Appendix

The Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. E. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. THOMSON of Wyoming. Mr. Speaker, I believe the best method of determining if an expenditure of public funds is justified is to analyze the benefits to be derived and to measure them against the total expenditure involved. In the case of the Colorado River storage project, the benefits far exceed the total cost. In a 50-year period following the last power installation, irrigation revenues from the irrigation projects, plus net power revenues from the power facilities to be authorized by H. R. 3383 will have repaid the investment in construction cost plus interest on the power features even during construction and leave a surplus of about $86 million. In addition, after the project has paid for itself, net power revenues amounting to from $15 million to $20 million annually will continue to flow into the Treasury. That, to me, means that the Colorado storage project is a sound investment for the people of the United States and that it is financially feasible from every standpoint.

However, there have been a number of unfair attacks on the project, and I would like to put the record straight on one of these distorted criticisms. The attack to which I have reference originated with Leslie A. Miller, and I feel it necessary to answer it not only because of its inaccuracies, but because Mr. Miller is a resident of my State. I do not want people to think that Mr. Miller speaks for the rest of the citizens of Wyoming. He most emphatically does not.

Like other opponents of this project, Mr. Miller ignores this fundamental fact: The project is self-liquidating. Documents show that the cost will be repaid to the Government, much of it with interest, by the people of the area to benefit directly from the project.

Mr. Miller errs when he says the project will not provide the needed water and power for industrial uses. The project specifically provides for full use of the water and the power for industries and cities. A specific assignment for these purposes was made after careful and comprehensive surveys of the potential needs. If cities need even more water in the future, they have the right to it under western water law. So this is not a matter of shutting the municipal and industrial users out of the picture. It is the only way to provide them with a guaranty of adequate water. A study of the project will show that this is a major purpose, and the cities and industries of the West are well aware of it.

Also, Mr. Miller gives an erroneous impression when he lists the portion of the cost the water users will pay and states, "The balance will be subsidized by the Federal Government." Actually, the balance—that which is not paid for by the water user—will be paid for by the power user. Power is a natural byproduct of the project.

Mr. Miller implies that the use of sprinkling systems for irrigating farmland is a substitute for the project. We are not arguing the merits of various ways of putting the water to use; our problem is to get the water in the first place.

Mr. Miller writes only about those items he hopes will justify his conclusion, refusing to examine the project as the package that it is. He makes as a prime example of the weaknesses of the overall project the La Plata unit in New Mexico. This particular unit is not included as an authorized project in the bill that passed the Senate in April, nor is it listed as a project subject to future approval, nor is it included in the bill now before the House in any form.

To be able to decide whether the project is strong or weak, one must look at all aspects. The bill which was approved by the House Interior and Insular Affairs Committee in June 1955 authorizes 3 major dams and 11 participating units at a total cost of $760 million, and of this total, 61 percent will pay full interest.

The project will pay for itself within 50 years. This is no theory. It has been documented and detailed by engineers, scientists, and economists, and a study of hearings before the Senate Interior Committee this year will bear this out.

This same plan has worked time and time again in the United States, and the taxpayers and the people of the nation are the ultimate beneficiaries.

Where Mr. Miller and his friends fail to do the project justice is in their attack on isolated units, or the use of arithmetic trickery, to justify a predetermined opinion. They are too busy looking at the trees to see the forest.

Attacks on reclamation and the Colorado River storage project overlook these factors:

First. In addition to repaying its total cost, the project will eventually return a profit to the treasury of several millions annually, from the sale of power produced by the project.

Second. All power and municipal features of the project pay full 2½ percent interest.

Third. Tax revenues and other benefits will far exceed the total cost and the cost of interest-free money.

Fourth. The project greatly benefits industries and cities, and not just users of irrigation water.

Fifth. Water resources development creates wealth and income.

Sixth. The total wealth and income created are vastly greater than either the real costs or the money costs, and tax revenues on the wealth and income created eventually more than offset the money costs.

Seventh. The Colorado River region, as a major resource of the Nation, must fully be developed for reasons of maximum resource utilization and for long range national defense purposes.

Eighth. The western States are great contributors to the United States treasury and to the reclamation fund itself by royalties from oil and minerals found in these States.

In regard to the latter point, income from these minerals is divided 37½ percent to the State where the mineral is produced, 10 percent to the Treasury of the United States, and 52½ percent to the reclamation fund for the benefit of the Western States.

My State of Wyoming alone has paid more than $200 million to the Treasury in this manner. By the time the bill comes due for the Colorado River storage project, my State alone will have paid into the Treasury enough to assume the entire cost of the project. Yet, we are criticized by advocating developments that put this money to use.

The United States is the landlord in my State and in other States concerned directly with the Colorado River project. The Government owns more than 51 percent of the area of my State. It owns the oil and other minerals under 44 million of Wyoming's 62 million acres. This actually deprives our State of needed tax revenue sources and of income. That is one reason we feel justified in encouraging the Federal Government to participate in a project that will be a sound investment from a tax standpoint.

The history of water resources development is a history of accomplishment, of wealth creation. In the reclamation phase of such development, expenditures since 1902 of less than $3 billion has provided irrigation water and facilities to more than 7 million acres of land. This has been the basis for the transformation of relatively valueless land into highly productive valuable farms. The land has produced almost $10 billion in crop values. Net revenues from power generation on the projects total approximately one-fourth of $1 billion. Municipalities have been provided water supplies, and vast areas have been protected from the ravages of floods.

When Mr. Miller discusses the irrigation costs of the Colorado project his

AUTHENTICATED
U.S. GOVERNMENT
INFORMATION
GPO

basic figures are as much in error as his basic premises.

He arbitrarily uses an estimated irrigation construction cost of $1,000 per acre. This is way out of line with the actual facts of the matter. The average cost per acre served is $545—not $1,000.

Admittedly, this is more than the land would sell for today without the water. But it is a feasible and practical figure when its long-term use and repayment is considered. Repayment over a 60-year period makes the annual water cost about $8, which in terms of added wealth provided, is a great bargain.

Also, it should be kept in mind that the Federal Government is not being asked to shoulder this cost. It is an expense that will be borne by the water user and those who will benefit from the Colorado project.

Mr. Miller condemns the project because the land to be irrigated lies at high elevations. But he completely ignores the point that water will produce more calories of food per unit of water consumed at these elevations than at low elevations such as Imperial Valley, Calif.

Mr. Miller opposes reclamation of more land to provide food for the Nation's booming population. He says present farm acreage can handle the extra demand by 1975 through paying proper attention to new techniques and fertilizers and more efficient machinery.

This view is in direct contradiction to 3 Government studies which set the 1975 population of the United States at from 190 to 210 million. These three studies are: First, report by Byron Shaw, Administrator, Agricultural Research Service, 1953; second, the President's Water Policy Commission, 1952; and third, policy study of material resources, 1953.

To provide food at present diet standards will require 30 million new acres in addition to all the increases in production that can be obtained through scientific improvements.

The items now in surplus generally are not those that will be produced in the upper Colorado River Basin. Also, it will take perhaps a quarter of a century before the land is put to full use—and by then we will be facing a food shortage rather than a food surplus.

Is it any wonder there is no worry about having too much food a quarter of a century from now?

Of course, irrigation of farmland is only one benefit to come from the project.

One of the most important uses of water is for industrial development. In 1954, the Bureau of Mines listed 42 metals and minerals of strategic and economic importance found in substantial quantity in the upper Colorado River Basin. Considering proven reserves, their their value as raw material was estimated at $1,123 million. The Colorado Plateau accounts for nearly all of the Nation's current production of uranium, and one-third of the Nation's copper.

But water and power must be available in dependable quantities and at reasonable cost on a permanently assured basis. Water and power are essential ingredients for the mining, smelting, refining, and processing of these vital natural resources which are not readily available elsewhere. Right now, there is a shortage of uranium-processing mills, largely because of a lack of water to supply these mills.

The project will provide the water and power for mining and industrial development, and in so doing will add wealth to the Nation at the same time will bolster our national defense. Uranium royalties alone return millions of dollars every year to the United States Treasury.

This summer, many communities are rationing water for domestic uses. Denver has such a rationing program in effect, and so do other cities. This project will provide the water needed in these communities, and the cities, of course, will pay for it—and with full interest.

The project pays for itself in many, many ways. It is a great investment for the Nation from every standpoint and should, I believe, be authorized now, with construction to begin immediately. The Nation will benefit and so will the taxpayer. I urge my colleagues to give this project, as outlined in H. R. 3383, their full support.

The Upper Colorado River Storage Project

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. DAWSON of Utah. Mr. Speaker, never has any reclamation project been subjected to as much vilification and misrepresentation as has the upper Colorado River storage project. At the expense of hundreds of thousands of dollars, opponents of this project have deluged our offices with propaganda alleging—among other things—that the project will be a burden on the residents of other States in the Nation. This is false. The cost of the upper Colorado River project will be repaid by the residents of the four States directly benefitting from its construction—New Mexico, Utah, Colorado, and Wyoming. Each unit of the project will be repaid within a 50-year period after full development. The power and municipal water features of the project will be repaid with interest.

It is because this project is repayable within the limits set by the reclamation law that it has the full support of President Eisenhower. Those opposing the project would have the people believe that the President of the United States was advocating something that would increase their taxes by $4 billion. This is not so. The money is repaid to the Treasury and repaid by the people in Utah, Colorado, New Mexico, and Wyoming. The rest of the Nation shares in the additional wealth produced as water is saved from waste and put to domestic, industrial, and agricultural use.

Each Member of Congress should ask himself why this project—more than any in history—has been subjected to such a distorted national campaign of opposition. What is there about this project that makes it the target of calumny?

The answer is readily available. The source of the propaganda and opposition wealth is southern California.

Southern California's interest in the project is economic. As long as our water wastes into the sea, industry in southern California benefits from the purchase of firm power at dump power rates of 1.47 mill per kilowatt-hour. Depending upon the flow of the river, this power generated by upper basin water, is worth between $2 million and $4 million per year. The contracts for this power all have a clause cancelling them when the upper basin starts to use its water. To protect these contracts and, in protecting them, to steal our water is the sole purpose of southern California's opposition.

Statements that this project would add to the tax burden of residents in other States of the Nation are as false and fantastic as the accusation that we in the West want to grow bananas on Pike's Peak. We want our water in order that we can continue to grow. This priceless resource should not be wasted to furnish subsidized power to a few favored industries in southern California and to grow cotton in Mexico.

The Business of Wiretapping

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Collier's of August 5, 1955:

THE BUSINESS OF WIRETAPPING

As the British discovered as early as 1775, privacy has always been a touchy subject with Americans. A man's home was his castle, and if you entered without knocking you did so at your own peril. You didn't ask your neighbor about his quarrels with his wife, or how much money he had in the bank, or which way he voted in the election. In fact, in some rural mountain areas where traditions of personal dignity are still highly valued, it was considered customary and proper to shoot a man who asked an indelicate question. It emphasized a healthy national contempt for snoopers and eavesdroppers, for Peeping Toms and sneaks—and sometimes that included the police. As soon as they could get around to it, the Founding Fathers set matters straight in article IV of the Bill of Rights, which guaranteed all citizens the right to be "secure in their persons, houses, papers, and effects, against unreasonable searches and seizures." Whenever those rights were threatened, folks from Boston to Texas to California were apt to reach for the squirrel gun over the mantel.

Why do you suppose we invented window shades, mister?

Well, maybe it's about time we primed old Betsy again. For more than 30 years, in the absence of any real Federal or State controls, eavesdropping by telephone wiretaps or newer electronic listening devices has become a furtive big business. Federal Government agencies admittedly use wiretaps. So do State and local police throughout the country. Private investigators intent on snaring straying husbands or suspected employees are setting up unlicensed listening devices with all too common ease and impunity.

The legal confusion surrounding wiretaps is shown by the fact that Federal agencies continue the practice despite a Supreme Court decision in 1937 which forbade wiretapping by Federal officers and denied the admission of such evidence in Federal prosecutions. As a result of this paradox, the Department of Justice admittedly is loath to prosecute other wiretappers when its own wiretaps are legally so dubious. State laws are almost equally muddled. In April of last year, United States Attorney General Herbert Brownell, Jr., informed the Senate Judiciary Committee that 10 States permit authorized tapping of wires, yet an additional 23 States, although limiting in some forms the tapping of wires, "do not prohibit the admission in evidence of information obtained in violation of their laws."

That eavesdropping has become a clear and present danger is indicated in the testimony of various congressional investigations and by the revelations in the recent Collier's articles by wiretap expert Bernard B. Spindel and staff writer Bill Davidson. Since the development of electronics, the eavesdropper is no longer dependent on crude wiretaps. With apparatus far more ingenious than any known defense against it, the up-to-date snooper may aim a parabolic microphone, much as one might sight a gun, and record a conversation 300 yards away. An even more insidious device utilizes inaudible high-frequency sound waves to penetrate thick walls and when further perfected may be able to record supposedly private conferences in rooms half a mile away—and this without "bugs" or wires of any kind. According to Mr. Spindel, not even the White House and the private talks of the President may be considered wholly secure against modern eavesdroppers.

The growing list of wiretap abuses is as frightening as the possibilities of the new listening apparatus. In Pennsylvania and Rhode Island wiretapping has been used by State officials as a means of political espionage against their opponents. In Brooklyn, an investigation into the police blackmail of bookmaker Harry Gross revealed that some officers were making unauthorized wiretaps not to apprehend criminals, but to shake them down. In New York, it has been testified, wiretap authorizations were readily obtained from some local judges who hardly glanced at the applications before signing them. In Washington, a high-ranking Cabinet officer dared not use his office telephone to confer with his advisers because he had reason to fear it had been tapped by his political foes.

Despite its concern over the growing evils of wiretapping, as of this writing Congress has failed to act. Eleven times in past years either the House or the Senate has conducted investigations, then backed away from the problem without any decisive legislation. During the 1955 session of Congress, a subcommittee of the House Judiciary Committee headed by Representative EMANUEL CELLER aggressively pressed its inquiry into wiretapping, but the fate of any proposed legislation will not be known until Congress reconvenes.

The hesitation of Congress stems from the very great difficulties involved. Despite the fact that the Federal Government quite probably holds jurisdiction over telephone and air communications as essentially interstate in nature, the basic division of Federal and State authority over wiretapping has not yet been clearly determined. But beyond this difficulty, many Congressmen are haunted by a dilemma. They are uneasily aware that wiretapping is a powerful political weapon, that it has been used in the building of police states, that without the strictest safeguards it can become an instrument of blackmail and oppression. Yet they are equally aware that wiretapping may well be essential in protecting the national security against espionage and treason. It is a highly effective police tool in murder and kidnap cases as well as bookmaking, prostitution, and narcotics peddling, which depend heavily on telephone communications. The problem—and Congress has not yet resolved it—has been summed up by Representative CELLER: "We have to weigh two basic principles—the national defense and security versus constitutional privacy. One must not, need not, yield to the other."

Clearly, whatever the difficulties, it is time to act, to make some hard decisions. It is time that Congress strictly defined those crimes against national security, and perhaps individual life, for whose prevention or solution wiretapping authority must be permitted. It must decide whether wiretapping authority should be vested in the Attorney General, with its hazards of political exploitation, or in the Federal courts where, we believe, such controls traditionally and properly belong. It must carefully define the safeguards, such as the strict surveillance and licensing both of equipment and operators, against indiscriminate use. It must set up protective measures against the kind of vocal forgery which experts have shown to be possible. Congress then should make all other wiretap activities a Federal felony punishable by fine and imprisonment.

Confronted with the heavy burdens of enforcing the laws, there are police officers who oppose any stringent regulation of wiretapping. Some already have stated that it would cripple their campaign against criminals. But in the long run we believe it is far better to handicap the police than to run the risk of a police state, far better that some crime go undetected than to commit a greater crime against all citizens. As Justice Holmes remarked: "Wiretapping is a dirty business." However much the method affronts our national character, there are times and occasions when wiretapping is a necessary protection for the country's safety. But if we do not shortly limit its use to the most essential requirements of the national security, we may see a cherished constitutional right disappear by default.

North American Airlines

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. UTT. Mr. Speaker, sometimes the most significant developments in industry are accompanied by a great deal of turbulence. This has been the case in civil aviation, where each new innovation has been the subject of considerable debate and argument. However, in the free-enterprise system there seems to be a selective process and generally, despite monopolistic restrictions, regulations, and all kinds of hobbles, the outfit with the new ideas manages to survive. This, of course, is the basis of the miracle of the American economic system.

However, if too many restrictions are arbitrarily set down the new enterprise is driven out of business and the entire economic system and the general public suffer.

I should like to point out that this is what is taking place in the field of civil aviation, where one of the most creative and valuable enterprises, North American Airlines, is having its operating authority revoked by the Civil Aeronautics Board for technical, and what appear to be entirely petty reasons.

This remarkable company, which pioneered air coach and which has introduced hundreds of thousands of citizens to traveling by air, can continue to perform a valuable public service, providing it is not regulated to death. The story of this unusual company was recently recounted in Time magazine, February 28, 1955, and I should like to read the brief article about North American.

The article follows:

DOWN WITH THE SWOOSE

To establish United States airlines, North American Airlines is neither swan nor goose but an unloved and awkward swoose. Technically a nonscheduled operator under CAB rules calling for irregular and infrequent flights, it has nevertheless grown into a $9,000,000 outfit operating one of the biggest transcontinental air-coach services. Last week, with North American's 1954 sales topping $11 million, the CAB decided to clip the big hybrid's wings. A CAB examiner recommended that North American be grounded for operating a scheduled airline in violation of CAB regulations.

BATTLES AND COACHES

The trouble was nothing new for North American's four Los Angeles co-owners—Stanley Weiss, 43, James Fischgrund, 39, Ross R. Hart, 40, and Jack B. Lewin, 42. Separately, and together, they have been fighting CAB for years. Returning from the war Fischgrund, a Navy lieutenant commander,, and Weiss, an ex-Air Corps transport pilot, bought two war-surplus Douglas C–47 transports for $15,000 down, and formed Standard Airlines, Hart and Lewin, two Douglas Aircraft employees, formed their own Viking Airlines with the money raised from 29 coworkers. The two lines pioneered cut-rate air-coach flights. By 1948 they had 80 percent of the transcontinental aircoach business sewed up between them.

This was too successful both for CAB and the big scheduled airlines. Charging that the lines flew too regularly and too often, CAB put them out of business. The four-man team of flyers promptly organized North American as a series of interlocking companies to get around the rules. First they formed Republic Air Coach System to handle the financial end, then bought up four small nonscheduled lines with valid CAB letters of registration—Twentieth Century Air Lines, Trans National Airlines, Trans American Airways, Hemisphere Air Transport—to supply planes and pilots.

North American itself, though its name is on all planes, acted merely as a ticket agency. With that setup, Fischgrund, Weiss & Co., started maneuvering their four "flying companies" to operate what amounted to a regular scheduled airline. Though no one company ever flew at the same time each day, the four combined could put together a solid, round-the-clock schedule by jockeying their flights back and forth.

PERFECT SAFETY

The CAB took out after North American almost as soon as it started. But by one legal dodge after another, the line has managed to keep going. And it has turned into a whopping success. It started the first $99 fare coast to coast, expanded its air-coach business so fast that it forced the scheduled lines to start air-coach flights (today 34 percent of all airline travel is by air coach). North American made enough money to buy 2 Douglas GC-6Bs for nonstop transcontinental flights, has 3 more on order, and has been able to chop its coast-to-coast fare to $75 one way. The line can also boast proudly in its ads that it has flown "1 billion passenger-miles without an accident—a perfect safety record."

North American which will keep on flying while it files an appeal before the full Board, makes no bones about its determination to force its way into the exclusive circle of scheduled airlines. The line argues that CAB doctrine since the Board was first set up in 1938 has been to limit the number of trunk airlines to the 16 "grandfather" lines (American, Eastern, United, TWA, etc.) operating at that time. Since then, 3 have dropped out, but no new names have been added to the roster, though 27 small feeder services have been authorized. Instead of expanding existing airlines to fill all United States needs, North American wants the CAB to let it provide new service and competition.

The Most Important Idea of Our New Age

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. OSTERTAG. Mr. Speaker, the boldness of President Eisenhower's proposal at Geneva—a proposal that all the players in this tense and terrible game of power politics lay all cards on the table, face up—is as breathtaking as it is sound. By this single step—if it could be accomplished, the basic need for armaments could be removed, and the mortal peril of annihilation which hangs over the world could be dispelled. Emerson, contemplating some battleships, once said, "By an idea they were created; by an idea, they will vanish away." The President has put into words the idea that could cause them to vanish away. Let us prayerfully hope mankind will grasp it.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the Friday, July 22 issue of the Democrat and Chronicle, of Rochester, N. Y., bearing on this subject:

PRESIDENT'S PROPOSAL MOST IMPORTANT AS NECESSARY STEP IN NUCLEAR AGE

President Eisenhower has again proved his right to the five stars which he won as a career military man. He has achieved tactical surprise in the field of diplomacy as effectively as any man ever did in a war.

It has become a reiterated maxim in the atom age that if man is to survive, he must begin to think in new channels. The Eisenhower leadership has brought the most startling new proposal seriously advanced by any national leader.

If the Russians are not sincere in their professions of desire for peace, they have a most difficult decision to make. They must now stand before the world as they are. On their answer to the proposal they will be judged as men who realize that war is insane and who will do their utmost to prevent it, or their desire for a mere breathing spell before future aggression becomes plain to all.

The idea of putting both the United States and Russia in a goldfish bowl can be regarded on at least two levels. Considered as diplomatic strategy, as a move to force the Communists into the open, it is superb generalship.

But as a serious proposal to advance toward conditions that will eventually make war nearly impossible, the President's challenge is the most important idea of our new age. Nor can we doubt for a moment that he is completely sincere. He has to be sincere, for if he were not, the Russians could make a boomerang of the proposal by accepting it. Obviously, the President means to go ahead with it if the Reds do agree.

It should be noted that the President warned that Americans will not be pushed out of Europe. We shall maintain and, if necessary, increase our armed strength in Europe for as long a period as is necessary to safeguard peace and maintain our security, he promised. He is not making any idealistic but impractical proposal that the United States strip itself of its strength.

He merely proposes that surprise in war be made impossible of achievement. To do this he would push aside the old, inefficient system of spies and set up corps of military reporters. They would have access to any place in the United States and Russia. Pearl Harbors would become impossible under his plan.

Even the byproducts of this system are startling to consider. Russia would have no further use for its American Communist spy apparatus. Americans could quit looking at each other with suspicion and an atmosphere of full freedom might return in this country. Badges, fingerprints, loyalty investigations would lose much of their point.

All this we can have and lasting peace, too, if the Russians agree. Their decision may be slow in coming. It took them several years to agree with the President's first big international proposal. Not until the beginning of this meeting in Geneva did Premier Bulganin commit Russia to joining the atomc-energy pool. But the Reds have now promised to join.

So if the immediate answer by the startled Kremlinites is the nearly automatic "Nyet," it may not be the final answer. We hope, however, it is "Da," a seldom-heard Russian word meaning "Yes."

Postal Voters

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. MINSHALL. Mr. Speaker, my good friend Henry Haserot, of Shaker Heights, Ohio, has organized a group of people known as the Postal Voters.

The Postal Voters have an extremely worthwhile program which is explained by a recent brochure distributed by Mr. Haserot:

[From the Postal Voters, a nonprofit, nonpartisan plan for informing your Congressmen]

I. Most people enjoy the stimulating sport of criticizing Federal activities. Sometimes they even threaten to do something.

II. In the meantime, heavily endowed national organizations, assisted by hard-working professionals, are constantly and effectively urging their views upon our congressional representatives. Sometimes these views are detrimental to the best interests of the Nation. Sometimes, they are downwright treacherous.

III. When improper legislation is effected—or needed legislation shelved—we wail and moan, howl and gnash our teeth. Usually we do little else.

Holding these conditions to be satisfactory but corrigible: Therefore be it resolved that henceforth we shall make it our business to communicate frequently with our Congressmen and, moreover, we shall urge our thinking friends to do likewise—via use of the postal vote.

The postal vote is simply a preaddressed and stamped postal card having a blank side for the sender's message, name, and address.

The Postal Voters agree to maintain a supply of these cards—for personal distribution to all who indicate a desire for proper government.

"Too many people don't care what happens, so long as it doesn't happen to them."

Carlos P. Garcia, No. 2 Man in the Philippines

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I received from Mr. P. W. Reeves, an American in Manila who previously had served many years in the House Office Building as a congressional secretary. Because I am sure we are all interested in the Philippines and have read considerable about their President, Ramon Magsaysay, I believe the following information about the No. 2 man, Carlos P. Garcia, will be of much interest:

It is not my desire to minimize the popularity of President Ramon Magsaysay because it is known by all that he is a very popular man. However, during the 1953 campaign in the Philippines, Ramon Magsaysay needed help. No man gave candidate Magsaysay more support than Carlos P. Garcia—and the purpose of this article, therefore, is to tell my American friends a few facts about this man Garcia.

The 52 Provinces composing the Philippines are divided into 3 groups, viz: The northern or Luzon group, the central or Visayan group, and the southern or Mindanao group. The particular group to which I wish to direct my attention is the central group—or the Visayas.

Carlos P. Garcia was born November 4, 1896, in the town of Talibon, Province of Bohol. The Province of Bohol is 1 of the 13 Provinces which constitute the Visayan group. The other 12 Provinces are Antique, Cebu, Capiz, Iloilo, Leyte, Marinduque, Masbate, Negros Oriental, Negros Occidental, Romblon, Samar, and Palawan.

Using a pet phrase of that great American Alfred E. Smith of New York, let us look at the record. In the November 1953, election the ticket of Magsaysay and Garcia received in the Philippines a total vote of 2,912,992 as compared to 1,313,991 received by

the ticket of Quirino and Yulo. Magsaysay and Garcia were candidates of the Nacionalista ticket; Quirino and Yulo were candidates of the Liberal ticket.

In the Visayas where Carlos P. Garcia was born and where he campaigned vigorously for the ticket of the Nacionalista, the Marsaysay-Garcia ticket received a majority of 394,339 votes. When you take into consideration that the Visayas consists of only 13 provinces—and there are a total of 52 provinces throughout the Philippines—you must admit that a difference of 394,339 votes greatly helped in the election of Ramon Magsaysay as President.

Before members of the Philippine Senate were elected, at large (by all of the provinces), the provinces of Agusan, Surigao, Misamis Occidental, and Misamis Oriental, with his home province of Bohol, were in the same senatorial district which was represented by Senator Garcia. Senator Garcia carried the campaign into those five provinces in his efforts to elect Ramon Magsaysay as President. The vote which the Nacionalista ticket received in Senator Garcia's old senatorial district reflects the standing of Senator Garcia in the area. In the 1953 election the province of Agusan cast 20,273 votes for the Nacionalista ticket and 7,153 for the Liberal ticket. Province of Surigao cast 37,638 votes for Nacionalista ticket and 18,653 for Liberal ticket. Province of Misamis Occidental cast 23,600 votes for Nacionalista ticket and 9,612 for Liberal ticket. Province of Misamis Oriental cast 34,297 votes for Nacionalista ticket and 9,171 for Liberal ticket. Bohal voted 68,879 for Nacionalista and 37,849 for Liberals.

Thus in that original area of Agusan, Bohol, Misamis Occidental and Misamis Oriental, the Nacionalista ticket received in 1953 a total of 147,049 votes, as compared to a total of 63,785 votes cast for the Liberal ticket—a clear majority of 83,264 for the Magsaysay-Garcia ticket in the 5 provinces of Garcia's former senatorial district, 4 of which are Mindanao Provinces. The record is there. Facts are facts. The high officials appointed to office by the Magsaysay government should be everlastingly grateful to Carlos P. Garcia for the unrelenting campaign which he made in what was supposed to be Quirino-Yulo strongholds. Carlos Garcia was elected Vice President by the people. Carlos Garcia is a very important part of the Magsaysay government. No one can dispute the fact that Carlos Garcia is just as popular today throughout the entire Philippines—and holds the affection of the masses just as strongly—as in November 1953.

The vote which the candidate for Vice President (Garcia) received over the candidate for Vice President on the Liberal ticket (Yulo) was fabulous in some of the chartered cities of the Philippines. For example, in the city of Manila, Garcia received 162,856 as compared to the vote of 58,825 for Yulo. In the city of Davao, Garcia received 25,318 as compared to 5,745 for Yulo. In Cagayan de Oro, Garcia received 7,709 as compared to 1,326 for Yulo. In the city of Cebu, Garcia received 30,200 as compared to 9,042 for Yulo. In Ozamis City, Garcia received 6,419 as compared to 1,615 for Yulo. In Lipa City, Garcia received 10,508 as compared to 1,575 for Yulo.

Because of the knowledge throughout the Philippines of the terrific support given to Ramon Magsaysay in the 1953 election, I could not resist the urge to make known to the American readers the true stature of this man Garcia. When I was in America in 1953 several friends wrote to me about the campaign. They advised me that the greatest help to Magsaysay was being given by his runningmate, Carlos P. Garcia. Garcia's speeches were eloquent and impressive. Garcia's crusade for clean government was effective—particularly in the Visayan region where Magsaysay and his advisers had expected much greater strength to develop for Quirino and Yulo. One very outstanding man in the Philippines advised me that if Magsaysay could break even in the Visayas, he would win. Magsaysay not only broke even and held his own in the 13 provinces which make up the Visayas and the old senatorial district represented by Garcia, Magsaysay's ticket received a majority of almost 477,603 votes because of the fight which was carried to the enemy stronghold by Garcia. Quirino had carried that same region by a huge majority in the 1949 election. It was expected that Quirino would run even better in the 1953 election in the Visayas. Also, Jose Yulo being a man from the Visayas on the ticket with Quirino in 1953 was expected to give Quirino even a larger vote in the Visayas in 1953 than he received in 1949.

To enumerate the positions held and services rendered to his country by Vice President Garcia would require an article of great length. He served 6 years as Congressman (3 terms), 9 years as Governor (3 terms) and 12 years as Senator (2 terms). In 1945 he was sent to Washington in connection with Philippine rehabilitation and war damage claims. In 1945 he was sent to San Francisco as a delegate to the World Conference; and he helped to draft the charter of the United Nations. He was a delegate to Dublin, Ireland, in 1950 to attend the Interparliamentary Union Conference. In 1950 he was a delegate to the Baguio Conference (SEATO). In 1954 he was chairman of the Philippine delegation to Geneva Conference for Korean Unification. He served as president of the SEATO conference in Manila in 1954, and this resulted in the Manila Treaty and Pacific Charter. He went to Thailand in 1955 as chairman of the Philippine delegation at the Bangkok Conference. And with all these multitudinous duties for his people, he has served as Secretary for Foreign Affairs with credit and distinction.

The vice president is well fortified at all times with documentary proof to back up any statement he might make. His facts and figures are never challenged. When he speaks he has the complete attention of his audience and he has often addressed audiences of 25,000 and more. No other speaker throughout the Philippines can hold the attention of the Filipino people as does this former Congressman, former Governor, and former Senator from Bohol.

Many caustic and poisoned darts are thrust in the direction of the vice president from the Senate Chamber and oftentimes scurrilous attacks on this No. 2 man of the Philippines appear in the newspapers. Because of many years of sound-thinking and self-discipline, a highly developed sense of restraint, a proper perspective, the vice president will not permit himself to be drawn into a controversy, and he will not indulge in any form of reply or retaliation.

Notwithstanding the unwarranted attacks and unfair criticism which has been hurled at Garcia, he has stood four-square like a mighty oak. In the face of harassment and humiliation, the Vice President of the Philippines has held his head high, and has stood his ground with his banner of truth and honest service unfurled above the unmitigated attacks of his political enemies.

I have witnessed the popularity of certain Filipino politicians rise and fall. The friends who loyally supported Carlos P. Garcia in 1953 are his steadfast friends today after 18 months of the Magsaysay-Garcia administration. Moreover, by his candor, honesty, straight thinking, and straight talking the Vice President has won thousands of new friends to his banner.

Carlos Garcia is God-fearing, and he worships God. He loves his country, and I know the Filipino people love him. He is a man of great learning and high ideals. He has a warm heart and sympathetic personality. He has used his wisdom, experience, influence, and energy to help his country gain its place in the society of nations of the free world. He has many qualities, but the most outstanding, in my opinion, is his sublime humility. He has the courage of his convictions, and no power or combination of forces can swerve him from the position which he thinks is proper and best for his country's welfare.

Carlos Garcia's philosophy has taught him that triumph always comes to the side of truth. He believes that one will reap that which he sows. He is frank and straightforward in all of his decisions and dealings with his fellowman. He is a firm believer in the Golden Rule. He answers any question without the slightest equivocation. He does not resort to subterfuge, camouflage, or deception. There is no part of his makeup which even approaches demagoguery.

Some men are not dismayed by defeat or disappointment. Some men do not surrender their convictions when the will of a higher authority is laid down as the order of the day. Such a man is Carlos P. Garcia.

Leaders seldom spring into great power with one broad jump. Leadership is that rare and elusive quality by which some men are destined to lead. If a leader is fortified with truth he can lead his people to limitless horizons of happiness, prosperity, culture, and morality. Carlos G. Garcia is endowed with this type of leadership.

Political enemies differ with the Vice President but never question his integrity and honesty of purpose. No man in the Philippines is more highly respected than the even-tempered, soft-spoken Vice President. Yes, indeed, the name Carlos P. Garcia adds luster, dignity, and prestige to any activity or movement. There is something all-compelling about this man Garcia. His voice is such as Homer ascribed to Nestor—"a stream of eloquence sweeter than honey."

Yes, I unhesitatingly go on record in stating that Carlos P. Garcia is one of the truly great men of the Philippines. He is not a glory seeker. He stands for progressive ideas in government, economics, and in world affairs when they truly mean progress. He is a man of culture, a scholar, a gentleman, and a statesman of the highest order. His courage, foresight, strength of will, and unwavering conviction on all matters and his sterling integrity stand out like the Rock of Gibraltar. Fortified with this armor, he can with absolute ease weather the storms of opposition.

His thorough knowledge of world conditions, as well as his knowledge of what is best for the Filipino people, ideally equips the Vice President for the many services he is now rendering. My prediction is that he will continue to serve his people—yes, in a higher capacity.

Something Else for Our Russian Visitors To See

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. OSTERTAG. Mr. Speaker, it is unfortunate that the visit of the Russian farmers and farm experts has been confined so largely to the Midwest—eye-popping as their peregrinations out there are proving to be.

Agricultural New York could also show them some things they never saw in Russia; for example, a typical farm auction in a typical rural community of the Northeast called—whether the Russians believe it or not—Freeville.

A. B. Genung described it in the July 16 issue of the Times-Union of Rochester, N. Y., and under leave to extend my remarks, I include it in the RECORD:

HOW IT LOOKS IN FREEVILLE: DRAMA UNDER AN ELM—THE LAND OF PROMISE

(By A. B. Genung)

This week I went to one of the most interesting farm auctions I ever saw. And if you missed the typical country auction, you have something to see.

This was and is one of the noted farms in our part of the country, known as the Hart Fitts farm, near Freeville. It was settled in 1818 by an ancestor of Professor Van Hart, of Cornell, who is widely known about the State, the farm having been in the one family ever since.

It is a noble homestead, 500 acres of excellent land, 400 tillable, lying up on a flat table-land overlooking the beautiful Dryden Valley. Three big houses on it, good barns, big fields, just about everything a farmer's heart could desire.

For weeks men had talked about the auction and several ambitious younger farmers had sought finances for it in advance. Cornell experts had appraised it beforehand for certain prospective buyers. Guessing what it would bring had become one of the favorite local games. The guesses ranged from $40,000 to $70,000 for the farm with its growing crops of potatoes, beans, and so forth.

Auction day dawned bright and fair. Some 400 people streamed into the place and the sale began.

At noon hour after lunch came the sale of the farm itself. The crowd gathered under a big elm tree in the dooryard, the auctioneer mounted his box and the bidding began at $20,000.

Among those interested in the place were two brothers, Bob and Len Wright, both energetic young men of this county, excellent dairymen who have prospered on farms of their own. I talked with Bob before the sale began. He was quietly but very earnestly in the market.

You could see that that farm loomed for him and his brother like a dream of golden opportunity which might just happen to come true.

The bidding rolled rapidly up to $40,000 and there the Wrights came into it. But there were half a dozen other bidders, all hardworking, successful farmers, who also wanted the place. It wasn't a millionaire crowd. It was the grassroots men who know what it means to shoulder a debt and pay it off out of farm earnings. Each had his own idea of what the farm could be made to yield and each had a ceiling above which he felt unable to go.

After $43,000 the bidding went up $100 at a time, very slowly. Several times the canny auctioneer put his watch in the hands of a boy and told him when it had ticked off 2 minutes to call out "sold!" But each time as the seconds ticked away in tense silence, somebody would raise the bid at the last instant. This happened half a dozen times.

Finally it narrowed down to two bidders. Over an hour had been consumed in this drama, yet the crowd was now more than ever on edge, for now it could sense the climax coming.

I heard a flat bid of $50,000. I could not see who made it. But you could feel in the tense expectancy of the crowd that this would probably be it!

Again the auctioneer put his watch in the hands of the boy and gave all concerned his final warning for the 20th or 30th time. Only this time it meant something. One minute. One and a half. Two minutes—sold! Bob Wright was the buyer.

So, in that brief little scene there under the elm, the fine old Fits farm had passed to a new family after almost a century and a half. The Bob and Len Wright families this weekend are moving to new home and new land. For them it is indeed the land of promise. That's America.

Technical Assistance to Foreign Nations—Address by Hon. Hugh L. Keenleyside, Director General of the Technical Assistance Administration, United Nations

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1955

Mr. WILEY. Mr. President, it was my privilege recently to be the guest of a luncheon meeting of the National Press Club, which was addressed by the Honorable Hugh L. Keenleyside, Director General of the Technical Assistance Administration of the United Nations.

I believe the address is one which should be read by Members of the Senate, because on numerous occasions we have to pass upon appropriations and other matters relating to this vital organization which has done such significant work throughout the world. I therefore ask unanimous consent that excerpts of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS TO THE NATIONAL PRESS CLUB, WASHINGTON, D. C., JUNE 13, 1955, BY HON. HUGH L. KEENLEYSIDE, DIRECTOR GENERAL OF TECHNICAL ASSISTANCE ADMINISTRATION OF U. N.

We are now just a few days away from the 10th anniversary of the founding of the United Nations. During the next few weeks there will be many reviews of the political achievements and failures of the world organization. It seems to me that it is most appropriate that we should also consider the progress of the United Nations constructive activities in the economic and social field.

Perhaps, Mr. Chairman, I should begin by making it clear that in appearing before you I am doing so, first of all, as a representative of the Secretary-General of the United Nations. But, in addition, because the United Nations programs of technical assistance are a cooperative activity, I think that I can also claim to speak for the other participating organizations. These are seven of the specialized agencies of the United Nations, namely, the Food and Agriculture Organization, United Nations Educational, Scientific, and Cultural Organization, World Health Organization, International Labor Organization, World Meteorological Organization, International Civil Aviation Organization, International Telecommunications Union.

In addition to these active partners, the World Bank and the International Monetary Fund act as observers in the Technical Assistance Board which is our coordinating unit.

May I say just a word about the nature of the program? In spite of the publicity that has been given to technical assistance in recent years there are still people—including, I regret to say, even certain Members of the Congress of the United States and of other national legislatures—who refer to it as a giveaway program. It has been described as a starry-eyed, impractical scheme to give two shirts to every Asian or a bottle of milk to every African.

Now I have no objection to people being starry-eyed—what great idealist or humanitarian from Christ Himself down to Dr. Schweitzer wasn't so described? Nor certainly have I any objection to giving clothes and food to people who need them, whether they are Asians or Africans, or Americans, or Canadians.

But relief programs are not technical assistance.

What we are trying to do is to help governments to strengthen their national economies so that they can meet their own needs. We try to give them, on request the kind of advice and guidance that will result in justified self-reliance. We don't supply goods; we supply knowledge.

Nor do we in the United Nations and the specialized agencies have resources of capital for investment purposes. In this, of course, we differ from the point 4 program of the United States and the Colombo plan for aid in south and southeast Asia, both of which have strong capital backing. In our case we can refer the governments we are helping to the International Bank, or to the Export-Import Bank, or to sources of private investment, and we can assist them to mobilize their domestic capital resources. But we ourselves have no money to grant or to lend.

I have mentioned the point 4 program, now administered by the Foreign Operations Administration, and the Colombo plan. We are often asked about the relationship between these bilateral and our multilateral activities. Don't we overlap? Isn't there conflict? Don't we get in each other's way?

In response perhaps the first thing to say is that there is no competition between the United Nations activities and the national programs, except insofar as each tries to do its job with the utmost efficiency. Everyone who is engaged in any of these programs realizes that with over two-thirds of the people of the world suffering—for the most part unnecessarily—from ignorance, poverty, and disease, there is far more to be done than we can possibly achieve by our united efforts with our present resources. Thus, instead of competition, there is a well-established willingness to cooperate and to supplement each other's activities.

There is no organic connection between the United Nations programs and those of the various national governments. There is, however, a close and useful contact maintained between them. This is true as between the headquarters of the various programs and it is even more true of the representatives who are working in the field. I could quote many examples of how American, Colombo plan, and United Nations personnel have worked cordially and helpfully together, and of how the various programs have complemented and strengthened each other. I could quote instances in which we have given advice and the United States and British agencies have followed up with money to enable the Government to translate the advice into action.

I know of no field in which national and international organizations work more effectively and more cordially together.

And at this point I would like to pay a very warm tribute to the cooperative attitude of the successive administrators of the United States program, the late Dr. Bennett (who was killed in the course of duty), Mr. Stanley Andrews, and the Honorable Harold Stassen.

II

* * * * *

When the statesmen of the world met in San Francisco in April 1945 they faced a series of problems unprecedented in his-

tory. Humanity had survived two world wars but the scars of conflict were everywhere apparent. Within a single generation war and its attendant ills had brought death to tens of millions of human beings. Devastation had visited many of the oldest, largest, and proudest cities of the world. Invention had become the mother of desolation.

In this new world of scientific miracles—so potent for good or evil, so scarred by physical and moral dangers—the statesmen at San Francisco found themselves confronted not only by the traditional problems of the traditional peace conference, not only by the vivid contrast between humanity's technical progress and its moral lethargy, and not only by the issues created by the universality of modern war.

Another, new factor in human, and particularly in international, relations was the rising tide of determined discontent among the underprivileged persons and nations that was threatening with disintegration many of the oldest and apparently most stable of political institutions. For the first time an almost universal rebellion against their conditions of life was sweeping over that great part of the human race that had always suffered and was still suffering from hunger, ignorance, disease and the manifold forms of injustice.

The men of San Francisco were forced to recognize that the world of the present generation was, above all else, a world of shocking paradox.

There were, on the one hand, those to whom good health was customary and for whom adequate facilities existed to provide attendance in disease; who could expect a life span of 65 or 70 years; who had opportunity for education and for attaining the magic power that goes with knowledge of the written word; who were economically well established and to whom hunger was seldom known; who enjoyed political liberty and reasonable hope of justice under law.

There was, on the other hand, that much larger element of the human race whose members suffered chronically from disease and who could seldom expect to live beyond 30 years or 35; who were illiterate and denied the other tools and values of education; to whom hunger, inadequate housing and other economic and social ills were the commonplaces of life, and who, in many cases, were deprived of national independence and often of individual liberty and consistent justice. Of over half the people in the world it could be said, to adapt the words of Thomas Hobbes, that their lives would almost inevitably be "poor, nasty, brutish, and short."

It is true that conditions of this kind were not new. What was new was that now, for the first time, the majority of the people of the world had become convinced that the continuation of such condition was not inevitable. They no longer believed that it was a rule of nature or a law of God that they should be born in misery and hasten to an early grave. They were no longer prepared to accept the hope of felicity in heaven as a substitute for happiness on earth. With growing unanimity they were determined that something must be done. (That some things have been done becomes apparent when we remember that 600 million people—one-quarter of the population of the world—has gained its political independence in the last 10 years. But, of course, political independence, like patriotism, is not enough.)

The first and most urgent of the problems faced at San Francisco was that of designing measures to insure, if possible, international peace. It was for this reason that in the creation of the United Nations Organization major emphasis was placed upon the work and responsibilities of the Security Council.

It was at the same time recognized, however, that peace could never be secure so long as grotesque inequality and injustice continued among men and between nations.

It was therefore decided that in addition to the contrivance of machinery created specifically for the prevention of war the United Nations should be provided with instruments and policies designed to improve the social and material conditions of life wherever misery unnecessarily prevailed. The most important of these instruments was the Economic and Social Council; the most significant statement of policy was that embodied in the undertaking in articles 55 and 56 of the charter by which all members pledged themselves to work for economic and social progress in all countries.

One of the first steps to be taken in the execution of this promise was the beginning of a small program of technical assistance.

III

Technical assistance is not, of course, new. It is as old as the history of peaceful intercourse between organized communities.

* * * * *

IV

In 1946 for the first time the budget estimates of the United Nations included an item permitting the Secretariat to provide technical, scientific or administrative assistance to any member goverment that should ask for aid of this kind.

Four years later, stimulated by the initiative of President Truman and by the early successes of the point 4 program, the United Nations respondent to American leadership and organized what was called its expanded program of technical assistance.

In this expanded program the specialized agencies as well as the United Nations have from the first been participants. The particular value of this cooperative approach has been repeatedly emphasized by both recipient and contributing governments, and it has been clearly and vigorously asserted in their annual meetings by the Secretary-General and the heads of the other participating agencies. Any fragmentation of the program would inevitably destroy a large part of its practical effect, and would certainly dissipate much of the enthusiasm of the governments that are its strongest supporters.

Funds for the new program have been obtained from voluntary contributions made at annual pledging conferences by all governments willing to cooperate.

At first it was hoped and indeed intended that the expanded program would start with a budget of $25 or $30 million and grow rapidly to something of the order of $100 million a year. It was quite clear to its founders that obvious and immediate needs would justify an expenditure on that level.

What actually happened was that in the first year contributions amounted only to some $20 million, and that even this was not entirely spent.

Without going into too great detail perhaps it will suffice to note four reasons for this slow start.

In the first place it was necessary for the participating agencies to get themselves organized to do the job efficiently. New machinery had to be designed, competent personnel recruited, and effective techniques improvised.

Secondly, the problem of obtaining suitable experts in sufficient numbers proved to be much more difficult than had originally been anticipated. This is still, of course, one of our major problems because in selecting experts it is necessary to find men and women who are not only technically competent, but who have qualities of character and personality that make them suitable for the very responsible duties and very sensitive relationships they must face.

The third difficulty was that which arose from the inability of some governments to convince themselves that there were no political or economic strings attached to this offer of help from the United Nations. Some people in some governments at first believed that the technical-assistance program was just a new form of disguised colonialism or of dollar diplomacy.

And a final reason for the slow start was the fact that many governments—and particularly those most in need of help—either did not know what to ask for, or did not know how to formulate and present their requests. Thus it sometimes took us months of hard negotiation and discussion to reach agreement as to the real needs of a government, and then to work out with it an accurate and convincing justification for its request. One of the most characteristic difficulties of inexperienced governments is their failure to recognize their own most pressing needs.

As a result of these complications the program began slowly and it was not until 1953 that its early problems could be said to have been largely overcome.

Since that year our basic difficulties have been almost entirely financial. In the last 3 years there has been a very significant increase in the number of contributors. In 1955 we expect that something like 80 governments will share the financial burden. These include, of course, many governments that are not members of the United Nations, such as Switzerland, Japan, Italy, and Ireland. They include also the Holy See which for the last 3 years has used this method to emphasize approval and interest. But in spite of the increased number of participants the total amount of money contributed annually has grown only to something like $27 or $28 million a year—an increase of less than 50 percent.

During this same period, however, there has been an enormous increase in the number of requests for help. Early suspicions of the program have disappeared. During the last 5 years over 100 countries and territories have asked for and have received aid. Over the last year and a half we in the Technical Assistance Administration estimate that we have discouraged or actually refused at least three sound and sensible requests for every one that we have been able to meet.

In this whole period the United States has made the largest single contribution, at first about 60 percent. That percentage has gradually declined so that today the contribution of the United States is approximately half of the total.

I should perhaps add that although the United States makes the largest contribution it does not now provide as much proportionately as Denmark, Norway, Canada, and certain other countries.

Based on the original estimate of world needs and on the extensive plans that were made to meet them, the technical assistance program has accomplished little. In fact, it might almost be described as a token activity or a pilot project for a program. If it is continued at its present level, it cannot be expected to bring about the kind of changes that are so obviously needed and so urgently requested by the governments of the less developed areas of the world.

In addition to the serious limitations resulting from the meager amount of money available there is the added handicap th' arises from the fact that under the present system of pledging and payment we who are trying to administer the program have no accurate idea, at the beginning of a year, of how much money we are going to have during the succeeding 12 months. Governments are asked to make their pledges in November for the following year but we have to start the planning for that year at least 6 months earlier. Moreover, many governments do not make their pledges at the time of the November conference and others make them in a conditional form. Because we handle our funds in accordance with strict accounting

procedures, we cannot make firm commitments until the money is in hand, and very often governments leave large sums unpaid even into the last quarter of the year. As a result of these timing difficulties, we have found it necessary to reprogram our activities as many as 3 or 4 times in the course of a year.

Fortunately some governments have undertaken to make commitments—subject, of course to legislative approval—for 2 or 3 years in advance. In the past we have not been sure of the amount of the United States contribution until Congress has passed the appropriation in June or July of the year concerned. President Eisenhower has now proposed, however, that an appropriation be passed by the present Congress to cover not only the last half of 1955, but the whole of 1956. If this action is taken our position will be greatly eased.

* * * * *

Another complicating factor in our financial picture is the arrangement by which governments can make their contributions in their own currencies—and many of these currencies are not convertible. Thus we have to do a great deal of adjusting and accommodating of our program to the particular kinds of money that may be available.

You will, I think, be interested in a word about the cost of administration of the program. Governments very naturally and properly scrutinize our overhead costs with the greatest care. Having myself been trained under the rigorous procedures of the Canadian Treasury Board, I think that I can claim some solid basis for judgment in such matters. In my opinion the annual examination of our administrative expenses in the United Nations is notably severe. Any slackness or waste would be quickly exposed. In 1954 the central administrative costs of the technical-assistance administration amounted to only 5.9 percent of the total program expenditure. I doubt that any other similar organization can show a lower ratio.

Before leaving this aspect of the subject may I emphasize most strongly that the Secretary-General and all my colleagues on the Secretariat of the United Nations are very conscious of the fact that we are using money that comes through governments but originates in the taxes paid by the people of this and other countries. It is, therefore, a matter of great concern to us that our administration should be marked by the most meticulous efficiency.

* * * * *

VI

It is, I think, important to note that this is not a one-way program; that it is not simply a case of a few highly developed countries like the United States, Great Britain, France, and Canada sending out technicians to assist the less advanced governments. While it is true that the United Nations has aided over 100 countries and territories it is also true that help has been given by between 70 and 80 countries. Countries like India, Egypt, and Israel, for example, have sent out experts and have received students as well as having obtained aid themselves.

This brings me to a consideration of one of the great advantages of the United Nations program as compared, for example, with the national programs of the United States, the British Commonwealth and other countries. This is the fact that we in the United Nations can draw upon the resources of the whole world whereas expenditure under the national programs is normally confined to national personnel and facilities.

It is also significant to note that many countries find it much easier to accept aid from an international organization of which they are themselves a part, than it is to take help from a single government. This is particularly true of countries that require help in such sensitive areas as public administration or national financial policy. In this connection it is perhaps worth noting that we in the United Nations Technical Assistance Administration have at the present time top ranking economic and financial advisers occupying the most significant advisory posts in 18 different capitals. At the same time we have senior administrative personnel assisting governments at the very highest level in seven countries.

This willingness to accept United Nations aid in the most significant and sensitive activities of government is perhaps the most hopeful aspect of our work.

VII

It is not, I think, necessary, in speaking to informed Americans, to engage in any prolonged justification of technical assistance. It is an international activity that has been examined with the greatest care and with the most critical interest by governments, organizaions, and competent individuals all over the world. In the United States it has been strongly supported by both Republican and Democratic administrations and by every board or commission (the names of Bell and Rockefeller and Grey come readily to mind) of which I have any knowledge.

In Canada it has had the unanimous support of both the House of Commons and the Senate.

* * * * *

VIII

But in conclusion, Mr. Chairman, I think it must be said that technical assistance, and all that is encompassed in that term, is fundamentally a moral issue. The program was started and is being carried on not only because it strengthens the cause of peace, and not only because it holds out the promise of immense commercial profits. Its real motivation is found in the fact that it is the right thing to do. You in the United States and we in Canada have been born and have grown up in an atmosphere or freedom and democracy; we have been nurtured in the principles of Christianity. It is simply not possible for human beings with such a tradition, in America or in other fortunate lands, to rest in comfort and indifference when we know that by a concerted and determined effort we can put an end, within a relatively short time, to a measurable part of the unnecessary ignorance, disease, and hunger that affects so many human beings—men, women, and little children with needs and fears and hopes like our own—in other parts of the world we share.

Whatever our individual religious convictions I believe that all Americans and Canadians can agree with the good people of the Society of Friends when they say:

"Let us join together to grow more food, to heal and prevent disease, to conserve and develop the resources of the good earth to the glory of God and the comforting of man's distress. These are the tasks to which, in humility for our share in the world's shame, and in faith in the power of love, we call our own society and all men and nations everywhere."

Two thousand years ago Christ, speaking of those of his day who really practiced their religion, said:

"I was an hungered and ye gave me meat,
I was thirsty and ye gave me drink,
I was a stranger and ye took me in,

"Naked and ye clothed me,
I was sick and ye visited me,
I was in prison and ye came unto me."

Today in modern America, and elsewhere throughout the world, it is only to the extent that we translate the spirit behind these words into the realities of current practice within and between nations, that humanity can move toward that distant but imperative goal of peace and decency and justice and hope fulfilled for all men everywhere on earth.

Tribute to Herbert Hoover by Raymond Moley

HON. KARL E. MUNDT
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. MUNDT. Mr. President, I call the attention of the Senate to the article entitled "See Thou Character," written by Raymond Moley, and published in the July 18, 1955, issue of Newsweek. The article is a tribute to an outstanding American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEE THOU CHARACTER

(By Raymond Moley)

You might well pause in your work or play, ladies and gentlemen, and consider for a few moments what it takes to make a great American. It would fit the mood of such a moment of reflection to contemplate, as a vivid example, Herbert Hoover as he completes his latest public service.

There have been 41 years of such service since in 1914 the first rumblings of a generation of war and strife called him, at the age of 40, from a distinguished professional and business career to a broader service of mankind.

Two of his successors as President have regarded him as the man of all men in public life to survey the vast burden of Government which, unless it is lightened, may well engulf us all.

Consider the Hoover equipment for this task. He came from the grassroots of America and knew as a child and youth the ideals and habits of its people. As a young man in foreign fields he acquired the capacity not only to deal with large affairs but to see from abroad the ultimate place which his own Nation must take in a restless world. As an engineer and manager he learned the secrets of an industrial civilization. In Europe he saw the dire tragedy of Western nations intent upon their own destruction.

Hoover, the Quaker and humanitarian, comprehended long before politicians prattled about welfare, the need that organized government provide a minimum of subsistence while cherishing the initiative indispensable to a full life. Then there followed 12 years in the Cabinet and the Presidency. Where else in this generation or in our history has there been such personal equipment for a broad look at the way we are governed?

The statistical descriptions of the labors of the Commission are impressive, indeed, but they convey none of the essential feeling of the labors imposed upon the Chairman. The field of Government operations was divided into 19 sections, each with a task force to do the spadework and to make preliminary recommendations. Some of those task forces in turn subdivided their work with committees for each part. Hundreds and hundreds of meetings were held all over the United States. The personnel of the task force included scores of men who, with the compelling example of Hoover before them, gave weeks and months to public service.

Let us see what this job meant in terms of the labors of the chairman. Hoover toiled from 10 to 15 hours a day, mostly in weeks 7 days long. He divided his week between New York and Washington, usually using the weekend for the Nation's Capital when, as he said, he could "get the most work out of his congressional members." The task-force reports were often intoler-

ably long and badly written. Some were excessively dry. But Hoover read them all, and with his own hand and pencil rewrote most of them as commission reports. On one report alone, which in its raw state ran to 1,783 printed pages, Hoover labored every day for a month to make it shorter and more intelligible.

The staff of the Commission itself and its various task forces was large and needed at all times the supervisory attention of the chairman. There were also the innumerable appointments which he had with people in the departments surveyed, as well as with individual members of the task forces. Then there was the Commission itself to guide and moderate. This required many meetings, sometimes for days at a time. With the patience of Job, the chairman dealt with the quibbling of some of the members and when he could not persuade, he encouraged minority reports. Finally, he had to endure the political sniping from the agencies which it was necessary to criticize and from political opportunists in Congress who still hope to win votes by abusing Hoover.

Only a man with character chiseled out of granite and blessed with an extraordinary physical equipment could survive such a service. Altogether, Herbert Hoover has created a reputation and has established a record that will become a great American story long after the storms of controversy that have swept across his career have lost meaning and content.

Need for an Adequate Highway Program—No. 1

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the need for an adequate highway program in the United States is recognized by everyone. The highway problem is particularly acute in areas of concentrated population and in corridor States such as New Jersey. While New Jersey ranks eighth in population and eighth in motor vehicle registration, it ranks first in density of traffic. In fact, the density of traffic is 7½ times the national average. This places a tremendous burden on the State to provide adequate highway facilities.

Therefore, it seems appropriate to me that because of the vast magnitude of traffic coming from outside the State—200 million motor vehicles cross the State borders annually—a substantial contribution to the State's highway needs should come from the Federal Government.

In line with this thought, I sent a statement to some of the leading people in my district on the highway question. Under unanimous consent, I include my statement and some of the answers I received for the information of my colleagues in considering the highway bill which has just been reported.

The statement and letters follow:

STATEMENT OF CONGRESSMAN HARRISON A. WILLIAMS, JR., DEMOCRAT, NEW JERSEY

While New Jersey ranks 45th in size in the Nation, eighth in population and eighth in motor vehicle registration, it ranks first in density of traffic. The New Jersey problem is multiplied in Union County, which is a corridor in a corridor State. The density of traffic in Union County is over 7½ times the national average.

The facilities for handling this traffic, particularly on U. S. 1 and U. S. 22, are inadequate today—constituting not only a source of constant frustration and delay, but even more important, an extreme safety hazard. This problem will get worse rather than better, since it is clear that the number of automobiles on the highways will vastly expand in the future. The tremenodus output of the automobile industry this year, breaking all previous records, is but one indication of the scope and magnitude which this problem will assume in the near future.

For some time a subcommittee of the governors' conference has been studying this problem. In addition, a presidential commission headed by General Clay has also looked into ways and means of meeting this problem. Their reports have now been published. The Clay report outlines a 10-year program of Federal assistance to the States in modernizing and expanding our highway facilities. The recommendations of this report, as contained in legislation sponsored by the administration, emphasize the need of an interlocking system of national highways to carry the burden of city-to-city traffic, which is the major problem we face today and will face in the future, in terms of traffic density.

The plan proposed by the administration has one serious drawback, which is its financing provision. Financing of the program would be handled by a Federal highway corporation which would be established to sell bonds. This feature has two drawbacks: first, it hides the indebtedness of the National Government from the budget; and, second, it would involve a good deal of interest payment over the long pull.

Nevertheless, it is clear that the President's program—which I hope will be improved upon with regard to its financing provisions—offers the best hope for solving the highway problem, particularly in areas of concentrated density such as Union County. In all probability, under this plan very substantial assistance would be available to improve upon or build alternate superhighways for routes U. S. 1 and 22.

Under the Clay program, New Jersey's share of Federal funds each year for a 10-year period would be $141,900,000, with the State contributing $11,200,000, making a total expenditure per year for the State of New Jersey of $153,100,000, exclusive of other funds not contained in the Federal aid system. Of this total, 60 percent would be required for the modernization of three Federal interstate routes, including U. S. 1 and 22.

In addition, there is a proposal being advanced by Senator GORE and others in the Senate for a 5-year plan which has serious drawbacks in terms of the needs of New Jersey. First of all, it falls far short of the goal of providing adequate highways; and, secondly, it does not emphasize to nearly the same extent as the President's program the development of adequate and safe interstate highways. Under the Gore plan, New Jersey would receive $54 million of Federal funds each year for 5 years, as against $141,900,000 each year for 10 years under the President's recommendations. New Jersey's contribution under the Clay plan would be $11,200,000 per year, and $8,100,000 a year under the Gore proposal. I am informed by the State Highway Commissioner that New Jersey would be unable to meet the requirements of the Gore plan and at the same time provide for reconstruction, maintenance and relocation of routes not under the Federal aid system but still vital to the needs of the State.

Therefore, it seems clear to me that given the tremendous needs for highway development now and in the future, we in New Jersey particularly would be better served should a plan close to the President's proposal be adopted. I have already publicly mentioned my support of this proposal, with the reservation that I would like to see the financing provision improved.

It seems apparent to me that New Jersey should justifiably receive substantial Federal aid in maintaining a highway system which carries such a large proportion of traffic from other States. Taxpayers from other States who use the New Jersey highways to such a great degree should contribute to the maintenance of these highways through the means of Federal assistance.

MOORE CHEVROLET CO.,
Elizabeth, N. J., May 27, 1955.

Hon. HARRISON A. WILLIAMS, Jr.,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. WILLIAMS: Recently you expressed your desire to hear my viewpoint regarding the present national problem of highway construction.

In reading over your statement as to the solution of this problem, I cannot but help agree with you wholeheartedly.

Union County, small as it is, has a serious problem with its own internal traffic due to its large population and industrial concentration; but when the flow of traffic from U. S. Highways No. 1 and No. 22 is added, the problem becomes unduly severe.

It must be remembered these two highways are two of the main arteries into New York City, yet Union County suffers the weight of this out-of-State traffic. In addition, Elizabeth has already been penalized by the New Jersey Turnpike, which bisects its eastern region. This area is already showing signs of rapid deterioration due to this bisection.

I certainly hope you will use your utmost powers to further the highway construction program and with particular emphasis on Union County receiving its share of this financial assistance.

Sincerely yours,

MARTIN J. MOORE,
President.

ELIZABETH MOTORS, INC.,
Elizabeth, N. J., May 27, 1955.

The Honorable HARRISON A. WILLIAMS, Jr.

DEAR SIR: Having carefully read your statement on the highway question, we desire to go on record as being in full accord with your position. Definite steps must be taken soon to relieve present highway conditions, and Federal assistance seems to be the solution.

I am glad to see your interest in the program which, in my opinion, is of vital importance and should not be delayed any longer. There is, in my opinion, sufficient tax money derived from automobiles and gasoline, etc., to take care of this problem adequately.

I shall be glad to render any assistance if called upon to do so.

Respectfully yours,

ELIZABETH MOTORS, INC.,
B. W. SCHONINGER.

SUMMIT AREA CHAMBER OF COMMERCE,
Summit, N. J., June 10, 1955.

The Honorable HARRISON A. WILLIAMS, Jr.,

DEAR CONGRESSMAN WILLIAMS: I have given your letter dated May 23, with which you enclosed a statement regarding the problem of highway traffic, considerable thought.

Chambers of commerce have, as a rule, opposed any increase in Government control over projects normally operated by the individual States.

I realize that New Jersey's problem is somewhat different since it is a corridor State and has, accordingly, a greater density

of traffic. Because of these unusual conditions, perhaps we should accept some help from the Federal Government and, should this be done, the administration's plan seems the more practical, rather than that proposed by Senator GORE.

Thank you for giving me an opportunity to express my views on such a controversial subject.

Sincerely yours,

WM. RAE CRANE,
Executive Secretary.

PLAINFIELD LODGE, No. 835,
BENEVOLENT AND PROTECTIVE
ORDER OF ELKS,
Plainfield, N. J.

The Honorable HARRISON A. WILLIAMS, Jr.,

DEAR CONGRESSMAN: It is with great interest to me that you are supporting the President's highway bill with reservations as to the financing.

With the growing demand for new highways and reconditioning of the older ones it is very necessary to get quick action for the bill passage.

Your suggestion as to financing is in complete accord with my opinion.

Here's to success in this problem, I am,

Sincerely yours,

JAMES A. REILLY, P. E. R.

Need for an Adequate Highway Program—No. 2

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the highway legislation which is presently pending before the Congress has attracted widespread comment in the newspapers and elsewhere.

The need for an adequate highway program in New Jersey—not only now but in the future—is approaching staggering proportions.

I would like to call to the attention of the Congress the views of two leading New Jersey newspapers on the highway problem, as expressed in their editorial columns in May.

The editorials follow:

[From the Newark Star-Ledger of May 29, 1955]

THE MOST FOR OUR MONEY

The Democratic United States Senate has shelved the administration's highway program for one of its own, but the day may yet be saved by the House of Representatives. We hope so, for the administration plan is much, much better for New Jersey than the Democratic substitute.

A last-ditch fight will be needed in the House to win support for the administration program, developed by Gen. Lucius Clay. We trust that every one of New Jersey's congressional bloc, Democrat and Republican alike, will be lined up on the side that offers our State the most for its money.

The Democrats should not find the Eisenhower side too uncomfortable. Governor Meyner, a Democrat, has already endorsed the administration plan, because he recognizes how much better it is for the State than the Democratic program.

Here are the facts:

Administration plan: New Jersey would get $141,900,000 per year for 10 years. We will contribute $11,200,000 a year in addition, making a grand total of $153,100,000 a year for 10 years.

Democratic plan: New Jersey would get only $54 million a year, and for only 5 years. Our share would be $8,100,000 a year.

The Clay plan is obviously a much better deal for New Jersey. We would pay 3 times as much, but get more than 5 times as much in Federal aid.

These figures are stratospheric, of course, and it's a little hard to visualize just what all this means to us. You may get a better perspective on the terrible need for road construction and modernization in New Jersey when you realize that we are the first in traffic density in the entire Nation. It's no honor. It's a nuisance.

Our State is the carpet between that big city across the river and the rest of the United States of America.

Our traffic problem, as a result, is in reality the Nation's traffic problem. It is unfair and unrealistic to think that we should, or could, solve the Nation's problem by ourselves.

The Clay plan recognizes this reality. It offers New Jersey a substantial share of the Federal road-building program. It offers us enough money to make a significant and worthwhile contribution to solving our immense traffic headache.

The Democratic plan will not solve the problem. It will only ameliorate it. And that is not enough. Niggardliness in road-building usually ends up costing more money in the long run.

The future well-being of northern New Jersey rests largely on the success we have in eliminating the traffic problem. The New Jersey contingent in Congress should take the lead in persuading the House of Representatives to pass the administration's highway bill, and then in persuading the Senate to change its mind.

[From the Newark Evening News]

NEW JERSEY LEFT OUT

In a new and strange preoccupation with economy and the public debt, Senate Democrats, aided by a dozen Republicans, have defeated President Eisenhower's road-building program.

As a substitute the Senate offers the Gore bill. It doesn't come close to meeting national-defense needs for an interstate highway system and, comparatively, makes New Jersey a Federal orphan.

The Gore bill reduces the President's 10-year plan to 5, and Federal-State expenditures from $39,100,000,000 to $17,941,000,000. Reduction doesn't stop there.

Nearly $1½ billion had been earmarked for New Jersey under the administration bill at a matching cost to the State of approximately $112 million. By the terms of the Gore bill this grant becomes $260 million. And to qualify for this cut-rate aid, our State would have to contribute up to an estimated $100 million.

Under the President's proposal, New Jersey and other road-conscious States were to have been reimbursed for the millions spent on toll facilities such as Garden State Parkway and the State turnpike. There is every justification for such credits because parkway and turnpike form part of the interlocking system of transcontinental highways which the Eisenhower program is designed to create.

Governor Meyner 3 weeks ago refused to accept Democratic policy as promulgated by the Senate, and came out strongly for the President's plan. He appealed to the State's congressional delegation to do likewise, and has been joined publicly by a fellow Democrat, Representative WILLIAMS of the Sixth (Union County) District. Republican Senators CASE and SMITH both supported the shelved administration bill.

It may be said that New Jersey's stand is inspired by State interest. Frankly, it is; but in this case State interest coincides with the national interest that would have been served by the broader administration project.

This is more than can be said of the politics and sectional interest, such as the plea for farm-to-market roads, that went into the Senate's support of the Gore bill, with its emphasis on intrastate rather than interstate facilities. Moreover, as a corridor State, New Jersey bears a far greater burden of national traffic than the much-advertised bridge States of the West.

This State is not, of course, the only victim of the Gore bill. It discriminates as well against Connecticut, New York, Pennsylvania, Ohio, and other progressive States which have invested heavily in toll facilities to form a national road network. This fact doubtless will not escape representatives of the affected States when the Senate's poor substitute for a good road bill reaches the House.

Need for an Adequate Highway Program—No. 3

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the highway problem is a matter of vital and continuing concern in the State of New Jersey. In the light of the highway bill which has now been approved by the Public Works Committee of the House, I would like to call to the attention of my colleagues two editorials from New Jersey newspapers which summarize much of the opinion on this subject which has been publicly expressed regularly during the past several weeks. It is particularly gratifying to note the job the Public Works Committee has done in working out an adequate highway program to meet the Nation's needs and at the same time provide a method of financing for consideration by the Congress which would not impose a staggering interest payment on the taxpayers of this country, as the plan proposed by the administration would do.

The editorials follow:

[From the Newark Star-Ledger of July 13, 1955]

SPECIAL INTERESTS

There is hope on the horizon again that we in New Jersey will get the Federal help we need to straighten out our highway problems.

The Senate scuttled President Eisenhower's road program, which would have given us enough money—$153 million a year for 10 years—to really do the job right. There were political considerations in killing the bill, of course, but there also were objections in principle to the way it was to be financed. The idea was to float bonds, thus keeping highway expenditures out of the budget. This was attacked as illegal. There was also the reasonable objection that too much money would have gone for interest on bonds instead of for building better roads.

The House is now considering a new financing plan, and it promises to revive the Eisenhower plan which New Jersey needs so much. The money would be raised by direct tax increases. The gasoline tax would go up a penny and there would be special levies on diesel fuel, trucks, and truck tires and tubes.

The special interests involved have already registered their protests. They are genuinely worried that these boosts may drive some firms out of business.

There is something to be said, however, for taxing those who are most directly benefited by the projects involved. Clearly, the people who use gasoline and tires and tubes and trucks gain more from better roads than the people who do not drive at all.

A compromise here might turn out to be the most effective solution. The public at large should also share the cost of road improvements, since the economy as a whole is so dependent on good transportation. Instead of raising all of the funds by direct road taxes, it might be more reasonable to raise half that way and take the rest out of the general tax fund.

[From the Newark Evening News of July 12, 1955]

REALISM ON ROADS

Former Governor Driscoll was at least being consistent when he reproved Republican State Chairman Bodine for praising Governor Meyner and New Jersey's Democratic delegation in the House of Representatives for supporting President Eisenhower's highway program.

Mr. Driscoll has long advocated the repeal of the Federal gasoline tax and the return of the whole roadbuilding job to the States. He argues that not only could they do it cheaper, but that many States, including New Jersey, pay more in gasoline taxes than they get back in Federal grants-in-aid.

Mr. Driscoll is not alone. Senator BYRD, of Virginia, is among many others who share his views. Theirs is a logical argument, but it has no chance of acceptance. Some States get back more than they contribute, and there are enough of these to prevent the abandonment of the Federal highway program. Governor Meyner agrees with Mr. Driscoll in theory, but looks at the facts realistically.

"Sure," he says, "I'd like to see the Federal gasoline tax abolished and returned to the States. But when there's no chance of this happening, let's jump in and get all we can."

Mr. Meyner favors the Eisenhower plan because, despite a proposed 1-cent increase in the Federal gasoline tax, New Jersey would, for once, get back more than it paid. In contrast, the Democratic alternative, embodied in the Gore bill, would greatly reduce the amount New Jersey would receive, while requiring it to put up far more in matching funds than it could afford.

Mr. Meyner is working for a compromise that would come closer to the Eisenhower program than either the Gore bill or a new plan just presented by the House Public Works Committee.

With a highway problem of staggering proportions, New Jersey cannot afford divided counsel or the pursuit of impracticable principle, either here or at Washington. Its representatives should agree on the most advantageous program that can win congressional approval and then back it with every bipartisan resource.

Need for an Adequate Highway Program—No. 4

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, under leave to extend my remarks, I include a number of communications I have received from constituents with regard to the so-called Fallon highway bill. Although they mention H. R. 7072, it is clear from the tenor of these comments that they support the revised version of the measure, which is now numbered H. R. 7474.

The letters follow:

ELIZABETH, N. J., *July 20, 1955.*

Hon. HARRISON A. WILLIAMS, Jr.,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I am indeed interested in bill H. R. 7072 which covers the method of financing a huge Federal highway construction program requiring the expenditure of approximately $3 billion a year for some years to come. As you undoubtedly know the purpose of the bill is to allocate on a fair basis among the users of the new highways, and consequently the bill provides for size-and-weight limitations on large vehicles as well as for certain taxes, primarily on large tires.

It is my considered opinion that the individual automobile owner (I am in this category) using the car primarily for a little pleasure and recreation should not be burdened with an excessive proportion of taxes, while heavy commercial vehicles might well continue to evade their proper assessments. I believe highways costs should be calibrated in ratio to use, and surely the heavy vehicles result in considerably more wear and tear.

Your full support of H. R. 7072 will be greatly appreciated.

Yours very truly,

ALBERT L. POSTLETHWAITE.

ELIZABETH, N. J., *July 21, 1955.*

Hon. HARRISON A. WILLIAMS, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Trust you will kindly give favorable consideration to the passage of Bill H. R. 7072, which deals with the method of financing the huge Federal highway construction program.

In my opinion this bill contains legislation that will result in a fair distribution of the costs, and therefore would deeply appreciate your vote in favor of its passage.

Thanking you for your past considerations, beg to remain,

Very truly yours,

(Miss) MARY KIERNAN.

ROSELLE, N. J., *July 21, 1955.*

Hon. HARRISON A. WILLIAMS, JR.,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Will you kindly give your most favorable consideration to the passage of bill H. R. 7072, with reference to financing the huge Federal highway-construction program.

As this bill contains legislation that will result in a fair distribution of the costs, would therefore greatly appreciate your vote in favor of its passage.

Thanking you for your past considerations, I remain,

Very truly yours,

MRS. VERONICA AZZARA.

WESTFIELD, N. J., *July 19, 1955.*

The Honorable HARRISON A. WILLIAMS, JR.,
United States House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. WILLIAMS: As one of your constituents, and as a taxpayer vitally interested in seeing that the cost of our huge Federal highway program is distributed equitably among the several highway users—trucks, buses, and private automobiles—I urge you to support to the fullest extent H. R. 7072, which imposes taxes proportionate to highway use.

Sincerely,

NATHAN W. JAMES.

SUMMIT, N. J., *July 22, 1955.*

Hon. HARRISON WILLIAMS, JR.,
House Office Building, Washington, D. C.

DEAR SIR: As an ordinary motorist, I am interested in the highway-improvement legislation currently being considered by the Congress. Also, as such I am quite willing to pay my just proportion of the cost of these much-needed improvements on a pay-as-you-go basis to avoid further increase in the already too large public debt. I think that all other highway users should also pay their just proportion of these costs.

In my opinion the trucks and buses, which contribute so greatly to the congestion on our highways are not and have never shared the cost of maintenance of present or construction of additional highway commensurate with their use of those facilities. I, therefore, strongly urge your support of H. R. 7072. The provisions of this bill, while falling short of equalizing the cost of highway maintenance and construction as between the private automobile and the trucks and buses, is at least a step in the right direction.

Yours truly,

P. V. WEBB.

PLAINFIELD, N. J., *July 20, 1955.*

Hon. HARRISON WILLIAMS, JR.,
Representative, Sixth District of New Jersey, House Office Building, Washington, D. C.

DEAR MR. WILLIAMS: I am very much in favor of passage of bill H. R. 7072, which deals with the method of financing the proposed Federal highway-construction program.

Being an individual automobile owner, I feel very deeply that costs of this huge program should be apportioned equitably.

Urge you to vote for passage of this bill.

Yours truly,

S. KURITSKY.

JULY 21, 1955.

Hon. HARRISON A. WILLIAMS, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN WILLIAMS: We strongly urge you to support bill H. R. 7072, which provides for financing Federal highway construction by levying costs directly to those who will use such roads.

When we, as motorists, use these highways in the course of our travels, we would be happy to pay our way, but we do not favor being taxed indirectly through increased gasoline taxes or similar methods which might be proposed.

Yours very truly,

G. C. Wilms, Union, N. J.; Ward D. Ferguson, Union, N. J.; Fred H. Boehm, Roselle, N. J.; R. W. Baker, Cranford, N. J.; J. P. Anderson, Roselle, N. J.; Henry Schlaupitz, Roselle, N. J.; J. M. Palochak, Elizabeth, N. J.; Philip Cheetz, Elizabeth, N. J.; E. O. Dickinson, Elizabeth, N. J.; H. E. Whitener, Union, N. J.; A. J. Trusheim, Cranford, N. J.; G. A. Vogel, Scotch Plains, N. J.

ELIZABETH, N. J., *July 22, 1955.*

Representative HARRISON A. WILLIAMS,
House Office Building,
Washington, D. C.

DEAR SIR: I understand that the bill known as H. R. 7072, which deals with the method of financing a Federal highway-construction program calling for the expenditure of some $3 billion a year, has recently been reported out of committee for consideration on the floor of the House.

I wish you would throw the full weight of your support behind this bill which pro-

vides, I believe, for the apportionment of the costs in ratio to the use, wear, and tear on the highways.

Yours truly,

C. S. STRANG.

FANWOOD, N. J., *July 22, 1955.*

Hon. H. A. WILLIAMS, Jr.,
Washington, D. C.

DEAR SIR: I believe that highway costs should be apportioned in ratio to use, wear, and tear.

When H. R. 7072 is up for action please consider my comments.

Yours truly,

S. L. PACH.

ELIZABETH, N. J., *July 22, 1955.*

Representative HARRISON A. WILLIAMS, Jr.,
House Office Building,
Washington, D. C.,

DEAR SIR: I wish you would give your full support to the bill known as H. R. 7072 which, I believe, deals with the method of financing a Federal highway construction program calling for the expenditure of some $3 billion a year.

I believe that the provisions of this bill which call for size and weight limitations on large vehicles, as well as for certain taxes, are just and equitable.

Yours truly,

J. J. DUFFY.

JERSEY CENTRAL LINES,
New York, N. Y., July 22, 1955.

Hon. HARRISON A. WILLIAMS,
House Office Building,
Washington, D. C.,

DEAR CONGRESSMAN WILLIAMS: I will very much appreciate your support for H. R. 7072, the bill which deals with the method of financing a huge Federal highway construction program.

In my humble opinion this bill equitably and democratically distributes the financial responsibility in ratio to use.

Sincerely yours,

R. E. ROWLAND,
Industrial Agent.

WESTFIELD, N. J., *July 21, 1955.*

Representative HARRISON A. WILLIAMS, Jr.,
House of Representatives Building,
Washington, D. C.

HONORABLE SIR: Urge that you vote for bill H. R. 7072.

Respectfully,

FRANK V. MARTIN,

UNION, N. J., *July 20, 1955.*

Hon. HARRISON WILLIAMS, Jr.,
United States Congress,
Sixth District, New Jersey.

DEAR SIR: This is to let you know that as a private automobile owner, I am interested in seeing to it that private automobile owners are not compelled to pay more than their fair share of highway maintenance cost.

Bill H. R. 7072, in my opinion, should prevent an undue proportion of taxes being saddled on private automobile owners, and therefore hope that you can give full measure of support to this bill.

Yours sincerely,

GEORGE H. MASSY,

The Dixon-Yates Contract

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, July 25, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial comment by various newspapers, published in the St. Louis Post-Dispatch of July 19, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE END OF DIXON-YATES: EDITORIAL VIEWS

THE NEW YORK TIMES

We have never shared the opinion of the more ardent critics of the Dixon-Yates contract that this long-disputed project constituted "a national scandal," something akin to Teapot Dome. No giveaway of public property was involved.

It seemed to us from the start that the question of how to provide for the additional power needed was a matter in which the initiative should have been taken by TVA itself and not—as events transpired—by the Atomic Energy Commission, which was the customer requiring the additional power. In the second place, it has become increasingly evident that the whole record of the discussions that preceded the decision was not originally made public, as it should have been. And, finally, there is ground for believing that at least in some quarters the Dixon-Yates contract was intended to be a first step in dismantling TVA. Such a transformation would run counter to the long-established policy of Congress.

For these reasons we welcome the action of the President in canceling the contract.

NEW YORK HERALD TRIBUNE

The Democrats are hailing the cancellation as a famous victory for their side, and will try to keep the issue alive as long as possible. The President sees it as a vindication of his original determination to restrain the expansion of Federal power within limits. It can hardly be said to be a victory of any kind for private enterprise, the representatives of which, despite honorable efforts at cooperation, find themselves holding a canceled and null agreement.

Even the cancellation of the contract has not, in the Democrats' eyes, foreclosed what they hope to make a major domestic issue in 1956. Their strategy has been abetted by shortcomings on the part of Mr. Eisenhower's aids. The full story, which he ordered released, did not include the role of Mr. Adolphe Wenzell and the First Boston Corp., a fact of which the opposition makes much. At his press conferences he has been pushed to enter into the discussion of details with which his staff had not made him fully familiar.

AMERICA

There are signs that the GOP politicians are not yet "out from under." With the appearance of Adolphe H. Wenzell on the stand, the Kefauver subcommittee appeared to have struck something resembling paydirt.

THE CHRISTIAN SCIENCE MONITOR

Cancellation of the Dixon-Yates contract does little to settle the long-range question of added power for the area served by the Tennessee Valley Authority. How it will affect national policy on power—particularly President Eisenhower's concept of a public-private, local-Federal "partnership"—is problematical. For simple power questions have been submerged by politics.

Senator KEFAUVER is grossly exaggerating when he compares anything disclosed in this case with the Teapot Dome scandal. But the Democrats, working hard to build up domestic issues for next year's campaign, will undoubtedly try to make much of Dixon-Yates. They may be hampered somewhat by two facts: One, this contract was more favorable to the Government than two made under the Truman regime by AEC. Two, the last previous Democratic Congress refused to give TVA money for another steamplant.

THE LOUISVILLE COURIER-JOURNAL

The Eisenhower administration is doing its smiling best to bury that Dixon-Yates contract with as little show of pain as possible. None should speak ill of the dead, it seems.

None, that is, except those who are concerned with the glaring truths of the record. They point out that Mr. Eisenhower was aware that Memphis official spokesmen said last December 20 the city would have none of Dixon-Yates power, but preferred to build its own plant. The President continued to defend the contract as a good deal.

Now it all comes clear with the determined Tennessee contingent, Senators KEFAUVER and GORE and Governor Clement, dragging out the missing pieces. All the evidence of evasion, haste, subterfuge, and secrecy, all the highhanded disregard of ordinary safeguards, all the misrepresentations and the shrewd "policy reports" aimed at dismantling TVA power—all come out.

The President is quite affable with the mayor of Memphis. But the broadest of smiles and the utmost of geniality are not going to obscure the Wenzell testimony and shadow of conspiracies.

THE WASHINGTON POST

The spectacle of President Eisenhower and Mayor Tobey, of Memphis, rejoicing over the decision of Memphis to build its own power-plant and the cancellation of the Dixon-Yates contract is a happy outcome.

It should not be supposed, however, that this solution of an immediate problem has disposed of the issue underlying the Dixon-Yates contract. One partial solution may lie in giving TVA the authority it seeks to issue bonds of its own to finance its projects. If this were accompanied by a requirement that the TVA pay a full equivalent of Federal and local taxes, the special advantages which it confers upon residents of the Tennessee Valley in cheap power would be in large measure eliminated.

The administration and Congress ought now to proceed to work out a power policy in an orderly fashion.

DECATUR (ILL.) HERALD

Politically, the contract was becoming as dangerous as a high tension wire.

Fortunately for the President and the Republican party, there was a relatively easy out.

The Dixon-Yates contract was not in the public interest. But the whole episode represents only a skirmish in the high-voltage fight between private and public power advocates.

MADISON CAPITAL TIMES

The President has seized, almost frantically, on the decision of the city of Memphis to build its own generating plant rather than buy power from the Dixon-Yate combine as an excuse for the cancellation.

Few thoughtful people will be fooled by the President's pat alibi. The history of the affair is too clear. There is no record that he ever invited Memphis to build its own plant or consulted with its officials about such action.

It is now clear that the Dixon-Yates deal was meant to be the first major thrust in the drive to dismantle TVA and turn this vast public development over to private interests. It was a part of a proposed raid on the public domain staggering in its scope and brazenness.

President Eisenhower has indicated on frequent occasions that he wants to be known in history as a President who was above partisan politics. He owes it to his own place in history to disregard partisan considerations and cooperate in exposing the full truth about Dixon-Yates and to bring to the bar of justice any who are guilty of wrongdoing.

TRENTON EVENING TIMES

The Dixon-Yates contract, which President Eisenhower has ordered terminated,

has proved to be a costly mistake—costly to the Government and costly to the Administration.

It is unfortunate from every viewpoint that the President, who seems unwittingly to have played into the hands of financial interests, did not at a much earlier date face the facts of life on the Dixon-Yates contract. These facts have been quite apparent from the beginning.

THE DES MOINES REGISTER

The Administration took a deserved licking on the Dixon-Yates contract.

The licking was deserved because the Administration, in its zeal to find an alternative to TVA expansion, resorted to subterfuge and evasion in working out the Dixon-Yates plan. Neither the manner of working out the contract nor all the financial arrangements provided in it have stood up well when subjected to close congressional scrutiny.

President Eisenhower was slow to recognize that serious mistakes were made. But he finally did so and ordered cancellation of contract.

THE MILWAUKEE JOURNAL

President Eisenhower is "happy" over his decision to cancel the Dixon-Yates power contract. If he finally understands the whole mess, he ought to be overjoyed. He has been toying with the makings of a first-class scandal.

Dixon-Yates was wrong from its inception. The President forced the Atomic Energy Commission and the Tennessee Valley Authority to accept it after their best judgment said "No." This unwarranted interference with the operations of independent agencies gave the President himself top responsibility.

There was endless secrecy. The contract itself was kept in complete darkness, until an enterprising St. Louis Post-Dispatch reporter obtained a copy.

Almost incomprehensible in the whole story has been the stubbornness of the Administration which likes to call itself brainy and businesslike and to be thought of as "clean as a hound's tooth." It compounded error on error to the door of scandal.

Anyone who read a good daily paper in the last year could see the folly and political dynamite of Dixon-Yates. Unfortunately, the President apparently doesn't read newspapers. That's dangerous for a man whose subordinates mislead him.

THE MEMPHIS COMMERCIAL APPEAL

Now that a definite decision has been reached in Washington, we hope the fires of regional controversy will be pulled.

It is our hope that the West Memphis plant will be built. Arkansas needs reasonably priced power as an indispensable factor in its development.

Elimination of the AEC-DI-ON-Yates contract from the scene might well be a signal for simultaneous elimination of intemperance in words and behavior on the part of all concerned. As President Eisenhower and his administration have agreed, Memphis has the right to build its own power facilities to protect its own interests. It also has an obligation so to do in the absence of assurance from TVA of a favorable, long-term contract.

THE WALL STREET JOURNAL

The tumult about the Dixon-Yates plan was ended by the President's cancellation of the contract, but the shouting is far from over; the Democrats quite plainly look on it as an issue in the 1956 elections.

Senator KEFAUVER says the purpose of the plan was to restrict the TVA to flood control and like activities. That these—and not expansion into a giant public power project by construction of steam plants—were the original purposes of TVA has been forgotten as it grew into a tax-supported Government power empire.

What will be remembered by the Democrats until the next election is that the Dixon-Yates proposal angered most of the people in Tennessee who profited by TVA. And it is not at all unlikely that the Republicans remembered that in 1952 Mr. Eisenhower carried Tennesse by less than 3,000 votes out of nearly 900,000 ballots.

The implications of the controversy are more than political, however. The fight over Dixon-Yates was philosophical also. It was from start to finish a continuing battle between advocates of tax-paid public power and those who believe in free enterprise's private power.

No longer will taxpayers from all over the Nation pay to supply Memphis with cheaper electricity. And that was a defeat for those who support TVA's unwarranted expansion, no matter how long the shouting about Dixon-Yates continues.

BUSINESS WEEK

The Dixon-Yates power project will be canceled if the city of Memphis proves up on its plant to build its own powerplant. With the Memphis load off TVA, the Government's big power system can meet atomic needs. On the political side, the handling has been inept from the start. GOP politicians would like to get out from under the contract. The Democrats are using it outside the valley area to work up voters on the public power issue.

Problems of Dairy Farmers

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 25, 1955

Mr. WILEY. Mr. President, a few days ago from Elkhorn, Wis., I received a message from a man who works continually with the farmers.

He commented, as a great many other Wisconsinites have, on the very difficult problems faced by Wisconsin dairymen these days.

He pointed out that farm prices—farm milk checks—are low, while farm costs are high. He wrote:

The cost of items necessary to carry on a farm operation, namely, labor, machinery, and supplies are at an all time high. The price of milk to the farmer is approximately 7 cents per quart. The consumer is paying up to 26 cents per quart, delivered. There is too much price spread.

This is the very grim situation which I pointed out in an address which I delivered by transcription last night over station WGN, Chicago, and which I have described here in the Senate time and time again, in requesting corrective action.

I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEETING THE PROBLEMS OF AMERICAN DAIRYING—1955; A CONSTRUCTIVE 10-POINT PROGRAM

I would like to report to you on a great industry affecting every single American.

Yes, through the courtesy of station WGN, I would like to comment in detail on the problems of this industry—which affects you and me and 165 million other Americans. The industry I am referring to is the dairy industry of America.

Now, some city folks might not realize how crucially the dairy industry affects them.

But if they stop to think it over for a moment, even city folks who are listening to me tonight will realize that dairying—meaning the sale of milk, butter, cheese, nonfat dry milk solids, ice cream—is indispensable, in many ways, to this great Nation of ours.

And so I am going to answer some questions about our dairy industry—its past, present, and future.

DAIRYING—GREATEST SINGLE SOURCE OF CASH FARM INCOME

Question. First off, Senator WILEY, just how widespread is America's dairy industry in Wisconsin, Illinois, and elsewhere?

Answer. Well, a few facts will provide the answer. Last year the dairy farms of our country produced almost 124 billion pounds of milk. That means around 56 billion quarts.

To produce this vast supply of healthful milk, the dairy farms of America keep almost 25 million cows. Each of these cows turns out an average of 2,500 quarts of milk—a new record.

Question. How does dairying compare with other parts of American farming?

Answer. Dairying is the largest agricultural enterprise in America. It is the greatest single source of cash farm income. In other words, the health of the great farming segment of America depends on dairying.

Nearly $1 out of every $5 of all farm income comes from the sale of milk, and of dairy animals as beef.

TWO AND ONE-HALF MILLION UNITED STATES DAIRY FARMERS

There are dairymen in every State of the Union—about 2.5 million of them in all. They produce the milk which goes through more than 35,000 dairy plants and which comes out in bottles or as butter, cheese, ice cream, and other dairy foods.

There are around 10 million people employed—10 million people—in the dairy industry. And there are other millions building the machines and trucks and factories and other equipment needed to keep that river of milk flowing from the farms to the Nation's consumers.

WISCONSIN, AMERICA'S DAIRYLAND: NO. 1 IN THE NATION

Question. Senator WILEY, since you are the Senior Senator of the greatest single dairy State in the Nation—Wisconsin—naturally, your people have a special interest in the well-being of dairying.

Answer. That is absolutely right.

Wisconsin is America's Dairyland. Our 16½ billion pounds of milk production each year—our Wisconsin production of more than half of all of the cheese in the Nation—our top-quality dairy standards—our pioneering in dairy research—all this has rightly focused the attention of the entire country on Wisconsin dairying.

BADGER FARMERS CONCERNED ABOUT POOR RETURN

Question. Well, Senator WILEY, since Wisconsin farmers are the Nation's leading dairy farmers, what is their reaction to the present dairy situation?

Answer. I am sorry to report that Wisconsin, like other dairymen, are deeply concerned about the present dairy situation. They simply are not getting enough return for their labor.

Remember, dairying is no simple 40-hour-a-week proposition. A dairy farmer has to work—and work hard—at his occupation—with his wife and youngsters and hired hand—if he is lucky enough to have one—7 days a week, 52 weeks a year, around the clock.

Moreover, the dairyman has to have a heavy investment in machinery, in buildings, in equipment. And yet, he simply is not getting enough return on his labor and his investment.

WISCONSIN FARMERS GET ONLY 7 CENTS PER QUART

I know this personally. For over 30 years, I have been intimately acquainted with the dairy farmer's problems on the farm in Barron County, Wis., which my father before me owned and operated, and which I in turn took over.

I know that the dairy farmer has been getting, in my area, only around 7 cents per quart of milk. Just think of that, 7 cents only. And yet, the consumer buying that same milk in the city has been paying around triple that sum.

Question. Then one of the problems is, Senator, that the dairyman is not getting enough of the retail price?

Answer. That is right, Government statistics show that the dairy farmer gets only 46 percent of the retail price of fluid milk, and only 47 percent of the retail price of American cheese. Distribution costs all along the line are responsible for the difference.

And remember, these are national averages. The 7-cent-per-quart figure which I have quoted to you earlier shows that Wisconsin dairymen are getting even less of the consumer's price than the national average, in many instances.

Question. Well, lowering high-distribution costs is then, one answer to the dairyman's dilemma; is it not?

A DECENT LIVING FOR FARMERS ESSENTIAL

Answer. That is right. But the biggest single factor is, of course, to make sure that the farmer gets back his cost of production, plus a reasonable profit. If we keep that clear objective in mind, we won't become confused and confounded about details of the so-called parity debate.

After all, all the farmer wants is a decent living for himself and his loved ones.

The farmer has been caught in a price squeeze for far too long. The farmer is the only man who sells cheaply at wholesale, but buys expensively at retail.

You know, no other producer in America is so much at the mercy of competitive forces as is the farmer.

The farmer is also often at the mercy of other forces, as well as the elements. He faces the problem of fighting livestock diseases. He fights adverse weather conditions. He suffers from a terrific shortage of farm labor. And then, if he overcomes these and all other obstacles, when he sends his milk to market, he may find that his milk check is so low as to give him little or no profit for all his labor.

UNITED STATES DAIRY CONSUMPTION FAR TOO LOW

Question. How about American consumption; are we eating and drinking enough dairy products?

Answer. The answer to that question is, Definitely not. We Americans simply do not consume enough dairy items. If we did consume more—if we did consume as much as some European countries do—then much of this so-called dairy problem would be eliminated.

Question. What do the statistics show, Senator, on dairy consumption?

Answer. Well, believe it or not, although ours is the greatest Nation, with the highest standard of living in the world, we rank eleventh—yes, a low eleventh—in cheese consumption. We only eat around 7.1 pounds per person per year. Ten other nations consume more cheese on the average than we do.

In butter, we are even worse. We are in 13th rank, and only eat 8.6 pounds of butter. In fluid milk, we rank eighth. We drink around 350 pounds of milk per person per year. But in Sweden, people drink around 513 pounds, and in Norway, New Zealand, Switzerland, Canada, Denmark, and Ireland people drink more milk than we do.

Yet, if Americans realize what a wonderful buy milk is, if they realize how essential it is for building of sound bones and healthy skin and tissues, they would drink more milk.

Question. Are there any other statistics which point up this problem?

Answer. Yes, a study showed that 84 percent of American adults drink coffee, and only 43 percent drink milk. In other words, many of our adults have gotten out of the habit of drinking milk, even though it is essential to adult health, just as it is essential for the health of youngsters.

A 10-POINT PROGRAM FOR UNITED STATES DAIRYING

Question. Well, now, Senator WILEY, you have described a great many of the problems of the dairy industry. Would you tell us what you feel to be some of the solutions? I know, for example, that you have sponsored a great deal of constructive farm legislation on Capitol Hill to cope with this problem. Would you tell us about some of these bills which you have offered as partial remedies for the dairy problem?

Answer. Yes. I am going to run through a series of 10 major points in my dairy program. I am not going to try to hit every aspect of the situation, but I am going to cover many of the most important features.

Question. What is the principal point, Senator?

PUT DAIRY ITEMS AT SAME PARITY AS BASIC FARM GOODS

Answer. First, my first point is, of course, that the dairyman must absolutely get his cost of production, plus a reasonable profit. To do this, I feel that dairy parity should be established at the same level as the other six so-called "basic commodities."

There is no other agricultural commodity more basic than milk.

So, there is no reason why the dairyman should be discriminated against in relation to other agricultural products, like cotton or tobacco.

Question. What other points in your dairy program?

EDUCATE AMERICANS AND RAISE DAIRY CONSUMPTION

Answer. Second, well second, the Department of Agriculture, in cooperation with Federal, State, and local governments and private agencies, should strengthen its program to increase dairy consumption.

That means better educating the American people, particularly the American housewife, to use more dairy foods at every mealtime—to use milk, and butter and cheese, in more wholesome, healthful, recipes.

WIDEN SCHOOL MILK PROGRAM

Third, we must increase consumption among the Nation's school children. For that purpose, I have cosponsored with Senator HUMPHREY, of Minnesota, a bill to expand the special school milk program, which already has resulted in vastly increased drinking of milk by the Nation's youngsters.

Question. I know, Senator, that another of the major points on your program relates to research.

Answer. Very definitely.

PASS WILEY BILL FOR DAIRY RESEARCH LAB

Fourth, so I have offered a bill, S. 788, to establish a dairy research laboratory in Madison, the capital of my State.

This laboratory would help to coordinate all of the dairy research in the country. That means research into new byproducts for milk. It means finding new uses for milk, just as we have found new uses for the peanut and for cottonseed and for corn cobs, and other agricultural items.

But I want research also into dairy packaging, dairy processing, dairy distribution. Such research is recognized as essential by just about everyone. Endorsements for the Wiley bill for the United States Dairy Research Laboratory have come in from all over the country.

Question. How about other points on your dairy program?

MORE MILK-VENDING MACHINES ESSENTIAL

Answer. Fifth, my next major point is to increase the availability of milk-vending machines. I am referring to automatic machines which dispense milk by cup or in the carton. Right now, there are more than 20,000 of these milk-vending machines all over our country. They have resulted in tremendous increases in sales. Car owners, for example, can drive up to a gasoline station, drop some nickels in the slot, and take home quart ice-cold cartons of milk, which they might not otherwise buy, particularly if it is late in the evening and most stores have closed. So, there ought to be many more milk-vending machines in the Nation's factories, in schools, Armed Forces facilities, and other public places.

Question. How about other points on your dairy program?

INCREASE ANTIDISEASE RESEARCH

Answer. Sixth, well, next, we ought to step up scientific research in the combating of livestock and crop diseases.

Take two instances—brucellosis (that is, Bang's Disease) and bovine tuberculosis—which have cost American farmers heavily. Fortunately, these scourges are on their way to elimination. But money spent for research in battling these and other diseases pays off tremendously for the American people as a whole. It helps to produce more income for the dairyman and more wealth for America.

Question. How about some other points in your dairy program?

PREVENT OLEO MISREPRESENTATION

Answer. Seventh, we must enforce the Nation's laws so as to prevent misrepresentation of artificial products which try to masquerade as natural dairy products—as whole milk or butter or ice cream. In other words, we want fair play in advertising and labeling, fair play not fraud and deception.

PERMIT WISCONSIN MILK IN EASTERN MILKSHEDS

Eighth, then, there ought to be a study of the restrictions which prevent milk from moving freely across State borders.

For example, Wisconsin milk can't move into many eastern markets, because of wholly artificial restrictions which have been built up against it. This whole subject ought to be studied, and progress ought to be made so that there is freer movement of milk throughout our country.

Ninth, the problem of harmful foreign dairy imports requires constant reexamination. Very often foreign farm products pour into this country and they don't nearly meet the high health standards which our American dairy products meet. It isn't fair to penalize the American dairyman who must spend a great deal to bring his products up to high health standards, while at the same time, foreign products with far lower standards and produced at much lower labor cost, can pour in.

STRENGTHEN FARMERS' CO-OPS

Question. That represents nine points, Senator WILEY. How about the 10th?

Answer. The 10th point is to strengthen the farmers' organizations, not weaken them. That means strengthening the Nation's farm cooperative system, strengthening its rural-electric co-ops, its phone co-ops. It means strengthening soil-conservation committees. These and other groups are, after all, helping the farmer to help himself.

SENATOR WILEY'S FIGHT FOR FARMERS' SOCIAL SECURITY

Question. That is certainly a significant 10-point program.

Incidentally, I know, Senator WILEY, that many other objectives for which you have fought for the farmer have now been realized, or are on their way to realization. For example, you have fought to help assure old-age pensions for farm operators—legislation which was enacted, and which now helps to eliminate fear of insecurity in the farmer's later years.

You have fought for improved rural health for our farmers, for better hospital and medical service for them, for more schools in the rural areas of America, for improved highways to bring the farmer's products to market. You have fought to help the farmer lower the accident rate on farms, and fought to secure amendments to the tax laws to assure the farmer a fair break.

REFUND FARMERS' GASOLINE TAX

Answer. Yes. For example, right now, I am trying to get refunds for the gasoline tax which the farmers pay. After all, that gas tax penalizes the farmer when he buys gasoline for his tractor and other farm machines. The Federal gasoline tax was intended as a highway tax. So, it isn't fair to soak the farmer with this tax when he is using the gasoline, not on the highways, but basically within the confines of his own farm.

CONCLUSION—HELPING DAIRYING HELPS ALL AMERICA

Question. Well, I know, Senator, that our listeners have been interested in your presentation of the dairy farmer's problems.

I know, too, that they will understand that in speaking for the dairyman, you are speaking for the American people as a whole, because, if the dairyman goes out of business—if he finds it necessary, for example, to auction off his farm—then it is not simply the dairyman who is hurt, but America generally.

Answer. That is absolutely right. I am, indeed, speaking for the health of America—health which is dependent on this great segment of farming. I am not asking, and the dairy farmer is not asking, for favoritism or privilege.

Any man who has ever worked on a busy dairy farm knows that if there is anyone in our population who really works his own way, who really relies upon himself, is willing to take his chances, it is the dairyman.

He is not asking for anything special—just for fair, decent treatment from his Government. And he asks for understanding from the American people generally.

I hope that in the comments which I have made, my listeners will find greater insight into the problems of this great industry of America.

Thanks very much for your kind attention. This is Wisconsin's senior Senator, ALEC WILEY, signing off.

Address by Thomas K. Finletter, Former Secretary of the Air Force

---

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 25, 1955

Mr. HUMPHREY. Mr. President, Thomas K. Finletter, one of the most able minds in the United States, has devoted intensive study to two propositions which at first seem mutually inconsistent, but, in actual fact, are very consistent indeed. The first is that the United States should have armed superiority. As Secretary of the Air Force, and in many special missions, he has worked tirelessly for the kind of Air force we need to assure the security of our Nation. He is probably the country's leading proponent of a strong air arm.

The second proposition to which Mr. Finletter has given great study is the proposition that this planet cannot survive another war, and that the only way to prevent another war is to achieve total and enforceable disarmament of all countries, enforced by the United Nations.

Finletter, an experienced international lawyer and a hard-headed executive, does not want to rely on paper promises. He does not expect an era of good will to dawn. He wants the kind of enforceable arrangement that will work even though evil men and evil-intentioned rulers exist in the world.

A week ago Secretary Finletter delivered a provocative address at Colgate University, in which he criticized the disarmament proposals now being considered. I consider his criticism so vitally important that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THOMAS K. FINLETTER, FORMER SECRETARY OF THE AIR FORCE, AT COLGATE UNIVERSITY, JULY 12, 1955

* * * * *

We are entering, I think, a phase in which disarmament will be an increasingly active subject of discussion among governments. The reason is the growing realization that hydrogen war simply must be prevented, and that it will not be prevented unless governments get more busy than they have been in working for disarmament.

Now the United States will enter these discussions with a well-defined program on disarmament. It is this program that I shall talk about today. For I believe that United States policy on disarmament is based on a premise which should not and will not be accepted by the people of the country. This premise is that it would be safe for the United States to destroy its atom bombs under an unenforceable system of disarmament—one which, since it would be unenforceable, would put faith in Russian and Chinese Communist promises.

I do not think it necessary to choose between trusting the Communists and having no policy for disarmament and peace. The policy of enforced disarmament which was the policy of the United States until supplanted recently by this unenforced policy would achieve all the results of the new unenforced idea and at the same time would not put us in the position of relying for our safety on Russian or Red Chinese good faith.

I shall now try to make clear the difference between an unenforced system of disarmament such as is now the policy of the United States Government and a system which would be enforced.

This unenforced policy was revealed in a release of documents at London in May of this year. You will remember that the United Nations Subcommittee on Disarmament was meeting this spring in London in sessions which were supposed to be secret. The Russians, though, made a flamboyant public release, through their Tass Agency, describing the policy they had been advocating in the secret sessions and pointing out to the world that they had now accepted practically all the proposals which the United States and the other Western countries had been making for the reduction and control of arms. And indeed, they had accepted most of the West's program. Only on the inspection service was there any substantial difference. And even on inspection the Russians had gone far, agreeing to international inspectors permanently stationed on Russian soil at control posts in the big ports, railway junctions, motor roads and airdromes, and agreeing also to allow international officials unhindered access to materials pertaining to national budget appropriations for military needs, and to be allowed to inspect all objects of control, whatever that means.

If the two sides want to reach agreement this Russian attitude and the as yet not fully defined Western position on inspection can be brought together. There, however, is the big question. Are we right in assuming that the Russians do want to make an agreement? And then there is the question, too, whether we ourselves are decided on the kind of agreement we would be willing to make.

The West also released its side of the case at London. The significant fact which came out of this release was that the United States had abandoned its old principle of insisting on a foolproof enforcement before it gave up any of its arms, and now was ready to disarm even of its atom power, in reliance on an unenforced arrangement, in reliance that is on Russian and Chinese Communist good faith. The West said at London that it would give up all its atom bombs in exchange for a promise from the Russians to give up all of theirs, provided that both sides would first reduce their conventional forces to certain levels, namely 1 to 1.5 million men each for Russia, Communist China, and the United States, 650,000 men each for the United Kingdom and France, and lower figures for the other countries on both sides of the Iron Curtain.

A preliminary point about these London proposals of the West is that even if we could assume that the Russians and Communist Chinese would live up to the letter of the agreement, the London plan would be a bad arrangement for the United States and the other Western countries. For under the London policy the West would give up all of its best weapon, its atomic power, and would allow the Russians and the Chinese to keep enough of their conventional forces to assure them military supremacy in Europe and Asia.

The Western proposals at London recognized that United States public opinion would not put up with the United States giving up its main weapon, its air-atomic power, in reliance on Soviet and Chinese Communist good faith. So they announced a new theory, or rather put new faith in an old theory, which is supposed to protect us against a breach of faith by the Russians or the Chinese. This is the so-called fire alarm principle based on an elaborate inspection system.

The fire alarm theory is this. If there are enough inspectors permanently on the soil of all countries, and if these inspectors have the right of access to all factories, installations, and other necessary places, they will be able to learn if any country violates the disarmament terms. If there is a violation the fire alarm will ring. Then the matter may be referred to the United Nations which may try to persuade the law-abiding states to go to war to compel the offending country to stop its violations, or if the UN fails to rise to the occasion, the law-abiding nations may go to war on their own initiative against

the offender. Or if they do not want to do that, they can start rearming. As a high State Department official put it recently, "any significant breach of the agreement would be reported immediately by the enforcement agency and remedial action could be taken by that agency, the Security Council, the General Assembly, or the other participating states, relying on collective action by national armed forces as a last resort."

Unfortunately this fire-alarm theory will not protect us. If we could get it without giving up our armaments, and above all without giving up our air-atomic power, it would be good to have it. It would be to our advantage to have an international inspection service. But it would be too high a price to pay for it to give up our air-atomic power.

Possibly if the fire alarm were perfect, and would report every fire, we might think of paying a high price for it. But even then I do not think we should give up our good right arm, our air atomic power and much of the rest of our military establishment for an inspection service which could be stopped at any moment at the will of the Communists.

But this is academic. No inspection service can assure us that we shall know what the Russians and the Chinese are doing, especially in the atomic field. The Russians now have a lot of fissionable material and the other ingredients that go into A- and H-bombs. If they want to they can hide large quantities of this material and even the bombs they now have in the vast spaces of Russia and China which would be beyond any finding under any inspection system.

The current western proposals for disarmament in short would have us destroy our A- and H-bombs and would leave the Russians and the Chinese with a great amount of atomic explosive and of completed atomic weapons, together with the means of delivering these weapons against the United States and the rest of the free world. This, plus the 3 million men allowed to the Russo-Chinese partnership and the additional forces which their satellites would have under the London proposals, would give world dominion to communism.

* * * * *

These then are my conclusions about the present disarmament policy of the United States and its Allies. I shall now add two prophesies about this policy.

No tinkering with it, no minor changes, in fact no changes less than scrapping the whole concept of giving up our arms under an unenforced arrangement, can make any disarmament safe for the United States and its friends.

And second, if we persist in the proposals we made at London, or any other disarmament plan based on the unenforceable principle, it will be rejected by public opinion in this country and by the Representatives of that opinion in the Congress.

The reason that no tinkering with the London proposals will do any good is that they are based on a premise which is inconsistent with the safety of the United States. That premise is that we can rely on Russian and Chinese promises in matters of the military security of our country. This is the inherent and fatal weakness of any system of unenforced disarming. I do not think that American opinion will agree to disarm under a system of that kind.

* * * * *

Let us now look at the policy of enforced disarmament. What is it? Why is it so objectionable that we dare not even try to realize it? And if we did, would it work—surely, probably, or not at all?

Briefly and oversimplified, the following is the essence of an enforced system. It starts with some negative propositions.

1. The guiding principle of an enforced system is that we will not give up our decisive weapon, our atomic-air, or the smallest part of it, except at the end of the last step in the development of an enforcement system which, when this last step is completed, will be able, practically and legally, to stop any lawbreaking state (and here we are thinking especially of Russia and Red China) from starting to rearm or from using any weapons which it may have successfully concealed.

Inherent in this proposition is the principle that until we do get such an enforced system into actual being we will build and keep an overwhelmingly strong United States atomic-air, and will not give it up in reliance on promises by the Russians, the Communist Chinese, or, indeed, anyone else.

At the same time it is realized that armed strength of itself cannot assure the peace; that we need something more than armed strength if we are to be assured that there will not be a hydrogen war; that with the fantastic increase in the destructiveness of weapons which has taken place in the last 10 years we must make it the top priority policy of the United States to prevent a major war, if we can; and that when we come right down to it, only by eliminating the weapons with which war is made will we prevent a major—and that means a hydrogen—war from happening.

* * * * *

2. Collective security cannot enforce a disarmament treaty. Collective security—that is, the making of war by the law-abiding states to suppress a lawbreaking state—will not work against major countries such as Russia.

3. Inspection is not enforcement. Inspection is the intelligence system—the G–2—which gets the facts but goes no further. It is the fire alarm, not the fire department.

4. The two pillars of any enforced system must be—

First, to have a U. N. military force strong enough to compel any lawbreaking state, including the largest, to stop any violation of the terms of the disarmament treaty.

And, second, since this U. N. force must be relatively small, the other pillar must be to have all countries disarm down to the level needed for domestic policing.

5. Finally, an enforced system will need effective international control, which will probably connote international operation, of all civilian aircraft over a certain size. The wide spread of fissionable material and fission and fusion bombs and the ability to conceal them have made civilian aircraft into potential military vehicles. And since they would carry hydrogen weapons they cannot be left uncontrolled.

Such a control of civilian aircraft would be practicable under an enforced system, although not under an unenforced system. * * *

This, in rough outline, is the kind of arrangement, the kind of invasion of our national privacy, we would have to put up with if we were to agree to an enforced system of disarmament. It would be a serious invasion. It would be acceptable to our American opinion only if the American people were convinced it was the only way, or the best way by which hydrogen war could be averted.

I believe that this is the fact, that only by an enforced system with all its disagreeable aspects can we prevent a major war with the new weapons. And I believe it is as plain as can be that anything less, any plan which relies on Russian or Chinese promises, or on an inspection system operating in the vast spaces of Russia and China, can never work.

Even an enforced system would have its time of travail in being born and in coming to maturity. But once accepted by the United States, it would, I believed, be accepted by our major allies. And once accepted by them it might be accepted by the Russians and their Chinese partners. If half of the current optimism about the desire of the Kremlin to cut down its armament expenses is true, it certainly will be accepted by the Soviets.

The real test is what the United States is willing to put up with in order to make a serious attack on the institution of war.

The two most serious hurdles in the enforced system are (1) the degree of disarmament—almost total, down to the forces needed for local policing and for U. N. contingents, and (2) the creation of a United Nations police force.

Curiously, the United States Government seems to have accepted the idea of almost total disarmament. As late as the London meeting this spring the United States Government announced that it hoped that the "armaments and armed forces of the powers will be further reduced to the levels strictly necessary for the maintenance of internal security and the fulfillment of the obligations of signatory states under the terms of the United Nations Charter." United States policy at London indeed went further. We said that we would immediately divest ourselves totally of our best weapon, our air-atomic force, while allowing the Russians and the Red Chinese to keep conventional forces, which is their best weapon, up to the impressive total of 3 million men, not including the satellites.

It is the U. N. police force, surprisingly, which bothers our officials. Ten years ago we agreed to help build a U. N. armed force, in article 43 of the U. N. Charter. We renewed this commitment in the uniting-for-peace resolution of November 1950. But earlier this year a high State Department official said that "in the present state of international affairs the creation of such an authority (a U. N. police force) does not appear to be feasible, certainly in the foreseeable future."

There is, though, one ray of encouragement in all this. If the United States Government is willing to swallow the bitter pill of total disarmament, and is objecting to an enforced system only because of the U. N. police force, it is possible that it will change its mind. For a U. N. police force would operate only against treaty breakers. Surely we have no reason to think that we would ever be in that class. * * *

However, the fact is that our national policy is now opposed to a U. N. police force and, therefore, to an enforced system of disarmament. * * *

I have said that I do not think that a first step of giving up our air-atomic power in exchange for a partial reduction in the conventional forces of the Russians and Chinese is a sensible step. * * *

We might make arrangements at Geneva, or later, for a continuing international committee at a high level to discuss disarmament. This is such a novel and vital subject that the United States representative on such a committee should be an official one step only below the President, that is, a Cabinet official; and Mr. Stassen has already been given this status by the President. * * *

This is not the first step I would prefer, but it would, I think, be helpful. The first step I would like to see would be more venturesome. It would be for the United States Government to abandon the idea that it knows for certain that the people of our country would not accept an enforced disarmament, including that objectionable U. N. police force and all the other disagreeable elements of such a system, and to put forward an enforceable plan in the normal disarmament discussions in the U. N. * * *

We cannot be sure what the response of the American people would be. Justice Brandeis said that "the irresistible is often only that which is not resisted." It may be that, in this matter of peace, the impossible is only that which we are too timid to try.

Arms Cuts and Curbs

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Arms Cuts and Curbs," written by Hanson W. Baldwin, and published in the New York Times of July 22, 1955. The article refers to the Geneva Conference.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARMS CUTS AND CURBS—A CRITIQUE ON PROPOSAL BY PRESIDENT FOR UNITED STATES AND SOVIET MUTUAL INSPECTIONS

(By Hanson W. Baldwin)

The President's dramatic arms inspection suggestion to the Russians in Geneva yesterday dealt primary with the effects—not the cause—of international tensions.

The Big Four conference was discussing the limitations of armaments, after having failed to agree on solution of the political and other problems that caused those armaments. But, as the President said, if measures, such as he suggested, could be taken, the danger of surprise attack might be reduced, "thus lessening danger and relaxing tensions," and in turn, perhaps, creating an improved atmosphere for the solution of political problems.

In effect, the President's program represented a modification of one part of the United States plan advanced in 1946 by Bernard M. Baurch for the international control of nuclear armaments and atomic energy. The Baruch plan was envisaged as a United Nations program, and there were many facets to it besides the inspection program, which was the heart of the President's proposal yesterday.

SOVIET ACCEPTANCE DOUBTED

The Russians rejected the Baruch proposals, including the sweeping inspection and enforcement provisions the plan contained, and there is no indication they will accept—or, indeed, can accept—the President's program.

The President suggested: (1) that the United States and Soviet Union exchange complete blueprints of their military establishments from beginning to end; (2) that the United States and Soviet Union provide each other with ample facilities for aerial reconnaissance and photography to make all the pictures we choose; and (3) that these measures would merely initiate further discussions looking toward a comprehensive and effective system of inspection and disarmament.

The brief and somewhat ambiguous nature of the President's proposal, and indeed the entire proceedings at Geneva to date, show quite clearly that the program advanced was idealistic, in the full sense of the word, rather than pragmatic. The President suggested a general idea as a starting point for future discussion, rather than a specific program for immediate action. The spirit of his suggestion is far more important than the details of it. As part of a psychological peace offensive of great importance, it will be hard for the Russians to match.

MANY DETAILS LACKING

But that very spirit, unless tempered, could lead to unwarranted hopes. The President spoke, for instance, of disarmament. There is no practical possibility of such a goal. Complete disarmament never has been achieved in history, unless enforced by a conqueror upon a conquered. The program offered in Geneva must be read against the background of history.

The President addressed himself primarily to the great obstacle upon which nearly all prior attempts at arms limitation and reduction have stumbled—inspection and enforcement. His program was merely a suggested beginning to guard against surprise attack. Since it was not explicit and would have to be spelled out in great detail before its assets and liabilities could be judged, present criticisms can be purely tentative.

A mutual exchange of blueprints of their military establishments between the United States and the Soviet Union undoubtedly would benefit the United States in a strictly intelligence and factual sense. For Moscow unquestionably knows more about United States military establishments than Washington knows about the Soviet Union's; this is an inescapable part of our form of government.

The word "blueprint" needs, of course, to be defined, but if it were interpreted in as sweeping a sense as the President seemed to use it, such an exchange probably would give the Russians technical information of greater value that the United States would receive. For there is not much doubt that the United States still has a qualitative technical edge in nuclear developments, aircraft, naval vessels, and so forth.

Would the Russians, for instance, be permitted to inspect the submarine *Nautilus*? Could they visit atomic-energy facilities, the Strategic Air Command, and other vital areas? There is not much doubt that there would be very great opposition in this country, as in the Soviet Union, to such an exchange.

Furthermore, unless the exchange was strictly limited and hence of very limited utility, it would be difficult, indeed, to do other than include nearly everything in both nations under the heading of "military establishments." Missiles need no landing strips for launching, and biological agents can be produced in small and easily hidden laboratories. Are such installations part of the data about "military establishments" that it was suggested should be exchanged?

OTHER QUESTIONS POSED

The same general problems confront the President's second point—the suggestion for mutual aerial reconnaissance and photography of each other's "military establishment." This might well have to mean if it is to mean much of anything, complete freedom by each side to fly over any and all parts of the other's nation, and its outlying military establishments.

And would the Soviet Union open up its military secrets to the United States unless Britain, France, and other western allies followed suit? Would the United States be content to look at the Soviet "military establishment" without similar inspection of the Red Chinese and the East European satellites' facilities?

The effectiveness of any aerial inspection system is, in any case, open to question. Aerial photographs, magnified and carefully interpreted by experts, can reveal military information of great importance. During World War II, for instance, British photo-interpreters discovered the first visual evidence of the German V-2 rocket from aerial photos made of Peenemunde, the German rocket experiment center.

However, if all the military installations in a country as large as the Soviet Union were to be photographed the physical job involved would be tremendous, and in any case much vital information could be concealed from the camera's eye. Aerial photographs could not reveal underground storage depots for nuclear weapons and camouflage and concealment could hide effectively even fairly extensive surface installations. Even the most extensive and elaborate aerial inspection systems could not be expected to be foolproof.

The problem of establishing a foolproof inspection system, given the present immense variety and quantity of military equipment, has been studied and restudied repeatedly since World War II. Most expert opinion is that no such foolproof inspection system can be devised. Something must be left to trust.

The President's goal, therefore, seems both lesser and greater than the establishment of a foolproof inspection system. In fact, he stated that "we have not as yet been able to discover any scientific or other inspection method which would make certain of the elimination of nuclear weapons."

The President, therefore, is merely suggesting on the one hand, some exploration of the possibility of increasing our guard against surprise attack but on the other hand he is frankly postulating even this hope on some degree of mutual trust and confidence.

Despite the new atmosphere of sweetness and light in Geneva this mutual trust and confidence does not exist. Soviet tactics have changed since Stalin's death, but in the light of record, the United States would risk its future if it put its confidence in the present Soviet leaders.

There is an equally important hurdle confronting the President's proposal. Our own fears and lack of confidence in the Soviet leaders are more than matched by the Soviet fears and lack of confidence in us. There is, however, a very great question as to whether or not the Communist hierarchy could permit the type of sweeping examination and inspection proposed and still retain its grip upon the Soviet Union. Open frontiers could lead to open minds—always the enemy of dictators.

Effect of Reciprocal Trade Act on Oil Imports

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. JOHNSON of Texas. Mr. President, it will be recalled that when the bill extending the reciprocal trade agreements program was before the Senate Finance Committee an amendment was added authorizing the President to restrict imports in a situation where the national security was threatened. The amendment was adopted by the Senate, and subsequently accepted by the House of Representatives.

That was only a short time ago, but I am happy to say that the amendment is having the intended effect so far as imports of petroleum, that vitally important resource, are concerned.

A report from the Austin Bureau of the Dallas Morning News carries the information that Gen. Ernest O. Thompson, member of the Texas Railroad Commission and an internationally recognized authority on the oil industry, says the legislation already is having a wholesome effect on petroleum imports.

I ask unanimous consent that the news story published in the Dallas News be inserted in the Appendix of the REC-

ORD in order that all Senators may benefit from General Thompson's report.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUSTIN, TEX.—Congress' act permitting the President to restrict imports when the national security is threatened already is having a wholesome effect on oil imports, a Texas official said Tuesday.

Ernest O. Thompson, railroad commissioner, noted that imports recently have shown a decline.

"The legislation has had a wholesome effect," said Thompson, just back from the World Petroleum Congress in Rome. "I think it will continue to have a wholesome effect."

While some domestic producers believe greater restrictions should be imposed, Thompson said he expects the threat of Presidential action will help to keep imports in check.

The commission next Tuesday will hold its first proration hearing in two months.

"There seems to be no great optimism nor any great gloom" for Texas producers at this point, said Thompson. He noted that "phenomenal sales" of gasoline have reduced stocks and that crude oil supplies are 2 percent lower than 1954, as of July 2.

"There's plenty of oil and gasoline, so the consumer should be happy," Thompson commented. "We're really in a period of surplus, yet drilling activity is high. We need to be careful (regulating production) in the last half of the year."

Social Security

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. SMITH of Kansas. Mr. Speaker, it seems that every session of the Congress, either Republican or Democrat controlled, brings new additions to the so-called social-security law. The House of Representatives last week added some 2½ million more persons to the social-security rolls. If this House bill becomes law, all self-employed persons except doctors will be included.

Modern society recognizes the fact that we must properly and adequately take care of fellow citizens in need of help and assistance. I know full well the day of the poorhouse under the hill has gone and properly so.

Certainly the aims of social security are admirable, but too many still do not realize how the costs are to be paid. It is not self-supporting or sustaining. There is at least a deficit of 11 to 12 billion at present. Who will eventually have to pay for all this so-called security? The answer is simple: Oncoming generations.

Most people know that they should look carefully for the fine print on an insurance policy, but too many citizens do not look for the fine print in this so-called social-security law. It is mostly "social" and has very little guaranteed security.

It is well to remember that the Government does not create wealth; it only takes away. I believe there are still millions of Americans who prefer to handle their own personal budget and buy their own insurance rather than to be managed by bureaucrats. Whenever a Government undertakes to redistribute wealth, the benefits generally go down rather than up. In a Republic of free men, so-called free riders are not conducive to greater incentive efforts. "Social security" has a siren voice, but no one ever proclaims that it helps to increase productivity.

This Government was designed, set up, and paid for by our ancestors' blood, sweat, and tears. They set out to provide justice, domestic tranquillity, common defense—of American shores—the general welfare—not welfare of individuals—and to secure liberty. This new social-security law places by compulsion, involuntary tax slavery upon all self-employed persons whose net earnings total more than $400 a year, including lawyers, dentists, architects, engineers, accountants, funeral directors, osteopaths, chiropractors, veterinarians, optometrists, ministers, and farmers. This is nothing more nor less than involuntary tax slavery through a device called compulsory social security.

When we buy private insurance, either life, accident, health, hospitalization, or retirement, the price tag is clearly on the package. We just know how many dollars it will cost. But in this compulsory Government social security, the true cost is hidden—and will have to be paid by future generations—and the benefits paid in highly inflated dollars. The price we have to pay can lead to a lower standard of living, regimentation, and loss of more of our freedom.

This compulsory social security program is a most distasteful program because there are still millions of Americans who want to take a calculated risk—who refuse to barter incentive for a dole. Who prefer the risks of freedom to a guaranteed existence with a chain around their neck and above all they will not trade self-respecting initiative for a doubtful handout.

In our reading of history several facts always stand out in bold relief. This is particularly true when we get into the area of "social reforms" or a new approach to social progress. Many of the best international social reforms have become mere instruments of oppression to the whole of society. And in the end the individual sought to be helped becomes the mere tool of some all-powerful minority.

Just remember that European socialism was transformed into an autocratic, despotic, nationalistic socialism of Hitler and Mussolini, and that the idealistic communism from the intellectual teachings of Karl Marx, Lenin, and Trotsky finally took the form of present Soviet totalitarianism. All resulted in the enslavement of the individual and his government became his complete master.

Last week there was published an editorial in one of New York's newspapers. This editorial was inspiring because we often think that the large city papers do not see the picture quite as clearly as the less congested areas. This article lauds Representative STUYVESANT WAINWRIGHT who had the courage to vote against this new social security law.

Representative WAINWRIGHT—who is opposed to social security as such—was honest in his vote, not because he does not believe in helping those who need it but because he knew it was fraudulent and deceitful in approach. It was not in the best interests of those who deserve better treatment from their Government.

I commend this editorial:

[From Newsday of July 21, 1955]

A VOTE AGAINST MOTHER

Voting against an extension of social security coverage is like voting against mother. It isn't done.

Representative STUYVESANT WAINWRIGHT did it, though, for which he rates an awe-inspired gaze and a vote of thanks. Only 30 Congressmen joined him while 372 opposed him, but WAINWRIGHT was still right.

The bill would lower the retirement age for women from 65 to 62, jack up the present contribution from 4 to 4½ percent, and give benefits to disabled persons at the age of 50.

Like WAINWRIGHT, we are all for social security, but this bill did not deserve passage. It would cost $2.5 billion, yet no hearings were held by congressional committees. Only 40 minutes of debate were allowed.

In addition, as WAINWRIGHT said, women are given a special and unwarranted advantage. They retire only a few months earlier than men, not the 3 years the bill presumes. They live, on the average, 5 years longer than men so that, if anything, men's retirement age should be reduced rather than women's.

The bill passed the House so easily because it is not expected to reach the Senate this session. Congressmen could vote for women without risking a dime. We're glad WAINWRIGHT had the courage to say no.

Real Help for the Seashore

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. HAND. Mr. Speaker, on July 15, 1955, President Eisenhower signed into law the so-called public works appropriation bill. Included in this bill is $906,000 for the city of Atlantic City, $67,000 for Ocean City, and $60,000 for Cape May. This money is now being made available for the work actually done by these three cities in protective work against beach erosion, and will undoubtedly be followed by further appropriations as the work progresses.

It is also encouraging to remember that other seashore cities similarly affected may, by undertaking cooperative studies, eventually share in this same program.

The much larger amount which goes to Atlantic City is, of course, explained by the fact that their project is much the larger, and further by the fact that the entire beach at Atlantic City is publicly owned, which is not so either in Ocean City or Cape May.

The final successful conclusion resulting in these substantial benefits is the

culmination of a 10-year fight on my part to get the Federal Government to recognize its responsibility to our coastal areas as it has so long done in other areas of the country.

The authorization legislation for this purpose was passed last year, and on July 30, 1954, I made a statement to the House in which I said:

We have plowed the long furrow and we seem to be reaching the end of it. This is of the utmost significance to the entire State, because the seashore resorts of our area, entertaining millions from all over the world, are literally a billion-dollar industry in our New Jersey economy.

In my successful efforts to get funds actually appropriated, I testified before my own Committee on Appropriations this year and said in part as follows:

These high ratios are partly because of the values to be protected. The assessed value of real estate in Atlantic City is close to $90 million; in Ocean City it is more than $20 million; and in Cape May in excess of $6 million. The true values will at least double these assessed values. The permanent population of Atlantic City is 65,000, but it is estimated that it entertains 10 million visitors during the course of a year, from every State in the Union.

The protection afforded therefore is not local. Congress has recognized the value of these resort areas to the national health and welfare, and what we are protecting are recreational areas of great national value, and not localities.

One further word in closing. We appropropriate money, and quite properly, for navigation; for the benefit of shipping interests, which in some areas is the lifeblood of the community. We likewise protect farmlands from flooding, because agriculture is the lifeblood of that community. Recreation in New Jersey is a significant part of the lifeblood, not only of our communities, but of the State. Despite the fact that New Jersey is the sixth most important manufacturing State in the Union and a great agricultural State, its resort and recreational industry is its greatest producer of gross revenues, and is valued at well over a billion dollars a year. All of this would be lost without adequate and properly protected beaches.

Mr. Chairman, New Jersey pays a very high share of the total Federal revenues and seldom is found before this committee for any appropriation to it. I am sure that you will agree that this comparatively small amount of Federal aid, recognized by the 79th Congress, duly authorized by the 83d Congress, and now before you with the approval of the Bureau of the Budget, is amply justified.

I am very happy to have been instrumental in obtaining such a substantial amount of money for our seashore areas which, in the long run, will help to protect our beaches and will substantially relieve the local tax burden in doing so.

Mr. Speaker, I am appending an editorial appearing recently in the Ocean City Sentinel-Ledger, Ocean City, N. J., and for their kind words, I am very grateful.

The editorial follows:

CONGRESSMAN HAND WINS ANOTHER ROUND

As the gory pugilist was supposed to have said, "It was a tough fight, Mom, but I won." That's about the way it seemed when word came from Congressman T. MILLET HAND late last week that the House Committee on Appropriations has approved funds totaling more than $1 million for South Jersey beach protection work, including $67,000 for Ocean City.

The business of persuading Congressmen that Uncle Sam has some financial responsibilities in keeping the seashore a fit place for millions of bathing vacationists has been in progress for at least 15 years, ever since the ocean began making noticeably serious inroads on bathing beaches here and in neighboring resorts.

Action by the House committee is seen here as the culmination of a long wait for some Federal participation.

The wheels sometimes grind very slowly down in Washington. After what seemed an eternity, the 79th Congress conceded that seashore cities were entitled to some Federal aid, but that was as as it went. Conceding a point and providing money to back it up turned out to be two different things. It wasn't until 1954 that the 83d Congress moved ahead to the point where it prescribed the conditions under which it would grant such aid. Again, without an appropriation.

Now, according to Representative HAND, the money is definitely set up in an omnibus bill coverying a myriad of public works projects, and it is believed to have excellent chance of passage, at least in the House. Which brings up another question of whether the Senate will concur.

At any rate, the outlook for genuine Federal beach erosion assistance is brighter than it ever has been before. And Ocean City owes some words of thanks to a diligent Congressman HAND, who has been fighting for just such recognition for his district a good many years.

H. R. 9 and H. R. 10

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I should like to include a statement made before the Ways and Means Committee by Hon. George J. Burger, vice president of the National Federation of Independent Business.

Mr. Burger, it seems to me, has expressed a position which may conceivably hold at least, a partial solution to the perplexing problems faced by independent self-employed people in providing a measure of retirement security for themselves while keeping alive the system of business opportunity which characterizes this Nation.

The statement follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, WASHINGTON, D. C., BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, JUNE 28, 1955, SUBJECT: H. R. 9 AND H. R. 10

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740 Washington Building, Washington, D. C. Our national headquarters are located in Burlingame, Calif. We also maintain division offices at New York, Cincinnati, and Chicago.

It must be understood by members of the committee that no officer or group of officers is permitted to speak for the federation as to its position on any legislative or economic problems unless so directed by a nationwide poll of our members. The entire membership is polled and the results of these polls give the executive officers the authority to act in behalf of the members.

For the information of the committee, we have in the field approximately 200 or more sales representatives who are in personal daily contact with small business nationwide. Through this we are able to get the factual information from the grassroots.

The membership of the federation, all individual voting members, comprises independent business and professional men. Of course this includes doctors, lawyers, accountants, civil engineers, etc., and all as mentioned above are classed as self-employed. I myself have been self-employed for over a quarter of a century and there is no way that I, like many thousands of others, could build up a reserve for retirement purposes, except through private investment.

I think that the proposals in the bills being considered here today are fair and just, that they present a commonsense approach to the problem, and that if such legislation was approved it might for the time being result in a slight loss of revenue to the Government, but on the other hand, it could produce savings in many ways both to the Nation and to the individual States.

Professional men and self-employed persons having the privilige under the law to postpone paying taxes on a limited amount of money deducted from their taxable income each year and put into a retirement fund, would be subject to the tax when the pension benefit was received.

I agree with the statement of Congressman KEOGH where it is reported in the press that he maintains: "That the losses would be moderate and only temporary, because the money would be taxable when received as pensions."

I do know in my travels throughout the Nation and in discussion of matters of this kind, pension and retirement funds, the self-employed often remark: "Well, if I was working for a corporation for the years I have spent in my own business, I would find myself at the retirement age not alone receiving the benefits through social security, but I would in most cases receive retirement benefits from my employment over the years."

The trend of the times it seems is to make provisions for faithful and conscientious employment, which is typified in some degree through the actions of organized labor insisting on contract arrangements for the people they represent, through a guaranteed annual wage and other provisions.

You will hear the present-day youth, when they go into the commercial world remark, "Why should I open up my own business when I can get a job with some corporation and build up over the years a retirement fund." Surely many of the States and the Nation itself provide for retirement funds after years of service.

Mr. Chairman, the remarks I am making on the overall legislation are my personal views, but they may be found to be shared by many in the federation membership which would come under the category benefited by the legislation proposed in H. R. 9 and H. R. 10.

Finally, Mr. Chairman, the sponsors of this legislation, namely Congressmen JENKINS and KEOGH, are to be complimented on taking a very forward step, and more important, that the action is bipartisan, which should carry tremendous importance with the full Committee on Ways and Means, and the Congress of the United States.

We intend to poll our nationwide membership on these two bills through our official publication, the Mandate, with which Members of Congress are well acquainted, and I would request the privilege of having the results of that poll made a part of the record of the hearings on these bills.

Thank you for the opportunity of appearing in personal support of the legislation.

Submarine "Seawolf"

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. COLE. Mr. Speaker, on July 21, 1955, at the yard of the Electric Boat division of General Dynamics Corp., a pioneer in Marine construction was launched, the submarine *Seawolf*, the second nuclear-powered vessel in our Nation's history. I include as extension of my remarks the speeches made on that occasion, and data concerning the *Seawolf* and the christening ceremony:

ADDRESS BY JOHN JAY HOPKINS, CHAIRMAN AND PRESIDENT, GENERAL DYNAMICS CORP.

Mrs. Cole, Secretary Thomas, Commissioner Strauss, Mr. McCune, distinguished guests, ladies and gentlemen, we are delighted to welcome you to the Electric Boat Division of General Dynamics Corp., and to the launching of the United States Navy's second nuclear-powered vessel, the submarine *Seawolf*.

It is our pleasure, on this happy occasion, to greet many of you not only as honored guests in your own right, but as honorable representatives of the Government of the United States, and of our friendly allies, the peoples of Canada, Colombia, France, Italy, Peru, and Japan.

It is our privilege to extend greetings of still deeper feeling to those of you who in your capacity of leadership represent here today the United States Navy, the United States Atomic Energy Commission, the General Electric Co., and all those hundreds of other American organizations whose people have poured their minds and hearts and hopes into this great and revolutionary ship.

The atomic *Seawolf*, as you may know, will not be the first submarine to bear that name. It will be the third. I take particular pleasure, therefore, in saluting our very special guests: Capt. Henry M. Jensen, commanding officer of the first *Seawolf*, commissioned 42 years ago; Capt. R. B. Lynch and Rear Adm. Royce L. Gross, two of the commanding officers of the second *Seawolf* during World War II; and Comdr. Richard Laning, the prospective commanding officer of the third, the atomic, *Seawolf*.

Thus, the *Seawolf* of today is bound to her predecessors by invisible filaments of Navy tradition and achievement. But, like her sister ship, the famous atomic-powered *Nautilus*, the first vessel in world history to be propelled by the energy of atoms, she documents anew, not on paper, but in steel, that passionate belief in progress and improvement which is the wellspring of our national strength.

I am confident that vessels of tomorrow, the products of the minds and hands of scientists and engineers and craftsmen yet unborn and powered perhaps by engines utilizing processes of controlled atomic fusion, will have awesome attributes of strength and speed and dimension to dwarf even this historic ship.

Surely the turning propellers that drive the *Seawolf* deep under the sea and far, must bring home again to all the world astounding proof that cosmic forces can be domesticated to man's common needs.

Yet, in the elation of this moment, I recall the memorable phrase of the Spanish philosopher Unamuno that true science teaches us above all "to doubt and to be ignorant."

We must beware then in all science and industry, as in shipbuilding, of terminal thinking—of a happy contentment, whether through apathy or timidity or guile, with limited attainments.

In the struggle against even the possibility of an atomic status quo as insurance against the stultifying influence of terminal thinking and as evidence of our intent to extend the frontiers of scientific knowledge under the sea, in the air, and in space beyond—we will dedicate before the year's end what we believe to be the first privately financed laboratory in the world, devoted primarily to basic nuclear research. In the struggle for a massive technological breakthrough on all nuclear fronts, we have recently enlisted many of the world's great scientific minds among them Dr. Hans Bethe, Dr. Charles Critchfield, Dr. Frederic De Hoffmann, Dr. Joseph Kennedy, Dr. Frederick Seitz, Dr. Edward Teller, and Dr. John Wheeler.

The dedication of nuclear energy to constructive, creative purposes—now shortly to be demonstrated to the world for a second time in the *Seawolf*—must benefit all men, everywhere, on every continent, and in every economic and moral clime.

Indeed, the power embodied here—so sinister to felons, so happily ominous to friends—serves doubly in the interest of humanity. For the *Seawolf* epitomizes the dual destiny of the atom: To deter all men and all nations from the folly of atomic destruction, and to unite all men and all nations in the wisdom of atomic creation.

To me, the *Seawolf* is "atoms for peace."

HARNESSING A DREAM

(By Francis K. McCune, vice president and general manager, atomic products division, General Electric Co.)

The atomic age began on July 16, 1945, at 5:30 a. m., mountain war time. There, on a stretch of desert about 50 miles from Alamogordo, N. Mex., the energy locked within the atom was released in a burst of flame such as the world had never seen.

We have come a long way since then. Here, at Groton, Conn., only 10 short years after that history-making event, we are witnessing a practical, useful, and highly significant application of that awesome energy.

Today, we launch the second of two great undersea boats to be driven by the energy of the atom. This is phase two in the Navy's well-planned and far-sighted nuclear submarine program * * * and a real victory in the development of the atomic Navy of the future.

Atomic submarines, I am told, are the answer to a submariner's prayer. For—because of their nuclear engines—they can travel faster and farther under water than any other type of submarine in operation today, anywhere in the world.

The reactor going into the *Seawolf* operates on an entirely different concept from its predecessor. It is a second step in the rapid development and improvement of nuclear engines for naval propulsion. The next reactor—on which we are already working—will be superior to this one. This is progress.

To General Electric, the *Seawolf* signifies another in a long list of contributions to the science of ship propulsion. Almost 45 years ago, W. L. R. Emmet, a graduate of the United States Naval Academy who later joined General Electric, produced the Navy's first turbine-electric drive for the collier *Jupiter*. This was so successful that 5 years later the same principle was applied in a capital ship, the *New Mexico*—a ship that, in its day, was as modern in concept as our *Seawolf* is today. It is interesting to note that the *Jupiter*—with its same turbine-electric drive—later became the *Langley*, the Navy's first aircraft carrier.

Moving rapidly across the years, between 1933 and 1937, major technological contributions were made in the field of naval propulsion—advances that Charles Edison, then Assistant Secretary of the Navy, characterized as the greatest single contribution in a generation.

I would like to emphasize one thing at this point. Our long association with the Navy bears out the importance of teamwork in the creation and application of new ideas. No one organization can do the whole job. Rather, progress depends upon a cooperative effort with all elements aiming at a common objective or goal. And, certainly the *Seawolf* is no exception. Together, working with one aim in mind, a team—consisting of the Navy, the AEC, General Dynamics, and General Electric—produced this strikingly advanced nuclear submarine.

God willing, we will never have to measure the impact of military atomic propulsion in action. But one thing is certain: The mighty atomic Navy of the future will be the bulwark of our defense * * * a sturdy pillar of our freedom.

And to those who have worked so hard and so long to make this atomic dream a reality, and believed when others refused to believe, this is a dramatic victory: The beginning of significant practical application of the energy of the atom. But let me hastily add that, as these men well know, the most startling thing in the atomic field has been the tremendous speed with which the dream of yesterday becomes the commonplace fact of today * * * and the ancient history of tomorrow.

Already, these men, the many hands who have made the *Seawolf* possible, are turning their efforts to even greater accomplishments, aware, now, that it is possible to create progress. For, they have done it.

REMARKS BY LEWIS L. STRAUSS, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION

It is a privilege to be here today on this history-making occasion.

The launching of the *Seawolf* marks another important achievement in the development of atomic power. It signifies—as did her proud predecessor, the *Nautilus*—the leadership and determination of American democracy and free enterprise to advance the day when atomic power will greatly enrich our lives and the lives of peoples everywhere.

Work on the powerplants for the *Seawolf* and *Nautilus* was started at about the same time as parallel and competitive efforts, using reactor designs of marked difference. The *Nautilus* uses a reactor operation with low velocity neutrons, and the heat is removed by water under high pressure. On the other hand, the *Seawolf* reactor operates with neutrons of higher velocities, and liquid metal is the medium of heat transfer.

In the beginning no one could be certain of the success of either attempt, since atomic power was then still unproven; it was a great and very bold adventure.

I need not tell you how handsomely the *Nautilus* performed at sea under all conditions.

Today, I am happy to be able to announce that the land-based prototype of the atomic powerplant which will be used in this great new submarine also has operated most impressively.

Beginning on June 6, that prototype, located at West Milton, N. Y., operated, at full power, long enough to have propelled the *Seawolf* on a 2,250-mile, nonstop trip, fully submerged. That represents the equivalent of an underwater voyage from St. Johns, Newfoundland, to Dover, England. This, I am told, compares to 4 hours at full power as the qualifying time for new, diesel-powered submarines.

This prototype of the *Seawolf* powerplant has achieved further renown. On Monday

of this week at West Milton, I had the privilege of throwing the switch which sent thousands of kilowatts of power surging into transmission lines to serve homes, farms, and industries of upper New York State.

Who can fail to be enthused at these accomplishments and the visions they unfold for the future?

In a little more than 5 years, we have established the success of two different types of atomic energy reactors as propulsion systems for submarines, and this achievement was due neither to accident nor good luck. It is the result of hard work on the part of many skilled, devoted, and courageous people.

Outstanding among those entitled to take deep personal pride in todays event is my friend and colleague, Adm. H. G. Rickover.

The Electric Boat Division of General Dynamics Corp. and the General Electric Co. merit particular commendation and we in the Commission are continuously grateful for the splendid cooperation we have received in this, as well as many other enterprises, from our great Navy, and especially its distinguished Secretary, the Honorable Charles S. Thomas.

We build submarines and other weapons of defense because we have no other prudent alternative. Our security and our freedom depend upon them.

Nevertheless, such military weapons as the *Nautilus* and the *Seawolf* return to us very large, nonmilitary dividends — dividends which may in fact exceed the cost.

For the atomic powerplant so developed provides us with valuable new knowledge with which to advance the peaceful applications of atomic energy, especially in the field of power.

The Atomic Energy Commission and the men who have developed the *Seawolf* do not regard her only as a weapon. She is one of the significant milestones on the way to a great goal—the goal of progress, plenty, and of lasting peace.

INVOCATION, LT. COMDR. PAUL F. BRADLEY, (CHC.), UNITED STATES NAVY

Almighty God, it would be a foolish thing for us to be other than simple and brief in the epochal circumstances under which we are here assembled. We wish simply to ask Thy blessing on forces which we do not yet fully comprehend. It is an hour for prayer not rhetoric, for humility not hauteur.

We have seen the power of Thy creation in our own days, O God. We have felt the earth shrug and have seen whole cities shudder and slip into rubble. We have seen lightning leap from angry skies to incinerate man and his works. We have seen bacteria, so minute as to challenge the most discerning lens, snowball into pain and plague and death. We have heard the volcano rumble and seen it spew out destruction. We have seen the forces of nature caught in test tubes and have seen her metals hammered into blades and barrels and bombs in man's own plan and pattern of pain.

Today, O God, we ask you to look down on us with patience and compassion. This craft—this *Seawolf*, this capsule contrived of steel and secret structure, holds within its bulkheads the most awful culmination that man has yet derived from the potentials that your creative hand pressed into the bins and closets of nature.

We are awed and chastened, O God—but we are not frightened, for is it not true that none of Thy handiworks is as great as Thee? We are not frightened so long as we dedicate this craft and the fearful forces that propel it to Thy glory, to the protections of man's rights—to peace for all men.

And so again with the simplicity that this occasion elicits, we acknowledge that all Thy gifts are good—and only by man's will, can be bent to man's sorrow. Even the water and the air and earth and fire can be distorted and disastrous. * * * The nightshade and the lovely poppy can bless or blight, the mind can love or hate.

Therefore, reverently we ask Thee, O God, of both the atom's laws and man's reason, to bless and guide them to life more abundant. * * * To peace—because the awful alternative is the end of all life. Amen.

A REPORT OF NAVAL PROGRESS IN NUCLEAR PROPULSION

(Address by Hon. Charles S. Thomas, Secretary of the Navy)

Mrs. Cole, President Hopkins, Governor Ribicoff, distinguished guests, ladies, and gentlemen, only 10 years have passed since the power of the atom was first unlocked. Today, you are witnessing the launching of the second known nuclear propulsion plant in the entire world.

This launching follows by only 6 months the commissioning of the first nuclear-powered ship, the *Nautilus*. Few people can appreciate the magnitude of these twin miracles of design and production. History can ciate no similar achievement in so short a period of time as the development and construction of the submarines *Seawolf* and the *Nautilus*.

The launching of this ship has not been a naval enterprise alone. It had been a combined Atomic Energy Commission and Navy enterprise, encouraged by the enthusiasm and approval of the Joint Congressional Committee for Atomic Energy. The Atomic Energy Commissioners, under the outstanding inspirational leadership of Chairman Strauss, are to be commended for their unstinting support of this and other naval projects. Tribute is also due to the Navy's Bureau of Ships and particularly to Admiral Rickover of that Bureau whose vision, tenacity, and zeal contributed so much to this accomplishment. And great credit must go to the General Electric Co. who constructed the nuclear plant, as well as to the Electric Boat Division of the General Dynamics Corp., who built the *Seawolf*.

If, 10 years ago, one would have predicted that the end of the next decade would see operating nuclear power plants, he would have been thought unrealistic, to say the least. Great progress has been made in an incredibly short time. In spite of the fact that nuclear propulsion is only in its infancy. Americans can take pride that three nuclear powerplants are operational in the United States today. And of course, we are extremely proud that all three of these are for naval use.

As we look at the *Seawolf*, let us briefly examine the present status of the Navy's nuclear propulsion program. As you know, the *Nautilus* if now operating and its performance has exceeded our expectations. Today, the *Seawolf* is launched. In addition, Congress authorized the building last year of two additional nuclear submarines.

The production of nuclear-powered vessels by the Navy has come of age. This year, Congress has approved the Navy's plans to build four more nuclear powered submarines. This means that this fiscal year the Navy will have eight nuclear-powered submarines in being or under construction and, in rapid succession thereafter, many others. Of course, our future plans include nuclear-powered vessels of other types. Development of nuclear propulsion for larger naval vessels is well advanced, and the Atomic Energy Commission will soon start construction of a land-based prototype at its National Reactor Testing Station in Idaho.

To insure the earliest and maximum exploitation of nuclear power for surface ships and naval aircraft, I have recently appointed with Admiral Strauss' concurrence, the Assistant Secretary of the Navy for Air, Mr. James H. Smith, Jr., and Rear Adm. Arleigh A. Burke, the incoming Chief of Naval Operations, to work with the Atomic Energy Commission in the accelerated adoption of nuclear power.

To show you the Navy's avid interest in nuclear propulsion, the Navy has seven different nuclear reactor projects. The nuclear plants of the *Nautilus* and the *Seawolf* were purposely made competitive, partly to determine which is the better power plant and partly to exploit the rapidly advancing technology of nuclear propulsion. The objective of these seven projects is to develop a family of reactors which will be applicable not only to submarines but to surface ships. They will lead to savings in costs, refinements in construction, saving in the expenditures of fissionable material, and incidentally, the faster realization of nuclear power for American farms, homes and factories.

The Navy is also giving special attention to the nuclear propulsion of naval aircraft. This field has unique application to the Navy's mission. In particular, careful attention is being given to nuclear powered seaplanes. Promise in this field is great indeed. Much of the way in this field has been paved by the efforts of the Atomic Energy Commission and the United States Air Force. Their years of research and effort had made possible the Navy's effort in recent months to increase its contribution to the aircraft nuclear propulsion program. Our naval program is being fully coordinated with the Air Force and is designed to complement that effort.

To keep pace with this accelerated progrom of nuclear propulsion, both construction and research, increasing emphasis has been given to broadening and expanding the educational and experience levels of the Navy's personnel, naval and civilian. A letter of instruction emphasizing and profound impact of nuclear power on the Navy and the need to attract and train our best officers and men to participate in this accelerated program was sent by me to every ship and station in the fleet in April. A stepped-up program of training selected officers in nuclear engineering was comenced last year. The training of production and maintenance personnel in naval and private shipyards has also been accelerated. The point has been reached where it is desirable to further expand the base for constructing nuclear powered ships. This has been done and this year two naval shipyards will build nuclear powered submarines for the first time.

Thus, the *Seawolf* is symbolic of the accelerating importance of nuclear power in the American Navy. We have crossed the threshold of a period of change which promises to alter the fact of the Navy even more than did the changes of sail to steam and of wood to steel combined. Submarines with nuclear power are a new and modern weapon. They have a submerged endurance and versatility heretofore unknown. In addition to the traditional role of destroying enemy ships, the nuclear powered submarine may lay mines, may furnish early warning of threats to our homeland or to ships of our task forces, and may track and kill the enemy's submarines. Nuclear submarines may be used for the supply and replenishment of the new jet seaplanes, perhaps nuclear powered ones, that I mentioned. Even more imortant, the nuclear submarine has a very promising role as a component of a missile launching system. Equipped with missiles, the submarine can silently emerge from the depths of the ocean and send missiles of great destruction great distances with deadly accuracy as the newest weapons system in our retaliatory arsenal.

The Navy is very proud of its pioneering in the nuclear propulsion field. We are glad

that a requirement for a naval ship such as the *Seawolf* motivated the generation of a new body of technical knowledge which will have extensive peaceful applications.

The President's farsighted program to demonstrate what the peaceful use of atomic energy can do in the benefit of mankind is an inspiration to all of us. The Navy is proud that its contribution goes beyond military purposes and aids in the achievement of our national goal of peace. What has already been learned and what will be learned from the operation of the *Nautilus'* and *Seawolf's* powerplants has already been most helpful for atomic power in American industry and commerce. The successful development of nuclear propulsion systems for naval ships has solved numerous problems which industry and commerce can adopt: new metals, new controls, new materials, new safety devices, new processes, new pumps and new instruments.

These facts, I think, indicate that the Navy has been pressing forward in the field of atomic energy in a bold and aggressive manner. We shall continue to push ahead as rapidly as is consistent with industry's ability to support our program, as the availability of trained manpower, building facilities, and technical know-how grows, and with prudent concern for the taxpayer's funds and the rapidly developing state of nuclear science.

This launching is also symbolic of the new American Navy of which the *Seawolf* is a small but important segment. Throughout our fleets, accent is being given to the rapid adoption of nuclear propulsion to submarines, surface ships, and aircraft. Fresh emphasis is being given to the concept of using ships as mobile bases—moving airbases, missile launching bases—bases upon which our national power can be projected wherever necessary. Jet seaplanes are being developed that can range the oceans of the world. Guided missle ships are replacing conventional ships, and missiles are replacing guns themselves. A stable of atomic weapons, air to air, air to ground, and surface to surface, is being fully assimilated.

It is, I can assure you, a new Navy which the *Seawolf* joins.

"SEAWOLF" LAUNCHING HIGHLIGHTS

Mrs. W. Sterling Cole, who will christen the new atomic submarine *Seawolf* today, July 21, will be making her second appearance on the sponsor's platform at Electric Boat. On August 8, 1943, she launched the submarine U. S. S. *Bluegill*. That submarine was commanded by her brother-in-law, Lt. Comdr. Eric L. Barr, Jr., United States Navy. Now a retired captain, Barr is security director at the Electric Boat division.

Mrs. Cole has two sons serving in the Navy. Lt. (jg) W. S. Cole, Jr., United States Navy, is attached to the New London-based submarine U. S. S. *Sea Robin*. Ens. Thomas Cole is a gunnery officer serving in the heavy cruiser U. S. S. *Newport News*. Mrs. Cole's third son, David, a recent high school graduate, will begin an agricultural career at Cornell University in the fall.

Mrs. Cole's husband, Representative W. STERLING COLE, Republican, New York, is a member of the Joint Congressional committee on Atomic Energy and a former committee chairman. He played an important part in the development of the Navy's atomic submarine program. He will ride the *Seawolf* down the ways.

The U. S. S. *Seawolf* SS197, for which the Navy's newest atomic submarine is named, was one of the first American submarines to seek out the enemy in World War II. Its record of 18 vessels sunk for a total of 71,609 tons during 15 patrols was one of the best established by a United States submarine. She won two Navy unit citations.

Two former shipmates on the World War II *Seawolf*, Royce L. Gross and Lucien T. Rajotte, have been working on the new *Seawolf* since its keel was laid. Gross is inspection manager at Electric Boat and Rajotte is a first class pipefitter.

The new *Seawolf*, is the third submarine in the United States Navy to be named *Seawolf*. The first *Seawolf* was authorized on March 3, 1909, but her name was changed to the *H–1* before she was commissioned on December 1, 1913. The second *Seawolf*, SS197, was commissioned on December 1, 1939.

The *Seawolf* will be able to steam submerged at speeds in excess of 20 knots. Because it is powered with a nuclear reactor, independent of the earth's atmosphere, the *Seawolf* will be able to cruise underwater almost indefinitely.

The crew of the *Seawolf* will number approximately 100 officers and men.

The cost of the *Seawolf*, SSN575, is estimated at $32,700,000 exclusive of the Atomic Energy Commission's construction costs for the nuclear powerplant.

The powerplant of the *Seawolf* will be of a different design from that of the *Nautilus*. The *Nautilus'* powerplant, called the submarine thermal reactor, is cooled by high pressure water. Another type reactor, labeled the submarine intermediate reactor, will be installed in the *Seawolf*. It is cooled by liquid sodium and is being built for the Atomic Energy Commission by the General Electric Co.

Habitability is a key word in the *Seawolf*. New color schemes in the living and working spaces have been designed to increase efficiency and morale. Operating machinery and instruments have been "human engineered" to reduce fatigue and extend the period of top efficiency for crew members.

A reunion of old shipmates who served in *Seawolf* during World War II was held July 20 at the Mohican Hotel in New London. More than 50 men were to be on hand for the get-together. Among those planning to attend were old "seawolves" from Aztec, N. Mex.; Durango, Colo.; and one from Mount Vernon, Ind., who arrived on motorcycle.

Mrs. Nancy Brindupke Cole, matron of honor at the *Seawolf* launching today, is steeped in submarine tradition. Her late father, Comdr. C. F. Brindupke, United States Navy, was in command of the submarine *Tullibee* when it was lost in the Pacific in 1944. Her stepfather, Capt. John Davidson, United States Navy, had command of two submarines in world war II, the *Mackerel* and the *Blackfish*. Her husband, Lt. (jg.) W. S. Cole, United States Navy, is now serving in the submarine *Sea Robin*.

The *Seawolf* is the 229th submarine built by Electric Boat for the United States Navy. Electric Boat is the only civilian builder of submarines in the United States.

If all the blueprints used in the construction of the *Seawolf* were laid end to end they would make a path 30 inches wide from Groton to Washington, D. C. They would cover an area of more than 100 acres.

On the building ways adjacent to the *Seawolf* is the partially completed *Darter*, a conventional diesel-powered submarine of the *Tang* attack class.

Comdr. Richard B. Laning, United States Navy, the prospective commanding officer of the new *Seawolf*, comes from a Navy family. His father is Rear Adm. Richard H. Laning, Medical Corps, United States Navy, retired; he has 2 brothers, Robert and George, who are naval officers, and 1 brother, Edward, who is a Marine flier. Commander Laning's sister, who served in the WAVES in World War II, is married to a submarine officer in the Reserves.

Capt. Robert L. Moore, Jr., United States Navy, supervisor of shipbuilding and naval inspector of ordnance at Groton, has the immediate Navy responsibility for the construction of the *Seawolf*. Captain Moore is well qualified for his position. He took a course in advanced nuclear engineering at MIT and served in the Bureau of Ships as head of the engineering and research group of the nuclear power division, assisting in the design and development of nuclear propulsion plants for naval vessels. He is also a qualified submariner.

Electric Boat, shipbuilders, installed 205,920 feet of electrical cable in the *Seawolf*, or enough cable to reach from bow to stern almost 700 times. There are also 89,760 feet of piping and tubing in the Navy's newest nuclear submarine.

The agency of the Navy which is responsible for the design and construction of the *Seawolf*, is the Bureau of Ships. It is the duty of BuShips to develop, design, and construct or have constructed all Navy ships.

The keel of the *Seawolf* SSN575 was laid on September 15, 1953 by Robert B. Anderson, then Secretary of the Navy. Mr. Anderson's initials are welded on the keel plate and are a permanent part of the *Seawolf*. Mr. Anderson, now Deputy Secretary of Defense, will attend the launching.

After the *Seawolf* has slipped down the launching ways into the Thames River, she will be towed to an Electric Boat wet dock where work on the nuclear-powered vessel will continue.

The sponsor of the *Seawolf* of World War II fame, Mrs. Edward C. Kalbfus, is one of the distinguished guests at the launching. Mrs. Kalbfus, widow of the late Rear Adm. Edward C. Kalbfus, United States Navy, retired, christened the *Seawolf* SS197 at Portsmouth, N. H., on August 15, 1939.

As the *Seawolf* experiences her first dip in the Thames River, United States Navy planes from the naval air station at Quonset Point, R. I., will fly over in salute to the Navy's newest atomic-powered submarine.

Three former *Seawolf* captains will witness the christening of the new *Seawolf*. On hand for the launching are Capt. Henry Martin Jensen, United States Navy, retired, first commanding officer of the first *Seawolf*, Rear Adm. Royce L. Gross, United States Navy, retired, and Capt. R. B. Lynch, United States Navy, both of whom commanded the second *Seawolf* on patrols in World War II.

Until launched, the *Seawolf* will be held on the ways by a steel trigger sticking up from underneath. At a signal from the sponsor's party, a lever is tripped and the trigger is turned down so that the ship and its supporting cradle is free to slide. Should she stick, hydraulic rams mounted at the head of the ways will give her a shove to start her moving.

FACT SHEET ON COMMANDER RICHARD B. LANING, UNITED STATES NAVY, PROSPECTIVE COMMANDING OFFICER OF "SEAWOLF" (SSN575)

Commander Laning has served on 5 submarines and 2 aircraft carriers since graduating from the United States Naval Academy in the class of 1940. He is the son of Rear Adm. and Mrs. Richard Henry Laning, Medical Corps, United States Navy (retired), of Amherst, Va.

He has two brothers, Robert and George, who are naval officers, and a third brother, Eward, who is a Marine flyer. He also has a sister who served in the WAVE's during World War II.

Prior to attending the submarine school at New London, Conn., Commander Laning served on board the carriers *Yorktown* and *Hornet*. He was then assigned to the submarine, U. S. S. *Salmon* which was badly damaged in action. The entire *Salmon* crew was then transferred to another submarine, the U. S. S. *Stickleback*.

Since World War II he has commanded three submarines, the U. S. S. *Pilotfish*, U. S. S. *Trutta*, and the U. S. S. *Harder*.

The *Seawolf* is the second electric boat-built submarine which Commander Laning has commissioned. The *Harder*, a Tang-class boat, was commissioned in August 1952 with Laning as the skipper.

The prospective *Seawolf* commanding officer has had considerable schooling in preparation for his new command. He took a postgraduate course at the Naval Academy in 1947 and spent 2 years at the University of California at Berkeley where he was awarded a master of science degree in biophysics.

In addition he has taken specialized training in nuclear physics at Oak Ridge, Tenn., and Albuquerque, N. Mex. In 1954 he reported to the Schenectary, N. Y., area office of the Atomic Energy Commission where the *Seawolf* reactor is being built by General Electric Co.

Commander Laning was awarded the Bronze Star Medal with combat "V" and the Silver Star Medal. In addition he wears the Presidential Unit Citation ribbon and the Navy Commendation ribbon.

He is married to the formed Ruth Richmond and they have 2 daughters, Christine, age 9; and Lucille, age 5.

ELECTRIC BOAT BACKGROUND

Electric Boat is 1 of 5 divisions of General Dynamics Corp. Other divisions include Convair, Stromberg-Carlson, Electro-Dynamics, and General Atomic. Canadair, Ltd., General Dynamics subsidiary, is located in Montreal, Canada.

In addition to submarines, General Dynamics is a leading producer of military and commercial aircraft, guided missiles, telephone and electronics equipment, and specialized types of electric motors.

For more than a half century, Electric Boat has been building submersibles. Today's launching of the *Seawolf* makes 229 submarines which Electric Boat has built for the United States. Another 100 have been built for allied nations.

Work at the division now includes completion of the *Seawolf* and construction on the conventional-powered submarine *Darter* on the south yard building ways. Electric Boat has been designated by the Navy for construction of a third nuclear-powered submarine as yet unnamed.

Principal General Dynamics officials at the Electric Boat division are:

Carleton Shugg, a General Dynamics' vice president and general manager of Electric Boat; joined Electric Boat in 1951 after holding top executive positions with the Atomic Energy Commission and the shipbuilding industry.

Rear Adm. Andrew I. McKee, United States Navy, retired, a corporation vice president and director of research and design at Electric Boat. Extensive submarine construction experience in Navy and regarded as leading submarine designer.

VITAL STATISTICS ON THE SUBMARINE "SEAWOLF" (SSN575)

Builder: Electric Boat Division of General Dynamics Corp.
Length: About 330 feet.
Breadth (at widest point): About 27 feet.
Keel laid: September 15, 1953, by Robert B. Anderson, Deputy Secretary of Defense.
Christening: July 21, 1955, by Mrs. W. Sterling Cole.
Delivery: 1956.
Number of crew: About 100.
Speed: Over 20 knots.
Displacement (surface): About 3,000 tons.
Main propulsion: Reactor-fired steam turbine (sodium cooled reactor).
Auxiliary propulsion: Storage battery and diesel electric drive.
Miles of electric cable: 39.
Miles of pipe and tubing: 17.
Miles of blueprint issued: 400.
Number of drawings made: 2,200.
Number of propellers: 2.
Number of items included in ship: More than 1 million.
Daily capacity of water distilling plant: 5,000 gallons.
Cost (exclusive of reactor): $32,700,000.

Respecting the Wishes of Professional People in Social-Security Coverage

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. WRIGHT. Mr. Speaker, I realize how anxious most Members are to complete our labors and adjourn this session of the Congress. Veteran observers, with significantly few exceptions, have noted in terms of highest praise the volume of important and constructive legislation thus far enacted. If we can complete those matters remaining unattended and adjourn at an early date, it will add further credit to this session's record of businesslike accomplishment.

Surely there is one obligation, however, which must transcend our quite natural desire to create a new record in legislative volume performance, and that is the obligation to accord thorough deliberation to each measure which arises and to protect the processes which assure to the membership the opportunity to work its will.

It seems to me that there is a very grave danger involved when we become too much in a hurry. An excellent case in point was the motion last Monday which brought before the membership a compendium of social-security revisions hermetically sealed in a single package, limited discussion to 40 minutes, and denied Members the privilege of a separate vote on any of the varied issues at stake.

This closed rule placed many Members in an extremely embarrassing position. It forced some even to break promises where they had indicated approval for certain of the revisions embodied in that single motion and opposition to others. Other Members were confronted with the uncomfortable choice of either breaking a promise or violating a conviction.

Certain features of the bill seemed unanimously agreed to be necessary and desirable, such as that strengthening the actuarial soundness of the program, and that permitting women to retire at the age of 62.

Other provisions, such as that extending compulsory coverage under the program to the members of 7 professions, seemed highly questionable and at the very least worthy of more extended discussion.

In matters of this kind, involving such groups of self-employed professional men and the Government's role if any in the planning of their future security, it seems to me highly proper that the desires of the people directly affected by such legislation should be an overriding consideration.

Not believing myself sufficiently wise to act in their behalf without knowing their feelings in the matter, I conducted a poll by mail of the members of these professions in my district. In all, some 400 responded.

The results of this poll intensified my delemma in trying to cast an intelligent vote with all the provisions wrapped inseparably together under this "closed rule."

My poll indicated, for instance, that a majority of the lawyers in my district want such coverage, while clearly tending to show that most dentists do not.

It seems to me that an effort should be made to respect the desires of such people when considering an extension which affects none but themselves. Surely this would be preferable to compelling them against their will.

It is encouraging to note that open hearings have been scheduled in the Senate, and it is hoped that separate votes on these varied matters may be permitted in that body.

Why could we not consider a plan of voluntary, rather than compulsory, coverage for those self-employed professional groups whose members desire it?

It has been argued that too many would wait until retirement time nears, then qualify for benefits by participating for only a short period, thus increasing the costs of administering the program.

Yet it seems to me that this particular possibility could be rather easily overcome by some permissive program setting a deadline for beginning participation—say at the age of 35—with those already beyond that age to have 18 months from the effective date of the law in which to decide.

The Members of the House of Representatives have successfully maintained a voluntary retirement system by setting a deadline for declaring oneself in or out. With sufficient imagination and thorough study, it seems not at all impossible that such a permissive plan could be devised for other professional groups of our citizenry.

I do not say that this is the answer. Yet it may possibly provide a means of accomplishing the objective within the framework of individual choice without involving the distasteful means of compulsion. I hope the Senate will carefully consult the wishes of the people directly concerned and will look fully into this possibility.

Direct Loans Under Servicemen's Readjustment Act

SPEECH
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1955

The House in Committee of the Whole House on the State of the Union had under

consideration the bill (H. R. 5715) to amend the Servicemen's Readjustment Act of 1944 to extend the authority of the Administrator of Veterans' Affairs to make direct loans, and to authorize the Administrator to make additional types of direct loans thereunder, and for other purposes.

(Mr. WEAVER asked and was given permission to revise and extend his remarks.)

Mr. WEAVER. Mr. Chairman, I should like to take this opportunity to add my wholehearted support to this proposed legislation. I trust every Member of this House will likewise give it his enthusiastic approval.

The Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. BRAY. Mr. Speaker, a free press has become one of the strongest foundations of our democratic form of government, and one without which our system could not survive. The first amendment of the Constitution says, "Congress shall make no law * * * abridging the freedom of speech, or of the press." The fight to maintain and protect that freedom has been continuous since our first days as a Republic.

It is natural enough for any person or group of persons to believe that his opinions are right, and others' are wrong. But one of the main responsibilities of Congress, and of the courts, is to protect the right of the press to express its editorial opinions free from intimidation by any individual, organization or governmental power. However much we may disagree at times with the press, it is our duty to safeguard that freedom accorded it by the Constitution. We must keep a most watchful eye on any commission or bureau of the Government which may attempt to control the dissemination of news.

Of course the governmental agency which most obviously touches on the communications media of our Nation is the Federal Communications Commission. The advent of radio and television broadcasting, and the regulation entrusted by Congress to the FCC, have resulted in ever-increasing contacts between the press and the Government. Every caution that these contacts do not result in intimidation or quasi-censorship must be exercised.

The FCC must act as arbitrator in determining which parties should be given television permits; and this authority increases the duty of the FCC to tread carefully in consideration of our freedoms. A recent examiner's report on an application for a television franchise spent a considerable portion of the report criticizing the editorial policy of a certain newspaper, the principal owner of which was also the principal stockholder in one of the companies which sought the TV permit. No one would deny that the FCC has the right to consider the possible effects of a communications monopoly which might be created by granting a TV permit to the owners of radio or newspaper interests.

However, the Commission must not attempt to evaluate the content of an applicant's newspaper editorials. And certainly such considerations should play no part in deciding which applicant gets the TV permit. Such a precedent could lead to terrible abuses, such as closing the airwaves to applicants who have shown an editorial policy contrary to the political opinion of the FCC. It might go beyond considerations of party, and act against applicants who expressed certain views on public power or tariff legislation or on any economic, social, or political opinion. Such a precedent could well be the beginning of a governmental step toward thought control. We must ever be on guard against the infringement of free expression of opinions in our Republic.

There is no evidence that the Commission has adopted the philosophy indicated in this examiner's report. There is now pending in Congress a bill stating that "In no event, however, shall the Commission in any proceeding give any significance to the editorial policy of a newspaper." The legislative action on the subject seems warranted, and I believe the bills now pending which deal with this subject deserve consideration by this Congress.

Time Magazine Shows What Water Can Do in the West

EXTENSION OF REMARKS
OF
HON. JOHN J. DEMPSEY
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. DEMPSEY. Mr. Speaker, I wish to call the attention of my colleagues to the excellent article in the current issue of Time magazine, in which the impact of water on our arid West is dramatically disclosed. This article and its beautiful photographs by the famed photographer, Joern Gerdts, show full well that water can make the desert blossom as the rose. It shows that what the Nation can derive from its reclamation projects far exceeds the investment. This situation is true in the proposed Colorado River storage project. It is a wise investment for the Nation, not only because of what it will do for the West but because it repays its entire costs.

Mr. W. A. Dexheimer, a distinguished engineer and now Commissioner of Reclamation, acknowledged this fine article in a letter to Time magazine. Mr. Dexheimer makes some excellent points in his letter. As an extension of my remarks, I wish to introduce this letter into the RECORD:

EDITOR, TIME MAGAZINE,
Time and Life Building,
New York, N. Y.

SIR: Congratulations on your excellent spread of pictures and story on the Pacific Southwest, entitled "The American Desert, 1955."

Never was a truer word written than your assertion that "Water has always been the limiting factor to the desert's growth." The author could have well added that, but for men of daring and vision, the water supply which has made the growth of this area possible would still be flowing unused down the Colorado River.

When Federal Western reclamation was authorized in 1902, some critics labeled it unnecessary, impractical, and visionary. The Salt River and Yuma irrigation projects, the keystone to Arizona's prosperity, were constructed by the Bureau of Reclamation in 1906–1907. The Salt River water users will make final payment to the Federal Government on those early works in November 1955, and the Yuma water users are also virtually paid up.

I heard the same cries of "visionary" and "impractical" when I was on the Bureau of Reclamation survey party which fixed the location of Hoover Dam in 1929. The growth and prosperity of the Imperial, Yuma, and Coachella Valleys and metropolitan southern California, would not have been possible without this dam (completed in 1936) and other river control structures, low-cost hydroelectric power and irrigation canals built by the Bureau of Reclamation.

Now, history is repeating itself. The need for water in all of the arid West and elsewhere in the Nation grows more critical. The Bureau of Reclamation proposes to alleviate some of those shortages. We are again being indiscriminately criticized with the same old adjectives—unnecessary and visionary.

I hope this country can learn from experience the lessons your article so clearly demontrates. Water is the key to prosperity.

Sincerely yours,

W. A. DEXHEIMER,
Commissioner.

Rural Electrification Administration Interest Rates

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Listen to Mr. Nelsen," referring to Anchor Nelsen, Director of the REA. The editorial was published in the Denver Post on July 17.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LISTEN TO MR. NELSEN

Ancher Nelsen, Chief of the REA under the Eisenhower administration, wasted no time in condemning the Hoover Commission Report on Lending Agencies (which include the REA). Mr. Nelsen said simply that the Commission's plan, if put into effect, would raise interest rates on Federal funds advanced for rural electric and telephone systems to prohibitive levels. And he is opposed to that.

Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, has pointed out that the Chairman of the Commission's task force which reviewed REA lending policies was Paul Grady, a partner in Price, Waterhouse & Co. Mr. Ellis observed that that is the firm which audits the

National Association of Electric Companies, which is the lobbying organization of the private utilities.

But Price, Waterhouse & Co. also audited the Bonneville Administration when Paul J. Raver was its head, and upon the insistance of Dr. Raver.

The point is that the basic thinking behind a policy of imposing crippling or restrictive interest rates for REA's is more important than who propounds it. Once again, as in the case of the Dixon-Yates deal for the TVA, the issue is what is good public policy and what is not.

The principle of lending Federal funds, at minimum rates of interest, to spread the benefits of electrification and telephone service in areas that could not be feasibly served by investor companies is a sound and proven one. Problems of competition for new loads and added business, in areas where private companies and cooperatives overlap, are multiplying. But there is still great, legitimate demand for REA loans—to heavy-up existing lines and to expand generating and transmission system. And there is no reason why that program should be handicapped or terminated by the imposition of unnecessarily high interest rates.

The Congress would do well to listen to Mr. Nelsen. He is winning the confidence and respect of REA by forthright action on a course midway between the extremes of private and public power. Mr. Nelsen knows better than members of the Hoover Commission task force or the Commission itself the intensity of loyalty that most REA members feel to their co-ops. Devotion to the REA is not a party matter.

Washington Police Boys' Clubs

SPEECH

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1955

The SPEAKER. Under previous order of the House, the gentleman from Mississippi [Mr. WILLIAMS] is recognized for 30 minutes.

(Mr. WILLIAMS of Mississippi asked and was given permission to revise and extend his remarks.)

Mr. WILLIAMS of Mississippi. Mr. Speaker, no issue presently before the people of the United States is more explosive or more fraught with danger, not only to our social system, our customs, our mores, our institutions, and also to the very form of government which we enjoy than the racial issue which has been made a political football for the last decade or longer. This issue portends to destroy our very system of government as well as our social institutions.

Already the political implications involved in the racial issue have caused members of the judicial branch of our Government to set aside their judicial consciences, to disregard their oaths to defend and protect the Constitution of the United States of America, and to invade the legislative field by usurping the prerogatives which, under our Constitution, belong exclusively to the legislative branch.

It is a very serious thing when we permit an emotional issue to become involved in politics; and when for the sake of political expediency we permit our institutions to be destroyed. It is a sad commentary on our present political system when a court, sworn to defend and protect the Constitution of the United States, can become the vehicle by which that Constitution can eventually be destroyed.

Under the guise of seeking to help minority groups, who allegedly have been made second-class citizens by our present social system, many, many fine institutions in this country are being destroyed.

Those who profess to be tolerant are, as the gentleman from Georgia [Mr. FORRESTER] said the other day, perhaps the most intolerant people in our country. While they would like us to be tolerant of the other fellow's racial background, at the same time they are very intolerant in seeking to force laws upon us which are directly in conflict with our best interests and which would result in great damage to our people.

The gentleman from Georgia [Mr. DAVIS] on Tuesday of this week made a very pertinent speech to the House in which he pointed out a specific example whereby racial politics carried on by our intolerant-"tolerating" friends, was about to destroy one of the finest institutions that has ever come to this Nation's Capital. I refer, of course, to the Police Boys' Club of the District of Columbia.

The police boys' clubs have been a prime deterrent to crime and juvenile delinquency over the years. I think it is significant to note that last year, 1954, when the membership in the boys' clubs reached its peak of 22,000 members—14,000 colored and 8,000 white—juvenile crime was at its lowest in many years.

To give you the figures, in 1949 a total of 2,856 felonies were committed by juveniles in the District of Columbia. By 1953 that had fallen off to 2,166, and last year it was 2,015. The dropping off of this juvenile crime rate has been more or less in proportion to the increase in membership in these Washington Police Boys' Clubs.

Judging from my conversations with people in the District who know what they are talking about, these police boys' clubs have been the finest deterrent to juvenile delinquency of any institution in Washington with the possible exception of the churches. Today, as a result of orders from the executive department and as a result of these newfangled social theories which seem to have swept the political leaders of the District of Columbia, orders have been issued to deny the use of public facilities in the District to boys' clubs which operate on a segregated basis.

The result has been that three of the Washington Police Boys' Clubs have been closed and their facilities denied to members of either race.

When we let our passions and our emotions proceed beyond the point of practicality, to the point where we actually injure the chances for a law-abiding and productive future for our young men, whether they be white or colored, I think we have reached a pretty sad state.

I do not exempt the President of the United States from criticism when I say that from the White House over to the Supreme Court and right on down into the Halls of Congress to the Commissioners' offices in the District of Columbia cheap, petty politics have been played with this issue, with little or no regard for the consequences. It is jeopardizing the future of the youth of the District of Columbia as a result, so much that I understand the Police Department of the District is considering the possibility of withdrawing its sponsorship of the Washington Police Boys' Club.

The reason for that is very simple. It is, of course, to be found in the fact that the Washington Boys' Clubs are supported by the contributions of the white citizens of the District of Columbia. Over 95 percent of the contributions made to the operations of the boys' clubs in the District of Columbia are made by the white citizens of the District of Columbia.

I understand that in the last drive to raise funds for the operations of the boys' clubs it was very, very difficult for these policemen to approach white sponsors and tell them that they were going to have to finance integrated boys' clubs. Contributions for integrated clubs are difficult, if not impossible, to get. Ask any District policeman, and he will verify that. We are going to see the boys' clubs destroyed, sacrificed to petty political scheming; and when they are destroyed, we are going to see the crime rate in the District of Columbia increase. The very fine influence of these boys' clubs will be lost to the youth of the District.

Mr. DAVIS of Georgia. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield.

Mr. DAVIS of Georgia. I want to compliment the gentleman on his remarks on this very important question. As the gentleman has intimated in his remarks, I think the decision of the Supreme Court upon which a lot of this integration activity is based amounts to nothing more or less than a fraudulent use of power and a fraudulent usurpation of legislative functions which that Court does not possess.

With reference to the gentleman's remarks regarding the police boys' club, he has given us some very interesting information about it and I concur in his statement that it will be a very sad day when this worthwhile organization is destroyed, as 3 of these clubs already have been by 1 church and 2 public agencies where they have been meeting in property under the control and jurisdiction of the Federal Government.

I would point out also to the gentleman—I am sure he knows it—that almost twice as many Negro boys have benefited from the police boys' club as white boys. The gentleman mentioned a moment ago that in 1954 the organization reached its peak in membership of 22,000 members; 14,000 of these were colored and only 8,000 were white.

As the gentleman has pointed out, the contributions made to support the activities of these clubs have been 95 to 97 percent from white people.

In 1954 the budget was $350,000. Right thinking people, people who believe in bringing our youth under good influences contributed $350,000 for that purpose. As I said, 95 to 97 percent of it was contributed by white people although almost twice as many colored boys benefited by it as white boys. It had the fine result, which the gentleman has told us about, of decreasing juvenile delinquency. It took the boys in off the streets. It tended to decrease the influences which lead to gangsterism and hoodlumism and crime. It had a wholesome effect and influence upon all of the boys. As the gentleman has pointed out, three of these clubs have been ordered to be closed. For what reason? Simply because the would-be liberals are so interested in mixing the races that they are not willing to provide places for these boys to meet and to come under these good influences unless they can come there in an interracial group. I am so glad that the gentleman from Mississippi is thinking on this subject, and I appreciate very much the facts that he has called to our attention.

Mr. WILLIAMS of Mississippi. I thank my friend, the gentleman from Georgia.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to the gentleman from South Carolina.

Mr. RIVERS. Mr. Speaker, I compliment the gentleman from Mississippi [Mr. WILLIAMS] on his fine appraisal of the situation and telling us about these glorified hypocrites who are trying to carry out this new fandangled concoction of mingling the races.

Mr. WILLIAMS of Mississippi. The gentleman knows that there is no other issue in public life today that has as much hypocrisy wrapped around it as this issue.

Mr. RIVERS. Some people in this District of Columbia would do more to be a Commissioner than a lot of people would give for a one-way ticket to heaven. I would like to pay my respects to this outfit known as the Commissioners, and with particular emphasis to one Samuel Spencer. I would not know him from Adam's house cat, and the chances are I would select the house cat. But I would like to say this about that individual: He is the so-called Commissioner who sent this action up here to take over Wolfson's enterprise. I understand that it has about as much legality and constitutionality as the man in the moon. But he is so interested now in carrying out the beck and call of the NAACP that he does not care anything about the existence of these boys' clubs. He has already destroyed the usefulness and the morale of the fire department. He would destroy them just to get a writeup in the NAACP magazine—what ever that is. About this other outfit known as the Supreme Court and the school integration case, they wrote a decision when there was not one iota of testimony in the transcript of the lower court. That is what you call legerdemain. My word is as good as theirs. I say here and now they have bypassed the Congress in order to write legislation. They have left the making of the laws to the administrative department and God knows what is going to happen to this country when that crew finishes wrecking the decisions that have existed since this country began. They are in a headlong flight to take care of the political expediency of this day and to destroy the traditions of this country and of the several States. God help us if something does not happen to stop that crew from legislating and otherwise stealing the birthrights of future generations. As far as this crew in the District of Columbia, these Commissioners, are concerned, they are going to have about as much influence in the Congress as the man in the moon as far as I am concerned. They could be abolished tomorrow and the District would be much better off.

Mr. WILLIAMS of Mississippi. I thank the gentleman. As he well knows, the current trend in our present Supreme Court is to interpret the law, not as the law is written but to interpret the law as they think it should have been written. When we reach the point when the courts interpret the law in that fashion, we shall have no such thing as law.

Mr. FLYNT. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield.

Mr. FLYNT. I want to join the gentleman from Mississippi and my colleague from Georgia for bringing this very important subject to the attention of the House. I have had some little experience with the work of these boys' clubs. They have meant a great deal to the underprivileged, not only of this city but throughout the length and breadth of this land. There are those who, under the guise of doing good and with the cloak of hypocrisy wrapped around every ounce of their bodies, are doing everything they can to inculcate and bring race mixing into this good work that has been done by these boys' clubs their own ideas. They will either rule it or ruin it with their hypocritical ideas. They care not for the youth of this land, they care not for the youth of this city, but if they cannot mix the races against the will of those who do not want to be mixed, they are going to ruin and destroy everything they touch.

Mr. WILLIAMS of Mississippi. I thank the gentleman for his contribution.

Mr. Speaker, we hear our self-styled liberal friends speak of the brotherhood of man. They speak in glowing platitudes about the equality of human beings. They speak in terms of ideals. They speak of second-class citizenship for certain people of our country, yet they disregard the very vital fact that in order to achieve first-class citizenship an indiivdual must discharge the responsibilities of first-class citizenship. They speak in glowing terms of the brotherhood of man, yet they disregard completely the practical aspects, which must be taken into consideration before the principles they enunciate can be realized.

Mr. DAVIS of Georgia. Mr. Speaker, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield.

Mr. DAVIS of Georgia. Does the gentleman know of any better way to create first-class citizens than to start to train them in their youth in the principles of industry, integrity, honesty and truth, as these boys' clubs do?

Mr. WILLIAMS of Mississippi. Of course not.

Mr. DAVIS of Georgia. Those race mixers to which the gentleman has just referred consider it a matter of secondary importance that the youth of this country should be trained in the principle of good citizenship. Their goal is to mix the races, regardless of the cost or consequences. As a result of that policy of "rule or ruin," to which the gentleman from Georgia [Mr. FLYNT] has just referred, they have already caused the doors of three of these clubs to be closed, and destroyed the good influence for every one of these boys who formerly had the benefit of those clubs.

Mr. WILLIAMS of Mississippi. It is not my purpose here to try to advance theories of racial superiority of one race over another, but there are differences between the whites and the colored which, for many generations to come, will prevent their living together in an integrated society. We must recognize this as true as a practical matter. We must be realistic. We must also recognize that if we are ever to abolish second-class citizenship in these United States, if such exists, that those who now are considered second-class citizens will never attain first-class citizenship until they are ready to assume the responsibilities that go along with the privileges and emoluments of first-class citizenship.

Mr. Speaker, I think this is a very serious thing, the abolition of the Washington Police Boys' Clubs. Those who are responsible for insisting that those clubs be integrated, and thereby destroy those clubs, must assume the responsibility—in the hereafter at least—for the future crimes committed by boys who otherwise could have been taught the advantages of law-abiding citizenship.

Mr. Speaker, I yield back the remainder of my time.

Immigration and Naturalization

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the national council of the Junior Order of United American Mechanics of the United States of North America:

RESOLUTION CONCERNING IMMIGRATION AND NATURALIZATION

Whereas there has been going on in the United States a vigorous campaign to destroy the McCarran-Walter Act which became a law of the United States on December 24, 1952; and

Whereas the McCarran-Walter Act is the result of almost 4 years of study of the im-

migration system and is well suited to the present conditions and situations in our country; and

Whereas the act was passed by an overwhelming majority of the House of Representatives, and when it was vetoed by the then President of the United States it was enacted into law over President Truman's veto: Therefore be it

Resolved by the national council of the Junior Order of United American Mechanics of the United States of North America, Inc., in session assembled in the city of Cincinnati, Ohio, this, the 22d day of June 1955, That we call upon Members of Congress to keep the McCarran-Walter Act on the statute books of this Nation in order to ward off attempts to weaken or modify the act, and to continue to screen carefully all aliens who apply for admission; and to keep the present immigration quotas. This is by far the best immigration act that the United States has ever passed; and be it further

Resolved, That the Secretary of the National Council send a copy of this resolution to the State secretary of every State council for presentation at their State councils and the enactment of a similar resolution to be forwarded to the President of the United States, Members of Congress, and especially members of the Senate and House Judiciary Committees.

Mr. George Y. Harvey

SPEECH
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. CANNON. Mr. Speaker, I rise with reluctance to note the retirement of the Clerk of the Committee on Appropriations, Mr. George Y. Harvey, who has been with the committee for many years.

He was appointed to the committee staff by Chairman Edward T. Taylor, of Colorado, October 29, 1937, and is the only member of the present staff who had the privilege of serving under Chairman Taylor. He has served under both Democratic and Republican administrations—under my own chairmanship and during the 80th and 83d Congresses under Chairman TABER—under the administrations of Speaker RAYBURN and Speaker MARTIN.

He is retiring permanently at the age of 48, the youngest retirement in the history of the staff, on the imperative insistence of his physician.

His retirement is a great loss to the committee and is accepted only because there is no alternative. He is one of the ablest of the short line of particularly able men, Stevens, Courts, Sheild, and Pugh, who have occupied that position since the establishment of the Committee on Appropriations in 1865.

During his incumbency the work of the committee expanded until the amounts appropriated by the committee reached a total in excess of the entire expenditures of the Government from the administration of President Washington down to the world wars. The duties and responsibilities of the committee and the staff more than kept pace with the growth in volume of expenditures and accompanying studies and investigations. Under the pressure of war conditions he worked unceasingly, and with such indefatigable energy and devotion to duty as to contribute unquestionably to the condition which today forces him to relinquish at the prime of life one of the key positions in the Government.

It has been a brilliant service while it lasted. It would be impossible to estimate the total savings made in the budgets with which the staff dealt under his study and direction but it aggregates stupendous sums.

His record and his attainments have had wide recognition. I had the privilege of attending the exercises when Northeastern University conferred on him the honorary degree of doctor of laws and, at my request, the president of the university favored me with a copy of the citation with which he was presented to the faculty and board of trustees on that occasion. It reads:

PRESENTATION OF CANDIDATE FOR HONORARY DEGREE OF DOCTOR OF LAWS

Mr. President, fellow members of the board of trustees, and faculty, I have the very great honor and pleasure of presenting this candidate for the honorary degree of doctor of laws.

This candidate was born October 28, 1907, in Chillicothe, Mo. He attended grammar school and graduated from high school in Norborne, Mo. He came to Washington, D. C., December 1, 1927, * * * and since that time has held positions in the following organizations: The Department of Justice, the Federal Security Agency (now Department of Health, Education, and Welfare), and the Committee on Appropriations of the House of Representatives.

He, at present, is the fifth person to hold the position of clerk and staff director to the Committee on Appropriations, United States House of Representatives. As you know, this is one of the key committees of Congress, particularly where the operations of the Federal Government are concerned.

His broad understanding of financial management in all of its aspects gained from firsthand experience in the executive branch of the Government makes him particularly qualified to assist the Congress in bringing about legislative changes that are beneficial to the Congress from the standpoint of being able to realistically evaluate the various Government agencies' requests for operating funds and maintain adequate control thereof, to the Federal Government from an operating standpoint, and to you and me as taxpayers, in that we receive more efficient governmental operations for our tax dollars.

He attended this university and graduated in June, 1938, receiving the degree of Bachelor of Laws.

He is a member of the following organizations: Society for the Advancement of Management, American Political Science Association, and the Methodist Church.

Over the years this gentleman has given freely of his time and talents to the service of the United States Government. He has always made himself available to extend a helping hand to any agency, organization or person to improve financial management in the executive branch of the Federal Government in balanced relationship to the fuller development of the exercise of the constitutional function of the Congress in control of the public purse. There are few people who have the keen practical perception of the interrelated workings of executive and legislative fiscal procedures and how they can be blended together to secure maximum results from tax dollars expended.

He has never looked for or expected any personal glory for himself; in fact, he has always chosen to work in the background with only the end result (a more efficient operation of the Federal Government) as his goal. The many sacrifices of his personal time are little known except to some of us in the Government who have benefited from the time he has given us during and after office hours. Looking back over the many hours he has devoted to this cause, it would be surprising to many of us if his family got to see him except on rare occasions.

It is said that Diogenes spent his life going around with a lighted lantern looking for an honest man. He had the wrong approach. The honesty, the character, the devotion to duty, the service to the United States Government of this candidate shine like a beacon in the dark. He is a living example of what all career Government employees should try to be. This university needed no lantern to find this candidate, even though he has always tried to stay in the background. His deeds shine for him.

In recognition of his outstanding service to the United States Government, I present to you George Y. Harvey, Clerk and Staff Director, Committee on Appropriations, United States House of Representatives, a gentleman, scholar, outstanding career employee of the United States and recommend that he receive the honorary degree of doctor of laws.

His capacity and faculty for cooperation also won the highest approval and collaboration in the Federal agencies with which he was associated. I am just in receipt of the following letter, typical of others, which I also include:

UNITED STATES GENERAL
ACCOUNTING OFFICE,
July 19, 1955.

DEAR MR. CHAIRMAN: I have just learned that George Harvey is leaving his post with the committee. Knowing the hazard to his family and himself that continued service would bring, his decision is an understandable one, regrettable as it may be.

It has been my rare privilege over the years to observe firsthand the tremendous contribution that this one man has made to better and more economical government by his efforts. The far-reaching financial improvements with which he is identified include basic simplifications in central fiscal and accounting processes followed in making funds available, the strengthening of the Antideficiency Act, and control over foreign credits, simplification of agency appropriation structures, and improved accounting support for budget presentations—to name only a few.

From its inception in 1947 he provided the Governmentwide joint accounting improvement program with understanding support and able counsel. This has contributed immeasurably to the progress which has been made under that program, particularly from the standpoint of keeping the improvements made tied in directly with the development of more effective congressional control.

In mutually seeking the most advantageous course of action, we did not always readily agree as to method, but there was never any doubt as to his sincerity of purpose or his loyalty to the Congress. Many times the course he chose to follow was not the one which would win him popular acclaim, but time has proven the wisdom of the reforms for which he labored.

Others will, no doubt, express much better than I the significance of the part George played in Governmentwide improvements in financial management in the past decade. However, I will ever be grateful for the helpful guidance and assistance he rendered to me and I felt impelled to convey to you my deep feeling of appreciation. I joint his

many, many friends in wishing him the good things he so richly deserves.

Sincerely,

WALTER F. FREESE,
Director, Accounting System Division.

I am certain I reflect the sentiment of the members of the Committee on Appropriations, on both sides of the table, in expressing the regret at his retirement and in wishing for him health, happiness, and contentment and length of days.

Mr. Harvey will be succeeded by Kennet Sprankle as of this date. Mr. Sprankle will have associated with him, in the expanded administration of the committee, Corhal Orescan with supervision over the Military Establishment and Paul Wilson, in charge of the nonmilitary establishment.

The Geneva Conference

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Change in Parley Course," written by James Reston and published in the New York Times of July 22, 1955. The article deals with the proposal of the President for a United States-Soviet arms-inspection program.

So many of us are apt to oversimplify the program stated by the President, and I believe it would be well for every one of us to read this very thoughtful article by Mr. Reston, dealing with that subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHANGE IN PARLEY COURSE—A SUMMARY OF EVENTS THAT ARE ALTERING ORIGINAL CHARACTER OF THE CONFERENCE

(By James Reston)

GENEVA, July 21.—The Big Four conference is declining fast. What was advertised for weeks as a realistic private discussion of conflicting national interests, and started this week as a determined demonstration of international chumminess, developed today into a propaganda battle between United States and the Soviet Union.

There is nothing new about this so far as the Russians are concerned. They have been making propaganda since Monday. The new thing is that President Eisenhower joined the propaganda parade today with a vengeance. He suggested that the United States and the Soviet Union let each other know everything about each other's defense establishments. He proposed, further, that they, the Russians, fly all over the United States photographing our military establishments, and that they let us do the same in the Soviet Union.

PLAN CALLED UNREALISTIC

This was the surprise of the conference for a variety of reasons; in the first place it was generally regarded as unrealistic. As President Eisenhower himself said yesterday, the Soviet Union already knows almost everything it needs to know about United States defense arrangements. The Soviet leaders do not need to hand over their defense blueprints and let United States aviators photograph their country to find out what the United States is doing.

Second, it is illegal under United States laws. Nobody, for example, is allowed to fly over the atomic energy projects in Savannah River, S. C.; Oak Ridge, Tenn.; Hanford, Wash.; or Los Alamos, N. Mex.

Third, in light of these facts it seemed to other Western delegates to be a proposal line the Soviet proposal for the destruction of all atomic bombs and the dismantling of Allied air bases, which the other side knew in advance had no chance of being accepted.

Fourth—and this was the greatest surprise of all—the idea of exchanging defense blueprints and aerial photographs with Moscow, forbidden under United States law, apparently was not explored in any detail, if at all, with congressional leaders, who make the laws, or decided upon as a carefully calculated policy in Washington.

Everybody in the United States delegation here knew the President was going to make an important disarmament speech. Photographers were alerted ahead of time for the briefing. Plans were made to reproduce and publicize his remarks.

The idea of exchanging "defense blueprints" with the Soviet Union and taking aerial photographs of the United States and Soviet defense establishments had been discussed casually here in private meetings, but it apparently was not in the draft of the speech President Eisenhower took with him to the Palace of Nations this afternoon.

When Marshal Nikolai A. Bulganin, Soviet Premier, started talking about the Soviet ideas of disarmament, however, President Eisenhower apparently decided to spring his "blueprint" and aerial photograph ideas.

This, of course, he had every right to do. He is the President of the United States, its Chief Executive, and Commander in Chief of its Armed Forces. But his proposal was not in keeping with the principles or the tactics he has recommended ever since he arrived at the summit.

EARLY ATTITUDE RECOUNTED

The President's contention all week has been that this was a conference not for orations but for discussions, not for controversial details but for general principles, not for emphasizing the things that divide "the four," but for emphasizing the things that unite them.

The United States delegation at the summit has been politely annoyed by the tendency of the British and French to propose specific plans that had little chance of careful discussion, let alone negotiations, in Geneva.

The United States delegates have been pointing to the President's own tactics here this week as a model of how to act at a short conference of this kind. He has been full of good will toward everybody. He has been courting the Russians one by one, so much so that they have been saying privately here for the last 2 days that they are convinced there will never be a war as long as he is President.

This was the traditional Eisenhower operating on his own, applying to international politics the personal habits that elevated him to the top in the Army and finally to the summit of United States political life.

Yesterday, however, a new flock of advisers arrived at the summit from Washington—Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, Harold E. Stassen, disarmament assistant, and Nelson A. Rockefeller, White House propaganda chief. The President has been in conference with them ever since.

Whether they persuaded him to change his tactics or whether one or another of them merely threw out ideas he accepted was still a matter of speculation here tonight.

The fact is, however, that he changed his line. He is still saying that a new spirit of good faith may dissolve the contradictory East-West policies on German unity and European security but today's barrage of Soviet propaganda followed by President Eisenhower's improvisations have not improved the outlook.

Attitude and Procedures of the Bureau of Federal Credit Unions

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I received from the Credit Union League, at Jamestown, N. Dak., dated July 21, 1955, signed by John P. Hillerson managing director, as well as an article entitled "Federal Bureau Hikes Audit Cost for Credit Unions," which was published in the Flint Weekly Review of July 14, 1955.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

NORTH DAKOTA CREDIT UNION LEAGUE,
Jamestown, N. Dak., July 21, 1955.

Hon. WILLIAM LANGER,
United States Senate, Washington, D. C.

DEAR SENATOR LANGER: Enclosed is a copy of an editorial and news article from the Flint Weekly Review of Thursday, July 14, 1955, dealing with the changes in the attitude and procedures of the Bureau of Federal Credit Unions and its attack upon the credit-union movement of Michigan.

The copy of the news item and the editorial was sent to me by Mr. A. W. Marble, managing director of the Michigan Credit Union League. As you perhaps know during the past year there has been some question of the tactics and methods used by the bureau of Federal credit unions in the State of Michigan against the Federal credit charter unions there. Mr. Marble felt that you should have this information and that by my sending it to you, you may become more interested in the trouble there and also in the credit-union movement as a whole. It is our feeling that you would be a valuable ally to the credit-union movement as you have been to the REA cooperatives in the past. We feel that credit unions are a vital part of democracy and are a physical expression of free people in doing something for themselves. If this right to organize and run credit unions freely is taken away from the people then democracy ceases to function.

If there are any further questions or any help that we can give you on this matter, please feel free at any time to write to us.

Sincerely yours,

NORTH DAKOTA CREDIT UNION LEAGUE,
JOHN P. HILLERSON, *Managing Director.*

[From the Flint Weekly Review of July 14, 1955]

FEDERAL BUREAU HIKES AUDIT COST FOR CREDIT UNIONS

The millions of workers in industry who are members of Federal chartered credit unions need be alarmed at the current administration's attitude toward their democratically operated organizations, say Michigan leaders. Latest move from the Department of Health, Welfare, and Education designed to stymie credit union operations is

a healthy boost in the cost of the annual audit conducted by the Bureau.

This new boost in costs could very well impair the efficiency of fast growing credit unions in their attempt to give service to their members. Last audit for Flint Buick Employees Federal Credit Union cost $1,169 with no increase in assets. The same audit next year would cost $1,246.68. Since the Buick credit union is one of the fastest growing in the Nation the handicap imposed with the new high cost of auditing will make it far more difficult for the credit union to continue its program based on service rather than profit.

HIGHER THAN STATE

That the Federal Bureau of Credit Unions audit costs are ridiculously high is evident when such costs are compared with a similar service performed at the State level where an audit for the Buick credit union last year would have cost $778.40. State chartered credit unions have a great deal more flexibility in operation than do those chartered by the Federal Government. They may make low-cost real-estate loans where Federal credit unions are restricted to what are designated as provident loans. Loan limits are lower for Federal credit unions too. However, groups wishing to organize credit unions frequently find that Michigan law provides for a far narrower base of organization than does the Federal law. For that reason they seek Federal charters.

Michigan credit-union leaders see in the newly established audit costs just one more attempt at the Federal level to bring them into disrepute or force them out of business. They cite the wholly false accusations made against the Ford Rouge Credit Union as one example of banker pressure in Washington to eliminate a rival suddenly grown big enough to constitute a threat to the lending industry. They point to the recent attempt of Federal examiners to find something wrong, no matter what, at the Buick Federal Credit Union as evidence that the Federal boys have been given orders to make things really tough. (The Review carried a story about the Buick CU probe).

M'NAMARA WANTS EXPLANATION

Michigan Senator PAT MCNAMARA has asked for an explanation as to why the Federal Bureau has suddenly gotten so tough. Over in the House of Representatives Wayne County's CHARLES DIGGS has posed the same question.

The Director of the Federal Bureau of Credit Unions has, under the law, sole responsibility for fixing the fees charged credit unions for audits. This bureaucratic setup has never been used to harass credit-union activities until Bureau came under the direction of an Eisenhower appointee, Mrs. Oveta Culp Hobby.

Michigan credit-union leaders are aware of the terrific banker influence in the President's Cabinet and wonder if the chill is on for credit unions.

AS I SEE IT

Michigan workers have taken to the credit-union idea with the same enthusiasm with which they welcomed labor unions back in the 1937 days. In labor unions workers unite to get their fair share of the goods they produce along with fair treatment on the job.

Workers join credit unions to avoid paying fantastically high interest rates when they need an emergency loan and find that such savings as they may be able to lay aside draw a fair rate of interest along with life-insurance protection.

Labor unions are currently under attack in a number of States where legislatures are bending to the will of employers and passing laws which restrict union activity and outlaw the union shop.

The UAW-CIO is under attack at the Federal level. Secretary-Treasurer Emil Mazey was recently hailed before a grand jury probing union expenditures for political action.

The press, radio, and television moguls, always faithful to their big advertisers, have found it easy to depict union leaders as ruthless goons who go about beating reluctant workers over the head until they join up.

It is not so easy to pick out a weapon with which to beat the brains out of credit unions. Credit unions have always had the cautious approval of big business having been good customers for the banks.

The trouble is credit unions are becoming too successful. Too late the bankers realized that this viper which they had clutched to their bosoms is now getting big enough to bite. At both the State and Federal level bankers have been insisting that certain curbs be put on the activities of these organizations which are run for service and not for profit.

In Washington Mrs. Oveta Culp Hobby's Department of Not Too Much Education, Health, and Welfare has not been devoting all of its time to lousing up the Salk vaccine program. Part of the time Mrs. Hobby's Department has used dreaming up methods of killing credit unions without leaving any evidence of the crime. Auditors from the Federal Bureau of Credit Unions, part of the Hobby staff have been instructed to get tough. And they have. The Ford Rouge tempest in a shallow teapot was one example.

For days Detroit's three dailies kept the fact that the Federal Bureau had illegally seized the Ford credit union in big black headlines. All of the phony charges against the Rouge CU fizzled and the Bureau turned its attention to Flint.

After an audit that cost the Buick Credit Union $1,169 the examiners couldn't find even a wrongly placed decimal point. Still they called the board of directors together and put them through a rude and rigorous cross examination.

But the bankers demanded more than that so the Federal Bureau has hiked its fee for such audits. The Federal Bureau of Credit Unions once enjoyed a Federal subsidy. This has been withdrawn. Costs have been hiked and the eagle-eyed auditors are alert for any slight error big enough to hang a headline on.

There are 10,000,000 credit-union members in North America. Mrs. Hobby is making Democrats out of most of them.

The House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the national council, Junior Order of United American Mechanics:

RESOLUTION CONCERNING THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE

Whereas, the members of the national council of the Junior Order United American Mechanics, and the individual councils throughout the United States, feel that the House Un-American Activities Committee of the Congress has performed an outstanding job in the field of anticommunism, and that it should be encouraged and supported in its future work along this line: Therefore be it

Resolved by the national council, Junior Order of United American Mechanics of the United States of North America, Inc., in session assembled in the city of Cincinnati, Ohio, this, the 22d day of June 1955, That we urge that the powers, functions, and duties of the House Un-American Activities Committee be not curtailed but encouraged by sufficient appropriations to carry on; and be it further

Resolved, That copies of this resolution be forwarded to the Speaker of the House of Representatives and to the members of the House Un-American Activities Committee.

The Ghost Trick Works, But Is It Really Honest?

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. MCCARTHY. Mr. Speaker, in television and radio suggestion bulletin issued last week the Democratic National Committee proposes its answer to the Republican National Committee's program of ghost writing and composite television.

The Democratic program, fortunately, does not go as far as the Republican one in simulating interviews, but rather provides for an introduction followed by the appearance of a Democratic spokesman.

This whole practice of ghost writing, including tele-prompters, composite pictures, and television programs, has serious implications for democracy.

The following article raises questions needing the attention of Congress and the American people:

[From the Washington Post and Times Herald]

THE GHOST TRICK WORKS, BUT IS IT REALLY HONEST?

(By Lawrence Laurent)

Where, oh where, is the political orator of yesterday?

Where is the barrel-chested shouter with his learned political references, his four-square stand for God, motherhood, dogs, children, country, and honesty (in that order)?

The old-style political orator survives in the Hall of the Congress and in semiprivate banquet halls. But he is rarely heard on radio. He is never, but never, seen on television.

Television has made the old-style politico's pitch as outdated as the Pony Express. New techniques—borrowed from New York's sellers of soap and Hollywood's merchants of dreams, have taken a high place in campaigning.

The film-laboratory technician threatens to replace the ghost writer. A makeup artist, euphemistically called a "cosmotologist," has taken on new political importance. The typewritten speech is being replaced by carefully concealed prompting devices called "idiot cards."

Whole personalities are being created to be shown only to the lenses of film and television cameras.

The practices may be deceptive and vaguely dishonest. But their effectiveness is not to be questioned.

Robert C. Albright, of this newspaper, has already called attention to the "ghostly" interview. It works like this:

You start with a script. It contains written questions and written answers.

A Cabinet member or any high ranking public official goes before a film camera and reads the answers. Develop the film and print it. In multiple.

Days or weeks later, any Congressman walks into the same studio and faces the same camera. He asks the questions, but he gets no answers. That comes later.

A laboratory technician takes the two pieces of film and neatly splices them together. Presto. The Congressman asks questions. The big wheel answers. Process and print it. In multiple.

Next step is to ship this chummy little interview to the politician's home territory. It is telecast—at no charge and as a public service feature. The interview is informative, to be sure. It is also likely to establish the Congressman as a big—indeed—dealer who can call Cabinet officials to heel and make them answer for his constituents.

Who knows? The film may convert a few voters. It can't possibly do any harm. Question: Is it honest?

There are variations on this laboratory technician's trick. With tape recordings, the job is a simple one. Radio stations may even marvel at voice quality.

But again we must face the question: Honest or deceptive?

The "scripted" interview need not be ghostly, need not be limited to film or tape recording. It can be done live and the viewer and listener is none the wiser. This practice has worked so well between politicos, that they've recently tried to force it on newspaper reporters.

A former Cabinet official, Oveta Culp Hobby, had a recent date with Reporters' Roundup. Shortly before the program a press agent arrived and delivered an ultimatum: "Work with a script or no show."

He got a quick answer: "No show." Mrs. Hobby changed her mind, went on the air and answered questions, unscripted questions.

(The very same week, Russia's V. M. Molotov tried this same trick on Face the Nation. His appearance on the show was canceled.)

Perhaps we should stop and consider the whole question. A man seeks office on his own merit. He offers himself to voters as informed, intelligent, honest, and articulate. You must consider him—if elected—as the spokesman for a great group of citizens.

The voters see this candidate on television, a media which threatens to sweep the slap on the back and the hearty handshake into the dustbins of history. It threatens to make face-to-face vote-getting a thing of the past.

The candidate is seen and he is heard. But whose words does he speak? Whose thoughts does he voice? Whose face does he show—his or a cosmetician's?

Makeup can grow hair on bald heads; give a boyish shave to a man with constant 5 o'clock shadow; remove bags from beneath the eyes of an old soak; magically wipe the wrinkles of decades from the face of an octogenarian.

("Stand still, Mr. Lincoln. Let me paint out that mole. Let's remove those wringles. This hair piece will take care of that high forehead and we simply must do something to shorten that nose.")

Honest? Well, we must remember to appeal to women. Their votes are vital in an election.

Then, too, the mechanical aids. TelePrompTers are fine for Milton Berle or Arthur Godfrey or any other entertainer. However, office seekers are not selling candy bars: they are selling themselves and, in effect, good government.

Candidate Jones reads his speech. He reads it openly and thus creates a small barrier between him and his audience. ("Look, Aunt Susie, he's reading.")

Candidate Smith looks his audience in the eye. ("Look, Aunt Susie, he's talking directly to us.") Candidate Smith, however, is reading. His script is in huge type, concealed directly above or below the lens of the TV camera.

Is the voter being cheated? The answer would appear to be in this fact: After election, the candidate must stand someday on the floor of Congress and speak for his district or State.

At last report, TelePrompTers have not yet been installed in the House or Senate.

Free Television or Scrambled Phony-Vision

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. RADWAN. Mr. Speaker, there are 36 million television sets in the United States today and their number is increasing rapidly. They cost the families that own them $13.5 billion and constitute the principal form of entertainment for many of these families, welding them together once again as no other influence has for many years. I think you will agree, therefore, that the fate of television is a matter of special and great public interest, and I as your representative in Congress certainly consider it as such.

That is why I am alarmed by a current effort on the part of certain promoters to arrest television's progress at the expense of the viewing public, all to satisfy their own greed and selfishness. The nerve of these promoters is almost fantastic. They are preparing a bitter, worthless pill for us to swallow and are actually arguing that it is good for us. Most of the writing into Washington today is, strangely enough, in favor of the idea, but that is only a reflection of the huge profits to be made by the promoters, and the lack of information on the part of the public. It is my hope that this column will supply some of that information.

Pay television, as the promoters call it, would mean that television stations which are now broadcasting free programs would scramble the image on the picture tube and the sound into a sort of unassembled jigsaw puzzle. Such programs could be unscrambled only when a costly gadget, attached to your set at your expense, was fed a coin, or slug, a key or a card for which you the viewer would pay, either in cash or as part of your phone bill.

It is no answer that you would not have to watch these pay programs if you did not want to. Since a station cannot televise two programs at once, any station broadcasting a scrambled pay-television program would necessarily have to eliminate its free program during that time period. Pay television would black out the best of free television. The plan is a sort of booby trap. It would render the television owner blind, and then rent him a seeing-eye dog at so much a program, to partially restore the sight he had previously enjoyed free as a natural right.

Worst of all, this scheme would divide television audiences along economic lines. Some of the promoters, with amazing gall, announce they would be satisfied if they got, say, $100 a year from the average family. Others say $3 to $5 a week on your phone bill. In a recent interview, the president of a baseball club, with understandable enthusiasm, announced he was in favor of it. After all, with only 11 million watching a ball game at say the price of a 50-cent bleacher seat, he would realize an additional half million dollars per game. Would this eliminate commercials? "Oh, no," he says. "After all, don't you have to look at billboard advertising at the ball park even though you pay to get in?"

It is hard to think of a single argument in favor of this scheme other than profit to the promoters. They argue that we would get better programs. But television is not suffering from lack of money today, not when million-dollar contracts are being signed by advertisers for a single program. The trouble is lack of talent—authors, performers, and so forth, to meet the tremendous demand for novelty and variety in our TV performances. Television is in its infancy, and already it has brought into the American home great box-office attractions, including opera, ballet, concerts, the legitimate theater, omnibus shows, sports events, children's and educational programs, current and patriotic events. All it needs is time to grow. Let us not be impatient. Permitting promoters to take in as much as $8 million for a single 30-minute program will not improve the program. If television is suffering from an illness, then the cure the promoters offer is worse than the illness, except for them.

About three-quarters of the people who own TV sets have an average annual income of $5,000 or less. Many bought them on the installment plan, and all were bought with the idea that once paid for they could enjoy free entertainment from then on, except for maintenance and repair.

As you can see from the above, I still think that is the right idea. If you can find the time, let me know how you feel about.

Mr. and Mrs. Robert Joseph Coar

SPEECH
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. YOUNGER. Mr. Speaker, one of the most refreshing experiences for a Congressman is the efficient and courteous manner in which Mr. Robert Joseph Coar and his wife, Helen Badgley Coar, operate the radio and television room.

On this 20th anniversary of the day when Mr. and Mrs. Coar took over the leadership and direction of this most im-

portant Congressional auxiliary, I want to express my personal thanks for the kindly cooperation which I have received at the hands of Mr. and Mrs. Coar and their staff.

The Silent Revolution

EXTENSION OF REMARKS
OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an article from Commonweal, July 22, 1955, written by Francois Houtart, secretary to Cardinal Van Roey, of Malines, Belgium:

THE SILENT REVOLUTION

(By Francois Houtart)

Political upheavals are familiar enough in Guatemala, Cuba, Paraguay, Bolivia, Nicaragua, and the other Latin American countries. Yet these are but a relatively minor aspect of the major revolution which convulses the Latin American continent today. This major revolution involves the social order, and it is advancing rapidly in every Latin American country, carrying everything before it. Economic factors are the basis for its transformation of this continent, just as they were the foundation for the transforming of Europe at the beginning of the industrial revolution.

Latin America remains chiefly a supplier of farm commodities and raw materials. In the last 15 years production has materially increased. Since 1939 Mexico and Peru have improved their production by 61 and 73 percent respectively. Mining too has increased, having doubled since before the war. This is due both to the discovery of new products and a large rise in the production of old ones.

Industrialization also is making great headway—especially in Brazil and Argentina, not to mention Mexico and Chile. New factories and industrial communities have sprung up where but a few years ago there were only the waving grasses of the pampas or the vegetation of virgin forests. Europe and North America have invested capital, built factories, organized production there. Since 1939 industrial production has doubled in such countries as Mexico, Chile, and Brazil. Where Argentina had 48,245 factories in 1937, there were 80,436 11 years later. In Uruguay the figures rose from 10,549 to 24,296. All this has led to a great rise in Latin American exports.

In recent decades the airplane has been effecting a complete changeover in transportation and communications on this continent. A country like Colombia, which had been cut off from the rest of the world due to its mountainous terrain and the virtual impossibility of building highways and railroads, is now linked to all points of the continent by airways, which have become the principal means of transportation in Latin America. Wherever you travel it is still common to see the natives, Indian or Negro, in their traditional dress, carrying their baskets or sacks just as their ancestors did three or four centuries ago, but now taking their places in a DC-6 or a Convair in the most natural fashion imaginable.

At the same time, technical and sanitary progress has brought about a continuing diminution in infant mortality in Latin America. The rate remains very high in certain regions, but the figures are shrinking throughout the continent, and in Argentina and Uruguay high infant mortality is already a thing of the past. Accompanying this development is an increase in the normal human life span. It is still possible to find certain areas, especially in the forests of Brazil, where the average life expectancy is not even 20 years. But progress in hygiene, especially in the rural areas, is producing increasingly greater longevity.

These economic and technical constituents of the Latin American revolution, however, are only the bony framework. When people speak of progress the world over, or in Latin America particularly, they refer to such elements. But this attitude fails to take sufficient recognition of the fact that these material elements supply only a starting point, that true revolution and true progress are preeminently human, and consequently social, developments.

We might consider the fact that since 1920 the continent has almost doubled in population (the figure for 1952 is 172 million). There is no doubt that this continent can feed many more people than it now contains. Yet natural resources have not yet been sufficiently exploited—nor has agriculture been adequately developed and mechanized—to permit an extremely rapid population growth. There are figures to show that the pace of investments in Latin America does not keep up with the increase in population and that therefore the standard of living is not slated to rise in the years just ahead. One effect of the impact of techniques is therefore to accentuate the contrast in living standards between the wealthy few and the Latin American masses.

Another social consequence of the economic transformation of this continent is the shift from a rural to an urban society, for the Latin American economy, long predominantly agricultural, is becoming more and more industrial and urban. All the large cities have doubled in population in the last 10 or 15 years and some 17 million people now live in cities of at least a million inhabitants. Obviously, the effects of passing from one civilization to another almost without any period of transition are catastrophic for individuals, families, and socety as a whole.

Latin America's rural civilization is still made up in large part of Indians and peoples of mixed blood, living under conditions which have not changed for four or five centuries. It is not surprising that industrialization and the exploitation of oil and mineral resources have brought in their train a social revolution. All too often, however, the conditions accompanying this industrialization are inhuman. Here we find a capitalism often lacking in human or ethical restraints. In some places there is a shameful exploitation of native labor by American or European capitalists. In others there is instead an indigenous capitalism which resorts, unhappily, to quite the same methods.

Whether it be in the sugar refineries of Cuba, the plantation of Guatemala or Nicaragua, the oil fields of Venezuela, the mines of Bolivia, the farming districts of Chile or the factories of Sao Paulo, everywhere we encounter similar conditions. Haiti may not be representative, but at Port au Prince the Haitian American sugar company employs workers but 6 months of the year because this is a seasonal industry. An unskilled worker gets $1.06 a day, a semiskilled, $1.25. A foreman, after 20 years in the refinery, earns $3.25 daily. There is no social security except for free medical care when accidents occur on the job. The Haitian infant mortality rate is extreme, and housing indescribably bad. The cost of living is outrageously high, as the economy is based on that of the United States. A suit of ordinary quality costs about $30 and a pair of shoes $10. The rent for two rooms in a poorer district can run as much as $15 to $20 a month. Rice, the principal food staple, sells for 20 cents a pound. Even if one considers the facts of industrial life in Haiti as one extreme, they still give some idea of the dimensions of the problem.

Because there is tremendous unemployment (since the big companies buy extensive farmlands displacing the small cultivators, who then flock to the city), the sugar company need make no effort at all to get workers. Some workers have to walk 7 miles each way to and from their jobs. There is no organized transportation and the company takes no responsibility about providing it. When workers complain about their low wages, management tells them to go elsewhere if they are dissatisfied, that hundreds of workers are waiting to take their place. That is true. A group of workers once tried to organize a union. It was immediately suppressed by the company; some of the leaders were fired; other were bought off.

Bolivia, like Haiti, may not be the best example to choose. But there I saw a mining village of 6,000 Indians, perched on the side of a mountain. Special permission is required to visit there. The miners work 8 hours a day; the 3 shifts cover the full 24 hours. The men work deep down in the mines while a number of women labor near the surface. The family life of the village is completely disorganized by this work in shifts. There are no holidays the whole year round, not Sundays nor even Easter or Christmas. The company which owns the mines builds its workers' living quarters; I would not want to put cattle in many of these dwellings. Some are simply wooden barracks filled with straw. Certain of these straw-packed hovels are called hot beds because every 8 hours they welcome a new shift of sleeping men.

There are also new homes of concrete with sheet-iron roofs. These provide 1 room for each family although some families have as many as 10 children. A miner earns the equivalent of 15 cents a day; one of the engineers gets over $2,500 a month. The mining company has built a church for the Indians. With 6,000 inhabitants, perhaps 50 people can squeeze into the church. A needy missionary who tries to conduct his apostolate under these conditions has himself declared that it is only the "opium of the people."

These examples are enough to show that the very conditions of industrialization held to be progress in Latin America are far from embodying real progress when it comes to the living standards and social life of the inhabitants. It is therefore not surprising that the Marxist ideology has begun to spread. Of course, the great urban masses, and even more the peasants in the rural areas, are not yet very greatly influenced by Marxism. Ignorance, illiteracy, difficulties in communications, the lack of a basis for comparison with better living conditions, the apathy of the Indian masses and the climate are all elements which hold back the growth of Marxism among the people. Yet Marxism makes inroads through two very important channels: the universities and the new workers' organizations.

In the universities the Marxist student organizations are often the most active, if not the most powerful. Indeed, the young intellectuals, who are much more conscious than the masses of the economic situation of their country, see Marxism as the economic and social solution of their problems. Moreover, it also seems to supply an answer to their needs for an ideology and a vehicle for their youthful, and characteristically South American enthusiasm.

The lack of other coherent theories on the social and economic order leads many students—even those from fairly well-to-do homes—to view Marxism as the only solution.

The labor organizations are almost all of Marxist inspiration—especially the different workers' mutual aid or cooperative groups.

Often they are camouflaged as government organizations—as in Mexico or Bolivia. In Argentina, although the labor unions are Peronist, it is no secret that the Communists hold many of the key posts, although for the moment they pose as more Peronist than the Peronists. In Brazil there is a similar situation.

A final social consequence of the great transformation now taking place is the growing influence of Latin America in international politics. The Latin American bloc is coming to be a force to be reckoned with. Its role in international organizations is increasingly important. That is why the economic and social destiny of Latin America can no longer be a matter of indifference to anyone. The character of the ideology and social system which ultimately prevails there will greatly influence the direction taken by international organizations in world affairs.

The Sunset Parade of the Marine Corps

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1955

Mr. TUMULTY. Mr. Speaker, recently I had the honor of witnessing the sunset parade of the Marine Corps at the Marine Barracks in Washington, D. C. It was a most inspiring sight.

Commanding the Marine Barracks, of course, is Col. Robert H. Williams. His executive officer is Lt. Col. Roy J. Batterton, Jr. The date of the parade was July 15, 1955, and the reviewing officer was Lt. Col. Roy J. Batterton, Jr., while the parade commander was Lt. Col. John B. Sweeney. Colonel Sweeney, I understand, has subsequently been transferred to further duties elsewhere. This parade was his last parade at the Marine Barracks here in Washington. The order of activities was thrilling, and was an experience never to be forgotten. In particular, the Third Platoon, Barracks Detachment, with 1st Lt. Richord W. Coulter, platoon commander, in a silent drill, was a performance, in my opinion, of exceptional perfaction. The Third Platoon performed the silent drill without a mistake and in a fashion which brought cheers from the stands.

In addition to the parade, we enjoyed the United States Marine Band. This scarlet-coated band performs its historic musical functions in Washington since its debut here on New Year's Day in 1801 when President John Adams gave his first official reception.

The parade is something that everyone should see in Washington. Every Member of Congress owes it to himself to attend this parade and I urge that every Member of Congress avail himself of this thrilling privilege and bring with him those of his constituents who may be in town on Friday evening, at about 5 p. m. when the sunset parade is held.

And so as an evidence of my gratitude to the Marine Barracks in Washington, D. C., for a thrilling afternoon and for a practical lesson in Americanism I hereby spread these remarks in the CONGRESSIONAL RECORD as a testimonial of my thanks to this gallant arm of our defense force.

In addition, I would like to thank Col. John B. Sweeney for the invitation to be present. Colonel Sweeney and his officers are men of warm hospitality, men of exceptional refinement and officers of intelligence and ability. It was a pleasure to have been their guest on this occasion.

What Price Too Much Food?

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1955

Mr. CRETELLA. Mr. Speaker, I include an article from the July Reader's Digest by Gaynor Maddox which gives a very glaring picture of the millions the taxpayers are doling out for storage and maintenance of surplus foodstuffs. It is unbelievable that this body on May 5 voted for the return of rigid parity prices which in turn encourages the production of more food and the raising of more storage bins and the spending of more of the people's money in a wanton and needless manner. The truth is we did not even give flexible price supports a chance to work before attempting to revert to the old rigid price program.

I am pleased to say that the Connecticut Farm Bureau Association, Inc., representing thousands of farmers in my district and the State, has always opposed any kind of price supports as a folly which has lowered foreign and domestic consumption, created unfair competition and tampered with the natural balance of supply and demand. The article follows:

WHAT PRICE TOO MUCH FOOD?

(By Gaynor Maddox)

The United States Government is belly-deep in the food business. I've traveled thousands of miles to take a look. It's been an eyeful—$7 billion worth of surplus wheat, corn, rice, butter, cheese, and dry milk stored away safe from the open market.

Who pays for these surplus foods? You and I and every American taxpayer. Do we get to eat them? No. A huge and unprofitable Government organization called the Commodity Credit Corporation keeps these foodstuffs out of circulation to protect favored sections of our agriculture from price competition. CCC functions as our price-support bank.

My secretary recently complained about the high price of bread and breakfast cereals for her family. She thought we had been raising bumper crops of wheat. I asked her whether she knew about CCC. "No," she said, "but doesn't it have something to do with gambling on the stock exchange?"

The CCC is not concerned with gambling. On the contrary, it is trying to take the gambling out of much of American agriculture. The CCC offers an insatiable market for those crops covered by the farm price-support program, buying up all the surplus beyond what the free market can absorb at prices considered fair to farmers. It withholds these surpluses from sale to keep the price up, and may dispose of them only at times and in ways that won't depress the market. This guarantees farmers a fair return, but also encourages them to pile up ever more unmanageable surpluses.

Today this colossal food corporation has over $7 billion invested in surplus commodities or in commodity loans. It owns or has under loan 1.2 billion bushels of wheat—enough to take care of all our people and all our animals, plus what we need for export, for 2 full years. It owns enough butter to supply our total population for 2 months, enough cheese to feed us for 3 months. The next freight train you see may be loaded with surplus food routed safely away from your supermarket. Hungry people please look the other way.

In the Fulton Market Cold Storage Co. in Chicago, H. C. Burrus, plant superintendent, showed me 14 million pounds of Government butter stored in below-zero rooms. Packed in 60-pound cubes, it has been there for almost 2 years.

In the same building Burrus showed me nearly 2 million pounds of surplus cheddar cheese, in 75-pound cylindrical hoops. Some of the cheese has been there since 1953. This storage plant is only one of hundreds the CCC has filled in our great milk-producing areas.

Our Government is in the rice business too. Stashed away in warehouses in Texas, Arkansas, and Louisiana, CCC owns 10,500,000 100-pound bags of rice. In Crowley, western Louisiana, a town that calls itself the rice capital of the world, warehouses were bulging with rice no one wants to buy now that oriental markets have been shut off. But the farmers go right on planting. As a result, more warehouses are needed. Six new storage bins are being built on the edge of town.

I asked one of the best-informed men in the area why they keep planting rice in face of mounting surpluses. Why don't they turn their land to raising marketable cattle? "Because they've been rice planters all their lives and don't intend to change," he said.

A reluctance to adjust to consumer demands is typical of farmers all over our fertile land. For example, although we as a nation are using less tobacco, and although synthetic fabrics are crowding cotton, tobacco planters and cotton growers are among God's chillun when it comes to price supports. CCC has more than 2 million pounds of surplus tobacco on its hands and well over a billion dollar's worth of cotton.

But the investment alone is only part of the surplus story. Just to store these foods costs American citizens $700,000 every day in the year. By law, CCC must use commercial elevators and warehouses for surplus when space is available. The Norris Elevator in South Chicago is typical of the 15,000 commercial elevators that have signed a uniform grain-storage agreement with CCC. The main tower and its 58 great storage tanks rise near Lake Michigan. Cups on an endless belt lift grain from barges into bins, where it is weighed and then routed on conveyors into the storage tanks. Every day more barges come up the Illinois River from the cornfields. Superintendent J. T. Goetzinger told me his elevator held 700,000 bushels of corn belonging to CCC, but only 200,000 bushels privately owned.

One of the largest grain elevators on the Great Lakes is at Superior, Wis., operated by the Farmers Union Grain Terminal Association. Its cluster of white concrete tanks holds 12,500,000 bushels—nearly 8 million of them belonging to CCC. At the FUGTA plants in Minneapolis 65 percent of the grain is owned by CCC. The St. Paul terminal is 60 percent filled with CCC grain.

Because there is not enough commercial space, CCC has to find other hideaways for its surplus. So the Government has gone into the storage business and erected bins in 28 States.

Throughout grain-producing areas CCC bins dominate the small towns. The new ones are made of corrugated steel, take up

to 40,000 bushels, and can hold grain off the market as long as 6 years. The little farm community of Peotone in northeastern Illinois has 40 of these steel bins set up in rows at the edge of town. At Fairmont in the rolling Minnesota countryside the traveler sees more of these bins near green fields of corn and soybeans.

This summer as you and your family drive through the lush grain country and gaze at these dome-shaped bins mushrooming near little towns, remember that the Federal Government has spent nearly $200 million to build 185,000 of them, and is spending $200,000 a day to keep them in operation.

But it takes more than commercial warehouses and CCC bins to hold our rising tide of surplus grain. We also have nearly 2 million tons stored in ships at a cost of $25,000 a day. CCC has wheat in 112 reserve fleet ships on the James River in Virginia, and in 130 ships at two Pacific coast points. At Jones Point on the Hudson River, 40 miles from New York, 450,000 tons of wheat lie in the holds of 70 ships left over from World War II.

David J. Ryan, grain supervisor for the Hudson River fleet, and I climbed aboard the ghostly *Lord Delaware* which, like its 69 sister grain ships, has been stripped of all navigating gear, lifeboats and lines. Down in the dark hold lay a lake of wheat. Five men crawled over the grain, inserting long thermometers and pulling up samples to check for insect infestation. They make this inspection at least once every 2 weeks. When necessary, the grain is fumigated.

During winter an electric-fan system circulates cold air through the holds, chilling the wheat so thoroughly it stays cool all summer. Ryan says that with constant vigilance his grain may remain in good condition for 4 to 5 years. I tried to figure how many loaves of bread could be made from the 40 million dollar's worth of wheat squirreled away in this Hudson River fleet.

The Government has made an effort to slow down the relentless wheat combines. It cut parity from 90 to 82½ percent this year under the flexible price-support program. That's a dip from $2.24 to $2.06 a bushel. But political pressure is massing against flexible supports.

Congress has also cut our 1955 national wheat-acreage allotment to 55 million acres. But scientific research now makes it possible to grow more wheat per acre than ever before. We don't need 55 million acres to produce our normal supply of wheat. With our present surplus, we need only 19 million.

So overproduction goes on. No one in Washington has enough public backing to dam the mounting flood. Many of our 4 million politically strong farmers seem to believe in free enterprise only for nonagricultural producers.

CCC tries desperately to get rid of some of the millions of tons of stored food. Between July 1 and December 31 of last year we donated to schools, charitable institutions, and needy persons 243 million pounds of food worth $83 million. During the same 6-month period we gave away nearly $66 million worth of food to the people of 41 nations overseas.

The United States is also selling food to Turkey, Yugoslavia, Japan, and other friendly countries at fire-sale rates. CCC is authorized to lose up to $700 million over 3 years on this venture and get its money back from the Treasury.

It would be cheaper to destroy all our surplus foods. Moral considerations block that thrifty course. The administration's philosophy is to get as much as possible of these foods into human stomachs—free, at bargain prices or by barter. But if surpluses are disposed of in this country, merchants are outraged; dumped abroad they depress foreign economies. Besides, shipment of any quantities abroad would be both costly and impractical. The law provides that 50 percent of these shipments must go in American bottoms. As CARE points out in its booklet, Feast and Famine, to move our surplus food overseas would require the dispatch of 10 freighters every day for a year; even to move the food to our port cities would require 100 freight trains a day for that period.

It is time we took a critical look at our agricultural policy. It's out of date. Today we live in the beefsteak era. Our consumption of wheat and other cereals has been dropping steadily. But we go right on spending billions to keep the agricultural clock turned back.

In a country that boasts of its free enterprise, our Federal Government operates one of the most unprofitable food corporations in the world. It is profligate in its efforts to shield farmers from the risks of free competition. By keeping food prices high, it works against the taxpayers who support it.

This Mad Hatter situation sits down at every man's dinner table. It touches the pocketbook of every taxpayer. Sooner or later we must ask ourselves, "What price too much food?"

Politics and Immigration

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hunterdon County Democrat:

POLITICS AND IMMIGRATION

Representative FRANCIS E. WALTER of Easton, coauthor of the McCarran-Walter immigration law, says that too many persons are "playing politics" with the immigration laws. He includes "well meaning do-gooders" as well as persons who seek to curry favor with minority groups and their self-styled leaders.

The McCarran-Walter Act is a favorite target in areas with large alien populations. Simply because people cannot come to America on the free and easy basis that once prevailed, spokesmen for the racial groups are exerting pressures on Members of Congress and persons in executive authority for the purpose of lowering the bars. Congressman WALTER points out that most of the eligible countries did not last year use up all the preference quotas assigned them. The law gives preference to persons with special skills and to mothers and fathers of aliens already in the country. Because of shortages of housing in this country and impending unemployment in some centers, restrictions have been necessary. Furthermore, there have been plenty of evidences of a desire to push into this country persons of subversive leanings.

We hear more doubletalk on this question of immigration than on any other. Publicly the politicians will join the clamor for "liberalizing" the immigration laws. Privately, in congressional committee sessions and in discussions with American patriotic groups, they will take the opposite stand, agreeing that to lift the bars means complicating the housing situation, the relief problem, the problem of unemployment and social conditions in the urban centers which receive and hold most of the immigrants—especially those from eastern and southern Europe. Congressman WALTER has taken much abuse for serving as author and defender of the Immigration Act. When given an opportunity in public to defend the act and to pin down those who make blanket charges of its unfairness, he makes out a good case for the law. The measure has overall national support or it would have been amended long ago.

Mining Industry Supports Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. DIXON. Mr. Speaker, the Colorado Plateau now is the second largest producer of uranium in the world. This same area is rich in many other strategic minerals, including vanadium, oil shale, copper, coal, iron, oil and other materials. Water and power are needed to assure full development of these vital resources. That necessary water and power will be provided for this purpose by the Colorado River storage project.

The mining industry of the Rocky Mountain States fully recognized this need. In a recent publication the mining industry of Colorado, New Mexico, Utah and Wyoming issued a statement outlining the reasons for their support of this project and pointing out that the project is beneficial to the entire Nation. Especially is this so because the project repays its costs to the Government, most of it with full interest.

I ask unanimous consent to insert this statement by the Rocky Mountain mining industry into the RECORD:

WATER AND POWER NEEDED FOR DEVELOPMENT OF NATION'S RICH TREASURE CHEST

In 1954 the Bureau of Mines listed 42 metals and minerals of strategic and economic importance found in substantial quantities in the upper Colorado River Basin. All of these are produced in substantial quantities in this Colorado River country. Their value as raw material was estimated at $1,123 million.

The Colorado plateau accounts for nearly all of the Nation's current production of that spectacular atomic-age power source material, uranium, and one-third of the Nation's copper (78 percent if you include Arizona). Important quantities of other metals and minerals including coal, iron, zinc, lead, copper, oil, and gas are produced here. In these States are some of the world's largest reserves of oil shale (of which the U. S. Navy has substantial holdings)—an assured source of large quantities of tomorrow's petroleum products for industry and defense. Many minerals of potential strategic value areas are yet undeveloped.

Our rapidly growing population and economy, our defense needs, and the related strategic advantages offered by a diversification and dispersion of the Nation's basic industries, especially those depending upon close-by sources of heavy raw materials for their economical operation, demand that these Rocky Mountain mineral resources be further developed and utilized.

This development means that water and power must be available in dependable quan-

tities and at reasonable cost on a permanently assured basis. Water and power—they are essential ingredients in any practical program for the mining, smelting, refining, and processing of these vital natural resources which are not readily available elsewhere or which must be obtained here to supplement diminishing supplies from other major producing areas.

Failure now to provide the water and power needed for any long-range mineral resource development program can hurt our entire national economy and our national defense program.

The mineral industry of the Rocky Mountain West therefore urges you to weigh these needs in your consideration of legislation now before Congress asking for authorization of the upper Colorado River storage project.

The Rumanian Legation at Bern, Switzerland

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mrs. ST. GEORGE. Mr. Speaker, I recently received a message from a Rumanian friend giving some interesting and, to me, new sidelights on the attempted seizure of the Rumanian Legation at Bern, Switzerland, by a group of young Rumanian anti-Communist students.

While we all realize that modern, or nuclear, warfare is unthinkable and to be avoided at all costs, still our hearts and sympathies are with the enslaved satellites who languish behind the Iron Curtain. We cannot help applauding these blows that are still being struck in the cause of freedom.

The message follows:

On the night of February 14 of this year a group of young Rumanian anti-Communist patriots seized the Communist-occupied legation in Bern, Switzerland, a legation which represents the Soviet-controlled puppet government in their homeland.

This action produced an enormous impression on European public opinion. The moral drama of these patriots, their youthfulness, the eldest among them being 31 years of age, aroused the sympathies of Europe. They came from resistance groups behind the Iron Curtain, being thus a living proof that 10 years of Communist indoctrination and oppression had been unable to kill the spirit of freedom germinating in the younger generation.

They had information that the new political setup in the Kremlin was in the process of sending fresh instructions to their various organizations and agents in the free world, one of these being the MVD chauffeur of the Rumanian Legation. They thought an excursion in that Communist den would surely yield valuable clues in that direction.

In fact the raid against the Communist Legation uncovered the espionage activities of the Red diplomats. An entire arsenal was found in the legation: a short-wave radio transmitter, automatic guns, all kinds of projectiles, time bombs, rockets, and a large quantity of ammunition.

According to the Swiss press, the important documents found clearly proved that the Legation was a spy center. As an immediate result of the Bern affair, the authorities in Sweden, alerted by this incident, uncovered also an important spy ring centering around the Rumanian and Czechoslovak Legations in Stockholm, thus bringing an added positive proof of the results of the action in Bern.

During the time the young Rumanians held the Legation the tension and excitement were at their height in Bern. The morning after the coup, about 2,000 Swiss were gathered in front of the building and 200 police surrounding it. As the young patriots refused to surrender at first, the Swiss authorities, under heavy pressure from the Communists, organized a veritable siege against the lone anti-Communists, surrounding the premises with barbed wire and bringing up an infantry battalion and an armored tank.

These young men had made a vow to obtain the release from Communist jails of several persecuted leaders of the Rumanian resistance, among whom was the heroic Roman Catholic Bishop Suciu. In these men they were asking symbolically the liberation of their people from the curse of Soviet slavery.

Finally after 42½ hours this action, which had caused such an impact on public opinion came to an end. The young men, before deciding to surrender, asked for a Catholic priest who released them from their vow. Then, before entering the police car, in full view of the crowd, they nailed on the front wall of the legation the insignia of free Rumania.

These young Rumanians are now in a Swiss prison awaiting trial.

The success of the Bern commando as a cold-war operation can be measured by the vehemence of Soviet Communist reaction. Mr. Allen Dulles and the CIA were violently attacked, a hysterical Communist press campaign was waged in order to combat the tremendous impression produced by the incident, and in Rumania a motion picture was made, in which the Bern incident was coupled with anti-American presentation of Korea, Indochinese, and Guatemalan scenes.

In Europe it was considered that the trial which will take place in the late fall, will be the most outstanding opportunity in years to dramatize with wide publicity, the issues between the free world and the Soviet enslaved world. Prominent European lawyers are ready to participate in the defense.

The incident in Bern was received among the refugees in Europe with unanimous enthusiasm and considered, since the revolt in East Berlin, as the most powerful event for stirring public opinion for their cause and for themselves a source of encouragement by strengthening their severely strained morale. It would largely counteract the present Soviet propaganda aimed at the repatriation of the refugees from behind the Iron Curtain.

Considering the above factors, it is my conviction that the Bern incident and the ensuing trial could be used with telling effect from the point of view of the American cold war strategy by having a spectacularly organized anti-Communist trial.

If the defense will have American moral support, there is no doubt that such support of the trial will focus the attention of both the refugees and the people behind the Iron Curtain and strengthen their resistance forces. It will be a moving story of heroism and self sacrifice, which will catch especially the imagination of patriotic youth in the captive countries. It will also prevent the Soviet luring into repatriation hundreds of refugees, who would then be used in their country of origin as effective anti-American propaganda agents. It will give fresh proof that America is on the side of the enslaved as well as underlining the major role America is playing in the cold war.

Legal Opinion Backs Stand of Upper Colorado River Basin States

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. DIXON. Mr. Speaker, southern California long has opposed the Colorado River storage project on a multiplicity of grounds, although seldom mentioning its real reason for this opposition. I submit that the true reason is its intention to appropriate the upper basin's share of the Colorado River system as well as their own, by a program of deliberate delay of the Colorado River storage project, regardless of the means used in bringing about such delay.

We of the upper basin long have been aware of the lengths the southern California water lobby would go, but even we were astounder when the Honorable CLYDE DOYLE, of California, asserted earlier this week that any project authorization should await a suit pending in the Supreme Court in which Arizona seeks to quiet title to certain shares of water in the Colorado River system. California is the defendant.

This is an amazing statement in view of the report this week by the special master assigned by the Supreme Court to study this matter and to make a recommendation to the court.

The special master, the Honorable George I. Haight, was appointed on June 1, 1954, and directed to find the facts, state his conclusions and submit a draft of the decree recommended by him, specifically on California's attempts to bring the upper basin States into the suit as full parties.

The special master recommended that the upper-basin States need not be drawn into the suit. He excepted, of course, Utah and New Mexico, and only so far as to allow them to protect interests they have because small parts of these States are within the lower basin and the special master specifically ordered that these States be included only in relation to their respective lower-basin waters.

This ruling of the special master defeats another southern California attempt to delay the Colorado River storage project.

Not only did the special master reject the California contention that upper-basin States should be made full parties of the suit, he also emphasized some other important points relative to the Colorado River system, the Colorado River compact, and the rights of the various basins in the overall matter.

The special master has this to say about the compact which California seems to want to ignore:

The Colorado River compact evidences far-seeing practical statesmanship. The division of the Colorado River system waters into upper and lower basins was and is one of its most important features. It left to each basin the solution of the problems of that basin and did not tie to either basin the intrabasin problems of the other.

Southern California has attempted to dictate how we of the upper basin shall put our water to use. The special master says this:

How beneficial consumptive use shall be measured in each basin is a question for each basin to determine so long as the Colorado River compact endures. The quantities of water for the upper basin and its obligations to deliver are fixed by the Colorado River compact; (2) what matter how the individual basins measure beneficial consumptive use so long as it is possible to interpolate the two methods; and (3) as long as the upper basin is not using its entire apportionment (here no party alleges that it is), how can it be said that they are interested in the system used in the lower basin.

If ever there was a question about further delay pending the special master's report, that question has been definitely erased. This recommendation by the distinguished special master, appointed by the Supreme Court, gives another green light to a project that will benefit the entire United States. I refer to the Colorado River storage project, which I urge you to support regardless of the water-hog attitude of the southern California water lobby.

So that the record may be complete, I am including as an extension of my remarks the conclusions and recommendations of the special master, dated July 11, 1955, at Chicago, Ill.:

CONCLUSIONS

I conclude as follows:

1. No original party to the cause and no intervener charges any wrongful acts of commission or omission against the upper basin States, or presents any prayer for relief against them.

2. The Colorado River Compact divided the Colorado River system into two separate and distinct basins.

3. By the Colorado River Compact, each basin was left to make its own intrabasin allocations of the use of its water.

4. In 1949 the upper basin States entered into a compact, the Upper Colorado River Basin Compact, which was approved by the Congress of the United States.

5. The upper basin States have since been and now are operating under that compact.

6. By that compact, they settled among themselves the interbasin rights to the use of its waters, and also settled among themselves several upper basin questions which in the lower basin and in respect to its waters are now in controversy in this cause.

7. There is presently no legal or equitable reason for this court to disturb the operation of the Upper Colorado River Basin Compact, which result might come by joining these upper basin States as parties to this cause.

8. The States of the upper basin do not wish to join as parties in the instant cause. They resist the motion to join them.

9. To join them would be a backward and retarding step with respect to the solution of problems relating to the Colorado River system.

10. To now join the upper basin States in this cause with respect to upper basin waters would not tend to avoid litigation but would presently promote it.

11. The upper basin States in their capacities as such presently have no legal or equitable interest in the instant cause.

12. As to the upper basin States as such, there is no existent justiciable controversy between them and the present parties to this cause.

13. The United States, as intervener, has not enlarged the scope of the instant cause.

14. The interest of the United States in this proceeding is confined to its rights relating to waters of the lower basin.

15. Whatever the possibility of future controversy may be, there exists in such possibility no sound equitable reason for now joining the upper basin States as such in the instant litigation.

16. A decree can be soundly entered in this cause that will not affect the upper basin States with respect to rights to water or the use of waters in the upper basin.

17. The motion filed herein on July 15, 1954, by the California defendants to join upper basin States as parties ought to be denied as to Colorado and Wyoming, and denied as to Utah and New Mexico in their capacities as upper basin States.

18. Utah and New Mexico each has interests in the lower basin. These interests are small in comparison to the interests in lower basin water of the lower basin States, particularly California and Arizona. However small, they are substantial and important to Utah and to New Mexico, and likely will be so considered by dwellers in the areas having use and need for Colorado River water.

19. In the equitable allocation of the waters of the lower basin, the decree should not overlook these relatively small, but nevertheless substantial, interests.

20. The respective interests of Utah and New Mexico in lower basin waters are adverse to the interests of California, Nevada, Arizona, and the United States in lower basin waters. A justiciable controversy presently exists respecting these lower basin waters which involves substantial interests of Utah and New Mexico therein. In order to make equitable allocations of the use of lower basin waters in this case, New Mexico and Utah are necessary and indispensable parties.

21. With respect to Utah and New Mexico in their capacities as lower basin States, and only to the extent of their respective interests in lower basin waters, the motion should be allowed, and allowed separately as to each of them.

Clear the Runway—Here Comes St. Pat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting article from the Boston Traveler, Boston, Mass., Thursday, July 21, 1955, by Miss Barbara Jencks, who won second prize in the feature-writing category at the recent Catholic Press Convention in Buffalo, N. Y. Her award-winning story was about the Trappistine nuns in Wrentham, and she is a staff writer for the Providence Visitor.

The article follows:

IRISH PLANES ARE NAMED AFTER SAINTS

(By Barbara Jencks)

The next time you're in Ireland, go flying with St. Patrick.

And if St. Pat is tied up, don't fret. St. Brigid, St. Finian, or St. Laurence O'Toole will be glad to take you where you want to go.

ALL NAMED FOR SAINTS

You see, the Aer Lingus (Gaelic for airlines) has all the planes in its fleet named after Irish saints.

That's why it isn't uncommon to be standing at either Shannon Airport or Collinstown Airport and hear this:

"St. Patrick arriving on runway five."

In addition to the planes already listed, the fleet also includes the following craft:

LINED UP AT ALTAR

St. Columncille, St. Malachy, St. Aiden, St. Albert, St. Colman, St. Brendan, St. Enda, St. Finbar, St. Ita, St. Senan, and St. Flannan.

Annually the entire fleet is blessed at solemn ceremonies, much in the same manner that the fishing fleet is blessed at Gloucester.

At this year's blessing, the planes were lined up behind a temporary altar.

Pilots, hostesses, mechanics, cleaners, and members of the office staffs at the airport in Dublin walked in the procession prior to the blessing.

Music was provided by the Irish Army's band. A staff choir made up of Aer Lingus employees sang during the ceremonies.

Many of the saints after whom the planes are named were intrepid travelers themselves. They brought the Christian message to all parts of Europe.

HOLDS WORLD SAFETY RECORD

The Aer Lingus was founded in 1936. From the start it was decided that each plane would bear the name of an Irish saint.

St. Patrick was designated the flagship of the fleet.

Is it any wonder, then, that Aer Lingus is one of the world's safest airlines with only one fatality in its 19-year history?

The business of the Government-owned Aer Lingus has increased annually, at times doubled.

As yet, the system has not obtained a trans-Atlantic air service. The planes fly daily to England, France, Holland, and Scotland.

New planes are purchased each year by the rapidly growing company.

However, regardles of type, all planes are named after saints.

And all are painted bright green.

Space Flight

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, July 25, 1955

Mr. CURTIS. Mr. President, theater goers throughout the country are familiar with the outstanding achievements of Walt Disney. Few know that, in addition to his role in the entertainment world, his technical capabilities have been of great service to our Government. I offer for inclusion in the RECORD an article describing Disney's study of the possibility of a flight into space, which was written for the magazine Interavia by Scholer Bangs, of Los Angeles.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPACE FLIGHT IS POSSIBLE (BUT WHO'LL PAY FOR IT?)

(By Scholer Bangs)

Walt Disney may be America's secret weapon for the conquest of space.

Apparently, and quite by accident, he has discovered the trigger that may blast loose his country's financial resources and place the Stars and Stripes of the United States aboard the first inhabited earth satellite and the first space ship to encircle the

moon as a trial run for an era of interplanetary exploration.

Scientists concede that human space flight is theoretically possible. And, generally, it is assumed that Russia and the United States are the two nations best equipped with resources and competitive urge to prepare the undertaking.

No one, however, seems to have come up with any clear answer to the No. 1 question confronting space planners:

"Who'll pay for it?"

In terms of the capitalist nation, the figure of $10 billion appears recurrently as a nice, round sum for getting space travel off to a good start.

One might imagine the amount, or its Soviet equivalent, as being relatively incidental to the overall space flight program, considering the stature of the nations involved.

In fact, United States space proponents figured they had made it as the cold war between the two world powers showed signs of becoming a "military ice age." They gazed upon the military as a prime source of dollars without end, and hopefully suggested that the first nation in the sky with an observation post satellite would dominate the other. The more politically astute even added that such dominance could prevent a hot war, and even assure lasting world peace.

The only thing wrong with this military approach is that it doesn't work.

It is true that under military pressure both the United States and Russia are spending some effort and money on space-flight research. But neither nation's armed forces may be expected to sponsor an all-out multi-billion-dollar do-it-now satellite project which might intrude heavily upon immediately available weapons.

In the case of the United States, the United States Air Force could hardly go to the Congress and say, "We do not yet have a production missile for intercontinental retaliation, but in the meantime how about letting us have an extra $10 billion to build a space ship?" And imagine the horrified reaction of a Congressman: "What would my constituents do to me at the next election if I were to vote for a comic-strip space patrol?"

Into this atmosphere has come Walt Disney, Hollywood's past master of the motion-picture documentary film, creator of countless wartime training films—Seal Island, Beaver Valley, The Living Desert, The Reluctant Dragon—to bathe the United States space horizon with a dazzling prospect. He has now produced a motion picture which he has titled "Man in Space."

It has never had "top secret" branded upon it to suggest awesome military importance because it is simply an entertainment film.

In Hollywood space fantasies are a dime a dozen for the television trade, and as preposterously improbable as they are numerous. But Disney has chosen to present merely a research-factual review of man's itch to explore the unknown, estimates of the flight equipment needed to probe the space wilderness, and a best guess of the problems and sensations which will be encountered by the first human to inhabit a space vehicle.

To do this he has brought together, for the first time in a motion picture, three internationally noted experts of space research: Willy Ley, the rocketry and space-flight historian; Dr. Wernher von Braun, the German rocket designer, now engaged in missiles projects a Redstone Arsenal, Ala.; and Dr. Heinz Haber, the space-medicine authority and associate physicist in the department of engineering at University of California, Los Angeles.

Ley brings up to date the advances man has made toward the barriers of space. Dr. von Braun presents his estimates for an immediately practical earth orbit space rocket, and offers in logical steps its construction, the training of its space crew, and the man's first blast-off into the void beyond earth's atmosphere. And Dr. Haber introduces an appealing, thoroughly Disneyesque cartoon personality, Homo Sapiens Extraterrestrialis, self-conscious, shyly serious, delighted and bewildered by his role of the first human to be subjected to a rocketing space flight. What happens to H. S. E. is exciting and alarming as he does everything wrong in the state of apparent weightlessness, and is subjected to a barrage of meteorites and cosmic rays. Of course, being the hero of the show, Mr. E survives it all quite handily, presumably ready for a go at Mars on the next trip out.

Disney's immediate achievement, with the aid of this triumvirate of space authorities, is the suggestion that space travel no longer is a wild dream; that it is so near that we can practically feel the earth tremble under the rocket base of Dr. von Braun's space ship.

Man in Space is believable, and Mr. Disney has close to one hundred million Americans believing. It was first shown on a network of 160 television stations in March and repeated on June 15. A third showing is to come on September 7, and if no production snags are encountered the Disney audience will be treated to a new space adventure, a rocket trip around the moon.

By then about half of the voting population of the United States of America probably will have reached two impressive conclusions: "It can be done!", and "Let's get on with it!".

United States space partisans are well aware of the potential of a nation of believers. The scientists who participated in the filming of the Disney show are certain that through public enthusiasm financial support of a space project will become readily available. Dr. Haber told me: "We are in agreement that the 'how soon' of space exploration is largely a political question, and that the hesitation of political agencies to assure funds for the project will disappear as popular support makes itself felt.

"However, one should not be misled into anticipating that if the Congress should vote unlimited funds tomorrow we could begin immediate construction of a space vehicle.

"We could reduce by years, perhaps, the target date for man's first space flight; but none of us have any illusions concerning the vast amount of preliminary work still to be done. We merely are more hopeful now, and convinced that we are on the right approach.

"I think it quite possible that I will live to see its achievement."

Dr. Haber believes that both Dr. von Braun and Willy Ley are in agreement with him that, before construction of a manned space vehicle can be attempted, exhaustive research data must be gleaned from tests of intercontinental ballistic missiles and, a step beyond, unmanned but highly instrumented earth satellites.

"Then," he said, "we will be ready to tackle the cross-country rocket plane which Dr. von Braun envisions."

"These are practical steps toward the realization of unlimited space travel, and they should not be too slow in their development. The manned station in space is quite another matter, however, and it is my strong belief that we have not yet reached the point of specific planning of the undertaking. We do not yet have answers to some of the major problems, both political and scientific. The mustering of scientific manpower for such a project presents, in itself, a major obstacle."

Such are the views of one who for many years has been in the foreground in United States discussions of space pioneering. In view of his careful, scientific recognition of many other stumbling blocks and barriers on the space highway it might appear strange that he should find himself involved in a television space show aimed solely at the entertainment of a mass audience principally concerned with meeting the monthly payments on their 1955 automobiles.

What persuaded him to join the Disney venture?

Dr. Haber relates the incident as follows:

"I was surprised when I received a call from the Disney studio in April of 1954. They explained that they were putting together a series of television films, and would like to have my participation as a consultant on a science-factual story about space travel. I was dubious because I knew from past experience that in Hollywood pictures and science don't mix.

"The studio had pinned upon the four walls of a large room otherwise occupied only by comfortable chairs with wheels on their legs a massive array of rough sketches depicting the plot and sequences of the space story. As we wheeled ourselves past this display, I was asked my reaction to every sketch.

"The story line was quite different than I had expected. Normally when a Hollywood studio does a space picture, scientific facts are badly twisted and distorted to fit a more or less silly plot of fiction. The projected Disney show had no plot—or rather, its plot was science and science's potential future. True, there were a number of sketches on the wall displaying material that was controversial, invalid, or scientifically doubtful. We scientists were put to work to weed out these flaws.

"It was very gratifying to find out that the science consultants to the Disney show were allowed to be true consultants. Their advice and suggestions were taken at face value. At one time Disney had told the artists 'If our scientists find it necessary to kill a good gag because it violates a law of nature—it is just too bad. Then we will have to find new gags that are consistent with scientific facts.'"

Dr. Haber feels that for himself and his consulting associates the making of the Disney film has brought about a new appreciation of the art of making pure science understandable to the unscientific lay mind.

"In putting together the space story the Disney artists became scientists, and we became Disney artists, inventing jokes and gags to convert pure science into pure entertainment and still present scientific facts which are important to an understanding of space problems.

"When we sought to personalize probable human experiences in space flight, the little cartoon character seen in the television show evolved. This droll little person did not come into being easily, however. The Disney artists drew more than a score of caricatures of the first man in space before the lucky fellow was selected. We chose to name him Homo Sapiens Extraterrestrialis not only to identify him with scientific clarity but, as well, to satisfy his obvious vanity at being selected for the important role.

"He became so real to us that very soon we found ourselves actually talking to him as a living actor: 'No, Homo, not that way; you're weightless; just floating in space. Show surprise when the Martini you're raising to your lips leaves the glass and keeps on going to splash against the cabin ceiling.' We constantly asked each other, 'How will Homo react?' when we placed him in one embarrassing predicament after another."

In the Disney show, Homo Sapiens is subjected alternately to the crushing forces of acceleration and the bewildering effects of weightlessness. He is machinegunned by bullets of cosmic rays; sucked by explosive decompression through a hole punched in the cabin by a wayward meteorite; seared on one side and frozen on the other when exposed, outside the space ship, to solar radiation; alternately delighted and terrified by the thrust effects of his small jet pistol as

he tries to regain the security of his space vehicle. Repeatedly, never quite able to grasp the consequences of his actions, he is subjected to the gross indignities of weightlessness in free fall through space.

Quite understandably Homo's misadventures in the weightless state command major prominence in the picture. It falls into the category of major problems of the space planners.

"Actually, while we have had and will have ample opportunity to test on the ground the structures, powerplants, and physical accessories of our space ships, there has been very little opportunity to learn from actual experience just how a human will react to the weightless state," Dr. Haber says.

"We can duplicate the effects of acceleration with the human centrifuge. Quite readily we can test human tolerances of heat and cold. We know what to expect of inanimate objects in the state of weightless suspension. But we know very, very little about human reactions in this field.

"As of today, our only tool for experimenting with human weightlessness is the fast-flying airplane, directed upward at high speed and then held as long as possible to the arc of a parabolic path. With equipment so far available, we have been able to maintain a crude approximation of the weightless state for as long as 35 seconds.

"I, for one, am not to happy with the results.

"Where Maj. Charles Yeager, the first man to fly faster than sound, experimented with weightlessness in a jet fighter, he reported that after 8 seconds in the parabola he became completely disoriented and had to break away from the curve. He said, 'I felt completely lost in space—as if I were sitting on a big ball and being rotated slowly.'

"Others who have attempted it have come down with quite contradictory reports of having experienced no disturbance.

"I cannot help but conclude that Chuck Yeager, an exceptionally good pilot, may have been the only one to maintain a steadily constant parabolic flight path, and it is wholly possible that we will get no really informative data on the physiology of weightlessness until we can so instrument a plane that it will maintain its parabola automatically."

However, Dr. Haber believes that the chief concern of zero gravity researchers will be that of discovering how to acclimatize space crews to their unusual situation. He says he believes that humans can adjust to the sense of weightlessness and through experience learn how to live with the phenomenon. He adds:

"Even should the transcontinental rocket plane develop before we have all the answers to weightlessness, we probably will not have too many worries. Assuming that the rocket plane reaches a speed of 3 miles per second in outer space, its passengers should not be exposed to weightlessness for a period greater than 6 minutes. Exposure of this length should not present any serious problems of human tolerance."

Small animals exposed to relatively lengthy periods of weightlessness in United States high altitude missile flights have shown no serious disturbance beyond disorientation, which evidently was modified when they were provided supports to which they could cling. At the point of rocket burnout, and start of the weightless state, test animals stopped breathing for the time of 5 or 6 exhalations but then resumed breathing normally.

While such experimental details are either absent or only lightly touched in the Disney picture, Dr. Haber and his fellow scientists appear to be convinced that the basic story of man's drive to learn what is beyond his earth's atmosphere has been well told, and effectively.

Walt Disney will probably expand the story in ensuing pictures. Those who know him are certain that he will not be swayed in the least by being considered America's "secret weapon" of space conquest.

The Geneva Conference

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. BOSCH. Mr. Speaker, we have all been interested in the summit meeting at Geneva and its outcome.

Under leave to extend my remarks, I include the July 24 column of John O'Donnell, Capitol Stuff in Europe, which appears in the July 25, 1955, edition of the New York Daily News. Mr. O'Donnell was in Geneva during the conference, and I believe that his observations will be of interest to my colleagues.

The column follows:

CAPITOL STUFF IN EUROPE
(By John O'Donnell)

GENEVA, July 24.—We Americans should be mighty thankful today over the results of this Geneva Big Four conference. Most certainly the diplomatic plane supposedly headed for the port of universal peace, peaceful coexistence, and brotherly love made another crash landing.

But this time we were able to walk away from the wreck much more than we could after Tehran, Yalta, and Potsdam. True, we didn't win anything except a vague promise that we'd keep on talking with our opposite Commie numbers next month in New York and here in Geneva next October on the same cold war issues that the boys have been discussing all last week without getting anywhere.

But this time we didn't lose our national pants and shirts as Roosevelt and Truman lost them for us in 1945. There are no secret agreements at this meeting.

Eisenhower must be given credit for putting on an amazingly brilliant propaganda show, so expertly produced, both in formal sessions and informal hours of relaxation, that he astounded even his greatest admirers.

Ike didn't change the basic line of Russian Commie thinking. The Kremlin big shots moved out of Geneva last night and this morning still gushing sweetness and light and showing off their newly-acquired charm-school deportment. But they definitely refused to go along with Ike's argument for a united Germany and a German army in the NATO setup.

The Russians weren't as grim and nasty as they have been in the past on this matter. Instead of saying to hell with the idea of letting a unified Germany rearm with United States equipment, the boys from Moscow kissed it off with a broad smile. They just refused to answer or comment on that all-important question and called for the vodka and caviar celebration. The masterminds of global government then locked arms for an Auld Lang Syne, chorus by the banks of Lake Leman and headed homeward to Washington, Moscow, London, and Paris.

ADENAUER: A DISAPPOINTED OBSERVER

A hundred miles north of here, up in a German-speaking Swiss canton, the most powerful European this side of the Iron Curtain, Konrad Adenauer, the 80-year-old chancellor of West Germany is now reported to be definitely disturbed over the results of this Geneva conference.

Old Adenauer knows that the Russians are playing for time, for 6 months or a year, hoping that age will finally conquer their determined enemy. Adenauer is disappointed that Ike did not get a firm and definite commitment from the Russians at this meeting.

Furthermore, reports here from Germany say that newsreel shots showing Eisenhower and Marshal Zhukov posing happily together have aroused fury among German audiences who recall when Zhukov's soldiers staged the "big rape" in May, 1945.

Russian infantrymen stuck United States lend-lease tommyguns into the bellies of German fathers and made them witness the ravishing of their wives and daughters. This German reaction to Geneva may turn out to be important for us as a military question.

WHO IS MYSTERY MAN IN THE KREMLIN?

On the Russian side, the most interesting development, at least to Americans and our British cousins (the French just don't count in this setup), is the fact that the top Russian delegation here in Geneva was not able to make a final important decision without talking to somebody in the Kremlin.

What Americans would like to know is who now sits in the Kremlin so important that top guy Premier Bulganin (who has really charmed everyone here), rough-and-tough Commie political by Khrushchev, Ike's old pal Marshal Zhukov and iron-pants Foreign Minister Molotov have to call up before they get the go-ahead signal.

The Russians played it smartly on the most dramatic play of the conference, particularly in their own backyard behind the Iron Curtain. This quick-thinking move came when our own Eisenhower crossed the boys up with his surprise suggestion that we and our cold war enemies swap blueprints of our top-secret defense installations and exchange mutual invitations to come on over in your planes and take all the pictures you want.

Now this idea had been chewed over for many weeks in Washington. Naturally, it sent cold chills down the spines of every responsible professional military man. Ike himself was originally cold to the suggestion. But here in Geneva he realized that he was the one member of the Big Four who was riding high, wide and handsome on the international propaganda front. So he decided to shoot the works, making up his mind only eight hours before pulling the trigger.

IKE PROPOSAL IS TOLD TO RUSSIAN PEOPLE

This was an audacious move. The Russians might have taken us up on the diplomatic propaganda gamble. Thank the Lord they didn't.

The Russians, as the British report, smiled decisively at this suggestion by Eisenhower. But it's important to note that this highly important Eisenhower move, a definite win for the U. S., was honestly reported to the Russian people both in their controlled press and over their government radio.

So score one for our side on this play. And give credit to the boys who needled Ike into taking the chance. The two who did it were Harold Stassen and Ike's White House assistant, Nelson Rockefeller, a former F. D. R. global New Dealer.

The Late Frank Crowther

SPEECH
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1955

Mr. RAYBURN. Mr. Speaker, I am deeply grieved at the passing of my old

friend, Frank Crowther. He and I became great friends during his service in the Congress, and we have kept up a correspondence ever since he left. Frank was a very able man, a very useful and patriotic one. In his work in the committee rooms and on the floor of the House he was always listened to because he had meat in what he said. He really served his day and generation in the best fashion. To his wife and his other loved ones goes my deepest and sincerest sympathy.

Appreciation of the GI Bill of Rights

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have today received a letter from a World War II veteran by the name of William G. Fogland, of Hornsby, New South Wales, Australia, whom I have never had the pleasure of meeting, and he is not a member of the district which I have the honor to represent. He writes in appreciation of the World War II GI bill of rights, Public Law 346 of the 78th Congress.

All of us know of the value of that legislation, but it is heartwarming to receive this type of letter from a young man who has made such excellent use of its provisions.

For that reason, I am asking permission to include his letter as a part of my remarks.

The letter referred to follows:

HORNSBY, N. S. W., AUSTRALIA,
June 8, 1955.

Mrs. EDITH N. ROGERS,
Member of Congress, Veterans' Affairs Committee, House of Repesentatives, Capitol Building, Washington, D. C., United States of America.

MY DEAR MRS. ROGERS: With the end of the last university term, my entitlement under United States Public Law 346, the GI bill, expired, and I am now finishing the last year of the medical course of the University of Sydney under personal resources.

To you, as a member of the Veterans' Affairs Committee and as the former member for Melrose, and to the other members of your committee, I wish to express my appreciation and gratitude for the opportunity provided by the far-seeing legislation enacted on behalf of veterans in 1944. It was a good substantial piece of constructive work at a time when the emphasis was on destruction, and without it, I, in common with so many others, should have been unable to retrain and to shift into a far more congenial and satisfying occupation. Since I have been in training for the past 5 years, I have felt very strongly that when my entitlement expired I must write to the Veterans' Affairs Committee to thank the members—both the present members and those who were members in 1944 if they be not members today—for providing the opportunity and the means for achieving the education which I should have been unable to obtain without this legislation.

Previously, I had a job; today I am on the threshold of a profession, and Albany Hospital, Albany, N. Y., has appointed me to an internship in surgery for next year.

Again, my many thanks to the Veterans' Affairs Committee.

Very sincerely yours,

WILLIAM G. FOGLAND.

A Bill To Relieve Aliens of an Unnecessary Trip To Canada

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. REUSS. Mr. Speaker, the case of Jane Edith Thomas has highlighted an inequity in our immigration laws that should be corrected. I have today introduced, for appropriate reference, a bill to obviate the senseless trip to Canada now required of aliens in the United States who are otherwise fully eligible to remain here.

Jane Edith Thomas is a 4-year-old girl born at the American hospital in Trieste in 1951. Her father, an American citizen, was a member of the Armed Forces stationed in Trieste. Jane's parents are now back in the United States, having brought Jane with them under a visa issued by the United States consul at Venice. Now it turns out that technically Jane is not yet a United States citizen and hence must be deported to Canada, although she can then, after cooling her heels in the land of our neighbors to the north, reenter this country under a valid visa and in due course gain her United States citizenship.

No earthly purpose is served by putting a 4-year-old girl to the trouble of a trip to Canada, and her parents to the expense and worry of such a trip.

Of all the needlessly harsh features of our immigration laws, none is more absurd than that which makes it necessary for an alien in the United States to make a special trip to Canada to secure an immigration visa in order to obtain permanent residence here. This makeshift procedure is resorted to by aliens in this country who desire to remain here, but have not been admitted for permanent residence, where they meet all the qualifications for admission as immigrants, and for whom a quota number is available if required. There is no explicit statutory provision which prescribes or authorizes this practice. It is an expedient devised by the Immigration and Naturalization Service to legalize the status of aliens who otherwise would have to leave the country or be subject to deportation.

To understand the situation, it is necessary to review the history of this method of adjusting the status of aliens, which is known as preexamination procedure. It was instituted by administrative regulation in 1935, after an agreement was reached with the Canadian Government whereby certain aliens would be granted entry into Canada temporarily for the purpose of applying to an American consular officer for an immigration visa to the United States. The United States authorities agreed to receive the alien back into this country if he was denied an immigration visa. In certain cases an alien who wished to have his status adjusted was examined by the immigration authorities in this country to determine his eligibility for admission. If found eligible and if a quota number was available for him, he was permitted to go to Canada, obtain an immigration visa from the American consular office there, and return to the United States.

Although originally intended as a temporary arrangement pending enactment of legislation by Congress, this "pre-examination procedure" was continued after Congress made provision in 1940 for suspension of deportation in specified hardship cases. To obviate the need for this cumbersome procedure, a provision—section 245—was inserted in the Immigration and Nationality Act of 1952 authorizing certain aliens lawfully in the country as nonimmigrants to obtain an adjustment of status to that of persons admitted for permanent residence by petition to the Attorney General. Unfortunately, this provision does not go far enough. It applies only to a limited class of aliens—those who have entered as bona fide nonimmigrants and who continue to maintain that status, and for whom a quota or nonquota immigration visa is immediately available. If affords no relief if there has been any irregularity in the admission of the alien, even a technical error for which he is not responsible. A person admitted as a citizen cannot obtain an adjustment of status if it is found that his parents had lost his citizenship or could not transmit citizenship under the highly technical provisions of the Nationality Code. Nor is this procedure available to aliens who through misunderstanding of our laws, fear of persecution in their native country, or for other reasons overstay the period of their admission.

Because there are so many meritorious cases for which section 245 of the Immigration and Nationality Act provides no remedy, Congress has been flooded with private bills to adjust the status of individuals. To lighten this burden on Congress, and to avoid the necessity of deporting aliens who have proved themselves to be desirable residents, the Commissioner of Immigration and Naturalization recently revived the preexamination procedure. While this is less harsh on a meritorious alien than deportation, to require him to go to Canada to pick up an immigration visa after he has been found admissible for permanent residence serves no useful purpose whatever. It imposes a wholly unnecessary financial burden on the individual. In many cases, especially with respect to elderly persons, it constitutes a physical hardship as well, one which may endanger their lives or health.

The bill I have today introduced would extend the present remedy for adjustment of status by the Attorney General to all cases where the alien is found admissible for permanent residence if a

quota number is immediately available to him or if he is admissible as a nonquota immigrant.

Such a provision would in no way weaken our control over aliens. It would be no obstacle to the deportation of undesirable aliens. Nor would it enable the alien who comes to the United States as a visitor to obtain a preference over persons in foreign countries who have applied for, and are waiting to receive, quota numbers. The Attorney General would be authorized to grant permanent residence to a quota immigrant only if he could obtain a quota number.

Furthermore, the adjustment could be made only where, after a thorough examination, the alien was found to fulfill all requirements for admission as an immigrant. The only substantial change I propose to make is to permit the adjustment to be made without a useless trip to Canada, after the Attorney General determines in accordance with the procedure prescribed by statute that the alien is entitled to the relief now obtained by this roundabout procedure. This change will be a benefit both to the alien and the Government. It will relieve the alien from the hardship resulting from leaving and reentering the United States. It will also greatly simplify the administration of the law.

Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter received from a constituent, Mr. Frank S. Lehmann, Hastings, Nebr.

Some weeks ago Mr. and Mrs. Lehmann were successful on the program Break the Bank. I sent a letter of congratulations to them and received this well written thoughtful letter in return. I feel that Mr. Lehmann's views on national and international subjects are deserving of this recognition.

The letter follows:

HASTINGS, NEBR., *July 9, 1955.*

Hon. PHIL WEAVER,
House of Representatives,
Washington, D. C.

MY DEAR MR. WEAVER: Kindly accept our heartiest thanks for your thoughtful letter of congratulation.

It was an unforgetable event for Mrs. Lehmann and myself when we proudly could proclaim to the untold millions listening in that we came from Hastings in the State of Nebraska.

We never would have believed what publicity really can do.

From the moment we left the theater, on the streets, in stores, depots, all over, hands were outstretched to greet and congratulate us. It is a grand and glorious feeling to live in such a great country among so many friendly people.

As a lifelong Republican, I was very happy to get in contact with my Congressman. May God bless you and your colleagues and may He help you in your great and strenuous work.

The world stands today at the crossroads of its most momentous decisions in the history of mankind.

Therefore the statement of fellow Nebraskan Mr. Brownell, that the President will be a candidate again in 1956 is timely, great, and welcome news to all patriotic Americans. His masterly and vigorous but still flexible judgment in guiding the affairs of his country and his comprehensive understanding of world affairs make it urgently imperative that he be the banner bearer again in 1956 and that we must do all in our power to convince our countrymen that President Eisenhower is absolutely the indispensable man of the day.

I have lived a long time in this world and I have studied its history over and over again to come to the conclusion that the power of the mind will prevail in the end.

Our great American democracy is the defender, godless communistic radicalism the attacker.

A great fiery and emotional propaganda campaign is in the offing.

Let's get ready for it.

With the approaching meeting of the heads of the four big powers in Geneva, and right thereafter the Communists will unloosen a flood of pernicious borings from within and bombastic and honest-to-goodness protestations of universal peace.

I watched them in Germany over 50 years ago when William Liebknecht and August Bebel fought Kautzky and Bernstein. In England when the Fabians, with the Sidneys and Bernard Shaw, gradually became the Kier Hardys and the McDonalds and ultimately the Atlees and the Bevins.

There is no "lesser evil."

They are all working for the same goal—the ultimate socializing of the world.

There might be coexistence for a while, but the positive end will be either free democracy or communistic socialism. There is still time. The freedom-loving people are still in the overwhelming majority. They are anxiously awaiting our message. Now is the time for action. We have to fight fire with fire. Let's get ready for it.

I could write volumes on this and related subjects, but I do not want to take up more of your valuable time, only please allow me to give a few sketchy remarks about myself and also my belief that God wants me to do my share in this great battle for justice and freedom.

I spent 20 years of my life in Germany and 5 in England. I have traveled all over Europe and studied its people and their political and economic conditions.

In general, the greatest part of my life I was in the mercantile field as a store owner, salesman, organizer, and public speaker.

For 12 years I was connected with an insurance company as agent, district manager, and traveling supervisor. My work consisted of opening new agencies, work as a high-pressure closer with the men, and go from office to office to make pep speeches. I helped to build the company from a small assessment society to 1 of the 10 largest sick and accident companies in the country.

I also was active in organizing industrial companies and fraternal societies. As an orator, I classify more as the emotional spellbinder type, very persuasive and successful.

In closing let me assure you that in writing this letter I am not guided by mercenary motives, nor do I have any political aspirations whatsoever.

My only desire is to lend a helping hand in this great and holy fight for liberty and freedom.

Sincerely,

FRANK S. LEHMANN.

HASTINGS, NEBR.

Elections in Israel

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. CRETELLA. Mr. Speaker, I wish to include for the RECORD a story on elections in Israel as brought to my attention by the Embassy of Israel in Washington. I am sure the Members of this legislative body will be interested in reading of the similarities and differences between Israel's elections and form of government and ours. But the outstanding fact is Israel proclamation, which like our own system, assures and guarantees freedom of religion, speech, conscience, education, and culture for all.

ELECTIONS IN ISRAEL—ELECTION DAY—ITS SPECIAL MEANING

Election day in Israel brings to a climax a political campaign that, despite the differences of custom and language, bears striking resemblance to those of the United States and other western democratic nations.

In 1955, July 26—the 7th of Av, 5715, according to the Hebrew calendar—was selected as election day. On that day, Israelis will elect the 120 members of the Knesset, the Parliament of Israel.

Radio—sound trucks—advertisements in the newspapers—posters on the billboards—speeches in the parks and meeting halls—heated conversations over the dinner table and at restaurants and cafes—everywhere, the political campaign holds the attention and interest of the people of Israel.

Indeed, Americans visiting Israel during the campaign would find the speeches and oratory missing from only one accustomed medium of communicaiton. There is no political campaigning on television in Israel—only because Israel does not yet have television.

Free speech, and lots of it, dominated the scene during this 1955 election—the third in the history of the young Republic. The preelection discussions, the secret ballot, the excitement and the pride that are the mark of a free people, are found in Israel as they are throughout the democratic world when voters choose the candidate who will direct their sovereign government.

But election day in Israel has a special kind of drama.

Israel is one of the few countries in the Middle East that hold free elections or permit a broad enfranchisement of their citizens.

Israel, a small country (it has some 8,000 square miles, about the size of Massachusetts; and a population of about 1,750,000, not much more than the State of Oregon) offers the voting right to every citizen.

Many of its citizens are enjoying democratic rights for the first time in their lives, as a result of their immigration to Israel.

Never is that more obvious than on election day.

Ballots are cast by Israel citizens who just a few years ago were living an existence typical of the Middle Ages in the ghettos of Yemen or Morocco, or who had been reduced to second-rate citizenship in Iraq; by families who came to Israel to escape the persecution of Hitler's anti-Semitism; by men and women who managed to get out from countries behind the Iron Curtain before their governments put a halt to legal emigration to this little country on the eastern shores of the Mediterranean.

Whatever their background, these citizens of Israel now have the right to vote. They

use their right. Jew, Christian, Moslem; man or woman; rich or poor; native born, old settler, or newly arrived immigrant—all share the right to vote in secret for the party of their choice in Israel's quadrennial elections.

The people of Israel treasure that right to vote. It is embedded deeply into their democratic tradition, and specifically into the constitutional legislation of the state. It is valued the more because of the contrast—contrast so close at hand, so fresh in their memories—with lands where the franchise is sharply limited, if it exists at all; or with other areas where the ballot is scarcely secret and the political choice is limited to one all-powerful party.

So, as the people of Israel vote in the free elections of July 26—in the big cities, in the cooperative farms, in the remote settlements, of the Negev, or at their army posts—they will have the special pride of an enlightened citizenry which is building the future of their families and their nation, despite special conditions of adversity.

WHO CAN VOTE?

Every citizen of Israel, over the age of 18, without regard to race, color, creed, or previous nationality, has the right to vote. The Government does everything possible to make him aware of his right and encourages him to make use of it.

Every effort is made to see that every eligible citizen qualifies himself. Thus, in view of continuing immigration to the country, persons who obtained their citizenship between January 1 and March 1, 1955, were given the right to vote in the 1955 elections—under a law passed in 1954.

During a 6-week period in January and February, registration notice forms were sent by registered mail to all the people on the roster of eligible voters. A signature on that card becomes prima facie evidence on election day that the bearer is entitled to vote.

The same mailing system serves to warn those who don't get their registration cards that their names are not on the voting list, or that they're registered at a previous address. (That's particularly important in Israel, with its hundreds of thousands of new immigrants; as might be expected, they tend to move around before they finally settle down.) So, the failure to receive a registration card serves as a reminder to the individual to get himself registered for the election—at the right place, at the right time.

There's still another safeguard. At every polling station, a list of the qualified voters for the area must be posted 10 hours a day, for 10 days prior to April 15. People whose names are missing from the list can arrange for appeal of their status; and they may take the matter to the district courts, if necessary, for final redress.

Of course, Moslems and Christians, as well as Jews, have full voting rights, as they have all the rights of citizenship, in the State of Israel.

(In Israel, the Moslems constitute the largest non-Jewish religious group. A number of groups of people of the Christian faith also live there: Greek Catholics, Greek Orthodox, Roman Catholics, Maronites, Anglicans, and other Protestant sects.)

Israel citizens do make use of that right to vote. It is estimated that more than 85 percent of the country's adults (who number about 1.1 million), will vote on July 26—one of the highest proportions of voting participation in any democratic country in the world.

WHO CAN BE A CANDIDATE?

Every citizen of Israel who will be 21 years of age on the day the lists of candidates are submitted is eligible to run for office.

Judges of any court, however, are not permitted to run for office—a prohibition based on the belief that the judiciary at every level must be completely removed from partisan politics.

Civil servants and members of the armed forces, regardless or rank, are eligible to stand as candidates in the election. Civil servants (except for schoolteachers) and members of the regular army, must take a leave of absence from their government jobs from the day of nomination by their political party until Election Day—and, if they're elected to the Knesset, that leave of absence continues for the duration of their 4-year term.

This is required in order to insure that the machinery of government and the army are insulated from the heat of the political campaign.

HOW ARE THE ELECTIONS RUN?

Israel's elections, in the language of its basic law, are "universal, direct, equal, secret, and proportional."

They are "universal" in terms of a broadly enfranchised electorate.

They are "equal," in the sense that every citizen has one vote.

They are "direct," since the voters cast their ballots directly for the party of their choice.

They are "secret." Each voter, in the privacy of the voting booth, places his ballot into a sealed heavy envelope. The envelope, in the presence of official observers, is dropped into the ballot box. Nobody can see or find out how the individual citizen votes.

And Israel's elections are based on a "proportional" system—but one quite different from the system of "proportional representation" that is sometimes used in local elections in the United States.

The Israel voter does not vote for an individual candidate. He does vote for a party, a party philosophy, a specific party election platform. The voter cannot split his ticket among the various parties.

In the election for the Knesset, each party submits a list of candidates—up to a total of 120, the total membership of the Knesset. Most of the larger parties submit a full ticket of 120 candidates; many of the smaller ones submit a lesser number than the complete 120. Each list of party candidates is numbered in whatever order the party itself decides.

Here's how it works. If a party gets 50 percent of the votes, it gets 60—out of the 120 total—candidates elected. The first 60 people on that party's list thus take office. The law provides that any party receiving not less than 1 percent of the vote cast participates in the distribution of the Knesset seats.

One interesting byproduct of this election arrangement is that it saves the country the necessity of byelections to fill vacancies in the Knesset caused by death or resignation. When a vacancy occurs, the seat is filled by the next man or woman on the election candidate list of the party involved

WHO SUPERVISES THE ELECTIONS?

Supervision of Israel's quadrennial elections, and the handling of the technical arrangements for them, are in the hands of a 31-member central elections board, carefully established to give a voice to all political trends in the country.

The chairman of the board is a Supreme Court judge, elected for this specific task by his fellow judges. The members of the board are elected by the political parties in the outgoing Knesset, each party being roughly entitled to 1 seat on the board for each 4 seats it holds in the national parliament. In addition, the smaller parties represented by less than 4 deputies in the Knesset each get 1 seat on the central elections board.

The central elections board has five major tasks: (1) accepting the lists of candidates submitted by the parties; (2) setting up and supervising the regional election boards, which, in turn, name the local boards; (3) handling all the technical and administrative arrangements for the election; (4) "policing" the campaign to make sure the "ground rules" are obeyed; and (5) counting, certifying and publishing the election results.

The sound and the fury of Israel's election campaign come to a silent halt at 7 p. m. the night before election day. No public campaign meeting, no broadcasts, no sound trucks are permitted after that time. On election day itself, the polls stay open throughout the country from 6 a. m. until 11 p. m. Counting of the votes starts immediately afterwards—and since in most cases the election law permits no more than 800 voters to be registered at any one polling station, the count comes in quickly to the Central Elections Board.

Soldiers have their own polling stations, located at military establishments throughout the land. The election campaign at the military posts is severely regulated. Each party has the right to display one copy of its list of candidates, its election platform and notices of outside campaign meetings at the premises of each army unit. But no other policital campaigning is permitted at army posts.

CASTING THE BALLOT

Casting a ballot in the Israel elections is a simple task, since the vote is for a party rather than for individual candidates.

Throughout the campaign, each party features one Hebrew letter on all its printed and oral propaganda; that letter becomes the symbol of the party, in much the same way that political parties in the United States feature visual symbols which appear at the head of their column on the ballot or voting machine.

When the Israel voter enters the booth—a booth that by law must conceal the voter from the sight of any other person, he finds stacks of printed slips, bearing the letter-symbol of the various parties. He chooses the paper with the symbol of his favored party, places it in a heavy envelope and seals it. Emerging from the voting booth, he drops the envelope into the ballot box, in the presence of the election inspectors.

This voting system is simple, foolproof—and of special value in this land of heavy immigration, where considerable numbers of the electorate do not yet have full proficiency in the Hebrew language.

THE KNESSET—ISRAEL'S PARLIAMENT

The Knesset, for which the voters make their political selections, is the Parliament of Israel. It is the most important public body in the nation, as it is in most other parliamentary democracies.

The 120 members of the Knesset serve for 4 years.

The Knesset elects the President of Israel, who serves a 5-year term. The President's duties and powers are restricted. He entrusts a member of the Knesset with the task of forming a government; he appoints the country's foreign representatives and receives foreign diplomats; and he receives reports from the Prime Minister. Mr. Yitzhak Ben-Zvi is the second President; he succeeded the late Dr. Chaim Weizmann on November, 9, 1952.

The Prime Minister must be a member of the Knesset, and the members of his Cabinet are usually fellow deputies in the Parliament. The first Prime Minister was David Ben-Gurion; he resigned on December 7, 1953, and was succeeded by Moshe Sharett. Both are members of the Mapai Party.

The Knessett also elects the Speaker of the Knesset—whose functions somewhat resemble those of the Speaker of the House of Representatives in the United States. The Speaker is Joseph Sprinzak.

The Knesset, unlike the American and British Parliaments, is a one-house legislature. There is no Senate, as in the United States of America, nor a House of Lords, as in the British Parliament.

Like its American counterpart, the Knesset has its own Congressional Record—called in Hebrew, Divrei HaKnesset—a transcript of all the debate. The Knesset also has its press galleries, and newspapers give it the same close attention that American papers pay to action and trends in the Congress.

The Knesset elected in July 1955 is the third in Israel's modern history; the first was elected in January 1949 and the second in July 1951. But the name "Knesset," as well as the figure of 120 members of which it is composed, derives from the ancient history of Israel. The Knesset Hagdola (the Great Synod) was the name of the central legislative body of Israel at the time of the Second Temple, over 2,000 years ago.

During the 7 years of Israel's existence as a modern Republic, the Knesset has been faced with the challenge of a heavy responsibility. It has had to establish a mass of modern legislation for a new state with unique and unexplored problems; and to adapt and modernize the legal system that applied under the British mandatory regime of Palestine and previous occupants of the land.

That means lots of legal problems. For instance, a typical hand-me-down from an older legal concept of the inferior status of women was a law of evidence that "in civil cases, evidence is only valid when given by 2 males, or by 1 male and 2 females." This discriminatory provision, like innumerable others, was abolished by the Knesset's passage of a women's equal rights law of 1951.

The wide scope of problems facing the State can be discerned in even a brief listing of the more important laws passed by the Knesset during 1953 and 1954. Over and above the normal parliamentary actions on appropriations, taxes, and governmental routine, the Knesset passed laws to establish an independent judiciary of high integrity; a modern social insurance system; a law and administrative ordinance to bring the general body of statutes up to date; and new laws covering marriage and divorce, education, and the abolition of capital punishment in murder cases—to name just a few.

Clearly, since the President's powers are limited and the Prime Minister is responsible to it, the Knesset is no rubber-stamp legislative body. It has been the scene of protracted and searching debate in the best traditions of parliamentary government throughout the world. Since no party has ever held a clear majority of the deputies, it is also an arena for the demonstration of political skill and sagacity. During these past 7 years, Israel's Cabinet—the executive government of the nation—has been a coalition of many parties.

ISRAEL'S POLITICAL PARTIES

Fourteen parties, reflecting every nuance of public opinion in Israel, are represented in the Second Knesset, which will be replaced by the new Parliament elected on July 26, 1955.

Here is the party composition of the Second Knesset at the time it went out of office:

Parties and seats in Knesset:	
Mapai (the predominant labor party in Israel)	47
General Zionists (the principal party of the liberal conservatives)	23
Hapoel Hamizrahi (a religious labor party)	8
Herut (a strongly nationalist conservative party)	8
Mapam (a left-Socialist, non-Communist workers' party)	7
The Israel Communist Party	7
The Progressives (a left-of-center liberal party)	4
Parties and seats in Knesset—Continued	
L'Ahdut Ha'Avoda—Poalei-Zion (a socialist party which seceded from Mapam)	4
Israel Arab Democrats	3
Arab Farmers and Development Party	1
The Arab Progress-and-Work Party	1
(The above 3 parties address themselves particularly to the Arabs of Israel. They are all alined with Mapai.)	
Agudat Israel (represents strongly orthodox religious circles)	3
Poalei Agudat Israel (a labor-oriented off-shoot of Agudat Israel)	2
Hamizrahi (a conservative religious party	2
Total	120

COALITION GOVERNMENT

During the second Knesset, the Government has been in the hands of a coalition of 5 parties: the Mapai Labor Party with 47 seats; the General Zionists, with 23; the Hapoel Hamizrahi, a religious party, with 8 seats; the Mizrahi Party, with 2 seats; and the Progressives with 4.

This grouping of 84 seats out of 120 in the Knesset has given the coalition a clear working majority; but, like all political coalitions, it has inhibited each of its constituent member parties from full expression and action on its own particular programs.

Despite the number of parties, the coalition form of government, and the immensity of the political, economic, and international problems which have faced Israel, the country has maintained a high degree of political stability.

The major political development since the 1951 elections has been a series of splits in the Mapam left-Socialist party. Two of its Knesset members switched affiliation to the Mapai Labor Party; two others, after a brief period as an Independent Party, joined the Communist Party; and four others seceded from Mapam to form the L'Ahdut Ha'avoda—Poalei-Zion.

Two small groups, the Sephardic Communities and the Yemenites, with a total of three seats, have adhered to the General Zionist Party.

Because of the large number of parties, many Israel political observers have suggested revisions in the present proportional system, under which any party that gets about 1 percent of the total vote is assured of a seat in the Knesset. These students of the Israel political system have voiced the hope that changes in the election system would tend to eliminate some or all of the smallest parties, and to concentrate power—and its accompanying responsibilities—to a greater degree in the larger parties.

But there is far from unanimous agreement on the desirability of changes—and any alteration of the election law will be dependent on the outcome of the 1955 elections and a consequent "great debate" both in the Knesset and among the voting public.

THE BASIS OF LIBERTY

Whatever the outcome of the elections or of the debate on the system of elections to the Knesset, one fact emerges from the history of Israel in the years of its modern independence—any future government will honor the words of Israel's Proclamation of Independence, which says:

"The State of Israel * * * will be based on Freedom, Justice and Peace as envisaged by the prophets of Israel; it will ensure complete equality of social and political rights to all its inhabitants, irrespective of religion, race or sex; it will guarantee freedom of religion, conscience, language, education and culture; it will safeguard the Holy Places of all religions; and it will be faithful to the principles of the Charter of the United Nations."

A Bill To Amend the Labor-Management Relations Act

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1955

Mr. BOSCH. Mr. Speaker, on March 21, 1955, I introduced H. R. 5087, a bill to amend the Labor-Management Relations Act, 1947, to require that unfair labor practice cases be tried in Federal district courts, and for other purposes.

I am convinced that cases of this kind should be handled by the courts and that same would expedite settlement.

Under leave to extend my remarks, I include an editorial from the July 25, 1955, edition of the New York Daily News which points out the delay of the National Labor Relations Board in following through and appealing the decision of the United States circuit court of appeals on the case involving the International Longshoremen's Association wherein fines were levied and jail sentences imposed by the lower court.

H. R. 5087 would, in my opinion, save us from situations of this kind.

The editorial follows:

WHAT'S HOLDING THE NLRB?

We imagine most of the readers remember the 29-day waterfront strike last year which tied up the port of New York almost as tight as a drum, cost millions of dollars, worked a lot of hardship on longshoremen, and so on and so forth.

Not too many, we imagine, remember the circumstances of that walkout. It was connected with the battle between the old International Longshoremen's Association, which had recently been booted out of the American Federation of Labor, and the new ILA which the AFL had set up in hope of taking over the old outfit's membership.

The strike was called for jurisdictional or secondary-boycott purposes. A longshoreman who had quit the old ILA and joined the new was employed at pier 32, North River. The old-ILA crowd there refused to work alongside this man, and struck. He was then fired.

Being a rather smart hombre, he set himself up as a one-man picket line. Since he now belonged to the AFL, the AFL truckers who served pier 32 refused to cross him—whereupon the old ILA refused to serve any trucks driven by AFL truckers, and the strike was on.

At that point, Charles T. Douds, regional director for the National Labor Relations Board, brought suit for an injunction to halt the strike. Federal Judge Edward J. Dimock issued the injunction. The old ILA thumbed its nose at the order, and the strike proceeded. Those who fomented this violation of a court's command were tried for contempt, and drew some rather stiff penalties.

The old ILA itself was fined $50,000; one of its locals $7,500, and seven other locals, $5,000 each. Three dock characters got jail sentences—Harold Bowers 6 months; William Ackalitis and Willie Lynch 3 months apiece.

What we've been working around to is that those fines have yet to be paid and those jail sentences served.

That is because the United States circuit court of appeals, in one of the most curiously reasoned decisions we've read in quite a while, reversed the rulings of the lower court. Also, it is because the National Labor Relations Board at Washington up to now

has shown a strange hesitancy about appealing the case to the United States Supreme Court.

How about the NLRB getting busy and bringing that appeal? After all, the case involves much law on secondary boycotts in the Taft-Hartley Labor Relations Act. It is most important that these questions be cleared up one way or the other. What's holding the NLRB?

The Commonwealth of Puerto Rico

EXTENSION OF REMARKS
OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. FERNÓS-ISERN. Mr. Speaker, with justified pride, I address myself on this occasion to the House of Representatives of the United States. Three years ago, on the 25th of July of 1952, the flag of the Commonwealth of Puerto Rico was raised for the first time, on the occasion of the inauguration of the new regime which had begun for the people of Puerto Rico. For the first time in their history, they were living under a constitution of their own adoption. Thus the people of Puerto Rico had organized themselves, as a free, self-governing body politic, with sovereign powers in all matters not reserved, under the terms of a solemn compact, to the Government of the United States.

The people of Puerto Rico became then citizens of the Commonwealth of Puerto Rico, but that did not alter the fact that they were and continued to be, loyal citizens of the United States.

The relationships between the Commonwealth of Puerto Rico and the Federal Government albeit parallel are not equal to those of a State of the Union vis-a-vis the Federal Government, but the significance for the people of Puerto Rico of the creation of the Commonwealth was the same as for the people of an incorporated Territory who attain the dignity of statehood.

The creation of the Commonwealth of Puerto Rico was the culmination of a series of events which evolved during the span of half a century and which began early in the century with the recognition of the existence of unincorporated Territories within the United States political system; areas and peoples who are subject to the sovereignty of the United States, but who, according to decisions of the Supreme Court of the United States, "constitutionally are not an integral part of the United States."

A projection, parallel to that of incorporated Territories toward statehood, was then marked for the unincorporated areas. It has led the peoples of those areas into a status of association, by mutual consent, with full enjoyment of self-government and without loss of common citizenship, common defense, and common protection.

As history teaches us, seed of future events lies buried and unrecognized in past events. Looking now in the perspective of half a century, considering the geographical location of Puerto Rico, its demographic and cultural origin, the smallness of its georgraphical limits, the density of its population, the lack of natural resources, the high aspirations of its people, it is seen how, from the starting point of that Supreme Court decision, all these factors conspired and led, by gradual steps, inexorably, towards a formula which would give the people of Puerto Rico the dignity of freedom they craved, together with the security, which they needed if they were to exist, and could not have in isolation.

And so, after 50 years of what might be called the fermentation of thinking and the distillation of ideas, there evolved in the minds of the people of Puerto Rico the happy solution within which they could attain the status of political dignity to which they could aspire without the sacrifice of their security and prosperity.

Thus, with the overwhelming support of the people of Puerto Rico and with the cordial cooperation of the Government of the United States, the Commonwealth of Puerto Rico was born 3 years ago.

I shall eternally be thankful that it devolved upon me to bring the expression of the aspirations of the people of Puerto Rico before the consideration of Congress, when I introduced H. R. 7674, on March 13, 1950, which became Public Law 600 of the 81st Congress, establishing the compact and authorizing the creation of the Commonwealth.

I shall be thankful again that I had the honor to preside over the Constitutional Convention of Puerto Rico from September 1951 to February 1952, and that again I was privileged to introduce the joint resolution which became Public Law 447 of the 82d Congress, ratifying the Constitution of Puerto Rico.

I shall live eternally thankful to the Congress that both in 1950 and in 1952, almost unanimously adopted both pieces of legislation.

My legislative duties have not allowed me to be in Puerto Rico today, to participate with my people in the enjoyment they feel, mindful of the fact that on the very same date that we celebrate this anniversary, we also celebrate the anniversary of the landing of United States troops in Puerto Rico, an event which took place on the 25th of July of 1898, under the command of Gen. Nelson A. Miles. That was the beginning of the association of the people of Puerto Rico with their fellow citizens of the United States.

But the fact that I cannot be today in Puerto Rico, is amply compensated for by the fact that I can be here today with my colleagues of the House, to whom I am so deeply indebted for their spirit of generosity, fairness, and kindness toward the people of Puerto Rico.

I have had the honor of speaking, in the name of the United States, before the corresponding committees of the United Nations, when the status of Puerto Rico was there considered. As an alternate delegate of the United States, I presented there the reasons why the United States was justified in ceasing to report to the United Nations on Puerto Rico, as provided under the charter for dependent areas, since Puerto Rico had ceased to be a dependent area.

I found opposition there from such sources as naturally would be expected, but I found there the support, the understanding, and the applause for the United States and for Puerto Rico from the majority of the peoples there represented. The majority of the peoples of the New World, who speak the same language as the people of Puerto Rico and who have with the people of Puerto Rico a common origin and a common cultural heritage—especially did they express their deep satisfaction with the action taken by the United States.

Our good neighbors of the South American Continent, of the Caribbean islands, of Central America, with few exceptions, all heartily supported the United States in its decision. The praise I heard for the United States and for what the United States had done for Puerto Rico, made me proud to be a citizen of the United States, and proud that the United States received those expressions of applause and just recognition on the occasion of having done justice to Puerto Rico.

The association of the people of Puerto Rico and the people of the United States is based now on a compact, on legal documents, as it should be. But it has much more solid and much deeper basis. It is based on common relationships, on common history, on common devotion to common principles.

The blood of Puerto Rico's youth flowed in Korea for the same principle and under the same colors as the blood of the other youth from the 48 States which form this Nation. To the credit of Puerto Rico, by far a very large number of those young men who there bled and died, did not go there because they were called to duty under provisions of law, but because they volunteered of their own accord to do their duty.

Mr. Speaker, let me express my thought that the existence and development of the Commonwealth of Puerto Rico is a credit to the people of Puerto Rico and it is a credit to the people of the United States. Let me express my faith in the principles that have united us so firmly. Let me express my certainty that the association of the people of Puerto Rico to our mainland fellow citizens shall remain forever as firm as it is today.

Commonwealth of Puerto Rico Celebrates Third Birthday

EXTENSION OF REMARKS
OF

HON. JOHN J. ROONEY

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. ROONEY. Mr. Speaker, the Commonwealth of Puerto Rico today celebrates its third birthday. It is important that we make note of this most significant event as the United States has never before enjoyed such a tranquil political

and economic relationship as that which now exists with the people of Puerto Rico.

The establishment of a commonwealth has been a fortunate solution to the political problems of the Puerto Rican people and they now enjoy internal independence. We should be pleased that we authorized the organization of the Commonwealth of Puerto Rico, that we agreed to its constitution, and that the people of Puerto Rico have willingly assumed their responsibilities.

On May 28, 1952, in the 82d Congress, 2d session, I had the high honor to be appointed by Speaker RAYBURN as chairman of the Committee of the Whole House on the State of the Union when the resolution—House Joint Resolution 430—approving the Constitution of the Commonwealth of Puerto Rico was favorably considered by this House of Representatives. One of my treasured possessions is the gavel presented to me by Speaker RAYBURN and used at the time of passage of this historical legislation.

Since achieving Commonwealth status on July 25, 1952, the people of Puerto Rico have made remarkable progress and have forged ahead industrially, educationally, and agriculturally. They now have a sound economy and a stable government.

We must continue to help the people of Puerto Rico against segregation and discriminuation because of race, religion, or national origin. They are entitled to full equality of opportunity in education and employment. The fulfillment of such programs will prove that faith in freedom and self-determination has in every respect proved its worth.

I extend my felicitations and heartiest congratulations to the people of Puerto Rico on this historic day and commend my good friend the distinguished Resident Commissioner of Puerto Rico, Dr. ANTONIO FERNÓS-ISERN, whose interest here in Washington has always been to maintain amicable association and understanding between the people of Puerto Rico and the United States.

Hurricane Emergency Warning Will Save Countless American Lives

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1955

Mr. DONOHUE. Mr. Speaker, I am pleased to include an editorial entitled "Greater Protection in Future Hurricanes," which appeared in the June 17, 1955, issue of the Worcester (Mass.) Evening Gazette, advising that we in New England must now, according to our weather experts, realize that we are in a hurricane area.

As a matter of record, we in central Massachusetts have already had the horrifying experience of a hurricane which struck unexpectedly and with great devastation on June 9, 1953, taking many lives and costing millions in property damage.

For that reason, I am intensely interested in the proposed appropriations for the erection of an emergency hurricane-warning system, which I hope will find unanimous favor with the Members of this House. If sufficient money is approved, many additional communities from coast to coast, with my home city of Worcester in central Massachusetts among them, will be included in the establishment of an expanded emergency warning system.

In my judgment, any reasonable amount of money expended to save American lives and homes and industrial property is the best economy that we can practice.

The editorial follows:

GREATER PROTECTION IN FUTURE HURRICANES

Weather experts say hurricanes in New England are here to stay for years to come. New upper-wind patterns will drive the great sea storms inland.

But New Englanders will be relieved to know that, because of improved warning measures and other Government action, damage will be minimized and many lives saved.

Hurricanes Carol, Edna, and Hazel last fall took 150 lives and caused property damage amounting to nearly a billion dollars. As a result, New England, for the first time, has now been linked to the special communications system known as the hurricane circuit. Last year Washington and New York were hooked into the circuit, which originally extended from Brownsville, Tex., along the Gulf coast to Tampa, across Florida to Miami and up the Atlantic coast to Jacksonville. Added now are New Haven, Bridgeport, Providence, Portland, and Boston.

These cities will henceforth receive prompt reports from storm warning centers at Washington, New Orleans, and Miami, which have inaugurated a 24-hour watch of the tropical waters where hurricanes breed.

In addition, President Eisenhower on Wednesday signed a bill authorizing a 3-year study of ways to minimize loss of life and property in hurricanes, tornadoes and other severe storms. Cost will be $3 million. And Congress is considering creation of an emergency hurricane warning system. The House Appropriations Committee has reached a compromise on a bill filed by Representative PATTERSON, of Connecticut, calling for a $5 million appropriation. The House compromise provides for $2,250,000 additional for salaries and expenses of the Weather Bureau to establish the emergency system. And the Senate is considering a similar bill introduced by Connecticut's Senator PURTELL.

These steps are logical. The need for advance warnings on hurricanes cannot be disregarded. And a few million dollars worth of foreknowledge may save billions over the years, to say nothing of lives.

The Transit Strike

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. ASPINALL. Mr. Speaker, under unanimous consent, I include the comments of Washington correspondent Joseph F. McCaffrey on the local transit situation. Mr. McCaffrey's remarks were made on his Sunday night television program. This Sunday report is rapidly becoming Washington's most popular news show because Mr. McCaffrey is bringing reporting to television, providing a fresh and vivid review of the news.

The comments follow:

I'd like to say something about the Capital Transit strike now. I first began this series of Sunday night news programs on July 3, 3 weeks ago.

There is nothing I can tell you tonight about that strike that I couldn't have told you 3 weeks ago tonight.

There is nothing new to report.

No strike in local history has produced so much talk and so little action.

Yet this strike has produced the greatest emergency situation this city, the Capital of the Nation, has ever faced. Downtown business is affected; the entire police department is disrupted.

I could recite for an hour a list of people and businesses who are adversely affected by this strike. But I'll just cite one instance which I uncovered this week.

There are thousands of men, women, and children who must have outpatient service at local hospitals and doctors' offices. They are unable to work, they have little or no income coming in; many are older people trying to live on inadequate pensions.

The shutdown of the public transportation system here has caused these men, women, and children hardship and suffering, both physical and financial.

That is only one group affected by this strike; there are many, many others.

It is time for less talk and more action.

And there is only one man who can act.

The President of the United States.

Now it may seem strange going from the summit to the transit system, but there is no one else who can do it.

Congress has failed.

The District Commissioners have failed.

The Public Utility Commission has failed.

In the District of Columbia there is no mayor to sit down with the parties involved and try to reach a settlement.

There is no governor to turn to.

In this emergency there is only one man living here who can bring the parties to the bargaining table and keep them there until the buses and the streetcars are running again.

No financier is too big to ignore the No. 1 man in America; nor is there any union leader who would feel that way.

If the public transportation system in this city—the Capital of the Nation and the world—is worth saving, then the only hope for saving it right now rests at 1600 Pennsylvania Avenue.

The Urgency of New Highway Construction Is No Excuse To Abolish Fair Labor Standards

EXTENSION OF REMARKS
OF
HON. HAROLD. D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1955

Mr. DONOHUE. Mr. Speaker, I would like to include a brief editorial from the June 11, 1955, issue of the magazine America entitled "Victory for Low Wages," which explains how some skillful maneuvering by a few Senators

led to the elimination of the Davis-Bacon clause in the Senate road bill.

Let us earnestly hope that this grave economic error will be corrected by the House, and that in the final enactment of any highway-aid legislation our progressive fair-labor standards will be safeguarded.

The editorial follows:

VICTORY FOR LOW WAGES

Though a bipartisan Senate majority rejected the President's highway bill on May 25, Mr. Eisenhower is reported to be still hopeful that his plan will eventually prevail. Some Democrats in the House are said to see merits in the administration bill which completely escaped their colleagues in the Senate. Regardless of the final outcome of this controversy, it is by now regrettably clear that the Federal Government does not intend to safeguard fair labor standards on its future road-building projects. In passing the substitute Gore bill, the Senate knocked out a provision that would have applied the Davis-Bacon Act to all highway construction financed by the Federal Government. That law, which now governs labor contracts on all federally aided hospital and airport construction, requires contractors to pay prevailing wages. The managers of the Gore bill capitulated on the Davis-Bacon clause when southern Senators, led by the redoubtable GEORGE, of Georgia; BYRD, of Virginia; and HOLLAND, of Florida, threatened to vote against the bill unless it was deleted. Much to his amusement, and to the discomfiture of liberal Democrats, Minority Leader KNOWLAND allotted time during the debate to the supporters of the fair-labor standards clause. Senator JOHNSON, the majority leader, controlled the time for the opposition. The southern Democrats compounded their victory for low wages and poor labor standards by defeating all efforts to force a rollcall vote. Now the workers back home have no way of knowing how their Representatives voted on this important issue.

The Dixon-Yates Story: What Mayor Tobey Said

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1955

Mr. PRICE. Mr. Speaker, when the White House staged the famous scene announcing the cancellation of the Dixon-Yates contract and having President Eisenhower photographed cheerfully with Mayor Tobey, of Memphis, most people were not allowed to know precisely what Mayor Tobey's sentiments were. This defect can now be rectified.

The St. Louis Post-Dispatch sent a reporter to Memphis to interview Mayor Tobey, just before the famous love scene intended to suggest that we were all good fellows together, and Mayor Tobey's comments on Dixon-Yates and the administration were vitriolic.

Under permission to revise and extend my remarks, I offer an editorial from the St. Louis Post-Dispatch commenting on the interview:

MAYOR TOBEY'S HOT RETORT

Wholesome indignation characterizes the statement of Mayor Frank Tobey, of Memphis, in his interview in the Sunday Post-Dispatch.

From what Mayor Tobey said it is obvious that he and the national administration are of two different parties. It is also obvious that he does not mind hitting back hard. But when allowances are made, the substance of Mayor Tobey's statement adds up to a lot of common sense. Because it will not be as widely printed over the country for the information of the American people as it should be, we reprint Mayor Tobey's statement below.

Independent voters who do their own political thinking will see that the Memphis Mayor demolishes the patently distracting tactic of the White House in demanding "assurances" that Memphis will build its own powerplant rather than take a kilowatt of electricity from the Dixon-Yates utility promoters.

Here is what Mayor Tobey told the Post-Dispatch:

"In the first place there is no actual situation existing in which President Eisenhower on one hand gives an ultimatum of 90 days for Memphis to move toward building its own steam plant, and the city on the other hand races to meet the 90-day deadline.

"This is so much Republican hogwash to confuse the public.

"The true situation is that Memphis decided in its own democratic, fundamentally American manner to build a steam plant rather than accept power from Dixon-Yates.

"And by so doing, Memphis has taken the Eisenhower administration off the hook and opened the door through which the President can sidestep a political scandal of startling proportions.

"Consequently, it is our feeling that the administration should be thankful for our sincerity and honesty of purpose, rather than keep trying to insist that we come up with some special phrase-making that will help the Republicans in future campaign contests.

"Also, let's get the record straight. The Memphis City Commission on June 23 passed a resolution authorizing our light, gas and water division to commence the construction of a steam plant.

"We are not bluffing, and neither are we going to write campaign literature for an inept (Federal) administration when it bungles the public interest."

A straightforward answer to this from President Eisenhower, Attorney General Brownell, Budget Director Hughes and AEC Chairman Strauss would make interesting reading.

Conservationists and the Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1955

Mr. METCALF. Mr. Speaker, I have been one of those opposed to construction of Echo Park Dam in the Dinosaur National Monument. I voted against this proposed structure in committee, and would do so again if it were to come on the floor of the House.

However, this dam has been eliminated from the Colorado River storage project in H. R. 3383. Because of that elimination, I support the bill and hope that you will, too. I also hope that other conservationists will step forward now and give this bill their backing.

The conservationists opposed H. R. 3383 for one reason, Echo Park Dam. They won when the dam came out of the bill. But some of them have shifted their ground and now oppose the bill because of the possibility—actually it is an impossibility—that Echo Park will be put pack into the bill.

These people excuse their opposition on the grounds that proponents of Echo Park Dam will "sneak" it back into the project somehow. As a person interested in conservation, I assure you that I will ever be alert to any such procedure, although frankly it is impossible to add anything to the bill without approval of this esteemed body.

It would seem logical to me that conservationists now should support this project, conditioning that support with a statement reiterating their opposition to Echo Park Dam. That would be the honest and direct way to approach this problem and one that would draw support from all of us interested in conservation.

There seems to be some fear that Echo Park will be restored in conference committee. The Honorable CLAIR ENGLE, chairman of the Committee on Interior and Insular Affairs, recently told the Rules Committee that he will let the entire project die in conference committee rather than have Echo Park inserted. The Honorable WAYNE ASPINALL, of Colorado, chairman of the Subcommittee on Reclamation and Irrigation, backed up Mr. ENGLE on that point. Both will be members of the conference committee. How can anyone sincerely express fear that Echo will be reinserted with such assurances from these men?

The Washington Post and Times Herald described this project as it stands now as "a conservation measure in the largest sense of the word." That, I believe, is a correct analysis of the project as set forth in H. R. 3383.

I say to conservationists, put your fears to rest and support the revised Colorado River storage project.

Conference Views of United States Editors

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION, JR.
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. ROBSION of Kentucky. Mr. Speaker, newspaper editorials throughout the Nation generally praised the Geneva Big Four meeting as a constructive step toward the possibility of ending the cold war. Under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following excerpts from newspaper editorials around the country, as referred to in the July 25, 1955, issue of the Washington Post and Times Herald:

The New York Times: "President Eisenhower, perhaps, won the moral victory at Geneva if there was such a victory. Nobody reading his words could doubt that he was full of good will toward all men and that therefore he honestly strove for peace. * * *

A third world war would be no solution. A modus vivendi to avoid that frightful tragedy is essential, and we now seem a little nearer to it."

Chicago Sun-Times: "Better world conditions and an easing of world tensions should result from the Geneva Conference. No final agreements were reached by the Big Four. But as the chiefs of state departed for home there seemed to be a better climate for peace on a firm agreement to continue the search for East-West understanding. * * * If the Geneva Conference did nothing but generate good will it was successful."

The Denver Post: "The President's proposal * * * would formalize a willingness, at least, to deal more openly in steps leading up to effective arms limitation and control. It would, moreover, provide a practical test of intentions and good faith of signatories to such an agreement, without exposing ourselves to any greater danger than presently confronts us."

The New York Herald Tribune: "The conclusion must be that the negotiations which will follow this conference have a better chance of getting somewhere than if the conference had not been held. * * * When all else has been said and done, the week will be remembered because the Big Four did meet * * * and did talk together candidly and calmly and left with the realization that further talk would not be wholly in vain."

Baltimore Morning Sun: "Without being overly optimistic, it is possible to discern in the tone of the last day at Geneva a trace of what President Eisenhower said more than a week ago was the first purpose of the meeting, to alter the spirit of acrimony in which East-West diplomats have been talking for the last decade. * * * Geneva was not a third act, but a prolog. As such it promises an interesting drama as the action unfolds."

New Haven (Conn.) Sunday Register: The President's proposal "gives emphatic definition to the United States desire for peace." (The plan) "is wildly unrealistic in terms of all our experience of the last 10 years with the Soviet Union, but the proposal is definitely not one to be regretted."

Atlanta Sunday Journal-Constitution: "Geneva was a beginning only, a slow and cautious start. From it, secretaries of state and foreign ministers may move on to other meetings, other conferences, where specific results may be achieved. * * * Negotiations are preferable to the imminence of war under which the world has lived for a decade."

Boston Globe: "Superb is the only word that can describe Mr. Eisenhower's achievement at Geneva * * * (His skill and sincerity) has all but eliminated the effectiveness of the charge this country is a 'warmonger'."

San Francisco Chronicle: "Some criticize the President for smiling a lot and avoiding the details of negotiating. This criticism overlooks the fact that Bulganin, Khrushchev, and Zhukov are, so to speak but recently prisoners of Stalin's Kremlin. They need to be exposed to the Western * * * personality; they need a chance to look us square in the eye."

Nashville Tennessean: "Thanks to President Eisenhower, the gathering of Big Four representatives cannot be put down as another dismal failure of world statesmanship. The man who once sought to bring peace to Europe in command of armies, has paved the way to better understanding by the impact of ideas * * *. The world waits for the decision that Bulganin and company are still called upon to make.

St. Louis Post-Dispatch: "The world can look back today on one of the most important weeks of the 20th century. * * * A fair summary of it is to say that although little was definitely settled, a great deal has been accomplished. * * * Certainly it is a great accomplishment for the Geneva conference to reawaken the spirit of diplomacy which now supplants the old condition of deadlock."

Cleveland News: "The big payoff is that cordial relations have been established * * * actually little was accomplished except to pass the issue on to another conference—if that can be arranged."

Cleveland Plain Dealer: "Not until the foreign ministers meet in Geneva in October will the world be able to put a proper assessment on the first meeting of the Big Four leaders in 10 years. Only when details of world problems are faced will it be possible to say whether the 6-day conference in the Swiss city wrote a postscript to the cold war and formed a prelude to an era of coexistence—* * *.

Chattanooga Times: "President Eisenhower's warm personality, his offer to trade defense blueprints with Russia, his refusal to treat any international problem as beyond solution made the Big Four meeting unique among such gatherings. * * * The Russians left Geneva knowing that the United States does not intend to attack them. They were never sure of that before."

New Orleans States: "As for any tangible results from the mutual scrutiny of military works, the Russians could start a discussion of the subject and keep it going for months, even years, which is probably what they will do."

St. Louis Globe-Democrat: "The summit conference, for which the world held great expectations in spite of itself, has ended without results of substance. * * * Geneva did not materially improve peace prospects. But neither did it worsen them or leave them unchanged. It did illuminate the road ahead—and suggest that if the world will be patient and forebearing, the way is not now quite so long."

Resolution Adopted at the 62d Annual Convention Banquet of the Armenian Revolutionary Federation

EXTENSION OF REMARKS
OF
HON. HAROLD. D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include the resolution adopted at the 62d annual convention banquet of the Armenian Revolutionary Federation held on Friday, July 8, 1955, at the Sheraton Park Hotel, Washington, D. C., placing the organization on record in favor of House Resolution 183.

The resolution follows:

Whereas the Armenian Revolutionary Federation meeting in 62d annual convention, in Washington, D. C., from July 2 to July 8 did consider the perilous days in which we live because of the aggressive threat of Russian imperial communism; and

Whereas the national independence of the United States of America and all other free and sovereign nations is threatened by the Communist conspiratorial plan for world conquest; and

Whereas the many non-Russian nations and peoples enslaved by the Red colonial policy of the Kremlin look to the United States for hope, inspiration, and enlightened leadership: Therefore be it

Resolved, That the Armenian Revolutionary Federation pledges itself to a continuation of unqualified support in the fight against Red colonialism and expresses its warm appreciation to Congress for the passage of House Resolution No. 149, which puts sage of House Resolution 149, which puts us clearly on record as against colonialism and for self-government and national independence.

That the Armenian Revolutionary Federation pledges itself to continue and to increase its efforts to better acquaint the American people with the true nature of communism, the subversive methods used by that conspiracy and the sufferings of the many nations and peoples now enslaved by that tyranny.

That the Armenian Revolutionary Federation puts itself on record as favoring House Resolution 183, a resolution which requests the United States delegation to the United Nations to submit a resolution to the General Assembly of the United Nations naming the U. S. S. R. as an aggressor, and urges the House Rules Committee to report that resolution to the floor of the House so that it may be put to the test of public debate and vote by Members of Congress.

The Dixon-Yates Story: A Policy of Coverup

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1955

Mr. PRICE. Mr. Speaker, the deeper we dig into the Dixon-Yates background the more clear it becomes that a deliberate plot was hatched against the Tennessee Valley Authority, that high members of the President's family were involved in that plot, and that they have tried—and are still trying—to cover up the facts, to hide, conceal from, even to misrepresent these facts to the Congress.

We have the Assistant President, Sherman Adams, declining to appear before a special subcommittee of the Senate, which earlier was forced to resort to a threat of contempt proceedings to get the Chairman of the Securities and Exchange Commission, J. Sinclair Armstrong, to confess that Sherman Adams had intervened in an SEC proceeding in the Dixon-Yates matter and requested delay—specifically mentioning the fact that a certain vote was then pending in the House on a Dixon-Yates appropriation item.

We have the question of Rowland Hughes, a direct subordinate of the President as head of the Budget Bureau, giving out a fake "chronology" of Dixon-Yates matters that carefully omitted the name of Adolphe H. Wenzell, the New York investment banking official who doubled in brass as inventor of Dixon-Yates and in conferences on financing with Atomic Energy Commission Chairman Strauss.

Bad faith has been revealed, Mr. Speaker, and something very close to breach of trust and breach of the honest and honorable relations that should exist between the Congress and high members of the executive department.

The St. Louis Post-Dispatch has been exceedingly alert to the developments arising from the dismal Dixon-Yates deal. I offer two editorials commenting

specifically on the refusal of Sherman Adams to appear before the Senate subcommittee and the record of Budget Director Hughes:

DARKER AND DARKER

Sherman Adams' refusal to testify to the Senate subcommittee investigating the Dixon-Yates power contract is a surprising and contradictory development. It would seem that the presidential assistant would want to do everything possible to clear up the imputations of questionable conduct that have been raised against him—that he would demand a hearing if he had not been invited.

It is all the more contradictory because Mr. Adams pleads immunity on account of his "official and confidential relationship to the President." President Eisenhower has given his word that the complete record of Dixon-Yates shall be spread out to the public view.

Could the complete record conceivably exclude the testimony of the one man who, as is becoming evident from the facts now being painfully extracted by the investigators, knows the most about it?

Fulfillment of the President's promise would plainly seem to call for Mr. Eisenhower to direct his first assistant to tell what he knows if Mr. Adams persists in his refusal to do so voluntarily.

The charges that have been raised against Mr. Adams are grave. He stands accused of having interfered in the affairs of an independent regulatory quasi-judicial commission, the Securities and Exchange Commission. That in itself would be a serious offense. But that is not the only imputation against him which it remains for Mr. Adams to explain.

Sherman Adams is further charged with having done the interfering for the purpose of keeping Congress in ignorance of facts pertinent to pending legislation until after the House of Representatives had voted on that legislation.

These charges are based on testimony given to the investigating committee by the Chairman of SEC, J. Sinclair Armstrong. As Mr. Armstrong continues his testimony before the Antimonopoly Subcommittee, headed by Senator KEFAUVER, of Tennessee, the atmosphere of duplicity and official secrecy which has surrounded this whole Dixon-Yates affair from its very inception becomes more and more odoriferous.

The SEC chairman seems to have acted as little more than an errand boy for Mr. Adams in this episode of an unprecedented 3-day recess in the hearings on Dixon-Yates financing. He withheld from his fellow commissioners salient information which might well have caused some of them to vote against the recess rather than, as they did, for it:

He did not tell them Mr. Adams had mentioned the pending legislation in the House. He did not tell them Mr. Adams had told him cancellation of the Dixon-Yates contract was being considered and the whole matter might soon be academic.

Mr. Armstrong now says he cannot remember whether withholding this information from his colleagues was his own idea or Mr. Adams' suggestion. Yet the Commissioners could not have voted on the recess proposal intelligently and with their eyes open without knowing this information which their Chairman was withholding from them.

After the vote to recess was taken, the Commission issued a statement saying that "procedural problems were the reason for the unprecedented action. It now becomes apparent that this explanation was false. The Commission was guilty of practicing a deceit upon the public, yet Mr. Armstrong professes to see nothing wrong there. In fact, he maintains that it would not have been "proper or appropriate" to tell the public the truth.

These notions of propriety on Mr. Armstrong's part, and the actions that grew out of them, raise a strong question of his fitness to serve as Chairman of SEC or indeed as a public servant in any responsible capacity.

With all these questionable maneuverings by Mr. Armstrong, Presidential Assistant Adams is involved. How deeply is he involved? Does his involvement go so far as to raise doubts of his own fitness as a servant of the public as well as of Mr. Armstrong?

Only Mr. Adams' own testimony can settle these question one way or another. Until he testifies, frankly and fully, a cloud will hang over his role in this affair.

QUESTION ABOUT DIRECTOR HUGHES

Looking back on the Dixon-Yates fiasco, one of the most remarkable things about it was the role played by Budget Director Rowland Hughes.

Mr. Hughes was in the middle of all the negotiations between the Atomic Energy Commission, the Budget Bureau, Messrs. Dixon and Yates, and Adolphe Wenzell.

Yet Mr. Hughes, when called upon by President Eisenhower last August to give the the public full details on the contract, published a chronology which studiously omitted any reference to Mr. Wenzell.

Mr. Hughes knew that Mr. Wenzell had been brought into the Government in 1953 to make a study of TVA and plan alternatives to its expansion. He knew that Mr. Wenzell had been brought back into the Government in 1954 to help arrange the Dixon-Yates contract. Yet Mr. Hughes allowed President Eisenhower to make the public statement, at a news conference, that Mr. Wenzell "was never called in or asked a single thing about the Dixon-Yates contract." Only one inference is possible: that Mr. Hughes misinformed the President.

Budget Director Rowland Hughes, in short, appears to have been convicted of misleading both the public and the President about Mr. Wenzell's dual connection with the contract.

How much confidence can the President or the public henceforth place in Rowland Hughes as Budget Director?

A Rare Reformer Takes Over in Italy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "A Rare Reformer Takes Over in Italy," which appeared in the July 22, 1955, issue of the Courier Journal, of Louisville, Ky.

The editorial is as follows:

A RARE REFORMER TAKES OVER IN ITALY

The new Premier of Italy and his cabinet got only a lukewarm reception in parliament when they first appeared. And in the first confidence vote on the new regime Premier Antonio Segni and his coalition government won by only 28 votes (293–265), with 12 deputies not voting.

But the situation in Italy, nevertheless, augers well for the West. The center parties have pledged to support him and the policies he advocates. These include faithful observance of treaties binding Italy to the West, "Western and Atlantic solidarity," the curbing of monopolies, war against unemployment, reduction of government spending, lower taxes for the poorer classes, development of exports, encouragement of capital investments, and extension of land reform throughout Italy.

The last-named goal may well account for the lack of enthusiasm with which the Segni government was confirmed. For the slim, sharp-faced new Premier, old-fashioned in courtesy and geniality but possessed of a pungent wit and capable of temperamental outbursts, is a veteran crusader for land reform. And land reform, promised Italy's hungry peasants by every premier since the war but not pushed too energetically by any, is not a popular program with all his supporters.

To Professor Segni, however, land reform is not only a necessity but one of the most effective ways to nullify the popular appeal of the Communists and of his neo-Fascist opposition. He is the Christian Democratic Party's leading expert on the subject. As Minister of Agriculture from 1946 to 1951, he pushed through some of his land-reform ideas then, saw gratified peasants by the thousands renounce the Communist Party, was eased into the Ministry of Public Instruction when his enthusiasm for more reform became too controversial.

Before Segni began his program, some 40,000 landowners held 22 million of Italy's arable acres, while 1,700,000 peasants owned only an acre each and another 2,500,000 had no land at all. A large landholder in his native Sardinia himself, Segni 5 years ago expropriated 250 acres of his own olive groves and vineyards as part of the government's campaign to break up great estates and redistribute the land on long-payment terms to those who work it. And this rare type of reformer defeated in parliament a transparent Communist attempt to save model farms such as his own from being split up.

First man from Italy's forgotten island of Sardinia to become the head of Italy's government, Premier Segni is now 64 and not in robust health. But he has a reputation for driving tenacity, and he may be able to transform the lipservice to land reform of other Italian politicians into the reality of its extension throughout the nation. On his side is the growing realization that, without it, the protracted economic misery of millions will add new strength to the Communists.

Farmers' Home Administration Makes Progress in Assisting Family-Type Farmers

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. HILL. Mr. Speaker, about a year ago I took occasion to call your attention to an agency in the United States Department of Agriculture, the Farmers' Home Administration, where some remarkable improvements have been made under the Eisenhower administration. Today I would like to bring the account of that fine record up to date.

Last year I pointed out that during the first full year under the Eisenhower administration the Farmers' Home Ad-

ministration made or insured loans totaling more than $292 million. This was a 28-percent increase over the amount loaned in 1953, and more funds had been advanced in 1953 than in any previous year. During this current fiscal year the agency has continued to provide farmers of the Nation with credit at approximately the same volume.

The agency has continued to use most of its credit to help operators of family-type farms finance improvements in their operations, and purchase and improve farms. In this group are many young farmers who if it were not for the Farmers' Home Administration would not be able to obtain the credit they need to become firmly established in agriculture.

In addition, the agency has carried on a number of emergency loan programs which serve the credit needs of all farmers, including the small ones. These loans which include the special livestock loans and the economic emergency loans authorized by the 83d Congress have been lifesavers for thousands of drought-stricken ranchers and cattlemen.

I have said many times that in my opinion, the special emergency loans that the 83d Congress made available were a major factor in saving the livestock industry during the critical period in 1953. Altogether more than $53 million was advanced to cattlemen to help them carry on their operations until drought conditions eased and the market stabilized.

During the past 2 years the amount advanced for all types of emergency credit totals approximately $181 million.

Along with the emergency loans, in the drought-stricken areas, during the past year the county committees of the Farmers' Home Administration were assigned the responsibility for approving applications for emergency feed assistance. These committees with the help of the county office staffs handled this assignment in a commendable manner.

I want to pay special tribute to those committeemen. They receive only a nominal sum for their efforts and they give freely of their own time for the benefit of their community.

I pointed out last year that a number of steps have been taken under the Eisenhower administration to enable this agency to render a better service on a more efficient basis. Additional progress has been made along this line during the past year. For example, when the revised farm ownership loan regulations were placed into effect last January 31, sufficient streamlining had taken place to enable the number of pages in the regulations to be reduced from 75 to 18. The number of forms used in making these loans were cut one-third. The number of times a farmer had to sign his name in order to obtain a farm-ownership loan was reduced almost 50 percent. This, I believe, is indicative of the careful way that all of the operations of the agency have been reviewed and improved.

Last year I told you about a bill that had been passed that would enable the Farmers Home Administration to make more insured loans and thus enable it to serve the credit needs of a larger number of farmers. They have had almost a year's experience with this expanded insured loan program, and I want to tell you the record is impressive. The total amount of farm ownership loans insured so far this year—these are the loans that are made to improve, enlarge, and purchase family type farms—the total amount of these loans insured is $30,400,000, or three times the amount insured last year. This sets an all time record.

The largest amount of farm ownership loans ever insured before in any one year was back in 1951, when $17,500,000 worth of loans were made in this fashion. In addition, approximately $15 million of the new soil- and water-conservation loans have been insured since last fall.

These insured loans have two advantages: They enable the agency to serve the credit needs of more farmers. Also the insured loans reduce the amount that needs to be borrowed from the United States Treasury; for private lenders, banks, insurance companies, and other investors supply the funds from which the insured loans are made.

When the insured loan program was enlarged early last fall, Farmers Home Administration, with the advice and guidance of a representative group of private lenders, made a number of improvements in the administration of the program, cutting out red tape and making the loans generally more attractive as investments. Lenders in return have responded wholeheartedly, have committed more than $81 million, and appear willing to finance additional amounts in the months to come. This, I believe, is real progress.

I also mentioned last year the passage by the 83d Congress of a soil and water conservation loan program. This program has been in operation for about 9 months and it, too, has set an impressive record. What the 83d Congress did in respect to this program is this: First it extended the water facilities program which had been operating only on a direct loan basis and only in the Western States to the entire United States. In addition, it provided for insured as well as direct loans. This expansion made available throughout the country, credit for irrigation systems, farmstead water supplies—a type of credit that has become increasingly popular during the dry spells of recent years. In addition, the 83d Congress added to the water facilities loan, authority to loan funds both insured and direct, for soil conservation purposes. This authority likewise is available throughout the United States. The soil conservation loan enables farmers and ranchers to borrow funds to carry out soil conservation measures that are needed today for the protection of our Nation's soil resources. Without this credit available it is likely these measures would not be carried out for years to come. During that time the elements would further deteriorate, erode, blow, and wash away soil upon which our future and the future of our children depend. The loans will put a checkrein on that.

More than $18,800,000 was advanced for these loans this year. I expect the program to continue its expansion for months to come. R. B. McLeaish, Administrator of the Farmers' Home Administration, who incidentally has done a grand job placing that agency on a solid basis, tells me that the irrigation loans are now fairly well known throughout the country but that many farmers are not aware of the fact that they can borrow funds for soil conservation. I understand he is taking steps to make sure that this new type of credit is known throughout all farming areas in the country.

The collection record established by the Farmers' Home Administration is good despite the fact that the farm families who borrow are those who, at the time they applied for credit, were unable to obtain loans from banks or other reputable lenders.

A large proportion of the real estate loans, although made for 40 years, are being repaid well ahead of time. The bulk of the loans for farm operating expenses are also being paid on time. This speaks well for the understanding regarding repayments that the agency works out with the borrowers. It speaks well for the economic progress the borrower families are making through the wise use of Government credit. It speaks well for the attitude that American families hold in regard to repaying their debts.

The agency is also placing a great deal of emphasis on graduating borrowers to regularly established lending institutions as quickly as possible. The average operating loan borrower repays his loan in about 4 years. Each year from 20,000 to 25,000 farmers pay off their indebtedness to the Farmers' Home Administration. While some of these borrowers find it necessary to call upon the agency for assistance in future years, most of them continue to farm without further Government credit.

All in all, I would say that the prospects of the farmers receiving adequate service from this agency during the coming year are very good. There is no reason to believe that the fine record that has been established for the past 2 years will be in any way diminished; in fact it may be improved upon. Funds that have already been appropriated, plus the funds that are obtained from private lenders for insured loans will enable the agency to carry on its operations at about the same level. In fact there is every reason to believe that the insured loan business will continue the rapid expansion that was begun in the past year.

In addition, I understand that the Department of Agriculture is developing an expanded credit program for the Southern Great Plains States based upon the recommendations made at a meeting of the Great Plains Council in Denver early in June. This credit program will further expand the usefulness of this agency in the Great Plains area and will, of course, be of great service to the farmers and ranchers who need to reorganize their operations in order to make proper use of the land and develop the type of farming that is best suited for that area.

The way this program is being handled, and the service this agency is providing the farmers, is a fine example of the good government practiced by this administration, and an equally fine service to the farmers and ranchers who form the foundation stone upon which our Nation rests.

Mr. President, Here Is a Suggestion

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, the Racine Journal Times of Racine, Wis., on July 18 carried an open letter to Bulganin and Khrushchev. It contained a pertinent suggestion. Under leave to extend my remarks, I am including it at this point in the RECORD:

AN OPEN LETTER, WITH A SUGGESTION

To Premier Nikolai A. Bulganin, Commissar Nikita S. Khrushchev, and to Whomever Else It May Concern:

GENTLEMEN: During recent months the American people have noted what we believe to be a change in your attitude toward us and our Government. For 10 years the official tone of the Soviet Union toward the United States has been—and we understate deliberately—very unfriendly. Suddenly, that tone has become more friendly.

The American people are aware that what they are hearing from Moscow today is what could well be called "sweet talk" in our American way of saying things. But dozens of incidents lead us to believe that probably you are trying to make a point, which is that you want improvement in the relations between the American and the Russian people.

Among those incidents, large and small, are the recent friendly visit to the United States of your foreign commissar, Mr. Molotov; your own visit, with your associates, to the American embassy's Fourth of July party this month; relaxation of travel restrictions for Americans across your borders; the reasonable attitude you demonstrated in settling the Austrian peace treaty, and, finally, the fact that you and other leaders of the Soviet Union sit down today in Geneva with our President, our Secretary of State and the heads of our allies' governments.

Your objective, we hope, is peace between our respective peoples. We want to believe this because the American people individually, collectively, and sincerely want it.

You should know by now that we will not buy peace at the cost of compromise of our principles or the sacrifice of our freedom, political or economic. You will find, in the next few days, that President Eisenhower has gone to Geneva to negotiate with you as among equals. He will respect your words if you are willing to support them with deeds. But he negotiates from a position of strength and principle, and the American people freely and nearly unanimously stand behind him.

But what can be done at this meeting at Geneva is only to put into motion the mechanics of international agreement between governments. A real peace between the people of these two greatest nations of the earth should come from a much wider and deeper "people to people" understanding.

We have a suggestion which we believe will form a basis for that kind of understanding. We respectfully propose to you, as leaders of the Soviet Union, and to the heads of our own Government, this plan:

"You would permit the spokesmen of the American people, preferably President Eisenhower himself, to make one or a series of broadcasts over the Soviet Union's radio and television system. You would permit him to speak freely and without censorship, explaining to the Russian people the position of Americans and their Government, the principles we stand for, the actions we are taking in the world, and our attitudes toward your country.

"In return, the Government of the United States will make arrangements for your spokesmen—and you may nominate any man or men you believe qualified to speak for you—to have equal time over all American radio and television networks. In that time, you may explain to the American people the Soviet position, its policies and attitudes. You may be assured that a vast majority of the American people would be interested in hearing what you have to say."

We know that this is an unusual suggestion. Yet it is entirely feasible. We do not fear you or anything you say. Fear is based on ignorance and lack of understanding, and that is exactly what we are trying to combat.

If the motives behind your recent attitudes is the lessening of world tensions and, eventually, peaceful accord between us, you should welcome this suggestion. We make it sincerely and earnestly to you in the hope that it will be seriously considered.

Tribute to Congresswoman Leonor Sullivan, of Missouri, for Support of Food and Drug Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1955

Mr. PRICE. Mr. Speaker, despite the sentimentality that has attended tributes to the departing Mrs. Hobby, I think most people recognize that the Department of Health, Education, and Welfare has shown too little humanitarianism, too little concern for the problems of the people regarding schools, social security, health, and welfare generally. It has been hesitant and slow to move; it has refused to accept as valid the tremendous statistical evidence compiled previously to reveal what the people need.

Even in the field of food factory inspection, the Department had to be pushed and prodded by the gentlewoman from Missouri [Mrs. SULLIVAN], and it is good to observe that the gentlewoman's services have not been overlooked in her home city of St. Louis.

Under permission to revise and extend my remarks, I offer an editorial from the St. Louis Post-Dispatch commenting on Secretary Hobby's resignation, Mrs. SULLIVAN's services, and the "second chance" the Department of Health, Education, and Welfare now is given:

THE SECOND CHANCE

The nomination of Marion B. Folsom to be Secretary of Health, Education, and Welfare gives the newest Cabinet department a second chance to establish its national importance.

President Eisenhower named Under Secretary of the Treasury Folsom to replace Secretary Oveta Culp Hobby after accepting her resignation in a klieg-lighted, emotional ceremony. "This is a sad day, Oveta," the President said.

Mrs. Hobby had already explained that she was quitting for personal reasons. But it was no secret that the first Secretary of Health, Education, and Welfare was discouraged by criticism of her record.

That record included the polio botch, begun with fanfare and continued with rallies and retreats. Little was done about Federal aid to education. The Hoover Commission criticized Mrs. Hobby's agency for cutting medical research funds. The principal success in 2½ years was the expansion of social security, which was a bipartisan extension of previous policy.

In fact, the Hobby administration ended on somewhat the same note with which it began. It began with a routine problem of restoring food-factory inspection, and succeeded with prodding from Congresswoman LEONOR SULLIVAN, of St. Louis. Now Mrs. SULLIVAN is trying to add a million dollars to the Department's Pure Food and Drug Administration appropriation so that agency can do its important work.

From the record it appears that the Department of Health, Education, and Welfare stressed economies as much as health, education, and welfare in its first 2½ years.

The nomination of Mr. Folsom now promises a director experienced in the field to which he is assigned. Mr. Folsom was treasurer of Eastman Kodak Co. when he joined the Eisenhower administration in 1953. He had developed early employee-benefit plans. In Washington he helped to devise the social-security amendments and group insurance for Federal employees.

Mr. Folsom is a man of unquestioned ability. He also has been the assistant to the administration's leading proponent of economy, Secretary of the Treasury Humphrey. And the problem confronting him will be much the same as that which faced Mrs. Hobby.

Will the Department of Health, Education, and Welfare go on scrimping and limiting its services, or will it treat its three special provinces as matters of national importance? Will it pioneer in exploring a new realm of government or will it hold back in timidity?

While extravagance has no place in public welfare, for the Nation cannot afford it, the growing problems of health and education and related fields cannot be viewed simply as columns of budget figures. This is a new agency and it needs new energy. Under Mr. Folsom, the Department should begin life anew even at its tender age.

Cordell Hull

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. EVINS. Mr. Speaker, with the passing of Cordell Hull, Tennessee, the Nation, and the free world have sustained a tremendous loss. In addition to the tributes paid to this great American today in the Congress, I desire to have included in the RECORD other tributes to Cordell Hull which have appeared in three leading newspapers.

These editorials follow:

[From the Washington Sunday Star of July 24, 1955]

CORDELL HULL

In his own lifetime, as he himself once wrote, Cordell Hull, whose death has come with the close of the Geneva Conference, where others have pursued the same war-preventing objective that he long pursued—saw the United States make extraordinary progress. He saw it grow from a relatively provincial and underdveloped land to a position of wealth and power incomparably greater than that attained by any other nation since time began. But most of all, he saw its influence steadily expand as "a potent world force in the cause of peace and humanity."

Nor did he merely see all this. He was much more than an idle spectator watching other men labor at the task of building American greatness. He was one of the laborers himself, a member of that distinguished company whose vision and energy carried the Nation forward at a pace that amazed the world. His own particular forte was in the political realm, and his achievements there during his long congressional career and his unprecedented 12-year term as Secretary of State, have long since won him a secure place in history.

Above all things, Cordell Hull was a man of peace, laboring ceaselessly and seeking by every device—from the good-neighbor policy to reciprocal trade—to avert war. And even in the darkest days of the conflict with the Tokyo-Rome-Berlin Axis he gave of himself without stint to organize mankind in a way that it might never again take up the sword. His was the guiding genius behind Dumbarton Oaks and San Francisco, and although ill health forced him to resign before he could see his task through—a supreme tragedy to him personally—he earned as no other individual had earned it, the title that President Roosevelt gave him: "Father of the United Nations." Indeed, it may well be said of him now that the course he followed over the years has contributed in no small measure to whatever progress has been made at the summit meeting in Geneva.

Deeply respected all over the world, Cordell Hull occupied in his own land a position of rare and affectionate esteem placing him far beyond the hurly-burly of politics. In the early phase of the New Deal some critic of the young and ebullient Roosevelt brain trust likened him to a full moon shining steadily in a sky full of momentarily flashing stars, and as time wore on and the solemn but controversial days of the war were here, much the same sort of view persisted and deepened. Republicans and Democrats alike, all parties, regarded him as a man who was in the fray but above it—beyond suspicion.

He was simple in his ways. He was honest. He was direct. His integrity stood out so clearly that no one could question it. And though he was a man of peace, he had only fire and wrath in him—as the Japanese learned on the day of Pearl Harbor—when he came across double-dealing and deceit. It was perhaps these virtues of character that made his face so fine to look upon. They were written all over him, and the world at large recognized them as America did.

Cordell Hull is dead, but what he stood for lives on. No one did more to make this country and its ideals "a potent world force in the cause of peace and humanity." A good man, a fine patriot, a tireless fighter in behalf of a decent and happy civilization, he was the first citizen of the United Nations and a truly great American who served his own people and peoples everywhere surpassingly well.

[From the Washington Post and Times Herald of July 25, 1955]

CORDELL HULL

If Secretary Hull had resigned in December, 1941, after he had "babied along" the expansionist Japanese for over 6 months, he would have gone out in a blaze of glory. No man had done a more valiant piece of work in the history of our diplomacy. With no man did the entire Nation feel so much as one as with Cordell Hull when, on the heels of Pearl Harbor, he gave the despicable Kurusu an old-fashioned "eussing." When the Tennessee dander of Cordell Hull—usually the most urbane of men—was up, it was something to behold and to hear, and the Japanese got from him a blistering foretaste of the wrath that was to come out of an embattled America. There was a toughness about Cordell Hull which resisted death to the end.

But Cordell Hull stayed on as Secretary of State till November 1944. In the meantime he aged rapidly, and was impatient with the criticism which blew up as the American people, locked in the greatest war of all time, began to develop a sophistication about their foreign relations. The people, wont to leave the State Department in its cloisters, wanted more responsiveness and representativeness in their diplomatic service. Hull reacted to this new-found questioning, even when addressed to him by his Cabinet colleagues, in a "Grandpa knows best" manner. His irascibility was sharpened by the fact that he and his Undersecretary, Sumner Wells, were engaged in a Homeric feud without equal since the days of Burr and Hamilton. Withal, Hull's memorable service to the Republic had not been extinguished. As a kind of swan song he flew to Moscow in October 1943, and laid the foundation with our allies for the United Nations. It was the finale to a career dedicated to the idea of a world community devoid of exclusiveness.

Cordell Hull used to be known as the stepchild of the New Deal. A son of the free-trading South, he was a liberal in the Victorian, not the New Deal, sense. That is to say, he believed in freedom, in private enterprise, and in the minimum of Government interference. Yet as a Member of Congress (he had served in both branches) he was a reformer, as was shown, for instance, by his introduction of the income tax.

Cordell Hull labored patiently in the all-American vineyard for good neighborliness. President Roosevelt declared the good neighbor policy; Mr. Hull (and Mr. Welles) carried it out. Good neighborliness was the heart, also, of his trade agreement policy to which he devoted himself with such single-mindedness that he was sometimes accused of having a single-track mind. In part, the policy was aimed at lowering tariff barriers. Mainly, however, it was intended to make a league out of the world by joining all nations in a pledge not to discriminate in commercial policy.

The granitic probity of Mr. Hull gave him a singular standing in his America. He used to top the list of all Cabinet members in popularity polls. President Roosevelt, even with his towering reputation, profited by the standing occupied by his Secretary of State. It is sometimes said that, but for this, Roosevelt would have got rid of him. That may be doubted. Unquestionably Mr. Hull could be as prosy and prolix as anybody, and bored the insouciant Roosevelt like a stubby needle. However, Roosevelt respected his Secretary of State highly enough to work with might and main to get for him the Nobel peace prize which was awarded to him in 1945. In his retirement public men found inspiration for their duties in savoring his salted, sometimes sulphurous wisdom. Cordell Hull had the type of character which adorns the public service and refreshes the soul of the people.

[From the Christian Science Monitor of July 23, 1955]

CORDELL HULL

WASHINGTON.—Cordell Hull, former United States Secretary of State who passed on here July 23, was regarded by many as "the father of the United Nations."

Mr. Hull had steadily maintained an interest in national affairs.

As the original sponsor of the reciprocal trade program, going back to his days in the Senate, Mr. Hull had been especially interested in United States trade policy and had closely followed the ups and downs in Congress of pending legislation to carry on the trade program.

Mr. Hull, as Secretary of State in three administrations of the late President Franklin D. Roosevelt, held the post longer than any other man in the Nation's history—from March 1933 to November 1944.

NOBEL PRIZE IN 1945

Illness forced his retirement during World War II, which he had labored to avert, then labored to use as a springboard for establishing an enduring world peace.

He was awarded the Nobel peace prize in 1945 in tribute to his efforts to develop a worldwide, effective plan to banish war from the earth. These efforts led to creation of the United Nations.

Born in a log cabin in Tennessee, Mr. Hull's whole adult life was spent in public service. He was in Congress for 24 years—22 in the House and 2 in the Senate—before he became Secretary of State. Prior to his election to Congress he was first a State legislator and later a circuit judge in Tennessee.

As a Member of Congress, Mr. Hull specialized in tariff and economic matters—an interest reflected later in his efforts as Secretary of State to promote world trade.

Mr. Hull was described by a close friend as considering five accomplishments to be of primary importance in his long career. These were:

1. His part in the development of the United Nations: The late President Roosevelt called him, in a letter at the time of Mr. Hull's retirement, "the father of the United Nations."

GOOD-NEIGHBOR POLICY

2. The development of nonpartisanship in foreign policy: Mr. Hull played an important role in bringing about cooperation between the Roosevelt administration and Republican leaders in and out of Congress with the specific purpose initially of winning GOP cooperation in the creation of the UN.

3. His part in evolving the good-neighbor policy toward Latin America: The essence of this policy has been that the United States should conduct itself toward other countries in this hemisphere as a good citizen would act toward his neighbor.

4. The enactment of the trade-agreements program: This program, which is still basic to United States trade relations with the rest of the world, is built on the idea of reducing tariffs by international agreement in order to stimulate freer flow of goods and commerce.

5. His contribution to raising standards of international morality and conduct, which Mr. Hull considered to be of the utmost importance if nations are to learn to live together in peace and friendship.

Mr. and Mr. Robert Coar

SPEECH

OF

HON. HENDERSON L. LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1955

Mr. LANHAM. Mr. Speaker, I am happy to add my congratulations to those of other Members of the House for Mr. and Mrs. Robert Coar on the completion of their 20th year of splendid service to

the Members of the House and Senate. Almost as soon as I came to Congress, I began to make weekly radio reports to my constituents through the facilities of the Joint Senate House Recording Facility operated so efficiently and effectively by the Coars. My contacts with them have been uniformly pleasant and they have been most cooperative.

Incidentally I may say that my belief is that these weekly reports have been at least partly responsible for the fact that I have had no opposition for reelection to the House since I was first nominated and elected in 1946.

One rather unusual incident occurred when once I returned to my home in Rome, Ga., and got into a taxi to be driven to my office. At the moment one of my recordings was being played over the taxi driver's radio and he remarked that he was astounded to see me in Rome since he was just listening to my report and thought I was in Washington.

The addition of television facilities has, of course, added much to the service rendered by the Coars to Members of the House and Senate. I have not used it myself but many other Members do and are loud in their praise of the splendid service rendered in this field of publicity by Mr. and Mr. Coar. My good wishes go with the Coars as they continue their fine work in the field of publicity for the Members of Congress.

The Whitfield Story: Not for the AEC

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1955

Mr. PRICE. Mr. Speaker, when the announcement was made that Allen Whitfield, of Iowa, had been nominated for a place as a Commissioner of the Atomic Energy Commission, I raised the first protest. I protested because it was my information that Mr. Whitfield had held positions in the Republican organization in Iowa. I do not think that any official of any political organization, Republican or Democratic, should be selected to serve on the AEC, which has an overriding mission and should be completely free of partisanship.

I knew nothing at the time about other questions that later were raised about Mr. Whitfield. I offer no comment about them now. But I could not see that Mr. Whitfield had any special experience or background that equipped him for the AEC, and I think that his political background should have been an absolute bar. The AEC should not even think about politics. It should never have a Commissioner whose thoughts involve partisan politics.

I was criticized, Mr. Speaker, for raising the political question against Mr. Whitfield's nomination. But I would have raised such a question if, in the past, a man had been appointed to the AEC in response to Democratic political pressure from Iowa, or anywhere else.

The nomination was finally withdrawn, and I hope that the lesson has been learned by President Eisenhower. I hope that never again do we have a Commissioner appointed because of political influences.

Under permission to revise and extend my remarks, I offer the following editorial on the Whitfield issue from the St. Louis Post-Dispatch:

NOT FOR THE AEC

Personal and professional integrity should be required of any public official. So the Joint Committee on Atomic Energy was justified in checking reports about the fiduciary conduct of Allen Whitfield, President Eisenhower's nominee for the Atomic Energy Commission. Whitfield has now asked the President to withdraw his name lest the Commission become involved in controversy.

There were, however, more fundamentally disturbing aspects of the Whitfield nomination, even if they did not carry the kind of implication which led to examination of his connection with the Valley Bank & Trust Co. of Des Moines. First there was the charge of Representative MELVIN PRICE of Illinois, a Democratic member of the joint committee, that Whitfield had been named in response to a demand for more patronage for Iowa Republicans. Even more serious was the lack of any indication that the man was qualified by training, experience or well-founded interest for the work of the AEC.

With the possible exception of the Central Intelligence Agency, the AEC is the most unusual of Federal agencies in that the people, and to a considerable extent, Congress itself, are kept uninformed about most of its activities. Secrecy about the AEC has been equated with national security. That is why it should be made up only of men in whose ability and fitness the public can have the utmost confidence.

If ever AEC memberships become plums for political lawyers and rewards for party workers, then some changes will have to be made. Whitefield's looked just like that wind of appointment, and that is the best reason for welcoming his withdrawal.

Recreation Facilities in Forests and Parks Falling Short of Need

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. ENGLE. Mr. Speaker, every summer great hordes of families come out of the cities to camp and fish on national forests in my State. An editorial from the July 5 issue on the Redding Record-Searchlight tells what happened at Shasta Lake in Shasta County—in my district—over the Fourth of July.

When there are millions of men, women, and children wanting to go to the mountains they are going regardless of improvements to prevent fires, pipe-in drinking water, and provide toilets.

Paul Bodenhammer, editor of the Redding Record-Searchlight, forthrightly points out that "it will take the best efforts of local government and civic bodies, private developers, and the Federal Government to meet the need." I hope that the administration and the Congress see fit for the Federal Government to uphold its end in this public responsibility.

The editorial follows:

OVERCROWDED SHASTA LAKE

The big Fourth of July weekend has proved again that Shasta Lake doesn't have enough facilities for the number of people who want to use it—and that we'd better do some local development while urging the Forest Service to do all it can.

Visitors to the Jones Valley portion of the lake report there was a serious sanitary problem because there were dozens of families camped there—without any regular toilet facilities. One immediate solution would be for the Forest Service to set up at least one pair of privies, and we hope that will be done right away.

Sure, there isn't any public campground, officially, at Jones Valley, and the Forest Service may not want to put one there because of the lack of a water supply, etc. But the fact remains that one can reach the lake there by road and there's some fairly level ground for camping and gently sloping shoreline for boat launching. Even if people do have to carry their water supply with them, they're going to camp there, at least until there's enough space for camping in more desirable spots.

The Shasta Dam area chamber of commerce and the Redding recreation department are both working toward locally-controlled public parks and camping areas on Shasta Lake, and we say more power to them both. It will take the best efforts of local government and civic bodies, private developers, and the Federal Government to meet the need.

Several thousand people—yes, thousands—use Shasta Lake over weekends during vacation season, and the number will increase from year to year if they can be offered suitable places to launch boats, pitch camp, or enjoy a picnic—without having to stand in line or make advance reservations.

Toledo Doctors, Dentists, Lawyers Ask Social Security Coverage for Themselves

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. ASHLEY. Mr. Speaker, today we are considering a bill which would make important amendments to the Social Security Act. One measure would make women eligible for social-security benefits at 62 years of age instead of 65. Another amendment permits totally disabled workers to receive payments at 50 instead of 65. A third proposal, one which I sponsored, continues for life, if necessary, payments of benefits for mentally or physically handicapped children.

The final provision which we consider today extends social-security coverage to all self-employed professional groups except doctors. Because I wanted to know the views of those most directly affected by such a law, I wrote to all members of the interested professions in Lucas County to ask if they wanted coverage for themselves. Of a total of 1,507 questionnaires sent, 517 replies have been received. Here is a tabulation of answers to the question, "Do you favor extension of the present Social Security Act to in-

clude members of your profession in its coverage?"

	Yes	No	On voluntary basis	Keogh plan
Lawyers	134	22	35	9
Physicians	85	60	28	19
Dentists	69	13	4	0
Optometrists	15	2	0	3
Chiropractors	3	0	0	2
Chiropodists	3	1	0	0
Veterinarians	1	3	0	0
Total	310	101	67	33

(Six persons gave no opinion or expressed views not included above.)

If the results of this questionnaire in the Toledo, Ohio, area are similar to attitudes in other parts of the United States, self-employed professional persons emphatically believe that the benefits of our social-security system should be theirs, also. A number of professionals indicated their support of the plan sponsored by our colleague, Mr. KEOGH, which would make deductible from Federal income taxes payments to specified types of private retirement plans by professionals and other self-employed persons. I believe that Congress should support this proposal also in order to encourage those persons who have their own business or profession to set up their own retirement programs. This measure, as well as the important social-security amendments we are voting on today, will do much to strengthen the stability of the American economy while at the same time reinforcing the widespread purchasing power which is the basis of our Nation's economic greatness.

It Took a Hamburger To Show Us

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "It Took a Hamburger To Show Us," which appeared in the July 21, 1955, issue of the Courier Journal, of Louisville, Ky.

The editorial is as follows:

IT TOOK A HAMBURGER TO SHOW US

Though it seems to take something away from the ineffable wonder of it all, we suppose we ought to report that the split atom has become standard household equipment. Electricity generated in a plant run by atomic energy has been used to cook a hamburger. By now it is reasonable to expect that it has been used to milk the cow, warm the baby's bottle, and drive the electric shaver.

We can't help thinking that this means the atomic age has lost the honeymoon bloom, taking on as it has the humdrum of the domestic routine. This homely mission accomplished, perhaps we'll begin looking beyond to new realms and eras. Hohum, it was swell while it lasted. A hamburger, eh?

What happened was no great marvel. An atomic reactor, of the type that was devised to run the submarine *Nautilus*, was set to work making power for a utility in upper New York State. Some of this power was switched into the general system that serves 35,000 homes in the area. A housewife turned on the current in her kitchen stove, and some of it had to be the new stuff. It was as simple as that.

It was also inevitable. One of the odd things about our bemusement by atomic power has been our concentration on the big jobs. In his book, Report on the Atom, Gordon Dean, former Chairman of the Atomic Engery Commission, wound up with a look into the future. He foresaw the submarine with the atomic reactor and then pursued the thought of atomic aircraft, locomotives, automobiles and on to interplanetary rockets or space ships. They were possible; they raised technical problems. They caught attention which might better be turned to ordinary uses, but now at last the proper diversion has come, just as Mr. Dean likewise got around to homework for the atom.

It is, of course, a costly operation for now. It is also a small one. General Electric built the reactor for this pioneer retail consumer operation, to produce electricity at the rate of 10,000 kilowatts. As Mr. Dean wrote of the general theory, this sort of thing "probably will not change your electric-light bill very much, but it may make your city cleaner and more attractive place in which to live." The atomic reactor, you see, takes the place of the steam plant burning coal or gas. It also holds out promise of electricity for remote and undeveloped parts of the country—Mr. Dean mentioned the Rocky Mountain region—where fuel for steam plants is hard and expensively come by.

This may mean, he pointed out, that "some mineral deposits can be worked that are now undeveloped for lack of power, or that some areas can be irrigated that are now barren because there is no power, or not enough power, to pump in fresh water. The presence of ample power may also mean that new industries will move in, to be closer to raw materials produced there."

Prophesying in relation to the atomic age turns out to be good business. Everything is coming true, and the flurry of dispute in Washington over the atom-powered merchant ship, as against the President's peace ship, seems almost pointless. And just think, it took only a hamburger to show what we can do.

Miss Helen K. Wallace Retires From Cleveland Heights High School After 45 Years of Devotion to Learning

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, second only to our homes, our schools shape the character of our children. The security of this country depends in great measure upon the character, intelligence, and competence of each succeeding generation of young people. This task we give to our teachers and educational administrators. Among them, a few stand out for the great impact they have had on an entire community.

Miss Helen K. Wallace is one of these. She has devoted her entire professional life to the young people of Cleveland Heights High School and now, after 45 years with the school, she is retiring as dean of girls.

Miss Wallace has seen enrollment at Heights High grow from 112 pupils to more than 2,000. From a suburban red-brick schoolhouse, home of the board of education today, it has grown into a teeming center of school activity at Cedar-Lee, and Helen Wallace was part of it all. Many of her young pupils were the children of early settlers on the Heights. She has been an inspiring influence for the finer things of life, morally and culturally, and her influence upon our young people will be sorely missed.

Miss Wallace started the school newspaper in 1916. She put out the first school yearbook in 1922 and then 2 years later the pupils dedicated it to her for character and faithful service. She was one of the first deans to organize an all-school program of social activities and the girls' cabinet which gives the pupils the task of maintaining their own high standards of dress and conduct. The Mothers Club, the Friendship Club, the Junior and Senior Literary Club, all resulted from her vision.

Miss Wallace has loved her work and her pupils have loved her for the years of selfless effort she has devoted to their welfare. All of us will miss her invaluable contribution to Cleveland Heights education. But she is not retiring from all activities and I sincerely hope the community will be able to draw upon her wise counsel for many years to come.

Mr. Speaker, under leave to extend my remarks, I ask that the splendid article about Miss Wallace which appeared in the Cleveland News on July 15, be inserted in the Appendix of the RECORD:

HEIGHTS HIGH LOSES ITS DEAN WALLACE

Miss Helen K. Wallace—who has guided through graduation many thousands of Cleveland Heights High School pupils during the last 45 years—will not return as dean of girls in September.

Miss Wallace has spent her entire professional life at Heights High, joining the faculty as an English teacher when classes were held in the present Board of Education building.

She saw enrollment grow from 112 to more than 2,000. Some of the present pupils she has advised against corridor-crowding, bouffant petticoats and other extremes of dress are the daughters of earlier pupils whom she cautioned about too-filmy georgette blouses.

TIME TO QUIT

Today, in the Scarborough Road home where she has resided for 38 years, Miss Wallace said:

"I'm leaving reluctantly, but it's time to quit. Everything is going well now. This isn't retirement, though. I'm planning new ventures."

Miss Wallace finds that pupils—and their problems—have changed over the years.

Shortly after her appointment as dean in 1921, she was one of six who organized the school's Mothers Club, forerunner of the PTA, which was primarily devoted to furnishing eyeglasses and supplying other financial assistance to needy pupils who came to Miss Wallace's attention.

MORE BROKEN HOMES NOW

"It's been a long time since a pupil came to me with a financial problem," Miss Wallace said. "Instead, in recent years, girls have increasingly sought my advice on upsetting family problems. * * * There are so many more broken homes, now."

Miss Wallace moved on from the worries of the hip-flask-toting flapper era to new problems created by a more independent, more socially mature, more sophisticated generation of Heights pupils.

But Miss Wallace's has not been a strictly problem job. "I've always enjoyed my job," she said, citing particularly her experience as chaperone on the school choir's 1953 European tour.

Until 10 years ago, Miss Wallace continued to teach English classes while serving as dean. She started the school newspaper, the Black and Gold, in 1916. In 1922 she put out the first school yearbook which, 2 years later, the pupils dedicated to her for character and faithful service.

Miss Wallace was one of the first deans to organize an all-school program of social activities and also organized the unique Girls Cabinet which has worked toward uniting the girls of the school and maintaining high standards of dress and conduct.

Miss Wallace was organizer of the Friendship Club, Junior and Senior Literary Club and, only last year, a group of pupil hospital volunteers. For many years she has supervised commencement activities.

A native Clevelander and graduate of old Central High School, Miss Wallace was awarded a bachelor of arts degree by Flora Stone Mather College where she has served on the board of directors. She studied at Harvard University, got her dean's training at Columbia University and was awarded a master's degree by Western Reserve University.

Miss Wallace is a former president of the Northeast Ohio Deans' Association. She is a member of the Women's City Club, former member of the College Club and, for the last 14 years, has been a member of the advisory board of Huron Road Hospital School of Nursing.

Miss Wallace, who was eulogized by members of the board of education as they accepted her resignation, said that her hope has always been to say goodbye to girl graduates who had developed good taste in manner and dress—and a love for learning.

Townsend-Plan Legislation

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. ROOSEVELT. Mr. Speaker, it was my intention to join my distinguished colleague, the Honorable JOHN RHODES, and other cosponsors of the Townsend-plan legislation, H. R. 4471 and H. R. 4472, in voicing my support for consideration of this legislation. However, it was impossible for me to be present at that time. I would like, therefore, to insert into the Appendix of the RECORD a summarization of my position on the Townsend plan, which I described in greater detail at the Townsend convention last May 2 in St. Petersburg, Fla.:

EXCERPT FROM SPEECH BY REPRESENTATIVE JAMES ROOSEVELT, DEMOCRAT, OF CALIFORNIA, AT THE TOWNSEND CONVENTION AT ST. PETERSBURG, FLA., ON MAY 2, 1955

Some people still insist the Townsend plan hasn't a chance of becoming law. I say this: Within the foreseeable future most of the principles of the Townsend plan will appear in the Social Security Act.

You are not fighting a losing cause. Some of the most important things you stand for will be the law of the land. And the time when they will be is not so far away. Here are points of the Townsend plan which I expect to see adopted:

Eligibility for benefits at the age of 60: This is proposed in many bills introduced in this first session of the 84th Congress. It recognizes the hard facts of economic life today.

Universal coverage: We have seen coverage under the original security law steadily widened. Last year the doors were opened to some 10 million people. The time will come when every American will automatically qualify on reaching a specified age.

Pensions as a matter of right: This goes with universal coverage. Old-age assistance will be abandoned. And with it will go the means test, the pauper's oath, the lien law, publicizing of the names of recipients of public assistance, and other distasteful features of old-age assistance as we have it today.

Pensions adequate to the cost of living: I myself am sponsoring a bill to establish a basic minimum of $100 a month. Maybe that is, in fact, not enough. But it would represent a considerable step forward and we can adjust as we go along. Benefits will be adequate in time. Of that I am sure.

These are the principles of the Townsend plan which I predict will be adopted in not too long a time. Now let me say that maybe credit will not be given the Townsend organization. But those acquainted with the history of social-security improvements will know where the credit belongs.

You members of this organization are fighting a good fight. You are fighting for a cause in which you believe. You are fighting for a program which you believe would be good not only for older Americans but for the entire Nation.

Our present system of social security, as you all know, originated under my father in the New Deal years. It was intended to meet a need of the time. He never claimed it was the final answer. He always said that programs must be changed as the times change. They must be revised and brought up to date with current conditions.

One of the essential freedoms which my father so deeply cherished is "freedom from want." The program of social welfare enacted during his presidency was designed to win this freedom for the American people.

As I see it, the Townsend plan is in this tradition. It is squarely aimed at achieving freedom from want. And in this blessed land of ours, so richly endowed with all the needs of a people, this freedom is surely attainable.

Third Anniversary of the Commonwealth of Puerto Rico

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. ENGLE. Mr. Speaker, on June 23, 1955, this Chamber unanimously passed House Concurrent Resolution 149 which refuted colonialism as a denial of the inalienable rights of man and supported as a policy of the United States the policy of championing the people of the world in their efforts to achieve self-government or independence so as to permit them to assume an equal station amongst the free nations of the world. This action by the House which was later followed by the Senate served notice that the United States will not be identified with colonialistic policies.

Three years ago today there was created as a result of similar action by the House and Senate the Commonwealth of Puerto Rico. The terms of the enabling act which made this possible served similar notice at that time that the United States scorned colonialistic policies and believed in and promoted the principles of self-government, and all of the attributes thereof. It was thus that the Commonwealth of Puerto Rico was created. It was thus that the United States showed it did not merely talk freedom and self-government, but practiced freedom and self-government for those under the Stars and Stripes.

The people of Puerto Rico through their Resident Commissioner petitioned Congress for authority to organize themselves into a commonwealth government, associated with the United States under an arrangement of specified relationships agreed to in the nature of a compact. This political development was certainly something new to the United States, and for that matter to the world. Political scientists were interested in its characteristics, ultimate development, and workability.

That the commonwealth idea has been successful comes as no surprise to the Puerto Rican leaders who conceived it and the Puerto Rican people who gave it enthusiastic support. As to those who studied its emergence, it has proved almost flawless. It is indeed significant to note that whereas in recent years and months and even weeks, both the smoldering and violent unrest of the remaining colonial peoples has been continually manifest, whereas in Puerto Rico, energies have been devoted not to violence and protest, but to continual attention to what must still be done to perfect details pertaining to political relationships with the United States and economic development in the island.

Many of the Members here have been to Puerto Rico. Some have recently followed up earlier visits. All are impressed with the almost unbelievable speed and degree of progress which is being made and the tremendous activity toward development and improvement. Especially those who are making second and third visits are struck by the changes which have occurred since their earlier visit.

This is what happens when a free and happy people are unhampered to devote themselves to their own self-improvement. In Puerto Rico they call it Operation Bootstrap—the uplifting through self-effort.

The action which the Congress took to make possible the creation of the Commonwealth of Puerto Rico has proved to be a wise move in more ways than one. Not only are these 2¼ million American citizens working together for economic progress, but the commonwealth has proved itself to be one of the weapons in the United States arsenal against communism. It is significant that there is no problem with Communists in Puerto Rico. It is significant,

also, that Puerto Rico is continually host to great numbers of visitors from South American and from all the undeveloped countries of the world to view this indisputable example of what is possible where there is given understanding and recognition of the freedom-craving heart that beats in every man, where there is cooperation, and where a helping hand is offered when it is needed.

Students throughout the free world are studying the commonwealth precept as exemplified by the case of Puerto Rico. Admittedly, it was a political experiment. Convincingly, it has proved successful.

So, today, on the third anniversary of the Commonwealth of Puerto Rico, just 53 years after the landing of the American troops in the island during the Spanish American war, it is appropriate to give proper recognition here and to extend best wishes to the Puerto Rican people in their work that lies ahead to complete the task for the welfare of the Puerto Rican people.

Our Unsound Social-Security Setup

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. MASON. Mr. Speaker, our unsound, dishonest, inequitable social-security setup that has been sold to the American people as a plan to provide security in their old age has again been extended and made more actuarily unsound than it was before. It really is a plan to tax our children and grandchildren when the time comes to meet the obligations that the present generation supposedly has paid for and are entitled to receive when they reach retirement age. It is a Ponzi-type shell game that is bound to collapse when the load becomes too heavy to carry.

Mr. Speaker, the social-security amendments of 1955—H. R. 7225—proposes that the tax rate for social security shall keep on increasing until it reaches 9 percent in 1975—4½ percent upon employer and 4½ percent upon employee—and 6¾ percent upon all self-employed. This means that the social-security tax load will amount to $20 billion per year by 1975—a colossal tax load superimposed upon the present backbreaking tax load.

Take as an example a farmer with a net income from self-employment of $4,200 in 1975. Assuming that he has a wife and two children and uses the standard deduction, his Federal income tax, under present rates, will be $276. His social-security tax, on the other hand, will be $283.50. In this example, which is a completely average case, the social-security tax, as a percentage of net taxable income, would be in excess of 20 percent. If the same individual had three children, his income tax would be cut to $156 but his social-security tax would still amount to $283.50. In such a case, the latter tax would be the equivalent of a net income tax of 36 percent. Is that the tax load we want to place upon the backs of our children?

Mr. Speaker, the Chicago Tribune carried an editorial in its issue for July 21, 1955, analyzing and summarizing the provisions of H. R. 7225, and stating briefly what the effect of its passage would be. The editorial also points out very clearly wherein the present social-security setup is unsound. Because it is such an excellent summary of the whole subject, I include it as an addition to my remarks, and perhaps as a vindication of the same.

The editorial is as follows:

THE SOMETHING-FOR-NOTHING BOYS

Revisions of the Social Security Act, sponsored by the Democratic majority in Congress and passed by the House on Monday, represent a new low in the something-for-nothing game that the demagogs of the Nation have been playing on the public since 1936.

Not the least distressing part of the exhibition was the part played by Illinois Republicans who know better and who usually can be depended upon to vote their convictions. Just one of them, Representative NOAH MASON, opposed the bill after denouncing it for placing the social-security system on an even more unsound actuarial basis than now obtains. Most of the rest voted for it, apparently depending on Senator BYRD and other conservatives in the Senate to keep it off the lawbooks.

Social security is called insurance. It is not. Insurance is based upon premiums which bear a direct relation to the benefits accrued. The premiums for old-age and survivor insurance, the official name for social security, are collected in equal amounts from employer and employee when the alleged beneficiary is not self-employed. The tax has no relation to the benefits. The law was deliberately written to make higher paid employees pay most of the benefits of lower paid and casual workers.

Furthermore, no one now pays enough into the social security till to provide the benefits he is promised by law. Neither are his employer's tax payments, added to his own, sufficient for this purpose. There is, it is true, a reserve of more than $20 billion in the social-security fund, but this is only because virtually everyone who now works is taxed, while only a relatively small number of persons—about 1 to every 10 persons paying taxes into the fund—are collecting pensions.

When the time comes for the more than 61 million present social-security taxpayers to collect, they will have two sources on which to call for the money. The first is the reserve fund. But there is no money in it. The money has been spent, and Government bonds put in its place. To provide money, other people will have to be taxed to pay off the bonds. But the reserve fund will fall far short of meeting pension requirements, long before the majority of present taxpayers come to collect. The rest of the money will have to come from social security taxes paid by their children and grandchildren, at constantly increasing rates.

The current phase of the something-for-nothing racket consists of a lower pension eligibility age—62 years instead of 65—for women, and the payment of pensions to totally and permanently disabled persons after they reach the age of 50. Disabled persons now are relieved of further pension taxes, but must wait until they are 65 to collect.

To the persons, about 1,300,000, affected by these new provisions, the payments will be largely velvet. They will contribute less and get more. But people who keep on working will be presented with a constantly increasing bill. The cost of the increased benefits will be $2 billion a year during the next 20 years and $2.5 billions a year thereafter.

The bill raises social-security tax rates beginning next January 1, when employee and employer will have to pay, together, 5 percent of every pay check into the social security fund. Further increases are provided for 1960, 1965, 1970, and 1975, by which time the social-security tax collector will be taking 9 percent of the Nation's payroll.

Experience shows, however, that when the time comes to increase these taxes, Congress will back down. It has done so already more frequently than it has enacted scheduled increases. All that does is shift more of the burden to future generations.

The man who retorted to a plea to think of posterity with the question, "What did posterity ever do for me?" now has his answer. Posterity is going to pay his old-age pension. Or will it?

Posterity can vote, too, and the increasing burdens of social security are going to make it less popular politically as the taxes necessary to keep the system solvent mount higher and higher. That, of course, is of no consequence to the something-for-nothing Democrats in the House. They aren't looking for posterity's votes—only those of the 1,300,000 whose benefits, if the Senate concurs, will be increased a few months before the polls open next year.

Separate Minority Views, H. R. 7474

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. ALGER. Mr. Speaker, with our expectation of the highway bill coming up for consideration in the House this week, I would like to call my colleagues' attention to the Davis-Bacon provision which has been incorporated in this bill. I intend to offer an amendment to strike out section 11. There is even a question in my mind whether the Davis-Bacon provision can be considered germaine to the bill. If it is, there remains the other strong objections which I have summarized in the separate views of Report No. 1336 accompanying H. R. 7474:

SEPARATE MINORITY VIEWS, H. R. 7474

We are all aware of the danger of overcentralized Federal Government with its vast bureaucracy. Our Founding Fathers propounded and we too have accepted a belief in the basic rights of the several States. This belief is embodied in our Constitution. The course of events in our national life and growth has greatly centralized and emphasized the Federal functions but has not disproved the wisdom, need, and reaffirmation of the original basic concept of our Government, nor have we changed the letter of the law.

Now we have a choice again—whether we will hold fast against further centralization and imposition of Federal will upon the States to the loss of their rights, or whether we will permit the States to continue to manage their affairs.

The Davis-Bacon Act provision in this bill is not just an expression of concern for the workingman's wage, but is a bold frontal assault on the God-given rights recognized

by our forefathers and embodies in the limited form of Government set up in the balance between Federal and State authority.

This provision endeavors through the Secretary of Labor to recognize and prescribe the prevailing local wage. Behind this simple statement of intent moves in the Federal bureaucracy to duplicate and take over the work already being done by the State to the extent which local conditions require the State to take part. Obviously, the local prevailing wage must be paid in the past, now, and in the future, or men will not take the work.

What do the workers want? They do not want wages set by a Federal mandate. What the Government bestows it can take away. Are not supply and demand and free negotiation a better basis for wages than a decision from Washington, far removed from the local scene and whose decisions can upset the local economy?

When government is necessary, that government is best that is closest to the people, and if wages must be set let the State exercise this function through the fine highway departments that are now in operation. State officials know more about their own local rates and economic conditions than do Federal officials.

Further, a labor matter, if such this provision is, should be properly considered in the time-honored legislative way by the Labor Committee of Congress and not tied onto this legislation to be railroaded through on the merits of other legislative needs.

How about the cost? Here's a matter which we watchdogs of the public purse must always consider. We agreed in Committee that we wanted the most roads for the money. It has been variously estimated that imposing the Bacon-Davis provision would add to the total cost between 4 percent and 10 percent. At the lower figure this would either add approximately 2,000 million to the cost or result in loss of the equivalent amount of roads.

In brief, the Davis-Bacon provision attempts to gain through this backdoor method the enactment of a Federal labor law not now in force. It has no place in this bill. It should stand on its own merits and be considered by the proper committee of Congress. All other arguments, therefore, for its inclusion, and certainly its merits, are immaterial and irrelevant at this time. Therefore, it should be stricken from this bill.

Shirtsleeve Diplomacy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Shirtsleeve Diplomacy," which appeared in the July 20, 1955, issue of the Ownesboro Inquirer, of Owensboro, Ky.

The editorial is as follows:

SHIRTSLEEVE DIPLOMACY

With statesmen meeting at Geneva for the Big Four talks, now is perhaps the time to take another look at diplomacy in our age.

Once diplomacy was regarded as a skilled game played by crafty but polite gentlemen on a diplomatic chessboard. As an old proverb put it, "If a diplomat says 'Yes' he means 'Perhaps,' when he says 'Perhaps' he means 'No,' but it is not becoming to a diplomat to say 'No'."

The Communists were the first to discard this elegant 19th century diplomatic routine. Now it is the West Germans who have introduced something new in world diplomacy, a type of shirtsleeve diplomacy, from which the Western powers can learn a trick or two—especially in their negotiations with the Moscow-Peiping Axis.

What happened to the typical German militarist-diplomat, arrogant and monocled? He seems to have vanished with Hitler and the ruins of the last war.

Bonn's diplomat speaks softly. He is no tea-drinking-striped-pants gentleman tied by diplomatic ritual and an intricate system of protocol.

A typical example is Heinrich von Brentano, the Bonn Republic's new Foreign Minister. In his early 50's, he is stanchly pro-Western and a political liberal who helped frame West Germany's United States-style Constitution and Bill of Rights.

Another German diplomat in shirtsleeves is Dr. H. L. Krekeler, Bonn' Ambassador to the United States. A soft-spoken and an unassuming man who has had the courage to fight both Nazis and Communists, he is primarily a scientist and a businessman rather than an old-style diplomat.

However, it is 79-year-old Chancellor Adenauer himself—a man who thinks, feels, and acts like a Westerner—who stands at the summit of Germany's new diplomacy.

For instance, consider the skill with which the Chancellor evaded the trap set for him by the recent Soviet invitation to visit Russia.

The invitation itself was anything but a surprise. It merely showed again that Muscovite diplomacy sees nothing strange in issuing a polite invitation to a man whom Red propaganda long depicted as a bloodthirsty tyrant.

However, if the Kremlin leaders were under any illusions that Adenauer would fall for their gambit and rush to Moscow they clearly misunderstood not only the Chancellor's devotion to Western ideals but also the new type of diplomacy gradually emerging in Bonn under his leadership.

Adenauer neither accepted nor rejected Moscow's invitation. He simply suggested that before a decision on such a meeting would be made it would be necessary to examine and clarify what subjects are to be discussed and on what basis.

With one simple stroke he thus took away the diplomatic play from the Russians and upset their plan for the Geneva summit meeting. For clarity in international relations is one thing the Kremlin rulers fear like fire.

United States as Minerals Tycoon

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. HÉBERT. Mr. Speaker, obviously there are certain elements and individuals in our Government who are determined to confiscate private property at the slightest provocation.

Those of us who fought the fight against the tideland grab by the Government, warned at that time that private property was next on the grab list.

Only recently there has developed some outrageous incidents of the Government grabbing private property under the guise of defense, holding the mineral rights to private property under misrepresentation and specifically in the instance of the Department of the Navy, treating a big corporation quite differently from private owners. The incident of the Houma (La.) Air Base is a disgrace and a discredit to the Navy.

Senator RUSSELL LONG, of Louisiana, recently introduced and had passed by the other body a bill which would require the Government to prove the necessity of grabbing mineral rights as a requirement for the national defense before being allowed to deprive individuals of their private holdings.

This legislation is being fought in this body by those who are hell bent on socializing this Government by first taking that which belongs to the several States and now conducting a campaign to take privately owned mineral rights from the individuals. Where will they stop?

The New Orleans Times-Picayune, which has always been alert to this vicious practice, has written an editorial which points up the danger of the situation and I hasten to call it to your attention as a warning signal of what is to come. The fight against such encroachment is far from an end.

UNITED STATES AS MINERALS TYCOON

Senator LONG has a bill, passed by the Senate and now before a House committee, which would fix a slowing-up point for the combined process of original ownership, land purchase, and plain "grab" whereby the Federal Government, according to testimony at a congressional hearing last week, has become the owner of half of the mineral rights in the United States.

Under this measure the Government no longer would acquire mineral rights along with the land it buys for specified purposes unless it can show a compelling need for ownership of the minerals.

Various factors contribute to the Government's mineral-rights ownership outstripping the percentage of its surface-owned land. Oil reserves in such public-domain States as Colorado, New Mexico, Wyoming, could be named. More important probably are the immensely valuable deposits of uranium bearing ore on land so barren and worthless that no one but the Government has ever wanted to own it. Then there was the overnight "grab" of the Continental Shelf's oil reserves, after Louisiana, working with the oil companies, had shown their fabulous value.

More interesting than important to the whole picture is the quaint procedure whereby the Federal land bank retains half the minerals on farmland acquired by foreclosure and later redeemed by the original owner.

Officialdom appeared in full force against the Long bill at the House committee hearing, which, of course, is not news, but Louisianians will find some of their arguments naive. The Interior Department—instigator of the tidelands grab—unblushingly opposed the bill as unnecessary because the Government "should" acquire only real estate "for which it has an absolute need to carry out authorized programs" and when the need is ended should restore the property "to private ownership." The Attorney General's office—up to its ears in litigation over the tidelands grab, cause of the greatest title confusion in the history of the country—expressed to the committee its fear that the Long bill "could create endless litigation and have a confusing effect on land titles."

Had Senator LONG's bill been in effect during World War II, it would not now be necessary for Louisiana Congressmen to be pushing another measure to restore ownership of minerals to Terrebonne parish landowners on land purchased for a naval installation. Indeed it is difficult to see how the Government could justify a need for the ownership of mineral rights save under the most exceptional circumstances. But in case it did so, the landowners and the courts would be on notice that the minerals constituted a valuable property, for which due compensation should be given.

Analysis of Public Law 78—Appropriations for Department of the Interior

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an analysis of Public Law 78 prepared for me by Elizabeth Elward, of the American Law Division of the Legislative Reference Service, as follows:

PUBLIC LAW 78, 84TH CONGRESS—DEPARTMENT OF INTERIOR AND RELATED AGENCIES APPROPRIATION ACT, 1956

TITLE I. DEPARTMENT OF THE INTERIOR

Office of the Secretary:	
Research in utilization of saline water	$400,000
Salaries and expenses, Oil and Gas Division	390,000
Office of the Solicitor	2,525,000
Office of Minerals Mobilization	225,000
Total, Office of the Secretary	3,540,000
Bureau of Land Management:	
Management of lands and resources	13,450,000
Construction	2,300,000
Range improvements	(1)
Total, Bureau of Land Management	15,750,000
Bureau of Indian Affairs:	
Education and Welfare services	41,764,995
Resources management	12,432,000
Construction	7,979,003
Road construction and maintenance (liquidation of contract authorization)	7,000,000
General administrative expenses	2,600,000
Relocation of the Yankton Sioux Tribe	56,500
Total, Bureau of Indian Affairs, exclusive of tribal funds	71,832,498
Tribal funds (not included in totals of this tabulation)	(3,100,000)
Geological Survey: Surveys, investigations, and research	26,635,000

Footnotes at end of table.

TITLE I. DEPARTMENT OF THE INTERIOR—continued

Bureau of Mines:	
Conservation and development of mineral resources	$12,893,000
Health and safety	5,000,000
General administrative expenses	970,000
Total, Bureau of Mines	18,863,000
National Park Service:	
Management and protection	9,825,000
Maintenance and rehabilitation of physical facilities	8,950,000
Construction	5,425,000
Construction (liquidation of contract authorization)	19,654,300
General administrative expenses	1,175,000
Total, National Park Service	45,029,300
Fish and Wildlife Service:	
Management of resources	6,728,500
Investigations of resources	4,187,000
Construction	1,000,000
General administrative expenses	760,000
Administration of Pribilof Islands	[1] (1,827,600)
Total, Fish and Wildlife Service	12,675,500
Office of Territories:	
Administration of Territories	2,609,500
Trust Territory of the Pacific Islands	4,500,000
Alaska public works	3,000,000
Construction of roads, Alaska	6,300,000
Operation and maintenance of roads, Alaska	3,500,000
Construction, Alaska Railroad	4,100,000
Total, Office of Territories	24,009,500
Administration, Department of the Interior:	
Salaries and expenses	2,065,000
Total, Department of the Interior	220,399,798

TITLE II. RELATED AGENCIES

Commission of Fine Arts	$21,200
Federal Coal Mine Safety Board of Review	70,000
Department of Agriculture:	
Agricultural Research Service:	
Salaries and expenses	150,000
Forest Service:	
Salaries and expenses:	
National forest protection and management	35,511,500
Fighting forest fires	5,250,000
Control of forest pests	6,272,500
Forest research	7,754,000
Subtotal	54,788,000
Roads and trails	24,000,000
Acquisition of lands for national forests:	
Weeks Act	190,000
Special act	[2] (10,000)
State and private forestry cooperation	11,337,129

Footnotes at end of table.

TITLE II. RELATED AGENCIES—continued

Dept. of Agriculture—Con.	
Forest service—Con.	
Cooperative range improvements (special account)	[1] ($700,000)
Total, Forest Service	87,580,129
Indian Claims Commission	119,500
Jamestown - Williamsburg - Yorktown Celebration Commission	100,000
National Capital Planning Commission:	
Salaries and expenses	143,000
Land acquisition	500,000
Total, National Capital Planning Commission	643,000
Smithsonian Institution:	
Salaries and expenses, Smithsonian Institution	4,000,000
Salaries and expenses, National Gallery of Art	1,355,000
Total, Smithsonian Institution	5,355,000
Woodrow Wilson Centennial Celebration Commission	10,000
Total, related agencies	94,048,829

TITLE III. VIRGIN ISLANDS CORPORATION

Grants	390,000
Administrative expenses	[2] (160,000)
Grand total, titles I, II, and III	317,573,627

[1] Appropriation of receipts. Not included in totals of this table.
[2] Limitation on use of corporate funds.

GENERAL PROVISIONS

Department of the Interior:

(a) Permits the employment of aliens in the field service of the Department for periods of 30 days in cases of emergency.

(b) Makes appropriations hereunder available for the reconstruction of damaged or destroyed facilities.

(c) Permits expenditures for forest or range fire suppression.

(d) Authorizes the temporary employment of consultants or experts at rates of up to $100 per diem, the total expenditure limited to $250,000.

(e) Authorizes maintenance and operation of aircraft, hire of passenger motor vehicles, purchase of reprints, payment for certain telephone services, and payment of library society membership dues under certain circumstances.

(f) Authorizes up to $200,000 total for payment for specified personal services.

RELATED AGENCIES

Forest Service:

(a) Authorizes the replacement of 165 passenger motor vehicles and the hire of such vehicles.

(b) Declares restrictions against employment of aliens inapplicable to (1) translators employed on a temporary basis, and (2) emergency employment on a temporary basis.

(c) Limits amounts for options to purchase land to a maximum $1.

(d) Requires the use of domestic twine except where no suitable product is available.

(e) Prohibits the use of funds for publicity or propaganda.

GENERAL

(a) Authorizes travel expense payments.

(b) Continues antistrike provisions.

Federal Aid for Indoctrination

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. McVEY. Mr. Speaker, the controversial problem, Federal aid to education, has absorbed the minds of a great many people during recent weeks. There are those who feel there should be no extension whatever of our Federal aid to education. Their fear is based largely upon the feeling that with Federal aid goes Federal control, and they are mindful of what happened in Germany, Italy, and now Russia where education has been under the domination of national authorities.

Opponents of this position are quick to point out that we have had specific Federal aid to education for half a century, and there has been no disposition to control the philosophy underlying our education structure on the part of the Federal Government. Federal aid to public-school construction, it is pointed out, is specific aid, and there is no justification for the belief that with this type of aid there will necessarily be Federal control.

It is certain that both groups in this controversy do not want Federal control of education. The lessons we have learned from countries abroad which have become victims to such philosophy are too fresh in memory for us to fall into that error.

There follow excerpts from the Fact Finder magazine, edited by Mr. Harry T. Everingham, which contains an interesting discussion of this particular subject:

FEDERAL AID FOR INDOCTRINATION

Many people favor Federal aid to education. Maybe you would too if you'd heard a distinguished speaker before the PTA tell how badly schools are needed in Mississippi—backing up his point with the statement that "there is not a single elementary school for colored children in the city of Jackson, Miss." Wouldn't that make you favor Federal aid to education? It would if you believed it.

When we heard a congressional candidate make that statement last fall we asked him where he got his information. He said from the local teachers' union. Later, we checked the school situation in Jackson and found: There are no less than eight elementary schools for colored children in Jackson, Miss. Furthermore, just last May, Adlai Stevenson was there, looking at the colored schools in Jackson and praising them. We even have photographs of them.

Only a few Southern States could have any possible need for Federal aid for schools. Yet nowhere will you find a proposal to provide Federal aid only for needy States, permitting the others to run their schools without interference from Washington. It seems odd that every program advanced to improve education in a few States must involve nationalization of education for all the 48 States.

But it isn't odd when you realize that the real goal of the organized forces behind Federal aid is not really equal education for all, but control of education.

Another report appeared February 25, 1955, on the front page of the New York Times. It was prepared by a 15-man subcommittee of the President's Commission on Intergovernmental Relations which included the Federal Commissioner of Education. The report said that Federal money for school construction is "not necessary." Also: "We have been unable to find a State which cannot afford to make more money available to its schools, or which is economically unable to support an adequate school system."

Another national authority, president of Indiana Central College, Dr. I. Lynd Esch, has made an exhaustive study of Federal aid to education and says he is personally opposed to it for several reasons.

FEDERAL AID IS UNNECESSARY

"I do not believe there is any State in the United States," he says, "which cannot provide the necessary improvement in its education if it has the will to do it. There is no State today that is spending as high a percentage of its income for education as it spent in 1929, or in 1933. There is no State spending as much as 3 percent of its income for education.

"There are some States with less opportunity than others in terms of dollar income, but the differential is narrowing very materially. The matter of teachers' salaries is a good example. The average teacher's salary in the last 10 years has about doubled in the public schools; but the States with the lowest salary income have almost tripled their salaries. So any State in the Union can afford it."

FEDERAL AID IS ECONOMICALLY UNSOUND

"It costs more money to do the total job if we turn it over to the Federal Government. The farther away politicians are from the source of income, the easier it is to spend the money and the greater amount of inefficiency in doing it. In Indianapolis we're building public schools at an average cost of $34,000 a classroom. That's a lot of money. But a school built by the Federal Government is costing $75,000 a classroom.

"It's economically unsound for another reason: the Federal Government can't afford it. We have just about reached the maximum of the public debt—nearly $300 billion. We have the highest tax rate in all the history of America. It's a rate that all of us think is too high, and we still have an unbalanced budget. Now how in the world can the Federal Government afford to take care of this situation? All the money the Federal Government gets has to come out of the 48 States in taxation. The individual States can tax themselves for their own purposes better than give it to the Federal Government. There is no State in the Union which financially is not much better off than the Federal Government."

FEDERAL AID IS UN-AMERICAN

"It will bring Federal control of education. The Federal Government has an obligation to control that which it subsidizes—an obligation to those of us who pay taxes—to see what happens to the money. The Supreme Court has ruled that this is true. It has to control what it subsidizes if it is going to be true to the trust we place in it.

"Control at one central place always brings standardization—which might be good or bad, depending upon the views of the political party in power. But that can change overnight. Germany had a good system of education before Hitler came to power, but in 7 years it was completely reversed because he had it under the control of one bureau, one minister. It is impossible to get aid without getting control. It's impossible to get control without getting standardization and then you get stagnation, because you've lost the incentive for a progressive, competitive program.

"You can't force education from the top. Education must go up. You can force indoctrination. You can force regimentation. But you cannot force education that is adequate for free citizens in a free society. That has to grow up from the local community with the best of community pride, initiative and goals to make it alive and real. You don't do that with dollars. We have to have more dollars for education, but along with the dollars we need the interest of the local community in building pride in that educational system."

Federal aid is a stepping stone to socialism.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Invitation to Sponsors of North Atlantic Treaty To Name Delegates to a Convention

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 26, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief statement made by me yesterday before the Senate Foreign Relations Committee, in support of Senate Concurrent Resolution 12.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ESTES KEFAUVER BEFORE THE FOREIGN RELATIONS COMMITTEE ON SENATE CONCURRENT RESOLUTION 12, JULY 25, 1955

Mr. Chairman and members of the committee, I want to express my appreciation to this committee for your consideration in scheduling hearings today on Senate Concurrent Resolution 12. If adopted in its present from this resolution would provide for the President to invite the other democracies which sponsored the North Atlantic Treaty to name delegates to a convention for the purpose of exploring means of further unity among the democracies.

As the committee knows, I was joined in offering this resolution by Senators FLANDERS, HUMPHREY, JACKSON, LEHMAN, LONG, MANSFIELD, MCNAMARA, MURRAY, NEELY, NEUBERGER, O'MAHONEY, PAYNE, SCOTT, and SPARKMAN. I believe that my fellow sponsors would also join me in urging the committee to make any changes in the language in the resolution which you deem necessary in order to better define or make more precise its purposes. For instance, it is my understanding that the executive departments concerned may propose that the language be changed to have the invitation of the President issued on behalf of the Congress. Such a change would certainly be satisfactory with me and is in fact in keeping with our own constitutional history. The important thing is that we take a step now which the times demand and make such a convention possible.

The President's meeting at the summit emphasizes, in my opinion, the desirability of the step here proposed. In line with our own history of freedom in the United States and the comparable histories of freedom among our fellow democracies, these meetings of the heads of state serve to emphasize the desirability of meetings also among representatives of the people themselves.

We need now a meeting after the summit—a meeting of the sovereigns—a meeting of the people themselves from whom, under the democratic theory of government, all power derives.

I believe it to be significant that during the past few months an increasing number of the world's leaders have endorsed the plan here proposed. I have here the statement of Gen. George C. Marshall, former Secretary of State, former Secretary of Defense, and former Chief of Staff which I think is of sufficient importance to read in its entirety:

"A few days before the death of Justice Owen J. Roberts, I accepted his invitation of May 5 to become a member of the Council of the Atlantic Union Committee which he has headed since its foundation in 1949. In accepting, I wrote him May 12:

" 'I am honored to be counted among those who support the unity of free nations.'

"Justice Roberts' services to defense as well as to the judiciary were manifold, but perhaps the finest thing he did was the sacrifice he made in resigning from the Supreme Court to devote himself to the cause of Atlantic Union.

"The subject today is vitally important and the period fateful. All probably agree to the importance of Atlantic unity but few act.

"Recently a resolution calling for action was introduced in Congress by a distinguished bipartisan group from both Houses. It proposes that delegates from the United States and other NATO democracies meet in a convention 'to explore and report to what extent their peoples might further unite within the framework of the United Nations, and agree to form, federally or otherwise, a defense, economic, and political union.' This prudent proposal, which commits us only to exploration, deserves support.

"Thinking back on the development of our own Federal Union—on the doubts and difficulties which preceded the final union of the colonies, on the remarkable advance in freedom, invention, production, and living standards which followed on the solution of the early difficulties, and on the high degree to which the States have continued to maintain their individual personality and institutions—Americans should have a sympathetic understanding of this effort to overcome the limitations of national barriers in the approach to a solution for common problems.

"What I said when I addressed the conference of governors on July 14, 1947, I would repeat today: 'There is no blinking the fact that this country now stands at a turning point in its relations to its traditional friends among the nations of the Old World.'

"Either it must finish the task of assisting these countries to adjust themselves politically to the changed demands of a new age, or it must reconcile itself to seeing them move in directions which are consistent neither with their own traditions nor with those of this country. Whatever course is adopted will affect the lives and fortunes of people in every State of the Union."

This from the author of the Marshall plan.

I have here another statement from Mr. Robert Schuman, Minister of Justice in the present French Cabinet, former Premier of France, which I should like to read:

"The setting up of an Exploratory Committee (Comité d'Etude) regarding Atlantic Union which is advocated at present in the United States Congress by so many distinguished Senators and Representatives, is of the highest importance to all nations belonging to NATO.

"I have long been an ardent partisan of a European federation to be integrated itself in the Atlantic community. But certain European nations have hesitated to advance far in this direction so long as the United States, Canada, and Great Britain were not disposed to explore in common with them an eventual political, economic, and military union.

"If the American Congress accepts the Atlantic proposal of Senator KEFAUVER, all the democratic European nations should be happy to accept the invitation to send delegates to such a Study Commission. Should there result from the work of this conference and from later proposals the outline of an acceptable plan of union, in which each of the member nations would be attributed an equitable voting right protecting it from any eventual domination by a single nation—which should be contrary to the democratic ideal of the Union—we would then certainly have made a great step toward world peace and general prosperity."

This from the author of the Schuman plan.

Paul-Henri Spaak, Foreign Minister of Belgium said, in endorsing this proposal:

"The Atlantic exploratory convention resolution proposed in the American Congress by Senator KEFAUVER, Senator FLANDERS, and other leading Americans seems to me a most praiseworthy effort to obtain at least a preliminary examination of the advantages and disadvantages of closer cooperation among western democracies. I personally hope that such discussion will take place between the citizens of the Atlantic nations very soon."

Former Prime Minister of Belgium Paul Van Zeeland said:

"Any step leading to the acceptance or the support by the United States of the creation of a truly well-balanced and equitable Atlantic community would, in my opinion, be a great support and a strong inducement for those who are doing their best to create a European union.

"To sum up, it would be a major step towards peace and prosperity throughout the world."

Foreign Minister of Italy Gaetano Martino said of the resolution:

"I agree with Senator KEFAUVER that the peace of the world cannot be assured by methods of formal diplomacy alone; and I feel that any efforts on the part of leading citizens in different democratic countries to explore and carefully discuss the probable advantages, obstacles, and problems connected with some possible form of eventual democratic federation are very desirable, because the more discussion we have of these problems the closer is the likelihood of eventual solution."

Now just exactly what is this plan, why do I think it is necessary, and how would it work?

NATO is now the most integrated and developed international organization of the free world as well as the principal bulwark of its security. But NATO is still fundmentally a military alliance. In the military field it has created an Atlantic defense force under a unified command exercised by a supreme commander. But in the political field, power of decision still rests with 14 separate national governments which must agree unanimously before action can be taken—and NATO action is strictly limited to making recommendations. NATO has as yet no adequate machinery for the exercise of civil control over its military forces, despite the fact that civil control over military force is a basic principle of every democratic people.

The purpose of the resolution for an Atlantic Exploratory Convention is to bring about a meeting of the most competent citizens of the Atlantic democracies to determine what steps might be taken outside the military field to bring about unity of action. On behalf of the other sponsors of this resolution, I wish briefly to explain certain provisions in its enacting clause.

It requests the President to invite the other democracies which sponsored the North Atlantic Treaty—Canada, Britain, France, Belgium, the Netherlands, and Luxembourg—to name delegates to meet in a convention with similarly appointed delegates of the United States. There is no reason why the President should not, if he deemed it desirable, undertake this initiative jointly with the Prime Minister of Canada or Britain or of any other of these nations. Because these seven nations have already joined in sponsoring the North Atlantic Treaty, this exploratory convention can most appropriately be initiated by them.

But the resolution provides that the convention may invite other democracies to participate.

The delegates to the convention proposed in this resolution would be appointed by their governments, thereby insuring that men of the highest competence and experience would devote their full time to this high mission for as long a period as might be required. The delegates from the United States could appropriately be appointed by the President with the advice and consent of the Senate. They would include members of the principal political parties, a provision which clearly envisages the participation of Members of both Houses of the Congress. They would, however, as the last paragraph in the Preamble makes clear, act as individuals, in accordance with their individual convictions, just as the delegates did in Philadelphia in 1787. Under this procedure, division of the convention into national delegations, which would be instructed by their governments and would negotiate and bargain with each other as in a diplomatic conference, would be avoided.

The purpose of the convention is delineated clearly in the resolution. It is to explore and to report to what extent their delegates believe their people might further unite within the framework of the United Nations and to what extent they might agree to form, federally or otherwise, a defense, economic, and political union. After comprehensive exploration of possible courses of action within this broad framework, the delegates would draw up a public report of their joint findings and recommendations.

There is no commitment in this resolution other than to call for such exploration and recommendations by a body selected from the peoples of our democracies. There is certainly no commitment to any action which would decrease the powers of the Government of the United States. Any such action which the American people might consider wise at some future date in the light of the recommendations of the convention would necessarily be undertaken by the Congress of the United States in accordance with our constitutional processes.

Anyone who believes in our political system and ackowledges the sovereignty of the people should favor the convocation of a convention of this nature, limited in its function to exploration and recommendation. To oppose it is to say "No; we will not give the American people and other Atlantic peoples a chance to explore possible solutions of their common problems. We insist that the task of seeking solutions of these problems, even though they involve the lives of tens of millions of Americans and the future of our country, shall be entrusted solely to diplomatic officials."

This concurrent resolution opens to the democracies a new and broad road toward the attainment of our objective of peace with freedom. It provides the free nations with a means of taking the initiative in the war of ideas. We cannot win the war of ideas if we remain on the defensive. To move forward toward ultimate victory in this ideological struggle, to make possible an expansion of the frontiers of freedom which have receded so far in the last decade, we must take the offensive.

The passage of this concurrent resolution by the Congress of the United States would electrify free men everywhere, providing them with a new and tremendously dynamic idea. It would generate hope and confidence wherever people are permitted to read the news and listen freely to the radio, and some of that hope would seep through the cracks in the Iron Curtain.

The initiative depends solely upon us. In seeking closer union between free peoples, there is no limitation upon our capabilities except ourselves.

National Rivers-Harbors and Flood Control Program

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of an able address entitled "The National Rivers-Harbors and Flood Control Program," delivered by Maj. Gen. S. D. Sturgis, Jr., Chief of Engineers, United States Army, at the 42d national convention of the National Rivers and Harbors Congress in Washington, D. C., on May 31, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NATIONAL RIVERS-HARBORS AND FLOOD CONTROL PROGRAM

This Congress meets at a time when the question of water—water supply, water conservation, water distribution, water utilization—is gaining recognition as one of our foremost basic problems. Our water policies are being rescrutinized. Our water needs are being studied with growing concern. At the same time, the benefits of the water developments already built—the bulk of them within the past 20 years—are now beginning to reach a volume that proves the wisdom of foresighted water-resource planning.

In these circumstances, the Rivers and Harbors Congress is presented a unique opportunity to serve as a focal profit for crystallizing national concern and action on water problems. And its first step should be to establish common denominators of interest around which a national water policy and program can be shaped.

Let me first briefly report on the status of Federal water-resource developments entrusted to the Corps of Engineers, and then I shall discuss some of the problems confronting us.

This fiscal year, the Corps is operating under civil works appropriations totaling $442 million, which embrace funds for 98 construction projects, including 21 new starts or resumptions. The President has requested $509 million for next year, which would prvide funds for 113 construction projects, of which 34 would be new starts or resumptions.

We are making progress with civil works construction, though the rate of this progress should be examined most carefully in light of growing water resources requirements and the other problems and considerations affecting the fiscal policies of the Government.

In navigation, the Corps is now maintaining 22,600 miles of inland waterways and 700 coastal and Great Lakes harbors. Tonmiles of traffic on this system increased 800 percent in the 25 years preceding 1954. Tonnage handled at coastal and Great Lakes harbors increased by 51 percent in this period. And the trends are still up.

The 391 flood-control projects put in operation since 1928 have cut the average annual flood bills in half. But still, no major river basin yet enjoys a completed flood-control program; in fact, there is none which is more than two-thirds complete. Some have barely begun. And completion of all those presently authorized would still leave the Nation exposed to flood losses aggregating some $200 million annually.

When installations now under construction are completed, the Corps' present 3-million-kilowatt hydroelectric generating capacity will approach 7 million kilowatts. But another 7 million kilowatts could be provided by projects authorized but not yet started.

In the postwar period, the Gulf Intracoastal Waterway, with a cost-benefit ratio of 14.8 to 1, has been completed, and progress has been made on other urgently needed projects of great national and local importance. To briefly review some of them: Modernization of the Ohio River and Warrior-Tombigbee Waterways is underway, and we are moving ahead with the Missouri River Basin program, the complex Central and Southern Florida project and the Niagara Falls remedial project. The St. Lawrence Seaway has been placed in construction by the St. Lawrence Seaway Development Corporation under the able administration of Mr. Lewis G. Castle, with the Corps of Engineers performing enginering tasks in its construction. Both the Calumet-Sag channel linking the Great Lakes with the Mississippi River system, and the old river closure project which will prevent capture of the Mississippi by the Atchafalaya, are included among the projects for which the President has requested appropriations in the fiscal 1956 budget. The project to deepen the Delaware River channel from Philadelphia to Trenton has been authorized.

This leads us to consideration of one of our major current problems. The corps' backlog of unfinished or unstarted work symptomizes one of the basic questions of our time—the fact that, though building at an unprecedented rate, we are not building fast enough to keep abreast of the Nation's needs.

In 1927 our backlog totaled only about $400 million. Today it is approximately 22 times that size. The rise has been regular and inexorable. Each one of the unfinished or unstarted projects in this backlog has passed through the searching scrutiny of the corps' own screening processes and has been certified by congressional authorization as constituting a proven need meriting Federal remedy. Each one represents towns and farms left unprotected from floods, or industries and communities deprived of water and power that could help them grow and produce, or unimproved waterways and harbors that could reduce the costs of American-made goods to American consumers and in world markets. We have no adequate measure of what the failure to provide these improvements is costing the American people; but since corps projects built to date have returned about $2 in benefits for every dollar of cost, it is reasonable to assume that

the $8½ billion worth of unbuilt authorized and active projects would return at least $17 billion worth of benefits.

This situation starkly reveals the need for a national program, based on orderly and sequential plans of development, and aimed at eliminating the backlog within a reasonable time. And this in turn may well involve reconsidering our funding policies and perhaps a rescrutiny of other Federal expenditures in the light of water-development needs.

The backlog of authorized Federal projects is only one indication of the Nation's need for water-resources development. Another one, though less reducible to statistics, is the concern over water supply now being manifested in all parts of the country.

Recent droughts have made it all too apparent that our developed water supplies for domestic use, industry, and agriculture are inadequate. At the same time the demands upon water supply are constantly increasing. Our population is swifting growing and per capita use is rising. Irrigation in the East has increased to an extent sometimes threatening municipal supply, and State governments are having to take up questions of water-rights legislation. As new industrial processes require ever greater quantities of water, plants are coming to the riverbanks not only to obtain low-cost water transportation but to have access to the water itself. The waterways, too, require stream regulation that will protect them against inadequate stages at times of low flow.

It is becoming increasingly evident that adequate water supply depends upon water conservation, and that from now on most reservoirs built for river control should include storage space for water supply.

However, this need for planning water supply in river-basin developments raises difficult problems in project evaluation, cost sharing, and reimbursement. We may be reasonably certain that additional water-supply storage will be needed in a given area within reasonably short time, and it would be obviously poor planning not to provide for it; yet how are we to evaluate that water when no customer is immediately available, and who will contract to pay, on a job being built at present, for storage capacity for development to occur in the future? I submit to you the thought that we must achieve some modification of existing rules to assure foresighted development of the maximum potentialities of our river basins with provision for deferment of reimbursement contracts for supply storage.

A third manifestation of the Nation's increasing reliance on water resources is found in the growth of water transportation. Whereas in 1942 our waterways carried only 2 percent of the Nation's total ton-mileage of freight traffic, in 1953 they carried 17 percent, and the trend is still on the rise.

The Presidential Advisory Committee on Transport Policy and Organization took cognizance of this trend in its recent report, when it pointed out that within one generation we have passed from a situation in which railroads held a virtual monopoly of transportation, to a highly competitive situation in which motor and water carriers help reduce rates and provide greater service to the public.

The committee pointed out that during wartime "in case of etxensive domestic damage, it might be necessary to place greater reliance on waterway facilities which are relatively more immune from destruction. Related to the foregoing considerations is the problem of developing and strengthening our coastal, intercoastal, and inland services by water. It is important to the national economy and to defense that these operations be both strong and prepared to meet their role in emergencies."

And the committee significantly omitted any recommendation for tolls on inland waterways.

The corps' development activities which in earlier days included railways as well as waterways, have always been justified only insofar as they contribute toward a national system which will provide needed transportation at the lowest possible cost to the ultimate consumer. Particularly in the case of waterways it has accomplished this not only directly by making available the advantages of low-cost water transportation, but indirectly by providing a competitive control upon rates. The Presidential Advisory Committee recognized this fact when it pointed out that new competitive controls upon common-carrier rates and practices had reached the point where they might now justify an easing of governmental regulatory controls.

This rivers and harbors Congress can help, through its studies and discussions, to shape a national transportation policy in which the advantages of water transportation are preserved for the benefit of the public.

The corps, the Department of Commerce, and other agencies and interests are now seeking broad agreements on such matters as standard bridge clearances that will help guide the way to solutions of individual cases. Unfortunately, there appear to be some groups more interested in inflaming controversies than in settling them—no doubt in the hope that one or the other interest in a bridge dispute will be injured to the benefit of the trouble-maker. Such efforts will contribute nothing to the solution of our pressing national water-resource problems. This Congress and its constituent groups, therefore, can render good service by helping to see to it that discussions and negotiations are always aimed straight in the direction of constructive solutions that will allow maximum progress for all interests and the best and most economical service to the public.

Similarly, some people appear to believe that the programs of the Corps of Engineers and of the Agriculture Department are hopelessly at odds and that neither compromise nor coexistence is possible. While admittedly much remains to be done in the resolution of this matter, such beliefs do not contribute to the solution of one of our pressing national water-resource problems.

Let me here and now wish thriving success to the soil-conservation programs of the Department of Agriculture—may they keep the soil in place and out of our rivers and reservoirs. You delegates to this congress, which has been in existence for more than 40 years, are well aware of the separate value and separate functions of each program—that neither is conceived to be a substitute for the other. But with teamwork, each program will serve in its own way to help provide our people with a richer, safer, stabler land.

Again, the problems of maintaining fishing, hunting, and other outdoor recreational opportunities, in face of the country's continued growth and the steady encroachment upon wild lands, have caused much concern. Considerable of this concern has motivated constructive efforts to take advantage of the potentialities of reservoir projects in furthering hunting, fishing, and other outdoor recreation. This is most heartily encouraged by the Corps of Engineers. But on the other hand, this concern has also motivated unwarranted attacks and outright opposition to the reservoir projects, to the utter disregard of both the economic stake involved and the already tremendous outdoor recreational benefits attending the Civil Works program. Disregarded are such facts as the 54 million visitors who fished, boated, bathed or camped on Corps reservoirs last year; as the pollution abatement and low-flow regulation provided by Corps reservoirs, which made possible better enjoyment of whole rivers by millions of people who live along or come to their banks. As the country continues to grow, Corps of Engineers and other reservoirs will assume greater and greater importance to the preservation and enhancement of our precious privilege of enjoying the great outdoors, but we are confronted by a serious problem of establishing the better understanding and cooperation required to gain full benefit from them.

As to these outstanding questions which I have presented here, and to the many other problems confronting us, the Rivers and Harbors Congress can perform valuable service by helping to achieve better understanding and unification of effort between the groups concerned with water resources development to the end of welding more orderly and effective action on common objectives.

The problems of obtaining adequate programs in the first place present one kind of difficulty which can be helped best by presenting, fairly, honestly, and accurately, the picture of the Nation's needs. But the problems of working out the adjustments involved in carrying out our programs, on the other hand, call for detailed study and above all a constant effort on the part of all concerned to avoid the misunderstandings which can only complicate our difficulties and postpone solutions. The Corps and all its governmental colleagues in the water-resource development field need all the help and good-will this Congress and its constituent groups can give.

In this connection and at this time when much attention is being devoted to reviewing and analyzing governmental activities, it seems to me that this Congress and all other groups of private citizens interested and concerned in the development of our water resources, should insist that such analyses and studies be scrupulously fair, and that conclusions be founded upon all the facts. In suggesting your guardianship in this respect let me affirm clearly my belief that improvements in policy and procedures are much in order and will greatly assist the Corps of Engineers and other agencies to do an even more effective, economical, and consistent job. But the water resources of this Nation are far too important for us to allow their development to be compromised in quarrels over issues that are small by comparison. Let us be sure that the improvement rather is constructive in the form of policies and procedures which can be accepted by the vast majority of the American people and constitute a common bond and guide for public thinking, for congressional consideration, and for guidance of the highly competent, loyal, and industrious public servants in the Corps of Engineers and other agencies who have our water resources at heart.

By calling attention to the Nation's water needs, by helping to keep legislation abreast of modern problems and requirements, by helping the Nation to be foresighted in its approach to resource development, by refusing to tolerate deliberately divisive influences, and by helping to perfect teamwork among those whose aims and interests are fundamentally similar or complementary, the Rivers and Harbors Congress can contribute largely to the solution of our growing and vital water problems. And in so doing, it will perform great and patriotic services to the Nation.

Farm Problems

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter

addressed to me and written by one of the outstanding farmers of North Dakota, Louis A. Kostelecky, whose address is Route 4, Box 90, Dickinson, N. Dak. I have never seen farm problems so well discussed as they are in this letter, which consists of a page and a half, and I commend it to the attention of every Member of the Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DICKINSON, N. DAK., *April 3, 1955.*

Hon. Senator WILLIAM LANGER,
United States Senate,
Washington, D. C.

DEAR SIR: In regard to the recent editorials in different farm papers and others, it seems to me that our publishers along with our Senators and Representatives know very little about our farm problems.

Some of these editorials say that when flexible price supports become law they are excepted as a big stride toward a saner agriculture policy.

Is it sane to cut the income of a large segment of our population while their costs of production remain high? If it is, why not do this to the industry also?

Why do so many people think the farmer does not need parity? Are we a different class of people that we can make our living producing below the cost of production? Are we not aware of the fact that industry is subsidized by the United States Government, take press for instance (Life magazine and others)? To be sincere, almost everything is except the farmer.

The manufacturers must have cost plus a profit on their products, they say. Labor must have a living wage—the grocer, the butcher, and baker, etc., say they must have a profit.

They say we have a surplus of farm products. Is this the only commodity in surplus? Take other products—farm machinery, cars, tractors, trucks, appliances, etc. Look around at the displays of dealers and the stores—merchandise lined up. Is that not surplus? Do they cut prices because of surplus—no—they must have a profit.

Take labor at present—between 3½ million to 4 million unemployed—do they cut wages? There is a surplus, is there not? No, they ask for higher wages. Here I think there should be a level at which to stop, don't you?

What does industry do when there is no demand for a product? Cut prices—no—they produce less and say they can't produce below cost of production. How can farmers produce below cost of production?

Mr. Benson says that the sliding scale will make it unprofitable to raise wheat, corn, and to milk cows. That will make the farmer switch to something else for Benson's sake. Supposing they do switch to something else? What is there that there is not a surplus of?

In a recent poll conducted of dairymen to find out if they milked less since the support on milk was lowered, all of them said they milked more cows and increased their volume so they could make ends meet. The same thing happens in wheat and other products. A person just must have so much money to survive.

How did the sliding scale help anybody? Wouldn't it be more sensible to give the farmers better prices and allow them to sell just a certain amount of each product at the supported price, and sell the rest on the world market, or store it on the farm, or feed to livestock, then to follow the sliding scale at ruinous prices for products?

Some also claim that rigid supports would raise cost of food to the consumer. It might some, but why should the farmers raise food below cost of production? According to Government statistics, labor people can buy more food per hour of work now than at anytime in the history of the United States. However, they still go out on strikes and try to bring our cost of production higher. I realize they are not to blame for all of these high prices, but they are to blame for a considerable amount of them.

Compare prices of industry between 1941 and now. In 1941 a 2-3 plow tractor sold for $1,280. Now the same tractor sells for $2,800 to $2,900. In 1941 a car cost $925. Now it sells for $2,100 to $2,200. You can go down the line as far as you want and you will find the same is true with everything. They do not say that they cannot raise prices because it would cost the consumer too much; they say it cost them so much and they must have a profit too.

Why put all the doggone blame on the farmers for high costs? In 1948 when wheat sold for $3.25 a bushel, bread sold for 20 cents a loaf. Now with wheat at almost one-half of this, bread sells for 24 cents a loaf. I don't think that is the farmer's fault. A farmer cannot make a living if he cannot make a living wage.

At the present time I think it is our duty to do something about these prices. Do something for the family-type farmer.

There is at present a tendency for the big operator to grab up the smaller farmers and chase them to the cities to make unemployment worse. If something is not done soon so the small operator can make a better go of it, there cannot be any peace among our farmers.

I think a lot could be accomplished toward a good farm program if the heads at Washington, D. C., were put together and used instead of raising their salaries in selfishness and forgetting about many things that should be done.

About the raising of Congressmen's salaries, I would like to say that this is the third time that their salaries have been raised since President Roosevelt's time.

The farmer's prices have been brought down many more times than that and nothing has been done to bring them up.

Sincerely yours,

LOUIS A. KOSTELECKY.

Statement by Hon. G. Mennen Williams Before Senate Committee on the Judiciary

---

EXTENSION OF REMARKS
OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a statement made on June 8, 1955, by Gov. G. Mennen Williams, of Michigan, before the Refugee Subcommittee of the Senate Judiciary Committee. I am told that it is within the required limits as to length.

I think the statement will be of interest to everyone who is interested in this important matter.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. G. MENNEN WILLIAMS, GOVERNOR OF MICHIGAN, TO THE REFUGEE SUBCOMMITTEE OF THE SENATE JUDICIARY COMMITTEE, WASHINGTON, D. C., JUNE 8, 1955

My name is G. Mennen Williams. I am Governor of the State of Michigan. Our State includes about 4.3 percent of the country's population and we pay about 8 percent of the United States taxes. We are proud to be known as the arsenal of democracy.

At the outset, permit me to express my sincere appreciation for your kind invitation to give my views on the Refugee Relief Act of 1953. I am familiar with the fact that my distinguished predecessor in testifying before you, the well-beloved Senator from New York, the Honorable HERBERT H. LEHMAN, undoubtedly is better informed on this subject than anyone in America. For a long time he has given leadership to the many in his party who have denounced our immigration policy and the administration of the Refugee Relief Act of 1953 as a refutation of our national character and policy, as well as blot on our reputation for democracy and humanity.

I have many times over the last year and before heard him in his State and in mine challenge the conscience of America to relight the torch held high by the Goddess of Liberty so that the immortal words of Emma Lazarus—"Give me your tired, your poor, your huddled masses yearning to breathe free"—would not only be embossed upon the base of the Statue of Liberty in New York Harbor but be alive in our hearts and in our law.

I am proud to have been one of his humble colleagues in this fight for human dignity, and over the past months to have raised my voice for a reaffirmation of our traditional American policy of the "melting pot." I have studied Senate bill 1794, which Senator Lehman introduced some months ago, and wish to wholeheartedly endorse it. I have also read Representative Celler's measure, House Resolution 3300 introduced last January, and I am in agreement with his aims also.

It is gratifying to me that recently our President has recognized the widespread and long-felt dissatisfaction so ably expressed by Senator Lehman, and has sent a message to the Congress on this subject. I am sure that, though this demonstration of interest is of recent date, it is nonetheless sincere. I am hopeful, therefore, that at this point we can count upon overwhelming bipartisan support for Senator Lehman's bill.

Let me say at the outset, I am not an expert witness. But I believe I can establish a general competency. My ancestry is such that I can view this problem with a broad perspective. On the one hand, an ancestor fought in the Revolutionary War for Independence after his ancestors had been on this continent for over a century. On the other, a grandfather came over from Europe and Horatio Alger-like worked his way up from nothing to a modest fortune. My ancestry is not only Welsh and English and Canadian, but French and German and Dutch.

This year the Philadelphia Welsh Society honored me with their "Most Distinguished American of Welsh Ancestry in 1954" award. I am very proud of this. But I am also proud of my honorary adoption into nationality groups of Western and Eastern European peoples.

For many years I have been associated with them in their social, cultural, and religious activities. More recently, I have had a special national association with them as chairman of the nationalities division of the Democratic National Committee.

During my first term of office, I established an Americanism commission. On it we had representatives of many of our ethnic

groups, including our American Indians. The commission members worked well and harmoniously together, without regard to their several national origins. Michigan probably has a very typical ethnic pattern for large-population industrial States in that we can claim residents representing at least 40 groups with 5,000 or more people.

Like other Governors, I have assisted in the creation of a displaced persons commission, and have helped the commission through the vicissitudes of establishing new lives for those for whom hope had almost gone. I have seen these people become good citizens, and I have felt the pride and religious exaltation of those who have participated in this good work. Michigan was proud to be the new home of the 100,000th European DP, and we celebrated this family's arrival by an appropriate ceremony in our State Capitol.

Michigan is proud and happy that we are a people gathered from many climes and kindreds. It is not only our cities that are cosmopolitan in character, but our ethnic map of the State will show that our countryside is dotted with town and farm folk tracing their ancestry all over the world.

We believe that, as a people, Michiganders have made a successful contribution to America. It is not only that we developed and manufactured the automobile which has magnified our country's prosperity, but we believe we have contributed in most other ways as well. In wartime we proudly earned the title "Arsenal of Democracy" and we have contributed our proportion to the Armed Forces of our Nation. We always subscribed and over-subscribed our war bond issue. We pay more than our per capita share of taxes. The University of Michigan has more people listed in Who's Who than any other State university.

These things I say not to brag about Michigan but to point out that we—a veritable melting pot—have been at least as successful in our contributions to the general welfare as other States.

And we like the rainbow radiance of our diverse cultures. We believe it adds strength as well as color and interest to our way of life.

If I may look for a moment to the national scene, I might remark that our democracy was certainly defended by the immigrants who helped us develop the atomic bomb: Einstein who fled the Nazi Hitler; Fermi from Italy; Szilard and Teller from Hungary; Bohr from Denmark, and so on.

Basically, we are opposed to the kind of discriminataion in our immigration laws that makes of some people second-class human beings.

Incidentally, on my recent trip to the Near East, I was made painfully aware that we are not doing ourselves any good with our friends and allies by our present immigration policies. In Greece, for example, they have a difficult time squaring our respect for their courage in fighting Fascism and Communism and our longtime admiration for their cultural contributions on the one hand with our brusque reluctance to accept more than a handful of their emigres who in many instances want to join their relatives who are already proven and successful American citizens. This is a contradiction that either breeds perplexity or anger or both. How can we try to build friends to defend us from communism with our right hands and insult them by unjust immigration laws with our left hands, and expect good results. This is a question we are going to have to answer soon not only to the Greek people but to the people of America. Because in this question are the seeds of serious trouble to our national prestige and security, and our national honor as well.

In 1953 we sought to give these people admission through the Refugee Relief Act which President Eisenhower signed in August 1953. We were going to admit 214,000 refugees under special quotas. As of this date, we have admitted slightly more than 1,000 real refugees and escapees.

There has been, over the past year, a sufficient amount of criticism to indicate what the main causes for such a poor showing in our admissions policy have been. The administrator of the program, Mr. Scott McLeod, claims that the law is too restrictive. It is his belief that, in order to comply with the statutory requirements, it requires a processing of anywhere from 6 to 9 months for each application, and that other restrictions, such as political backgrounds and conditions of health, prevent any real consideration being given to the great majority of refugees.

Other criticisms of the program are directed primarily at the administration. These critics maintain that the inordinate quest for security which characterized our governmental employment policy over the past years has been extended to the refugee relief procedures.

Somewhere amidst all these charges there is undoubtedly some objective analysis to be had. This subcommittee should be commended on its investigation for I am sure that a reasonable and just policy will be resolved.

There is certainly one thing that is evident. Our present program is totally inadequate. The admission of slightly more than 1,000 refugees out of a potential of 214,000, with the program having less than a year and a half to go, is adequate proof of this.

In the face of this evidence there is no other conclusion than that the law is adequate or its administration is adequate, or that both the law and the administration are inadequate. Anyway—it's time for a change, and a big one.

To get down to specific cases, I'd like to make the following suggestions developed by the Michigan Commission on Displaced Persons and Refugees, and the Michigan Committee on Immigration:

1. A new definition of refugee so that persons applying as refugees will not be considered ineligible because they are "firmly resettled." We know of numerous instances of sponsors in Michigan who are eager to bring dependable, hard-working refugees who are relatives of persons previously admitted under the Displaced Persons Act, to join their families here. If these refugees have had sufficient energy to get jobs in Europe, they are denied visas under the Refugee Relief Act on the theory that they are firmly resettled.

2. A new definition of escapee and expellee. The present act requires that an escapee or expellee also be a refugee. Therefore, a person who will not qualify as a refugee is also barred under the clauses referring to escapee and expellee.

3. Abolition of the requirement that a refugee be away from his place of abode and unable to return thereto. We have numerous cases of Greeks who are refugees from guerrilla warfare, whose land has been mined and is utterly worthless for agricultural purposes. Still, if they live in a house on this land, they are considered to be in their usual place of abode. Similarly, farmers from the Netherlands whose land was ruined by salt water have been ruled to be ineligible.

4. Abolition of the requirement that adjustment of status for refugees within the United States be limited to those who can show lawful entry as a bona fide nonimmigrant. In Michigan, there are many Polish patriots of excellent character who deserted ships of Polish registry as the only way of escaping from an intolerable situation in Poland. They should be eligible for adjustment of status but are not under existing law.

5. Waiver of passports. As President Eisenhower pointed out in his special message to the Congress, "Obviously, people who have risked their lives to escape from totalitarian nations often have no passports."

6. Abolition of the requirement that a refugee be able to prove by the testimony of witnesses every move that he had made during the past 2 years. A person who has just escaped from behind the Iron Curtain can furnish no such proof unless persons who know him intimately escaped at the same time. The provision for a 2-year history has caused innumerable delays in the administration of the present Refugee Relief Act.

7. Provision for agency assurances over and above the assurances of individual sponsors. It is very difficult to get an individual sponsor to give a house and job to a refugee sight unseen. The voluntary agencies and the State commissions had much experience in getting blanket assurances during the Displaced Persons Act. We had no difficulty whatsoever in Michigan in finding jobs and in supplying housing when displaced persons arrived in Michigan. We feel confident that we shall be equally successful with refugees if agency assurances are permitted.

8. Unused numbers in one category should be allocated to other categories where there is need. Unused numbers should be used for family units. We have more adoptive parents than orphans and they should come in freely.

9. Administration of the act should be in the hands of a special commission or commissioner. This is essentially a social-welfare operation and should be treated and staffed in that manner rather than as a police or security operation, although reasonable security screening is certainly in order.

Let me say that I feel that I speak not for myself alone but for a great majority of Michigan citizens. This is something which we feel keenly. Our traditional open door is something we believe in and believe in strongly. Incidentally, let me say this is not just a matter of theory with me. My children go to public schools with these children, not only the second and third generation Americans but the DP's and Spanish-American born. They not only go to school with them but they play with them and bring them into our home. My wife and I believe they will be not only better citizens but better human beings for it.

When I say I feel that I speak for the great majority of the people of Michigan, I speak as one who has time and again visited every corner of our State, traveling the equivalent of 3 times around the world each year in the confines of Michigan, and as one who has been close enough to the people to be 4 times elected.

In addition I can say many Michigan organizations are actually on record as favoring amendment of the Immigration and Nationality Act and the Refugee Relief Act. The Michigan Commission on Displaced Persons and Refugees compiled the list I shall read:

Michigan Committee on Immigration.

Michigan Commission on Displaced Persons and Refugees.

Immigration Service, Archdiocese of Detroit.

Detroit Archdiocesan Council of Catholic Women.

Social Action Department, Detroit Council of Churches.

Jewish Community Council.

Michigan division, National Lutheran Council.

Catholic Charities of the Diocese of Western Michigan.

Free Hungarian Reformed Church.

American Veterans of World War II, Department of Michigan.

Catholic War Veterans of the United States of America, Department of Michigan.
Jewish War Veterans, Department of Michigan.
UAW, CIO.
Wayne County Council, CIO.
International Institute of Metropolitan Detroit.
International Institute of Flint.
Nationality Department, United Community Services of Metropolitan Detroit.
American Hellenic Educational Progressive Association.
Polish-American Congress, Division of Michigan.
Central Citizens Committee.
United Lithuanian Relief Fund of America, Detroit chapter.
Latvian Association in Detroit.
United Ukrainian-American Relief Committee, Michigan division.
Ukrainian Congress Committee, Michigan section.
American Committee on Italian Migration, Michigan division.
Polish Activities League.
Polish Aid Society, Harper Community House.
American Aid Society, Inc.
Jewish Social Service Bureau.
B'nai B'rith, Greater Detroit Council.
Grand Rapids Committee on Displaced Persons.
Kalamazoo Committee on Displaced Persons.
Netherlands Pioneer and Historical Foundation, Holland, Mich.
Society for the Relief of Germans From Prewar Poland.
Michigan Labor Committee for Human Rights.
Epirotic Society of Michigan.
Estonian Aid, Inc.

This list is far from complete, I am sure. I request permission to submit a more complete list after further canvass. I know, for example, the State Democratic convention went on record as favoring these changes and the Steuben Society, of which I am a member, has made similar policy statements, so I am confident there are many more.

Permit me to sum up my ideas in this manner. We have, for more than two centuries, provided an inspiration for every freedom-loving person throughout the world. To forsake this tradition, at a time when democracy faces its greatest threat in history, international communism, would indeed be foolhardy.

Who Are the Friends of Organized Labor?

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 26, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of Col. James C. Wood, Republican State Chairman of Arizona, entitled "Who's Who With Labor?"

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

WHO'S WHO WITH LABOR?

Just who are the actual friends of organized labor? What individuals, organizations, and legislative actions have most helped rank and file labor in its phenomenal rise to security and dignity in the American economic and social system?

Whether you are of organized labor or just a sideline onlooker, hold your hat! The Taft-Hartley Act has done more for the benefit of labor in less than a decade than any other labor legislation enacted by Congress.

Yet in cold, blind, and unreasoned anger, political-actioners have been haranguing rank and file labor with the idea that Taft-Hartley was conceived to crush the labor movement and to enslave labor in some sort of totalitarian economic web.

In fact, Taft-Hartley achieved the first nationwide mandatory principle of collective bargaining. It provided Federal Government mediation between management and labor on wages and hours and working conditions. It protected the public interest. Since its inception, it has been amended to meet both labor and management objections. Senator Taft, just before his death, had promised his support of additional amendments that would make of the act an instrument of equal justice to all it affected. That's in character with the traditional processes of the Republic.

Here in Arizona we recently had the spectacle of a top labor union political official from Washington, venomously attacking United States Senator BARRY GOLDWATER, Republican, Arizona, and Representative JOHN J. RHODES, Republican, Arizona, and telling a delegation in Tucson that $23,000 was raised from union members between August 1 and December 31, 1954, which would be used in good part to defeat these Arizonians. A previous national figure of Labor's League for Political Education, also from Washington headquarters, had publicly said in Tucson that Senator GOLDWATER was the "most hated man in America by union labor."

These outland political-actioners came to Arizona to smear this State's right to work law and all who were for it. They either didn't know, nor did they heed the fact that they were smearing the vast majority of Arizona voters who made the right to work law a part of the constitution of the State. They didn't know nor heed the fact that when the law was made a part of the fundamental laws of Arizona that Democrats outnumbered Republicans by 4 to 1. The legislature that passed the enabling legislation that puts the issue before the voters was predominantly Democratic.

The political-actioners actually put the monkey right on the back of the Democratic Party of Arizona. And now they promise to spend Arizona's labor money to keep that monkey on the back of the Democratic Party of Arizona. So, it seems logical and fair to ask: "Who's who with labor and who's who with the Democratic Party of Arizona"?

What administration is responsible for the greatest era of peace and prosperity in the history of America? Conservative Democrats admit that the Eisenhower administration has done a phenominal thing in maintaining abundant prosperity without taking the country into war, as was done twice in the past two decades by Democratic administrations.

Employment in the United States has reached the alltime peak of 64 million, wages and standards of living have risen in parity to new peaks. Who are the actual friends of labor, those who have been able to lift labor to its alltime peaks, or those, who because they are Social-Democrats try to work their distortions through their political action committees? Are they not taking advantage of their captive audiences in labor union halls, to bellow out their prejudices?

Why did Arizona's attorney general, Robert Morrison, go before that same convention of labor in Tucson and apologize for failure of the Democratic Party to keep its promises to create an independent department of labor? Was Mr. Morrison's conscience bothering him? Did he fear the repercussions that would follow the professional attacks their boomeranging thrust at the Democratic Arizona Legislature and its Democratic governor, Ernest McFarland? "I am apologizing for the Democratic Party," said Attorney General Morrison.

Who and what party is the real friend of labor? Is not the record clear? The delegates at Tucson were told that Gov. "Goody" Knight, California Republican, had made a campaign promise to labor that he would create an independent labor department. He called legislative leaders into his office and demanded that they make good on his and their promises.

California today has an independent department of labor. Arizona has not. Governor McFarland and his Democratic colleagues had repeatedly promised in their campaigns that labor would have an independent labor department to administer their welfare problems and benefits under Arizona laws.

That's the record nationally, and, as between Arizona and California, it's a Democratic record of faithlessness to Arizona labor.

There's little wonder that Attorney General Morrison tried to stop the storm of bitter protest from the labor delegation at Tucson. He concluded his apology with, "I think when you make political promises you have a mandate to the people to carry them out."

The Democratic legislature apparently didn't think so, nor did the Democratic Governor of Arizona think so.

Southwestern Labor Record, official publication of the Tucson Central Trades Council, didn't think so, either, for it editorialized, under the caption "No Labor Department Yet." The Record said: "Despite the fact that we elected a few men to the legislature, we didn't do a good job at all. Next year if we don't get the job done with the men we elect, we should all be fired." The Record further said that "Governor McFarland, a Democrat, sat on his hands, too, in the matter of a labor department."

Organized labor in Arizona is cutting its political teeth on some gristly meat. It at least is finding out who its friends are not. Also, that true friends are not always the grinning, unctious, baby-kissing, back-slapping promisers and forgetters.

The Honorable Frances P. Bolton, One of America's Outstanding Women, Chosen To Contribute to New Book, The Spiritual Woman

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. HAYS of Arkansas. Mr. Speaker, a distinguished Member of this House has written a chapter for a new book that deserves the attention and commendation of her colleagues.

The book is The Spiritual Woman, edited by Marion Turner Sheehan, and of the 14 notable women who have contributed chapters, our greatly respected colleague the gentlewoman from Ohio [Mrs. FRANCES P. BOLTON] wrote on Woman in Politics. This article draws upon the experience Mrs. BOLTON gained in 15 years in the House of Representatives. It expresses her convictions about the religious and spiritual values that are needed in the important profession of legislating for this Nation.

Throughout her life, Mrs. BOLTON has been guided by the highest moral and ethical standards. Only last year, the Washington Pilgrimage named Mrs. BOLTON "Churchwoman of the Year" at the same time it gave President Eisenhower the award of "Churchman of the Year." And I had the privilege of being in the audience at the time this honor was conferred.

It gives me great pleasure to insert into the RECORD the chapter, "Woman in Politics," as written by the Honorable FRANCES P. BOLTON:

WOMAN IN POLITICS

Just at the close of the Second World War three other members of the Committee on Foreign Affairs of the United States House of Representatives and I were sent on a mission to Europe and the Near East. We saw the tragedy of destruction in England and France. The stench of death that was Berlin penetrated our very souls. We walked through the rubble that was Warsaw and its counterpart, Stalingrad. Everywhere we went there was the hideous aftermath of war reflected with unforgettable tragedy in the eyes of the women.

Returning from 2 weeks in Communist Russia with Moscow as our center, we stopped in Rome to avail ourselves of the high privilege of an audience granted us by the Holy Father. In his gracious words of greeting he singled me out (the one woman present), commending me for having recognized my responsibility as a woman to stretch out the walls of my home until they encircled the world.

It is in such wise that I envisage woman in politics.

Politics has many connotations. Primarily it is the science and art of government—yet it is also the machinery by which political parties manage their affairs. Through this machinery the citizenry expresses its will. Participation in these mechanics is both a privilege and a responsibility. We women of this free land have been recognized as full citizens: we have the franchise. We have become partners with men in this extraordinary enterprise which is the Government of these United States. We, as women, bring to this partnership additional gifts, a different understanding, a new approach.

In recent years, when the scarcity of manpower pulled women into many fields heretofore not open to them, they proved their ability to do as well as, and in certain areas even better than, the men they were freeing for more dangerous assignments. So it would seem that women have proven a definite equality of capacity with men that cannot be disputed.

But let us not fall into the error of interpreting "equality" as "sameness"—an identical capacity. It is because the essential reality of our woman's being differs from the essential qualities of man that it becomes more and more important that our voice be heard and our counsel heeded.

Woman is the giver and the protector of life. She is the matrix of God's life on earth. It is around her that the family revolves, the unit upon which civilization is built. She is the mother, the teacher, the counselor, the focal point of love within that unit. In her hands rests the future, for her children are the future. Together with the man of her household, consciously and unconsciously, she points the way, she holds the light. We know so well that without the father, children are tragically insecure. It is he who faces the outside world and gives protection and strength. But it is the mother who is both inspiration and comforter within the family circle. It is from her that the children discover the joy of sacrificial service for the common good. It is from her that they learn that America is a Nation whose trust is in God—whose strength lies in the belief that love is indeed the fulfilling of the law.

Women have influenced the destiny of nations down the ages. In ancient India, in China, on the islands of the Pacific, there is historic evidence of their power and their vision. Egyptian history is filled wth the names of queens who ruled alone or who shared equally with the Pharaoh the great responsibility of government. In ancient Greece and Rome, women played great roles of influence. We have but to turn to Europe to find Isabella in Spain, Elizabeth and Victoria in England, the Maid of Orleans Ste. Joan, who galvanized a nation into action only to be burned to death for her efforts. And in our own times as heads of states, we had Dowager Queen Wilhelmina of the Netherlands, and her capable daughter, the present Queen Juliana, with the second Elizabeth across the channel.

Out of the darkness that covers the earth today will come a new day. An era is being born which will recognize the basic need for woman's influence and judgment upon all levels. The world that is destroying itself was largely a world built upon the overemphasis on the judgment of men alone. It has had its rightful place in the evolution of man upon earth, but the complementary judgment of woman is now being added. The world that is tearing its way into new life will be a world where men and women share the responsibilities for its existence and work shoulder to shoulder, heart to heart, for its establishment and its growth.

We who live today have behind us the courageous women of yesterday who saw the vision and pressed ever onward and upward toward the light. We could not stand where we stand today had these women of other days not excelled in the great reform movements in every field of human activity. Who were some of them? There was Elizabeth Fry who pioneered in prison reform, Elizabeth Garrett who broke new ground in the field of medicine, Florence Nightingale who created an entirely new approach to the relief of human suffering which Clara Barton then instituted as the Red Cross in America. There was Octavia Hill who, by her tireless efforts, awakened society's conscience to the matter of decent housing. And there was Josephine Butler whose outcry that "Injustice is immoral, oppression is immoral, the sacrifice of the interests of the weaker to the stronger is immoral" could well serve as a guideline in our own usages of political power. Closer to us, strong in her certainty of the right, we have our own Susan B. Anthony through whose zeal and indomitable will women were inspired to demand full citizenship. With her were such women as Carrie Chapman Catt, Jane Addams, Lillian D. Wald, and many others, whose lives contributed so much to the initial recognition of women as persons in a civil life.

Because they, and many who remain unsung, lived and worked and demonstrated women's capacities, the way was opened for women to take their place in all areas of national life. That they are doing so in ever-increasing numbers is heartening indeed, for it would seem to show that there has come to women a definite recognition of the new part they must play if the world we are building is to be more nearly the world God meant it to be.

We have grown accustomed to speaking of the Nation's manpower; it is a familiar term. But the newer term "womanpower" is still a little strange to us. We have been accustomed to thinking of ourselves as the weaker sex. Indeed, we have thought of ourselves as a minority, lacking in power, rather than recognizing the reality of numbers and the consequent possibilities of influence. But the 1950 census brought to us the dramatic realization that we are no longer a minority, our numbers topping those of the male population by something like 2 million. This gives new meaning to the picture of women in politics. It means that we must assume the responsibility of numbers. It means that we must accept the fact that we have power, and use it humbly in true service to Almighty God.

Analyses of the 1952 election show that the women of this country, both rich and poor, rose up as a great tide and exercised their right of franchise as never before. As many women voted as men, and the various polls indicate that from 2 to 4 percent more women voted for President Eisenhower than did men. Important as this outpouring of women was, it is but a small part of what every American citizen who is a woman must do if government is to become the instrument of freedom envisaged by those mighty men through whom the spirit moved when our Constitution and the Bill of Rights were inscribed.

We are agreed that the family is the unit upon which civilization is built. We are agreed that, theoretically at least, the man stands between his family and the outside world. We are agreed that within that family the woman is the spiritual and moral force which holds it together, from which its members draw the strength, the fortitude, and the knowledge with which to meet the problems of living as they unfold step by step. I would enlarge upon the suggestion given me in Rome. I would say that in today's world life has taken on new aspects—the complex problems of an industrialized society have taken the mother from her weaving at the hearthside to the textile factories outside the home, to the offices, and to the steel mills. The economic pressures of just bare living have forced women into industry all too often. Home has ceased to be a place of peace and close companionship. It has been invaded by a sense of insecurity—of danger and suspicion. It has all too often become a center of tension and anxiety where there is little chance for peace and love.

Just as women have moved out of the home into industry, children no longer learn the fundamentals of their education at their mother's knee. They have moved into mass public education in huge schools where today there is a shortage of more than 58,000 teachers and 300,000 classrooms. It is too soon to know what the outcome of such a situation will be; it is too soon to evaluate the results. Yet on every side we see the demoralization of the home—the deterioriation of morals of both old and young. The family unit—the center of our civilization—is fast ceasing to have integrity. With their parents seldom at home, can we blame the children if they no longer stay there? It should shock us wideawake to find that a recent report paints the tragic picture of 1 million children picked up by the police in 1 year—young children not even in their teens. Can we blame some of their mothers if they must be at work to make possible the food and clothing necessary to the life and growth of these very children? Such things as these are the necessities of life. They do not represent the luxuries for which, unfortunately, some mothers abandon their homes in an effort to accumulate more and more material conveniences and thereby deny their children the more important spiritual and physical comforts of motherly care.

What of the nurseries and the recreation centers to which these youngsters should be going? Why do so few exist? But, equally important, we must be on our guard lest nurseries and recreation centers assume the parents' rights over their children. The right of authority over the children must always remain vested in the hands of the parents.

It is a God-given right as well as a civil right and constitutes the very foundation of a free democracy. If this right of authority over children is ever transferred from homes where mothers are working out of necessity to the organizations supporting the nurseries and centers, it would be a serious threat to our form of government and to the very institution of family life based on the law

of God. The nurseries or recreational centers, whether supported by State or community organization, can help and assist the parents, or parent, in promoting the welfare of the child. They can offer care, recreation, guidance, counsel, and medical attention, but always with the full knowledge that the final decision in regard to such assistance for the child is solely up to the parents (unless, of course, the parents are judged by court order to be incompetent). We have seen too much of the agony of parents in other countries whose children have been taken away from them and whose right to parental authority has been grossly negated to allow any infraction of this right ever to creep into any extension of our community nurseries and recreation centers.

For those children who need it, is it not the business of a woman to see that her own community finds ways to establish such extensions of the home as will protect them? Must she not go out from the confines of her home in order to secure such protection? The moment she steps across her own threshold bent upon such a mission she begins to assume her larger responsibility as a citizen. Fortunate indeed is the community whose women have accepted the challenge of today's world for the moment one step is taken others follow in rapid succession.

This first step opens up a new world and brings to a woman an overwhelming sense of the need to know how these things are done and by whom. Almost automatically she asks where she may go to learn the methods by which she can make her opinions known. This usually leads her to a group of those who, like herself, have determined to do something about inadequate or intolerable situations. Before they are aware, they have become "women in politics." Once awakened, women rapidly develop an eagerness to understand, a determination to know, which can well change the course of living in their communities and so in the Nation itself.

Awareness of her own community's problems brings recognition of the fact that they are tied into the problems of the county, the State, and of the Nation as a whole. Politics become dramtically and vividly the climate in which she lives, for she realizes that we are all of us knit so closely together that this which she thought of as a thing apart is in reality the machinery, the structure, the method of daily living. She soon loses all sense of strangeness, for the matters which have carried her into this new aspect of life are all of vital moment to her as wife and mother.

Bit by bit she finds her way to the town council meetings. Soon, perhaps, she is on the library board or the board of education. As another step to assuming actual responsibility she enlists the help of the various church groups, the civic clubs, the local league of women voters, the veterans' auxiliaries, the PTA, and she becomes one of a group of influential citizens. The walls of her home have started to move out into the community and she begins to realize that she is part of a nation and of a world.

Some there will be, and in increasing numbers, who will seek elective or appointive office. This is not an easy path. It requires, to be fruitful, peculiar gifts and special training and experience. Most of all, it requires understanding of and love for other human beings, a willingness to work and tireless energy. But the enormous number of women who will be recognizing their responsibilities as full citizens of a free nation will work quietly to further those matters which are most clearly theirs.

We cannot escape the fact that we have ceased to be a minority group. We have demonstrated the possibilities of our concentrated interest and determined action. No longer can we permit ourselves any apathy, any inertia. The welfare of the Nation, even of the world, is in our hands.

Although we have not yet come to appreciate the full meaning of the fact that our financial holdings alone give us a basis for action in areas where such power can make our voices heard, we recognize a new attitude toward us in the market place. We hold title to at least 40 percent of the Nation's 30 million and more homes. We are the beneficiaries of 80 percent of the life-insurance policies of the country and 35 percent of us carry our own life insurance. We are said to hold 65 percent of the mutual savings funds of America and at least 42 percent of all income-tax returns are paid by women—as are 80 percent of all inheritance taxes—and this means that there is in our hands economic strength we could well use. An even more potent force is ours in the area of retail buying. Fifty-five million of us are the retail shoppers. Would we not be taking a more realistic hold upon the influences that surround our children if we denied our economic support to unwholesome publications and stage and screen features? Concerted, intelligent determination must precede active political action if it is to be successful. The voice of woman can make itself felt. But if it is to be effective, it must be a constructive voice of reminder to all people that the family is the unit around which our civilization is built and that the structure of the family is as strong as as its faith in God.

This is but a rough sketch of our backgrounds, of some of our potentialities. Let us look at our record in public service over the years for a moment, remembering that nothing so far-reaching as this sense of our woman's obligation to the Nation bears fruit overnight.

It was in 1786 that the first women (two postmasters) were accepted into Federal service. In 1862, the United States Treasurer inaugurated the plan of using women in appreciable numbers to alleviate the wartime manpower shortage. In 1870, legislation was passed formally permitting the employment of women in the Federal Government service. Today it is estimated that approximately one-fourth of the total roster of Federal employees are women. Only about 1,000 of these occupy executive positions of marked authority in policy-making and administrative fields. President Taft's appointment of Julia Lathrop as head of the then newly created United States Children's Bureau, gave women their first appointment as chief of a major bureau. That post is held with distinction today by Dr. Martha M. Eliot.

Women are to be found in the greatest numbers in county offices. There is no county office that has not at some time been filled by a woman unless it be that of coroner. At least 12,000 women are serving today as county officials in 3,072 counties of the United States. They have taken the first steps across their home thresholds. On the State level, a recent check showed 304 women on the rosters of the legislatures as against 29 in 1920. In the judicial field at least 125 women are on the Federal and State courts, as well as on the domestic relations and juvenile courts where they work closely with local welfare groups and social agencies.

But it is not just on local and State levels that women are found. Congress has claimed 60 women since 1916 when Jeannette Rankin first took her seat in the House of Representatives. Today, MARGARET CHASE SMITH of Maine, with a background of 9 years in the House, is the one woman in the Senate, while 16 women are serving in the House. Women have held official positions in many of the departments and bureaus for a quarter of a century. In the State Department and the Foreign Service it was estimated that there are some 3,000 American women serving in 294 missions abroad, hundreds of them in the higher classifications, with 75 career women serving in Washington. Some 200 consuls and vice-consuls have been women—and several outstanding women, Mrs. Daisy Harriman, Mrs. Ruth Bryan Rohde, Mrs. Eugenie Anderson, and Mrs. Perle Mesta have represented us as ministers and ambassadors, while Clare Booth Luce was appointed our Ambassador to Italy and Miss Frances Willis, Ambassador to Switzerland, is our first career ambassador.

With the establishment of the United Nations, an even wider field of influence opened before us. Here Eleanor Roosevelt has served with diligence. I, myself, was the first woman to be appointed a delegate from the Congress. It was not an easy trail to blaze—but she has shown an appreciation of the dramatic need of all nations for the contribution which women in particular can make to the great future that has opened the way to all who will follow.

All across the world women are assuming greater responsibilities in the political life of their own people in order to build a world that will indeed be "closer to the heart's desire." Although there are still many lands where women do not have the franchise, yet in some of these they hold positions of far-reaching influence and great responsibility. Here in America it is becoming more and more the accepted fact that we who are women have a contribution to make in the field of active politics. Women long active in political fields know that power lies not in the invasion of those areas of endeavor in which men excel, but rather in the areas where their very womanhood is a shield, a strength, a force. We know, too, that we are but the vanguard. We know that the full value of our contribution will not be made until all women throw open the windows and doors of their homes, not only to let in the sun and wind of clearer perception and deeper understanding, but, perhaps more importantly, to let their own vision and humble determination to serve the infinite purpose of life become a part of the active forces of national and international policy and action.

With the world in darkness and confusion, the increasing power of women in government, here and everywhere, is not a question of equal rights. It is a question of the dramatic national and international need for the understanding women have of the fundamental life-giving truths. It is woman's primary function to give life, to renew life, to protect the young, to give them their first lessons in the art of living. It is our part to keep alive faith and hope and the certainty that because God is, we are.

It is no longer enough that we seek only to influence our men to wiser decisions, to better living. Those of us who are able to do so must seek office in every area of government. Those who cannot must find ways to encourage and strengthen those who can. Just as the individual must examine his own soul before he assumes duties which involve others, so must we who are women go deep into our hearts and minds to ascertain what it is that we have which is so vital to the full purposes of the infinite. Once we are convinced and aware that only as we take upon ourselves these broad aspects of our womanhood can we hope to see the dawn of peace, the day of light—only then shall we give richer meaning to citizenship in this free land of ours.

Politics is the machinery of citizenship. Let us who are women take our places quietly, intelligently, and unselfishly within its organization, accepting in full measure the duties of such citizenship in a land established upon the immovable rock of trust in God. Politics needs an elevation out of its present context which tends to be exclusively temporal. It should take its true place in society in the service of human beings whose total lives are spiritually dedicated to God. Politics should be the development of true peace and prosperity of mankind; it is a link in the chain of total prosperity which is spiritual. Woman's duty is to reforge the link which binds politics to a higher order.

Marion Bayard Folsom

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. CANFIELD. Mr. Speaker, President Eisenhower's appointment of Marion Bayard Folsom as successor to Mrs. Oveta Culp Hobby as Secretary of Health, Education, and Welfare, has been acclaimed throughout the Nation.

The Washington (D. C.) Daily News says:

In the new Secretary, Mr. Folsom, the department with the three-way name will get an administrator of demonstrated ability who also has a record of some accomplishment in the fields with which he now will be dealing.

According to the Rochester (N. Y.) Times—

The President is not likely to offer a more conspicuous example of finding the right man for the right job.

While the Atlanta (Ga.) Journal declares that—

Georgians find pride and satisfaction in the appointment.

Newsweek recalls that Mr. Eisenhower once told a visitor:

Folsom is the type of man that makes my job so satisfactory.

Newsweek also refers to a statement Treasury Secretary George M. Humphrey recently made of Folsom:

He's a man you can't stampede. He's intelligent and courageous. Once he's studied the facts and made up his mind you can't get him off the tract.

Writing in the Washington (D. C.) Evening Star, Thomas L. Stokes describes Folsom as—

A recognized forward-looking businessman with a pronounced sense of public and social consciousness.

Marion B. Folsom has been described by many people as a founding father of social security. He has been active in Government or private industry social-security programs for more than a quarter century.

His work in Government social security goes back 20 years to service on the President's advisory council which helped draft the original Social Security Act in 1934. Prior to that he was a pioneer in developing private company benefit plans for employees.

Born at McRae, Ga., November 23, 1893, Mr. Folsom was graduated from the University of Georgia in 1912 and Harvard Business School in 1914. He immediately went with Eastman Kodak Co. in Rochester, from which company he resigned as treasurer and director to join the Eisenhower administration as Under Secretary of the Treasury in 1953. While with the Eastman Kodak Co., Mr. Folsom was a major participant in the development and operations of the company's employee benefit program.

In addition to helping draft the original Social Security Act, Mr. Folsom served on the Federal Advisory Council appointed jointly by the Senate Finance Committee and the Social Security Board in 1937–38, and the Social Security Advisory Council to the Senate Finance Committee in 1948. Both councils studied operations of the social-security system and made recommendations to the Congress. Mr. Folsom worked with the Department of Health, Education, and Welfare on the Eisenhower administration's plan which resulted in the 1954 congressional amendments to extend the coverage and benefits under the social-security system.

Mr. Folsom was principally responsible for the development of the group life insurance program for Federal employees which was voted by the Congress and put into effect for nearly 2 million Federal employees in August 1954. Several years earlier he had helped organize the group medical care insurance plan in Rochester.

Mr. Folsom was also staff director of the House of Representatives Special—Colmer—Committee on Post War Economic Policy and Planning of the 78th and 79th Congresses. The Colmer committee reports led to enactment of contract renegotiation legislation and many other postwar measures which were put into effect in the years immediately after World War II ended. He was a division executive of the National Advisory Defense Commission from 1940 to 1941, and was on the National Advisory Board for Mobilization Policy in 1951–52. He has been a member of the Business Advisory Council, Department of Commerce, since 1936.

In the civic field Mr. Folsom was one of the original trustees for the Committee for Economic Development, which was formed in 1942, and resigned as chairman to come to the Treasury in 1953. In his home city of Rochester he served for three years as president of the Rochester Council of Social Agencies and on the boards of several charitable organizations.

Mr. Folsom is an overseer of Harvard College and a trustee of the University of Rochester. Prior to 1953 he was a director of several financial institutions including the Federal Reserve Bank of New York.

Mr. Folsom served as a captain in the United States Army in World War I and was overseas with the 26th Division. He is married and has two children, Marion B. and Frances.

The new Secretary is an outstanding type of appointment of the right man for the right place, which is typical of the Eisenhower administration.

Chemicals in Food

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. PRIEST. Mr. Speaker, I have today introduced, by request, two bills designed to amend the Federal Food, Drug, and Cosmetic Act prohibiting the use in food of new food additives which have not been adequately tested with respect to their safety.

The first of the two bills, entitled "A bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in food of new food additives which have not been adequately tested to establish their safety," has been prepared by several organizations representing the food industries of the Nation. This bill supersedes a bill—H. R. 4099—which I introduced on February 16, 1955. The gentleman from Minnesota [Mr. O'HARA] introduced a similar bill.

The second bill, entitled "A bill to amend the Federal Food, Drug, and Cosmetic Act for the protection of the public health, by prohibiting new food additives which have not been adequately pretested to establish their safe use under the conditions of their intended use," has been prepared by the Manufacturing Chemists Association, Inc.

I have introduced these 2 bills in the hope that these bills, as well as 2 other bills dealing with the same subject now pending before the Committee on Interstate and Foreign Commerce—H. R. 4475, introduced on February 28, 1955, by Mr. DELANEY, and H. R. 5927 introduced on April 28, 1955, by Mr. MILLER of Nebraska—will receive the careful study and consideration of all interested Government departments, groups, and individuals.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, on the subject of the adjournment rush. The column follows:

KEENOTES

(By Representative ELIZABETH KEE)

Did you ever stand and marvel at the way a circus is put together from what appears to be the most fantastic jumble of confusion ever created? Out of it finally comes a planned community of tents, of Big Top and side shows and rides and refreshment stands and everything is perfect down to the last detail.

Congress in the homestretch—in the midst of an adjournment rush—reflects a little bit of the fantastic confusion of the circus grounds early in the morning hours as the tents are just going up. There seems to be no order, no rhyme or reason, no plan, no recognizable pattern of activity—just confusion. And yet, it is remarkable how, out of all of this, comes a flood of carefully drawn, intelligent legislation under which our country can then operate during the 5 months, or so, of congressional recess.

Of course, if Congress let everything go to the last minute, this kind of record could never be accomplished. The "last-minute decisions" which seem to be made in the

closing days of a session are instead a final recognition by both sides of important issues that neither side will surrender on basic principles and so a compromise long under consideration will have to be agreed to. Legislation is almost always a case of compromise—but when you feel you might carry your point all the way, you are reluctant to compromise. In the final days of a congressional session, however, you face the choice of compromise or no legislation at all. So compromises are made.

And usually they are good compromises and good law.

The session now coming to an end has been a particularly productive one, and well run. The adjournment rush is a comparatively quiet one. Usually, at this point in a session of Congress, both the House and Senate are meeting almost continually, often in round-the-clock marathons, in an effort to get everything done which has to be done before adjournment.

Yet so current have we been on our work this year that the two Houses still can dispose of the business on the calendar in normal working days, and even take an occasionaly Friday off, as was done last Friday.

Of course, the intensive work—the long hours and the hard grinding—takes place primarily within the committees, where the bills are whipped into final shape for House or Senate consideration. The compromises are hammered out there, and consequently when a bill comes to the floor—generally with support from both Democratic and Republican leaders of the committee—the chances are 10 to 1 that it will go through as written in committee.

If we proceed at the pace we have been following in recent weeks, adjournment will come upon us almost by surprise. In past years, adjournment usually came simultaneously with mass exhaustion by all Members—they just seemed to wear themselves out and then quit in utter weariness.

It may yet happen that way this year, too; but it doesn't seem likely.

Judge Smith Runs Again

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared on July 24, 1955, in the News of Lynchburg, Va.

All of us who are privileged to serve in this House with the distinguished Representative of the Eighth Virginia District take pleasure, I know, in this well-merited recognition by one of the great newspapers of Virginia of the dedicated and efficient manner in which Judge SMITH discharges day by day his responsibility of service to his Nation, his State, and his congressional district.

The editorial follows:

JUDGE SMITH RUNS AGAIN

Representative HOWARD SMITH at 72 has no intention to retire to private life because of his age, or for any other reason. He is going to be a candidate for Congress in the Eighth Virginia District in 1956 and, he strongly intimates, thereafter.

In refusing to consider his age of just beyond the biblical limit—a limit which in this age of advancing medical science and greater knowledge of geriatrics means nothing—Judge SMITH has the justification of his clear mind, his physical condition and his will to work. As chairman of the House Rules Committee, which is no sinecure, he has performed his duties as energetically as younger heads of other, and less responsible committees. If he wishes further justification he can point to the cases of other Representatives older in years than he. In fact a Member doesn't get to be chairman of the powerful House Rules Committee in his salad years.

Judge SMITH's decision to run means that he will be returned. If he has any opposition it will be as perfunctory as it usually has been in the recent past. Those qualified and ambitious to succed him in the Congress will have to wait a while longer.

Two American Legion Essay Contest Winners From Sixth Ohio District

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1955

Mr. POLK. Mr. Speaker, for several years the Ohio department of the American Legion has sponsored an annual essay contest for students in Ohio high schools. As an incentive to participate in this essay contest, the American Legion awards as a prize a week's long trip to Washington, D. C., and other points of historic interest in this part of the country. Several hundred students participate in this essay contest each year. The subject assigned by the American Legion for the 1955 American Legion Essay Contest was The Effect of Spiritual Guidance in the World Today. I am happy to tell the House that this year two of the contest winners were from the Sixth Congressional District. They were Mr. Joseph Krug, of 462 Chestnut Street, Chillicothe, Ross County, Ohio; and Mr. Mark Lovett, a resident of Highland County, whose address is rural route No. 2, Bainbridge, Ohio. Because these young men have so clearly and concisely expressed the importance of spiritual guidance in the world today, I believe their essays are well worth reading, and therefore, I am inserting them in the CONGRESSIONAL RECORD:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Mr. Joseph Krug, Chillicothe, Ohio)

There has been no time in the history of the world when spiritual guidance was more needed than it is today. Although at the present time there are no shooting wars, there is great unrest among nations in addition to all the crimes, delinquency, violence, and the many isms throughout the world. All these things would be worse if it were not for the spiritual guidance we receive from our priests, ministers, and rabbis. But these wars and vices are still very prominent all over the world today because not enough people listen to the advice of their spiritual leaders.

In the time of Noah, God sent many good and holy men to warn the people against their wicked ways and to guide them spiritually, but the people still adhered to their life of corruption and sinning. Consequently, God punished the people by sending a terrible flood to destroy them.

We might say that, in a spiritual way, today is very much like the time of Noah, as spiritual leaders the world over are asking us to turn from our worldly ways back to God. They know that peace will be brought about only by the mercy and power of God, and not by military power alone. At this point it would seem that we are receiving the effects of spiritual guidance or the pleas of the clergy. For God has not yet punished us with a third world war, which would probably destroy the world as in the time of Noah. The difference is that this time we would probably be destroyed by devastating atomic weapons instead of by a flood.

It would seem that the prayers of the people who are turning back to God because of the pleas of the religious are appeasing Christ. More and more people are recognizing their helplessness in world affairs without the power and help of God. Even our national Government is recognizing God more, as can be seen in the words that were added to our pledge of allegiance.

So much for the international effect. Here at home the effects of spiritual guidance are shown by the stronger fights against communism, the condemnation of indecent and immoral movies, books, magazines, and comic books, which tend to wreck all good in our minds, and the increased interest people are showing in religion. The general effects of spiritual guidance are surely being seen more and more every day, but until they reach every nation, including Russia and her satellites, the harvest will not be completely reaped.

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Mr. Mark Lovett, Bainbridge, Ohio)

The result of spiritual guidance can be found in many places and in many forms in the world today.

The "Holy Spirit bears witness with" the spirit of man, as found in Romans 8:16, and this divinely reveals that we are the children of God. Therefore, by revelation, by direction and instruction, and by guidance, man has constructed a civilization which is basically Christian. The results of this Christian civilization are shown first in man, himself.

In nearly every situation where man must make a decision between right or wrong, between helping or hindering his fellow men, between selfish or unselfish desires, he will choose the better of the two, and expect no reward other than the satisfaction of knowing that he has done what is right.

It was spiritual guidance in the lives of consecrated men and women that caused them to organize many of the benevolent organizations that are present in the world, such as the Red Cross, the Salvation Army, YMCA, YWCA, and many others.

A deep spiritual insight has created a desire in devout people to build churches, hospitals, homes for the aged, schools for the retarded and handicapped children, and places for the care and education of underprivileged people.

Through the years many things have been done both nationally and internationally to help people of other countries. These acts are direct results of spiritual guidance in the lives of leaders of these movements. We have but to review the rehabilitation in Austria, the protection of refugees in Germany, provision for displaced persons in all of Europe, and the sending of millions of dollars in food and clothing from our great United States to all parts of the world. Even our President has created a new Cabinet position for the purpose of administering the point 4 pro-

gram. This is a United States legislative act which provides mainly for the feeding of the hungry people all over the world.

To summarize, I have stated in the above essay the effects of spiritual guidance to man individually, collectively in communities, nationally, and internationally.

All guidance in the universe may not be good, but all spiritual guidance is good, wholesome, helpful, and directed particularly to the betterment of man in his community, in this Nation, and in the whole world. The masses everywhere must be concerned with the difficulties and problems of human existence and of human coexistence. This, alone, will maintain spiritual well-being in today's world.

The Armed Forces Medical Library

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. MILLER of California. Mr. Speaker, on the south side of the Mall at the corner of 7th Street and Independence Avenue stands the old red brick building which houses the Armed Forces Medical Library, the greatest medical library in the world, now in its 120th year. The library was instituted in 1836 by Joseph Lovell, Surgeon-General of the United States Army, as the Library of the Surgeon-General's Office. Known variously under that name and as the Army Medical Library, and since 1952 as the Armed Forces Medical Library, it serves for all intents and purposes as the National Medical Library of the United States. Its collection of the world's medical literature, numbering almost a million items, ranges in date from a manuscript of A. D. 1094 to the latest printed book of 1955. Besides its outstanding collections of historical works, medical theses, portraits of physicians, and its unique section of American and foreign government and statistical documents, the completeness of its holdings of medical periodicals makes it a fountainhead of information surpassed by few other libraries.

The phenomenal growth and development of this great collection was predominantly the result of the vision and efforts of the great American physician John Shaw Billings, who administered the library for 30 years between 1865 and 1895, and during his term of office the present library structure was built—in 1887. The library is world-renowned, and we can believe that Sir William Osler spoke for the entire medical profession when he said:

> For the teacher and the worker, a great library such as this is indispensable. They must know the world's best work and know it at once. They mint and make current coin the ore so widely scattered in journals, transactions, and monographs. * * * The unique opportunities of the Surgeon General's library have done much to give American medicine a thoroughly eclectic character.

The Armed Forces Medical Library carries on an active service program. Material of clinical importance flows into the library from nearly every country in the world. Russian publications, Chinese periodicals, Icelandic, Turkish, Hungarian, Portuguese, Dutch, Swedish, and Spanish monographs and journals all make their contribution to the library's collection. Over 10,000 serial titles are regularly recorded. Each year it acquires 15,000 monographs and 100,000 journal pieces, the housing of which requires over half a mile of linear shelf footage. Each year its unrivaled interlibrary loan service places 133,000 volumes in the hands of medical research workers throughout this country. Over 1,000 reference questions are answered by the library staff each month, in the course of which many long medical bibliographies are prepared. The library is carefully cataloging all of its acquisitions, and issues each year a printed record of this work for all to see and use. The library publishes a monthly index to the current periodical literature of medicine in which over 100,000 articles a year are listed by author and subject. Interlibrary loans, bibliogrhphical and photoduplication services make it possible for the doctor, wherever he may be, to have at his beck and call all of the library's resources. It is difficult to exaggerate the important influence this library has had on the advances in the medical sciences throughout the world. Indeed, Osler once remarked that this library and its publications constituted the outstanding American contribution in the field of medicine.

The Library has long since outgrown its present quarters. As early as 1917 a lengthy report to the 65th Congress proposed a new building for the institution. The quantities of literature which the Library has amassed have become so great that since 1942 over 30,000 of its most outstanding old and rare volumes have had to be shelved in rented space in Cleveland, Ohio, at the cost of more difficult and less efficient operation, due to the divided collection. While some temporary relief has resulted from the removal of the Library's sister institution, the Armed Forces Institute of Pathology, to its recently completed new building, within 2 years the available stack space in Washington will again be full to bursting, and the collection will still be divided between Washington and Cleveland. Under such circumstances, a new building to house this irreplaceable national treasure is an absolute necessity, as a survey committee of the American Library Association declared in no uncertain terms in 1944. Since then the pressure of the Library's space problems has grown enormously until at the present time a really desperate situation is being faced which can be solved only by the provision of a new building.

In the military construction bills presently being considered by conferees of the House and Senate, the Armed Forces are presently concerned with an item for $350,000 for architects' services for a new Armed Forces Medical Library building. Eventually some $6 million additional will be required for the construction of this building. Surely no money appropriated could better serve the needs of all citizens of this country. When a recent report of the National Science Foundation tells us that during the current fiscal year the Federal Government is spending $94 million on research and development in the medical sciences, it is difficult to reach any other conclusion than that the expenditure of a relatively modest sum for proper housing of the national medical library, the services of which are absolutely fundamental and essential to the progress of these other, vaster, enterprises, is completely justified and extremely desirable.

For over a century the Armed Forces have operated this library in the public interest, and they have operated it well. How otherwise has it become the greatest medical library in the world? It is true that the library has had many setbacks, notably during the early thirties when, along with many other institutions, it suffered from a lack of funds. But since 1940, at least, the Armed Forces have directed a program of rehabilitation and reorganization of the library's collections which has in large part overcome the deficiencies of the previous decade. The Armed Forces have, in fact, developed a forward-looking service program, widely hailed as a sound one by both the library and the medical professions. Perhaps on no other issue, indeed, is medical thought so unanimous as on this: That the Armed Forces Medical Library ought to be adequately supported in the national interest, and that the outstanding item of current adequate support must be the provision of a new building for this monumental storehouse and nerve center of medical knowledge.

Today's demands for greater medical knowledge have placed heavy responsibilities on the Armed Forces Medical Library. To meet these responsibilities and to provide proper housing for its ever-expanding collection, a new and larger building must be secured. This great medical research library must continue to build and interpret its collection in support of medicine and its dedicated workers who seek the betterment of mankind through the prevention of disease and the alleviation of human suffering.

Those Who Judged Him

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks very interesting information appearing in the Catholic Standard of July 22, 1955, relating to what has happened to some of the key persons who figured in the persecution of Josef Cardinal Mindszenty:

THOSE WHO JUDGED HIM

One of the really astounding stories of our time is that of the fate of the persecutors of Cardinal Mindszenty.

A simple recital of the events that befell these people after the sentencing of the Cardinal tells perhaps better than whole volumes the tenor of life behind the Iron Curtain.

These are the names and the reported fates:

Laszlo Rajk, chief of police when the Cardinal was arrested. Hanged.

Janos Kader, who organized the Cardinal's "questioning." Hanged.

Gyula Decsi, who led the "questioning." Jailed.

Sandor Zold, who planned the propaganda campaign against the Cadrinal. Shot himself to avert arrest.

Istvan Riesz, minister of justice who signed the Cardinal's arrest warrant. Sentenced to 25 years in prison as a "spy," later found dead in his cell.

Col. Gyula Osko, who arrested the Cardinal. Shot while trying to flee Hungary.

Ferenc Donat, charged with fabricating "public demonstrations" against the Cardinal. Deported for slave labor.

Imre Zipser, warden at Cardinal's prison. Deported for slave labor.

Laszlo Sulner, admitted forger of incriminating documents against the Cardinal. Died of mysterious poisoning in Paris.

Colonel Biedermann, who took a prominent part in the examination of the Cardinal. Died suddenly under strange circumstances in the canteen of police headquarters in Budapest.

Professor Kaftanov, the chief Russian doctor who "prepared" the Cardinal for trial. A patient in a Russian asylum.

Doctor Blaukop, his assistant, also a Russian citizen. Found burned to death in his bed.

Emergency Military Service by Commissioned Corps of Public Health Service

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. PRIEST. Mr. Speaker, I have today introduced a bill "to amend the Public Health Service Act to authorize the President to make the commissioned corps a military service in time of emergency involving the national defense, and to authorize payment of uniform allowances to officers of the corps in certain grades when required to wear the uniform, and for other purposes."

In order to give the Members of Congress adequate information as to the background and purposes of this bill, I would like to make public Secretary Hobby's letter, addressed to the Speaker, requesting introduction of this legislation, and a summary of the bill prepared by the Department of Health, Education, and Welfare. The letter and the summary are as follows:

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
July 18, 1955.

Hon. SAM RAYBURN,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: We are enclosing for your consideration a draft of a bill "to amend the Public Health Service Act to authorize the President to make the commissioned corps a military service in time of emergency involving the national defense, and to authorize payment of uniform allowances to officers of the corps in certain grades when required to wear the uniform, and for other purposes."

This bill is designed to strengthen the personnel system governing the commissioned Corps of the Public Health Service by providing certain authorities which are required for the effective performance of the responsibilities of the service during war and emergency periods, by authorizing the payment of uniform allowances, and by alleviating certain problems pertaining to personnel management.

A major purpose of the bill is to carry out the proposal in the President's health message of January 31, 1955 (H. Doc. No. 81), that the Congress take steps to "Strengthen the Public Health Service commissioned corps by improving its status * * *." The mission of the Public Health Service, as a major health arm of the Federal Government, is one of considerable scope and diversity. Although normally its functions are civilian in character and vital to the maintenance of the health and welfare of the civilian population, the Public Health Service through special use of its commissioned corps is available, as a standby service of the Armed Forces, to perform in time of war or national emergency, at the discretion of the President, functions and duties relating to the responsibilities of the Armed Forces and such other defense functions as may be assigned to it. Legislation, however, is necessary in order to enable the Public Health Service to perform these functions and duties more effectively during periods of national defense emergencies.

Under present law the President is authorized to convert the commissioned corps to military status in time of war only. The same considerations which underlie conversion to military status during such periods obviously may prevail during periods of emergency related to the national defense. It is therefore desirable to authorize the President to convert the commissioned corps to military status in time of national-defense emergency as well as in time of war. Authority for conversion of the commissioned corps to military status during such periods would constitute a firm basis for the full utilization of the Public Health Service, including the Inactive Reserve, in mobilization planning.

The personnel system of the Commissioned Corps needs to be strengthened in certain other respects. In the first place, as recognized by the President in his above-mentioned health message, legislation is urgently needed to provide an adequate system of survivor benefits for the dependents of deceased members of the Corps, which is now lacking. A specific proposal to accomplish this has been omitted from the enclosed draft bill only because such legislation has been reported favorably by the House Select Committee on Survivor Benefits as part of a broader proposal (H. R. 7089) covering all the uniformed services.

Another needed improvement—which is covered by the enclosed draft bill—relates to uniform allowances for members of the Corps. Existing law authorizes an allowance of $250 to commissioned officers of the Public Health Service in the lower three grades entering on active duty in time of war or so serving at the commencement of a war. No such uniform allowance is at present payable despite the fact that approximately 40 percent of such officers are now required to wear uniforms during duty hours. We recommend an amendment to section 213 of the Public Health Service Act which would authorize a one-time uniform allowance for these officers regardless of the existence or nonexistence of a state of war, but which would limit payment to those who are required by directive of the Surgeon General to wear uniforms.

The bill also contains certain other proposed amendments (more fully described in the enclosed summary) designed to simplify administration and result in better personnel management, which would extend the term of Reserve commissions; equalize the provisions for crediting prior noncommissioned service of Public Health Service officers toward retirement for age or length of service with the provisions for crediting such prior service for disability retirement purposes; and extend the present authority for extramural training assignments of Regular officers to Reserve officers and round out and otherwise amend such training provisions.

In addition, the bill contains purely technical amendments, which would clarify existing authority to make reappointments to the Regular Corps without examination, delete obsolete provisions and references, etc.

The enactment of the bill would result in increased costs to this Department, with respect to the payment of the uniform allowance, in an estimated amount of $110,000 for fiscal year 1956 and $60,000 for each fiscal year thereafter. Other potential costs, such as those arising out of the proposed authority for conversion of the Commissioned Corps to military status during defense emergencies, are not susceptible to an estimate at this time.

We should appreciate it if you would be good enough to refer the bill to the appropriate committee for consideration.

The Bureau of the Budget advises that it perceives no objection to the submission of this proposed legislation to the Congress for its consideration.

Sincerely yours,

OVETA CULP HOBBY,
Secretary.

SUMMARY OF BILL, PUBLIC HEALTH SERVICE COMMISSIONED CORPS

SECTION 1

Section 216 of the Public Health Service Act at present authorizes the President, in time of war, or of emergency proclaimed by the President, to utilize the Public Health Service to such extent and in such manner as shall in his judgment promote the public interest. It further authorizes the President, in time of war only, to declare the Commissioned Corps of the Public Health Service to be a military service and a branch of the land and naval forces of the United States. And it provides that while in such military status, the Commissioned Corps shall, to the extent prescribed by regulations of the President, be subject to the Articles of War and to the Articles for the Government of the Navy. The proposed amendment, the need for which is explained in the letter of transmittal to the Congress, would authorize the President to declare the Commissioned Corps to be a military service in time of emergency involving the national defense, as well as in time of war. Furthermore, reference to the Uniform Code of Military Justice would be substituted for the now-obsolete references to the Articles of War and the Articles for the Government of the Navy.

SECTION 2

Subsection (a) would amend section 213 of the Public Health Service Act to authorize the payment of a one-time $250 uniform allowance to those Regular and Reserve officers of the Service who (i) are on active duty on, or enter on active duty after, the effective date of the amendment, (ii) are receiving the pay of the junior assistant, assistant, or senior assistant grade, and (iii) have not at any time received a uniform allowance from the Service. The general effect of this amendment would be to delete from existing law the limitations of the uniform allowance to war periods. The need for this amend-

ment is explained in the letter of transmittal to the Congress.

Subsection (b) would repeal, as no longer necessary, section 707 of the act of July 1, 1944, as amended, which authorized the retroactive payment of uniform allowances to officers who were appointed to the Regular Corps or called to active duty in the Reserve Corps after December 7, 1941, and prior to July 1, 1944, and who would have been eligible for the uniform allowance under section 213 of the Public Health Service Act but for the fact that their appointment or call to active duty occurred prior to July 1, 1944, the effective date of such act. Eligibility under section 707 is limited to officers who were on active duty on or after November 11, 1943. After a lapse of 11 years it can be assumed that this section has been executed.

SECTION 3

Subsections (a) and (b) would amend section 207 of the Public Health Service Act by adding a new subsection thereto which would authorize the reappointment of former officers of the Regular Corps within 2 years after the termination of their prior commission in the Regular Corps without a new examination, except as the Surgeon General may otherwise prescribe, and without regard to the numerical limitations with respect to the appointment of officers in the full grade and above. For purposes of pay, promotion, and seniority in grade, such a reappointed officer would receive the same credits for service to which he would be entitled if such reappointment were an original appointment, but in no event less than the amount of credits he held at the time his prior commission was terminated. These amendments parallel existing authority contained in Public Health Service Regulations. However, we believe that it would be desirable to make explicit in the act the basis for the existing regulation.

From time to time officers of the Regular Corps who have resigned from the Service find it desirable to return to the Service within a relatively short period of time following the termination of their commissions. These candidates are well qualified professional persons who because of former association with the Service, are familiar with the responsibilities and the mission of the Service. The amendments made by these subsections would facilitate the reappointment of these candidates.

Subsection (c) would amend section 207 (a) (2) of the Public Health Service Act so as to extend the term of Reserve commissions from 5 years to an indefinite period. This amendment would parallel the practice of the Armed Forces to grant Reserve commissions for indefinite periods. Reserve commissions in effect on the date of enactment of this subsection would not, however, be affected unless the officer consents in writing to such extension.

SECTION 4

This section would amend section 210 (d) (2) of the Public Health Service Act by striking out the words "pay period and for purposes of." The words to be deleted had reference to the Pay Adjustment Act of 1942, as amended, which provided for longevity increases in pay every 3 years. This law was superseded by the Career Compensation Act of 1949. The language to be deleted no longer has any meaning.

SECTION 5

Subsections (a) and (b) would amend subsections (a) and (b) (1) of section 211 of the Public Health Service Act to authorize the crediting of all noncommissioned service with the Public Health Service for purposes of age and length-of-service retirements without regard to the date of appointment of an officer to the Regular Corps. The term "noncommissioned service" is used to describe any employment with the Public Health Service other than in a commissioned status.

Under existing law (sec. 706 of the act of July 1, 1944, as amended), the crediting of prior noncommissioned service with the Service for the purposes of age and length-of-service retirements is limited solely to those Regular officers who were appointed prior to July 1, 1944. An officer who has been appointed since that date may not receive credit for any noncommissioned service for purposes of retirement for age or length of service, notwithstanding the fact that from the date of his appointment to the Regular Corps he is excluded from the Civil Service Retirement System and his rights thereunder terminated. While such an officer receives a return of all contributions paid into the retirement fund, he loses all credits toward retirement for his prior noncommissioned service which he had accumulated under the Civil Service Retirement Act.

These amendments would equalize the computation of service for nondisability retirement purposes with the computation of service for disability retirement purposes at present authorized under the Career Compensation Act of 1949. Under that act, Public Health Service officers may be credited for physical disability retirement purposes with their noncommissioned service with the Public Health Service regardless of the date of their appointment.

Although these amendments would grant in some few cases, a number of years of civil service credit for staff-retirement purposes, the number of officers involved would not exceed more than a small percentage of the total strength of the Regular Corps.

Subsection (c) would amend section 211 (c) of the Public Health Service Act to authorize the recall to active duty of a retired officer of the Regular Corps without his consent while the Corps has military status. Existing law authorizes such recall only in time of war. The amendment is necessary to complement the amendment to section 216 of the Public Health Service Act proposed by section 1 of the bill which would permit conversion of the corps to military status in times of national defense emergency as well as in time of war. This subsection would also incorporate into section 211 (c) of the Public Health Service Act substantive legislation contained in the Department of Health, Education, and Welfare Appropriation Act, 1954 (67 Stat. 254, 42 U. S. C. 212b) which authorizes the recall to active duty of an officer of either the Regular or Reserve Corps with his consent at any time.

Subsection (d) would repeal the provision of the Department of Health, Education, and Welfare Appropriation Act, 1954, referred to above, which would be incorporated into section 211 (c) of the Public Health Service Act by section 5 (c) of the bill.

Subsection (e) would repeal section 706 of the act of July 1, 1944, as amended. See discussion under subsections (a) and (b) above.

SECTION 6

Subsection (a) would amend section 218 (a) of the Public Health Service Act which at present authorizes the training of Regular officers at educational institutions.

The amendment would extend this training authority to include Reserve officers. Within the Commissioned Corps very little distinction exists between Regular and Reserve officers, both of whom have already obtained their professional degrees. They work side by side on the same projects which may require advanced professional training in order that they may keep abreast of changing times and new professional techniques. Authority to train Reserve officers on the same basis as Regular officers would be in the best interests of the Service.

The scope of subsection (a) of section 218 is somewhat ambiguous with respect to training courses and programs, both within and outside the Federal Government, which may not technically be described as training at educational institutions. Non-Federal training programs are given from time to time under the auspices of various professional associations such as the American Medical Association, the American Trudeau Association, and the American Psychoanalytic Association. Within the Federal Government, Public Health Service officers have need for training given by various Federal agencies, such as the Foreign Service Institute conducted by the Department of State and the biological warfare defense course conducted by the Department of the Army. Although such programs are normally short-term courses, they are, nonetheless, essential to the training activities of the Public Health Service. The amendment made by this subsection would, therefore, clarify the authority of the Service to train officers at educational institutions or training programs, both within and outside the Federal Government.

Subsection (b) would amend section 218 (b) of the Public Health Service Act which now provides that an officer whose tuition and fees have been paid by the service while attending an educational institution shall reimburse the service for such costs if he voluntarily leaves the service within 2 years after the cessation of such attendance. In view of the fact that 62 percent of such training is for periods of less than 3 months, and that such training assignments are, in many instances, for a period of no more than 1 week, the requirement of 2 years of subsequent service is unduly harsh on the officer and is unnecessary from the point of view of the Government.

This amendment would require an officer who receives training in excess of 30 days for which tuition and fees are paid by the service to reimburse the service for such tuition and fees if thereafter he voluntarily leaves the service within a period of time which is equal to twice the period of such training, with a minimum period of 6 months of service and a maximum of 2 years. Such period of subsequent service would commence upon the cessation of the officer's prescribed training program which may also include other training for which no tuition and fees are paid, regardless of whether such other training is in a Service facility or otherwise. The amendment would also authorize the Surgeon General to waive, in whole or in part, the recovery of tuition and fees when such recovery would be inequitable or not in the public interest.

The amendment would provide a more reasonable and equitable basis for determining the conditions under which the recovery provision would be applicable. For example, it would exclude from such provision an officer who is assigned to a training course of 30 days or less, as a training course of such short duration is mainly for the benefit of the Government and may provide only a small degree, if any, of personal benefit to the officer. Likewise, it would permit a remission, in whole or in part, of the required reimbursement when such reimbursement would be inequitable or not in the public interest.

The proposed "two for one" formula with respect to service to be performed subsequent to a prescribed training period relates to the period of training for which tuition and fees have been paid, as compared to the fixed period of 2 years of service required under existing law. This formula is more equitable from the officer's point of view and yet would sufficiently safeguard the interests of the Government.

Mystery of Missing Meat Stamp

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include an article from the Long Island Press of July 21, 1955, concerning a fraud perpetrated on the consuming public of New York City and ask the agencies whose duty it is to investigate what is being done about this case and what is being done to prevent future occurrences of a like nature:

MYSTERY OF MISSING MEAT STAMP—NO ONE WANTS TO TALK ABOUT IT

(By Austin Perlow)

How would you like to have a United States Mint plate that prints $10 bills?

You could make a million dollars, but you'd also land in jail.

You could also make a million if you could get your hands on a Department of Agriculture gadget that could turn 49-cents-a-pound meat into $1.10-a-pound beef.

There are such gadgets—rollers 3 inches wide used to stamp carcasses with either "USDA Prime," "USDA Choice," "USDA Good," or "USDA Commercial."

The initials stand for United States Department of Agriculture.

In the hands of an unscrupulous person, a "USDA Prime" roller could convert inferior grade carcasses into expensive sides of prime beef with the flick of a wrist.

And it would also turn a lean bankroll into one big enough to choke a steer.

But it's just as illegal to possess and use one of these rollers as it is to have United States mint plates.

Both are counterfeiting offenses.

Strange to relate, the Department of Agriculture admits that a "USDA Prime" meat-stamping roller was missing for 18 months, and has now been recovered.

But that's just about all the Department will admit. It has clamped down on all other information concerning the roller.

The Agriculture Department won't answer these questions:

Who is investigating the disappearance and the reappearance of the Prime roller?

Was it stolen or mislaid or borrowed? Where was it found; in whose possession?

Was it illegally used during the 18 months?

If it was not stolen and not criminally used, why doesn't the Agriculture Department say so?

If it was stolen, why is there no prosecution?

Most important—how many pounds of meat were upgraded illegally while the roller was in the wrong hands, and how many housewives were overcharged as a result?

The Press asked C. F. Beard, head of the Standardization and Grading Branch of the Livestock Division in Washington.

But all he would admit was that his office had completed an investigation and turned over the findings to procurement officials in New York City.

Apparently, Beard added, meat illegally upgraded with the missing stamp had been bought by the city.

The Department of Agriculture will take no further action until the city completes its investigation, he said.

Deputy Commissioner Abram Mattes of the Department of Purchase told the Press he believes not one but several rollers were missing, but that his Department could do nothing until a final report was submitted by the Department of Investigation.

"We've already received an interim report that the investigation is in progress," he said.

Deputy Commissioner Patrick J. Murphy, who Mattes named as directing the probe, said a mistake must have been made somewhere.

He hadn't heard anything about a missing roller until a Press reporter told him about it.

"If there's any investigation going on," he said, "it is being handled by the Livestock Division downtown."

Joseph Sullivan, supervisor of the Standardization and Grading Branch at 139 Centre Street, Manhattan, is on vacation, but an assistant said investigations were conducted in Washington by Beard's office.

It took weeks and weeks of patient effort to make the full circle and wind up once more back at Beard's office.

The time was wasted, because the Press learned nothing on the official merry-go-round.

Here's why the Press was so persistent in trying to track down the cause and effect of the disappearance of the Government "prime" stamp:

Only the most select carcasses are stamped "USDA Prime," following an examination of the amount of lean meat, the amount and type of fat and distribution and size of bones.

Prime-beef hindquarters from 1,400-pound Angus steers brought as high as 57 cents a pound last week at wholesale. Commercial, range-fed cattle, as light as 600 pounds, and running mostly to tough, lean meat and bone, brought as little as 32 or 34 cents a pound for hindquarters.

A single hindquarter of 140 to 220 pounds could net a wholesaler from $35 to $55 extra if it were stamped "prime" instead of "commercial."

Fifty-five dollars is "peanut," but a wholesale house with 20 meat handlers averages about 200,000 pounds of meat weekly. A "prime" roller could, in the wrong hands, be worth as much as a United States mint plate.

Gaining Security Via Freedom

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very timely address by Dr. Harold C. Case, president of Boston University:

GAINING SECURITY VIA FREEDOM

(From an address by Dr. Harold C. Case, president of Boston University, delivered at the Freedom Forum, sponsored by the Anti-Defamation League of B'nai B'rith at the Waldorf-Astoria Hotel in New York City)

Judge Curtis Bok said recently that "in the whole history of law and order, the longest step forward was taken by primitive man when, as if by common consent, the tribe sat down in a circle and allowed only one man to speak at a time."

This process has culminated in an educational system in which ideas can be presented without fear or favor. One person is listened to at a time and no one is shouted down because his position is unpopular. This is the essence of democracy. One of our greatest achievements has been to make educational opportunities available to all of our people. The public school is the most important single tool of democracy.

In order to win the struggle for freedom, we must vitalize this procedure by which ideas are examined, never putting handcuffs on notions because they are opposed to tradition or because they open new avenues for thought. Unless we believe that truth can stand up under testing, our faith in the future is only flimsy ground. The teacher is not an all-wise proclaimer of the truth, but a scholar, sharing his knowledge and engaged in seeking more truth. The personal equation in permitting freedom to explore and offering a welcome for the intellectually curious may be more important than the subject matter he teaches.

For education is more an art than a science. It stimulates learners to feel and to appreciate the values they learn about. And all of the conclusions reached by scientific techniques depend on certain intangible qualities that cannot be measured. A total view about life, cherishing the worth of persons, recognizing the responsibility of an intellectual, are basic.

EDUCATION'S PLUS FACTOR

It now seems quite clear that literacy is not enough; science is not enough; presentation of facts is not enough. Investigations may reveal problems, they cannot create an improved quality of spirit. With the largest commitment to education of any nation in history, we are seeing an attack on the procedures on which true education depends and a conscious confusion of issues which persons to be educated must clearly understand. Suspicion of motives of people who disagree with the conventional attitudes, libel by label, attack by innuendo are the methods being used.

Poison in the pipelines of communication kills the spirit of freedom as it depletes confidence in causes and wrecks the careers of persons.

On October 18, 1951, the following statement was inserted in the CONGRESSIONAL RECORD under the title "The Greatest Subversive Plot in History." "How anyone who venerates and loves Old Glory as the symbol of the deathless march of the United States through the years, to fulfill its destiny as a free and independent republic can read this documented evidence of the greatest and most malignant plot in history, against the future of his country, and its children's children, is more than I am able to comprehend. Just how careless and unthinking can we be that we permit this band of spies and traitors to exist another day in this land we all love?"

This Congressman was not describing some Benedict Arnold or some group plotting the overthrow of our Government. He was talking about the United Nations Educational and Cultural Organization (UNESCO), an official body of 69 nations which Soviet Russia had not joined.[1]

This is the innuendo unsupported by fact, the generalizations from prejudice instead of inquiry through which freedom of the individual decreases and national security is endangered.

In education we are obligated to support free inquiry and to expect reliable reporting about findings and responsible conduct among faculty members and students alike. Education should support differences of opinion and conviction.

Underlying all educational efforts must be a faith in the capacity for improvement on the part of all normal persons, regardless of past record or present performance.

The creative potential within each individual can be identified, released, and guided and so result in extraordinary achievements, even among ordinary people. Belief in an individual, conveyed to him until he feels confidence in himself, is often the key to personal transformation.

[1] Soviet Russia did not become a member of UNESCO until 1954.

EDUCATION IS AN ADVENTURE

Support for objective investigation and of adventure with ideas must be built into the educational process. The real, uncoerced zest for learning goes out of education when it is reduced to a routine transmittal of predigested information. Passive acceptance, without pointed questioning, enervates the educational process and renders it stodgy, dull, and lumpy. When a teacher treats ideas as routine and learning as a mechanical process, he deprives students of the golden opportunities for making discoveries that could serve as compelling invitations to creative effort and for scholarly achievement.

Real education is an adventure in ideas. Contact with truly big ideas sets the mind on fire. They stir the imagination and lift up new visions, purpose, and hopes.

Fear of being criticized for reporting unpopular findings or the feeling of misgiving for one's reputation or the family well-being because of the discussion of controversial issues tends to paralyze the motive for inquiry and to reduce the adventure in problem solving to a mechanical routine among conventional facts.

The leadership needed to revive the love of learning must come from persons who are unafraid of labels, whose curiosities are unbounded and whose enthusiasms are contagious.

The power of inspired living, of inspired teaching and of fearless treatment of issues, remains the most needed force to combat reaction, discrimination, complacency, prejudice and mediocrity.

We educators seek to train people to think objectively, to withhold judgment until all of the known facts are in, to revise positions as new information is gained. We seek release from blind allegiance to the past and the devolpment of an intelligent loyalty to current ideals that hold the key to the future.

Liberal education changes people by revealing the bases of irrational and accidental loyalties, by extending contacts, opening new windows on cultures, groups and eras.

The educated person must know how to absorb the shock of new proposals without stiffening in blind resistance or accepting with uncritical approval. He can adjust to the obsolescence of an idea, an institution or an invention without panic or paralysis. He can understand the infinite complexity of individuals and of civilization and refuse to adopt oversimplified suggestions of solutions and "either-or" propositions as the only choices in complicated situations.

EDUCATION CONFRONTS A CHALLENGING FUTURE

Since all areas of modern life are becoming increasingly complex, requiring new skills and knowledge, we must rely more heavily on college trained men and women. It is therefore more important than ever that gifted young people should have access to college education. Hope for freedom is related to the number and quality of trained leaders. The college-age population attending college has increased from 11 percent in 1934 to 31 percent in 1954. This represents 1 percent in college each year increased over last year.

Looking ahead toward 1970, some educators are panic stricken. They view with alarm the growing determination of American youth to gain an education. I oppose all artificial quotas or limits of student population. No youth should be penalized because he was born in 1943 or later. Yet 31 percent will take us from 2.6 million to 4.6 million. But 1 percent increase per year would yield a total of 5 million by 1970.

One million, six hundred thousand young people will graduate from high schools this spring. Of the top 25 percent in the graduating classes only 49 percent, or 200,000 will enter college. Half of the remainder, or 100,000, who are in the upper one-quarter of their graduating classes, will not enroll in college because of lack of finances.

Here is a great potential for future leadership, now largely immobilized and consigned to less than their highest contribution to their generation. We must find how to educate our qualified youth population and not complain because we have them on our hands.

EDUCATION NOURISHES INDIVIDUAL RESPONSE

True education must seek to pull away the layers of unquestioning custom and to nourish individual response beneath them. Otherwise the results of education will be the development of a generation of citizens who think, feel, act and look alike.

The question in education for a free world is how we develop within each generation a philosophy built on the central idea of freedom and self-disciplined performance in behalf of every person. Without such a philosophy the free world will cease to exist and any similarity will be merely coincidental.

Personal freedom can exist only when an individual has enough insight about himself to be released from the destructive tensions of anxiety, insecurity, loneliness and frustration, and to respond wisely and warmly to people and to life itself. The individual must learn to maintain a dynamic equilibrium between dogmatic assurance about everything and docile emptiness concerning anything. He must learn to welcome unconventional and even controversial ideas because of his belief in the compelling power of truth and its long-run victory.

EDUCATION, FREEDOMS, AND SECURITIES

Every educational institution can serve the interest of freedom and national security by:

(1) Making the quest for knowledge an invigorating and fearless adventure, with more and more of the truth as the goal.

(2) Developing special projects designed to improve human relations.

(3) Illustrating how secure responsible freedom is—no segregation or discrimination in the university community, in admissions, elections, housing, or honors.

(4) Introducing the university community to distinguished leaders among different races.

(5) Providing intellectual security for faculty members who hold unconventional attitudes.

Underlying all of the struggle for freedom is the battle for quality; for quality of scholarship; for quality of responsible action; for quality of faith in God and man; for quality of performance; for quality of character. With these we may weather the current social storm and illustrate in a healthy way the true kinship between individual freedom and national security.

Widest Spread Between Farm and Factory Product Prices

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. JOHNSTON of South Carolina. Mr. President, I hold in my hand an article entitled "Farm and Factory Product Prices Reach Widest Spread Since World War II's End" which appeared in the July 7, 1955, issue of the Wall Street Journal. I feel that this article should be read by all Members of the Congress, for it points out what is happening to America's farmers. I ask unanimous consent that the article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM AND FACTORY PRODUCT PRICES REACH WIDEST SPREAD SINCE WORLD WAR II'S END—WAGES HOLD MANUFACTURED ITEMS UP AS CROP STAPLES SKID 23 PERCENT IN 4 YEARS

Divergent chart lines for prices of farm staples on the one hand and manufactured products on the other have reached the widest spread since World War II's end.

In computing its wholesale price indexes, the Bureau of Labor Statistics uses the 1947–49 average as 100. Figures released over the weekend by the Bureau of Labor Statistics placed the farm price index at 89.8 as of July 5. The price index figure for all commodities other than farm and food products was placed at 115.7. That's a spread of some 25 points.

The trend has been underway since early 1951. In March of that year the two indexes were within a fraction of a point of each other. By the start of 1953, a little over 2 years ago, the spread had reached 17 points.

THE 4-YEAR PATTERN

Compare with the high-water mark of March 1951, prices on all commodities other than farm and food items have declined less than 2 percent. Farm product prices, meanwhile, have tumbled 23 percent.

Two factors seem clearly responsible for this fork-in-the-road picture in the price charts:

1. Sharply rising factory wages have propped up the prices of manufactured goods.

2. Superabundant production, coupled with waning foreign markets, has pulled down the farm product prices despite efforts to hold them up by Federal edict.

The farm price support program, ironically, has contributed to the decline in farm exports. While the propping efforts have failed to keep prices from falling, they have succeeded in keeping most United States farm prices above those of competitive foreign producers.

BIG BULGE IN WAGES

Stiffly supporting the present level of manufactured product prices is a climb in factory wage rates that is sharper than generally realized.

As recently as 1951 an all-industry average placed the factory worker's weekly pay check at less than $65. It's now above $76. That's a rise of some 17 percent.

Workers in some industries have scored bigger gains than the average. The folks in auto factories stand out in this respect. Their average weekly pay of $75 in 1951 has climbed above $96—up nearly a third.

Here are some weekly wage figures for different industries—those of 1951 compared with the latest:

Industry:	*1951*	*Now*
All manufacturing	$64.71	$76.11
Lumber	59.98	67.89
Steel	77.30	91.71
Automobiles	75.45	96.54
Machinery	76.38	86.94
Aircraft	78.40	83.88

Most recent wages increases—as in steel and auto making—are not included in the above figures. They bring another nudge upward to prices. Steel prices have already been raised. Higher prices on 1956 model autos are predicted.

WHEAT, COTTON, CATTLE, HOGS

Behind the big slide in the Government's all-inclusive index of farm product prices are some steep spills on individual farm staples. In grains, in livestock, in Dixie's cotton—the price charts point downward in almost any farm market you peek into.

Steers that brought $40 a hundred pounds in Chicago's stockyards in early 1951 bring

less than $25 today. Hogs that sold above $30 a hundred pounds in the summer of 1948 are now around $20—and some livestock men are predicting that the avalanche of porkers that will hit the market later this year will shove hogs on the hoof below the $15 level.

Wheat at Kansas City brought above $3 a bushel back in early postwar 1947. Today you can buy the bread grain in Kansas City at less than $2.15 a bushel.

Cotton has come down despite a drastic slash in plantings. Compared to their postwar high, cotton fields have been cutback nearly 40 percent—some 11 million acres. Yet cotton was close to 45 cents a pound in 1951—and is now under 34 cents.

SUPPLIES UP, EXPORTS DOWN

The monumental United States farm production behind these price slides has been widely publicized. This year for the first time the wheat surplus is above a billion bushels—4 times as big as it was just 3 years ago. An indicated cotton surplus of around 11 million bales is the fattest in a decade—twice as big as just 2 years ago.

As wheat and cotton acreage has been slashed in recent years, the idled land has been turned to pasture and feed grains—and this in turn has been converted into massive supplies of meat. Just since 1949 the number of beef cattle on farms has jumped from 41 million to 58 million—up 40 percent. Hogs and chickens have likewise multiplied.

In the years since World War II, while the United States has been carrying on with its hefty farm production, the outside world has been increasing its farm output, too. And the result has been that the early postwar hunger for United States farm products is simply not there any more. Some lands that begged for wheat at the war's end now seek foreign markets for their own wheat.

In the export year beginning July 1, 1951, the United States sent abroad over $4 billion of farm products. Exports in the year ended last month are figured around $3.2 billion—and would be much less were it not for big Government subsidies aimed at getting rid of the surpluses.

Three years ago the United States exported over 5.5 million bales of cotton in 1 year. The current export year's total is expected to be only about 3.7 million bales. Wheat exports that topped half a billion bushels in 1948 are now well under 300 million bushels yearly.

THE ROAD AHEAD

Will the price spread between farm and nonfarm products continue? Present indications are that it will. The Government's farm crop appraisal, due out today, is expected to predict whopping harvests all along the line. And the current round of wage increases will give new support to prices of manufactured products.

But wage increases can't be expected to bring sharp price rises in finished consumer goods. The heavy hand of high-production competition exerts a counterbalancing downward pull on prices. When the Norge division of Borg-Warner Corp. announced last week that it would not raise appliances to cover steel price increases, Norge President Judson S. Sayre commented that "like a lot of other manufacturers, we're just going to have to absorb higher material costs." Many other manufacturers agree.

The history of recent years demonstrates that the level of prices on manufactured goods does not have to follow the level of factory wages precisely. While factory wages have increased 17 percent since 1951, the actual decline of about 2 percent in nonfarm, nonfood prices shows how competition and more efficient production can hold prices down.

Wholesale price indexes for week ended July 5, 1955 (1947–49=100):

Commodity, group	Weekly indexes, July 5, 1955	Percent change to July 5, 1955 from—	
		June 28, 1955	July 1954
All commodities	110.0	0	−0.4
Farm products	89.8	−1.2	−6.7
Processed foods	102.7	+.2	−3.6
Meats	86.7	+.6	−8.2
All commodities other than farm and foods	115.7	0	+1.2

Coal Industry Is Stepchild

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues in the House to an interesting editorial which appeared in the July 17 issue of the Huntington Herald-Advertiser under the caption "Coal Industry Is Stepchild."

While the article in question does not offer a permanent solution to the struggle of the soft-coal industry, it does raise the question of discrimination not only in favor of other industries here at home but questions seriously the economic wisdom in the "bleeding America white" in order to buy friendship abroad.

The article follows:

Coal producers are fond of saying that most of their troubles in the famine cycles of their feast-and-famine existence are due to the fact that there are too many of them. They produce too much coal and actually beg consumers to buy it at less than cost.

This may be true, but their number is pitifully small in a political sense. There are far too few of them to impress Congress and win the kind of political consideration that is given, say, to the Nation's farmers.

On many of his most important cash crops, the farmer is guaranteed a fair price by the Government. Corn, wheat, dairy products, and other farm commodities are accorded Government price supports. Uncle Sam will buy the corn, the wheat, the butter—for which he has about as much use as for another hole in his head—and store it in sheds, mobile bins, and abandoned caves until it spoils or can be given away without danger to the price structure.

But what about the poor coal producer? Does the Government help him to maintain a fair price on his product? Does Uncle Sam regard this basic industry as important enough to justify some subsidization to keep it in business?

He does not. On the contrary, he persists in practices which make the lot of the coal producer even more difficult.

For one thing, he permits enormous quantities of low-grade fuel oil to be dumped on the eastern seaboard, where it actively displaces coal as a fuel.

For another thing, he permits agencies like TVA to establish price schedules on the coal they buy which do not give the producer a fair return. These schedules are followed by privately owned utilities, largely in self-defense. Industrial purchasing agents use the schedules for shopping purposes until they find producers who will sell at distress prices.

Uncle Sam maintains a growing stockpile of some minerals—such as zinc, lead, and copper—on the logical theory that they would be needed in quantities in case of war. By his purchases, he helps these industries maintain a fair market price for their products.

The stockpiling of coal is not regarded as practical, it is true, but that is all the more reason for concern over the industry's ability to meet any emergency as it arises.

There is no substitute for coal in the production of steel. There is no substitute for steel in the fabrication of weapons with which the Nation would have to fight if worse came to worst.

How can a Government, knowing this, contribute so intimately and in so many different ways to the financial insecurity of the coal business?

The most obvious answer is that the coal producers and their employees—including the 225,000 miners who have lost their employment in the mines since 1940 and the thousands of railroad employees furloughed because coal was not moving—are not numerous enough to count politically.

Either that or their representatives in Congress are not making the most of their opportunities. You may take your choice.

A Vaccine Against Delinquency

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 26, 1955

Mr. WILEY. Mr. President, as a member of the Senate Juvenile Delinquency Subcommittee, I have long urged that civic-minded citizens concentrate on developing constructive outlets and facilities for America's young people. I have pointed out that the great mass of our youngsters are healthy, wholesome, lawabiding, and sound in mind and body. It is our task to keep them so.

One of the ways of achieving this is through community centers, through YMCA's, YWCA's, YMHA's, and YWHA's.

Indeed, the activity of America's great religious faiths in sponsoring organizations and facilities to provide healthy outlets for young people's energies represents one of the great assets on the American scene.

I was pleased to note a few days ago a fine article which has just been contributed by one of America's leading authorities concerned with our young people, an outstanding law enforcement officer in his own right and former Member of the House of Representatives, the Honorable Jacob K. Javits, attorney general of the State of New York. Through the medium of the National Jewish Welfare Board, Congressman Javits contributed an outstanding commonsense statement to the Jewish New Year edition of many community publications.

I should like to underline my complete agreement with Attorney General Javits' comments. I agree not only with respect to the splendid role of Jewish community centers, but with regard to the funda-

mentally constructive approach—whatever the channel—which brings out the best in young people. There is no finer way of doing this than by training youngsters in the religious faith of their fathers, helping them to understand the heritage which is theirs, the heritage of their religion, the heritage of their country.

I trust and believe that in the year 5716 our fellow Americans of Jewish faith will carry on the fine job which they are doing in supporting their Jewish community centers. I hope, too, that Americans of every faith will likewise support similar constructive activities in the common interest.

I send to the desk the text of Jack Javits' article and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL JEWISH WELFARE BOARD,
BUREAU OF PUBLIC INFORMATION,
New York, N. Y.

A VACCINE AGAINST DELINQUENCY—THE PREVENTIVE ROLE OF THE JEWISH COMMUNITY CENTER

(By the Honorable Jacob K. Javits, attorney general of the State of New York)

The current emergency over juvenile delinquency and youth crime is producing black headlines and futile anger. But let it be said to the credit of our youth that no matter how sensational the headlines, delinquency involves only a tiny proportion of our youth population. Only 3 percent of children and youth have been involved in what we call juvenile delinquency, but millions of our young people are undelinquent juveniles. If parents and legislators and civic leaders spent as much time understanding our children and finding healthy outlets for them as many do in getting excited and alarmed and indulging in rash statements and proposing impractical solutions, more good would be done.

Children want to be recognized for their own worth, they want respect for their rights, they need pride in achievement, and opportunities to care and share. Agencies that help children achieve these are creating a kind of "Salk vaccine" against delinquency. Among the most successful institutions that project these feelings for our children are the Jewish community centers that now serve more than 250 communities throughout the country. The center's program of clubs, hobby groups, cultural projects, sports, social activities, and opportunities for sharing in communal life is a natural for young people.

Activities and sound moral standards that make for good home life, for friendly family togetherness produce solid young citizens at any age. All youngsters suffer growing pains but they can be withstood by well-established relationships between parents and children. The fact is that the surest preventative against delinquency is a happy, responsible family life. It is an old truism that the family that plays together stays together. And I have found that the Jewish community center is a kind of extension of the home for it serves the entire family.

When unhappy, angry children strike out blindly against society, the active role of good recreational facilities and planned leisure-time activities can be most helpful. Individual parents are often hard put to deal with this problem, which is not limited to the underprivileged. But through participation in community efforts such as Jewish community centers and YM–YWHA's they can find help not only for themselves and their children but also for other parents and children too.

For the past decade the Jewish community center movement, under the leadership of the National Jewish Welfare Board, has been expanding at a record pace throughout the country. Millions of dollars are being poured into new buildings, enlarged services, better programs, improved facilities, all in an effort to keep up with an insatiable demand from the Jewish community.

Two years ago, Senator HERBERT H. LEHMAN, in a statement published in the CONGRESSIONAL RECORD during the centennial of the center movement, said that "the organized leisure-time group activities made possible by Jewish community centers play an essential role in affording wholesome release from the anxieties and tensions and fears that beset every home and every family and every community under the pressures to which we are subject. Children and old folks, whose needs are too often neglected in a crisis, find the Jewish community centers particularly concerned with their recreational and social problems." That statement is even more valid today.

Although juvenile delinquency has traditionally been less a problem among Jews than among our non-Jewish neighbors, we cannot be smug about this. The old maxim about an ounce of prevention is still sound. Instead of getting mad and frustrated about the problem, let us concentrate our available resources on the tried and tested programs that have demonstrated their capacity to prevent delinquency while we deal with the law-enforcement emergency which the failure to support prevention adequately has produced.

We need to see that Jewish community center programs are made available to every Jewish youngster and every Jewish family that wants them. We need to mobilize and train volunteer leadership to meet an enormous shortage of such people. We need even more to provide scholarships and other practical inducements to young people to enter center work as a career. We need to develop more preinduction programs to prepare young people for military service which will be part of their lives. We need to strengthen Jewish family life to buttress the traditional Jewish bulwarks of education and learning that have so successfully resisted juvenile delinquency.

The desire for expanded center programs is everywhere manifest. If in the year 5716 we can give new impetus and support to our Jewish youth-serving agencies, to our Jewish schools, to our morale-building organizations, we in the Jewish community will have contributed immeasurably toward building a generation of better citizens and more understanding and self-respecting Jews. I hope that in the new Jewish year we can benefit from some of the special interest in juvenile delinquency to develop a passionate concern for and interest in the needs and desires and hopes of the overwhelming proportion of our teen-agers. Let them know that we have not let them down and they will not let us down.

Arab States and Anti-Semitism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article from the July 25 issue of Jewish Newsletter.

It is an acknowledged fact that stability in the Middle East is essential to world peace. This article by the editor of Jewish Newsletter is important to those who have an interest in the problems that exist in that part of the world:

ARAB STATES AND ANTI-SEMITISM

"The Arab position on Israel is in no sense a position against the Jewish people," stated Ambassador Mohamed Kamil Abdul Rahim, Ambassador from Yemen to the United Nations and director of the Arab Information Center in an exclusive interview with a representative of the Jewish Newsletter. Amplifying his statement, the Ambassador continued: "For centuries before the state of Israel was created, Arabs, who are themselves Semites, lived side by side with Jews in peace and in harmony in the best tradition of Islam. In the Arab part of the world they still do. Just because of the tense Arab-Israeli relations, the Arab countries take special measures in protecting citizens of the Jewish faith." As an example, he cited a recent act of the Egyptian Government which withheld news in Cairo concerning the recent events in Gaza in order to protect Egypt's 80,000 citizens of the Jewish faith.

Dr. Fayez Sayegh, the center's director of research, who was also present at the interview, supplemented the Ambassador's words, by quoting from a statement released by the Arab Center, dated March 31, 1955, which pointed to the contrast between the strained Arab-Israeli relations and the friendly neighborly Moslem-Christian-Jewish relations in the Arab world, and read in part: "Enlightened people think not in terms of man's religion, but of the man himself. There is an eternal battle against bigots who want to lump people together and treat them by wholesale hates and wholesale affections. We are glad to say that in Arab countries, citizens of the Jewish faith enjoy the same rights and privileges as other citizens. We wish we could say the same thing about the 180,000 Arab Moslems and Christians in Israel, but they are treated as second-class citizens."

Dr. Sayegh added that the Arab Information Center was opposed to antisemitism but that it would scrupulously refrain from taking a stand on individual issues as such, nor would it intervene in any disputes between American organizations of opposing points of view. The Arab Center plans "to supply the answers to questions about such problems as Palestine and the striving for independence in North Africa."

The Jewish Newsletter has learned from other reliable sources that the Arab Information Center has taken steps to keep Arab representatives and speakers informed about the character of the various organizations that they are called upon to address with a view to shunning meetings of organizations known to advocate racial and religious discrimination. The Arab Information Center itself has never sent any speakers to such organizations. Some Arab speakers who accepted such invitations in the past, were said to have done so largely through ignorance of the real purposes of the organizations inviting them.

Ambassador Rahim's statement helps to clarify an issue which was raised by a recent address delivered by a representative of an important Arab state at a meeting of an outspoken anti-Semetic organization (reported Jewish Newsletter, June 13). That incident gave rise to doubts about the position of the Arab states toward antisemitism. We are glad that the Ambassador's statement makes it clear that the Arab Information Center and the states it represents, repudiate a policy of antisemitism in their own countries and association with antisemitic organiza-

tions here. We are particularly pleased with the assurances that the controversy between the Arab states and Israel does not affect the treatment by the Arab governments of their citizens of the Jewish faith. We look for continued evidence of good will which will result in an improved relationship and greater friendship between the Arabs and the Jews in the United States and in the Moslem world.

Position of AAA With Respect to Highway Legislation

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mr. Andrew J. Sordoni, president, American Automobile Association, and a statement by Mr. Sordoni which he delivered at a hearing of House Public Works Committee on July 12, 1955. The letter and statement outline the position the AAA is taking relative to H. R. 7474:

AMERICAN AUTOMOBILE ASSOCIATION,
Washington, D. C., July 23, 1955.
The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D. C.

MY DEAR MR. FLOOD: On July 12 the American Automobile Association, by authority of its executive committee, presented a statement before the House Public Works Committee on pending highway legislation, copy of which is attached.

The Public Works Committee has reported out H. R. 7474, which you will soon consider. We know that you are under great pressure from commercial vehicle and rubber interests to reduce proposed taxes on commercial vehicles and to shift more of the tax load to the passenger car.

The position of the AAA, with a membership of 4,767,000, on the pending Federal aid highway legislation is briefly as follows:

1. The American Automobile Association supports H. R. 7474 as a practical means of securing, within 15 years, the toll-free completion, at high standards, of the National System of Interstate and Defense Highways and an accompanying large improvement of major Federal aid highways.

2. The association feels that, in the interest of equity, the proportion of taxes levied on the commercial vehicles should be higher than now provided for in H. R. 7474. We also oppose any tax exemption. Nevertheless, we recognize that this bill now provides at least a more reasonable distribution of the tax load than heretofore has been the case.

3. The association vigorously opposes any further shifting of the tax load to the passenger car, which is already carrying more than its fair share of highway costs.

A vote for this legislation is support for a greatly improved, efficient, and safer highway system for our country and all our people.

Sincerely yours,
ANDREW J. SORDONI,
President.

STATEMENT BY ANDREW J. SORDONI, PRESIDENT, AMERICAN AUTOMOBILE ASSOCIATION, TO THE PUBLIC WORKS COMMITTEE OF THE HOUSE OF REPRESENTATIVES, JULY 12, 1955

I am Andrew J. Sordoni, president of the American Automobile Association, and am appearing here to present the views of the association, whose executive committee, meeting yesterday and today, has given careful consideration to the proposals before you.

First of all, we should like to compliment the members of this committee for the careful and extensive consideration which you have given to the proposed Federal-aid highway legislation.

As one of the sponsors of the first Federal Highway Act in 1916, the American Automobile Association has always had a special interest in this important field of legislation. From the inception of Federal highway aid up to the present, the Congress has recognized that the major responsibility for improving the Nation's streets and highways lies with the several States and their respective political subdivisions.

The role of the Federal Government in this field was one of spurring the States on to accept their responsibility and to give leadership and impetus to the development of integrated and effective highway improvement programs. This participation of the Federal Government in State highway affairs was justified under the general-welfare clause of the Constitution and in the interest of national defense. Hence, from its very beginning, Federal aid has been recognized as a legitimate charge against the general revenues of the Federal Government.

Now for the first time, there is before the Congress a proposal that the Federal Government assume, not a minor role, but the major responsibility for financing a national system of interstate and defense highways. This network includes the Nation's most important roads from the standpoint of the national welfare and the national security, as well as the needs of the Nation's highway transportation. This proposed program, while a complete departure from the traditional role of the Federal Government in highway affairs, nevertheless ties in with the aims and objectives of the American Automobile Association. The American Automobile Association was probably the first organization publicly to advocate a concentration of funds upon the interstate system and to point out the advantages of its early completion to adequate standards. We are in general agreement with the principles and objectives of the highway legislation now under consideration by this committee.

This, then, brings us to the problem of financing this greatly expanded Federal aid highway program. It is our view that the adoption of a pay-as-you-go plan is more desirable than credit financing. We realize that a pay-as-you-go policy will require the imposition of some additional taxes. And we have no objection to that action so long as these tax increases are reasonable and are apportioned equitably among the several beneficiaries.

We believe an undue proportion should not be saddled on automobile owners merely because we have not urged our members to protest to you against the unfairness of any increase in their tax burden.

It should not be necessary to point out that everyone will benefit from the proposed highway improvement program. The national defense and the national economy justify contributions from general tax sources. The fact that no exemptions are provided for in the proposed increase in Federal gasoline tax would indicate that you are aware of this fact, and we certainly urge that no exemptions be granted. We ask the question, "Why shouldn't everyone make a contriution to the Nation's defense and its general welfare?"

There are, of course, special beneficiaries of highway improvements such as the people we represent, the Nation's motor-car owners. Their tax contribution in dollars will be the greatest of all. But other beneficiaries too should be required to pay in reasonable proportion to the benefits derived. It should not be necessary to remind you that the private passenger-car owner is already carrying a very heavy tax burden. The requirement of matching in the States will undoubtedly further increase this burden. How much more taxation can be imposed upon automobiles without doing serious injury to our national economy is open to speculation. No one knows the precise answer to that question. In any event, the passenger-car owner should not be asked or compelled to carry any tax burdens which rightly belong to others.

It must be assumed that your original proposal for taxing diesel fuel, heavy truck tires, tubes, and camelback were intended to achieve some measure of equity in apportioning the tax levies among the several beneficiaries of this road-improvement program.

Under such circumstances it would seem reasonable to ask reconsideration of the action taken in relieving commercial vehicles from what is believed to be their equitable share of the new tax burden. To the extent that such restoration increases the total revenues beyond the requirements of the program, we ask that there be a corresponding reduction in the proposed increase in the Federal gasoline tax.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 26, 1955

Mr. LEHMAN. Mr. President, there have come to me two communications dealing with the minimum wage legislation now in conference. These communications address themselves to that provision of the bill, as approved by the Senate, dealing with Puerto Rico. Without passing judgment on the exact position taken by the organizations sending these communications, I believe the views and attitudes expressed are worthy of note, and I, therefore, ask unanimous consent that these communications and their attachments be printed in the Appendix of the RECORD.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

JOINT MINIMUM WAGE COMMITTEE,
Washington, D. C., July 21, 1955.
To Members of Congress:

I have been asked by Hipolito Marcano, president of Puerto Rico Federation of Labor-AFL, and David Sternback, regional director, CIO, Puerto Rico, to transmit the attached cablegram to you.

Sincerely yours,
ARTHUR J. GOLDBERG,
Director, Joint Minimum Wage Committee.

SAN JUAN, PUERTO RICO.
Lt. ARTHUR GOLDBERG,
Chairman, Joint Minimum Wage Committee, Washington, D. C.:

Urge offset reproduction and immediate distribution to all Congressmen following cable just sent to Speaker SAM RAYBURN:

"Unable to cablegram individually all Congressmen due prohibitive expense to us; therefore, respectfully request you convey following message to House during debate on bill 7214, 'On behalf major groups organized labor of Puerto Rico with combined membership over 125,000 in industry trade and agriculture, urge you to secure passage of Senate bill 2168 through floor amendment in lieu House bill 7214. Increased minimum wage

rates for Puerto Rico along lines Senate bill long overdue. They can be paid without curtailment insular employment or affecting competitive position Puerto Rico industry. We look to Congress to rectify injustice long perpetrated against people of this island by inadequate adjustments minimum wages up to now.'"

HIPOLITO MARCANO,
President, Puerto Rico Federation of Labor-AFL.

DAVID STERNBACK,
Regional Director, CIO, Puerto Rico.

JOINT MINIMUM WAGE COMMITTEE,
Washington, D. C., July 15, 1955.

To Members of the Senate Committee on Labor and Public Welfare, Members of the House Committee on Education and Labor, Members of Congress from the State of New York:

Enclosed is a resolution passed at an overflow meeting of Puerto Rican workers held in New York City last night. This resolution petitions the Congress to enact Senate bill 2168 on Puerto Rico simultaneously with any change in the present mainland minimum.

We enclose also a story from today's New York Times reporting the meeting at which this resolution was passed.

In view of the fact that minimum wage revision is presently before Congress, we thought that the enclosed would merit your interest.

Sincerely yours,

JACOB S. POTOFSKY,
President, Amalgamated Clothing Workers of America, CIO.

DAVID DUBINSKY,
President, International Ladies Garment Workers' Union, AFL.

EMIL RIEVE,
President, Textile Workers Union of America, CIO.

ALEX ROSE,
President, United Hatters, Cap and Millinery Workers International Union, AFL.

ARTHUR J. GOLDBERG,
Director, Joint Minimum Wage Committee.

RESOLUTION ON HIGHER MINIMUM WAGE FOR PUERTO RICO, ADOPTED AT SPECIAL MEETING, JULY 14, 1955, ROOSEVELT AUDITORIUM, NEW YORK, N. Y.

Whereas the minimum wages in Puerto Rico are far below the mainland minimum, even, in some cases, as low as 22½ cents an hour, a starvation wage that makes it impossible for Puerto Rican workers to maintain even a minimum level of health and decency against a cost of living that is higher than on the mainland; and

Whereas thousands of Puerto Rican workers are annually driven from the island in search of a living wage as a result of the miserably low wages; and

Whereas the Congress of the United States committed a great injustice in 1949 when, after raising the mainland minimum wage from 40 cents to 75 cents an hour, no comparable adjustment was made for Puerto Rico, and since this failure of Congress in the past has created an even greater differential between mainland and island wages; and

Whereas the Senate of the United States has passed a bill to raise the mainland minimum to $1 and to raise the Puerto Rican minimum wage so that the differential between minima in Puerto Rico and on the mainland shall not become even greater than at present; and

Whereas government officials in Puerto Rico—contrary to the best interests of workers in Puerto Rico and to the best interests of Puerto Rican workers on the mainland—have publicly opposed the Senate bill; and

Whereas Puerto Rico is part of the United States and its workers should not be excluded from the general benefits and progress of American labor: Be it therefore

Resolved, That this public meeting of Puerto Rican workers in New York City petition the Congress of the United States to raise the minimum wage in Puerto Rico along the lines of the Senate bill so that the workers of the island may begin to enjoy the higher standards to which they are entitled as human beings and as citizens of the United States; and be it further

Resolved, That this meeting call upon the Governor of Puerto Rico—in the best interests of the economy and the workers of the island, and in the interest of safeguarding our wage standard on the mainland—to join with us in demanding a statutory minimum-wage increase for the workers of Puerto Rico.

[From the New York Times of July 15, 1955]

BILINGUAL RALLY BACKS WAGE BILL—FIFTEEN HUNDRED PUERTO RICAN GARMENT WORKERS HERE ASK SAME RISE FOR UNITED STATES, ISLAND

(By Peter Kihss)

Fifteen hundred union members rallied in what was called the city's first meeting of Puerto Rican garment workers last night. Enthusiastically they demanded passage of a bill to raise Puerto Rican and mainland minimum wages by the same margin. This, they said, would aid island workers and safeguard mainland wage standards.

The International Ladies Garment Workers Union, AFL, called the bilingual session. David Dubinsky, union president, said the cost of living in Puerto Rico was higher than in New York.

"Give Puerto Rican workers a decent wage," he demanded. * * * As long as they want to keep Puerto Rico on a starvation wage of coolie workers, Puerto Rico will become a school where people learn a trade and then go to Chicago, Philadelphia, and New York to make a living."

Asserting mainland unions had overcome "sweatshop" conditions, Mr. Dubinsky voiced fear that a widening wage gap might mean that the island "may get the work and we get the wages only on paper." The differential, he said, had doubled since 1939 so that the New York wages last year were $1.83 an hour, or $1.44 above Puerto Rican earnings.

INCREASES SUPPORTED

The meeting endorsed a Senate-passed bill that would increase the Federal mainland minimum from 75 cents to $1 an hour. It would provide a one-third increase in steps by January 1, 1958, in Puerto Rican wages that are worked out, industry by industry, by special committees.

Meanwhile, at the New York office of the Puerto Rican Labor Department, Joseph Monserrat, director, said the Commonwealth government favored improving the committee system and increasing wages when "economically feasible." But he contended the Senate bill would force rises as high as 257 percent for sweater and bathing-suit workers. The last time a flat minimum was legislated for Puerto Rico, in 1940, "it did create unemployment," he said.

Edward G. Miller, Jr., chairman of the mayor's committee on Puerto Rican affairs, conceded yesterday that he hadn't consulted the committee before writing a letter to the New York Times favoring a more flexible approach than in the Senate bill. But, in answer to protests from labor members, he asserted, "I thought it entirely consistent with everything the committee has been trying to do."

At the rally, Mr. Dubinsky asserted that mainland garment manufacturers were taking their work to Puerto Rico. He denounced a Federal Labor Department memorandum that reportedly recommended a flexible approach and described Puerto Rico as competing with Japan and the Philippines in such industries as hand-sewn needlework.

Hipolito Marcano, president of the Puerto Rican Federation of Labor, said island workers favored the Commonwealth program to attract industry by tax exemption, loans, and factory aids, but "reject starvation wages." Saby Nehama, business agent of the dressmakers local, presided and translated into Spanish speeches by Mr. Dubinsky and Representative IRWIN D. DAVIDSON, Manhattan Democrat. The latter hailed the union stand.

Airport Development Aid Needed

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Needed: Airport Development Aid," written by Larry Cates, Air Line Pilots' Association legislative representative, and published in the magazine, the Air Line Pilot.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEEDED: AIRPORT DEVELOPMENT AID—LOCAL GOVERNMENTS ALONE CAN'T FUND THE MANY IMPROVEMENTS NEEDED BY THE NATION'S AIRPORTS—FOR SAFETY AND PROGRESS, FEDERAL AID IS NEEDED TO MEET GROWING DEMANDS

(By Larry Cates)

Air airports are rapidly becoming the weakest link in our air transport system. Pilots see no relief in sight unless an airport development is undertaken.

From a safety and air progress standpoint, ALPA firmly supports Federal aid to airports.

ALPA's stand was outlined recently by President Sayen in a statement to the Senate Interstate and Foreign Commerce Committee, in connection with S. 1855, a bill designed to assist in the proper development of airports throughout the Nation. It would provide $63 million annually for the next 4 years for such development.

Behind ALPA's support are these facts:

Present airports are incapable of meeting even present needs efficiently and safely.

The problem will be compounded in the immediate future.

Other nations are recognizing this problem and meeting it.

Tools to do the job are necessary to maintain our safety records, and, next to planes themselves, the airports are an important tool.

Air travelers are being increasingly inconvenienced because of lack of airport development, which lack also acts as a barrier to the maximum flow of commerce.

ALPA'S POSITION

Some pertinent and condensed excerpts of Mr. Sayen's statement follow:

"The Air Line Pilots Association wishes to go on record in firm support of this statement to the Federal Airport Act, which would provide expenditures of $63 million annually over the next 4-year period for the development of our airports. * * * It is indisputable that our own present airports are incapable of meeting even our present needs efficiently and safely. In the large metro-

politan areas, many of the airport facilities are presently greatly overtaxed with resultant delays and inconvenience to the traveling public, and smaller communities are handicapped by lack of adequate airports to permit essential air services and their growth.

INDUSTRY'S GROWTH

"This problem will be compounded in the immediate future with the advent of faster and heavier aircraft and developments possible in turbine aircraft. Airport need is demonstrated by statistics showing that the airlines are rapidly moving into a key spot among common carriers with respect to the carriages of passengers. As recently as 1946, the airlines hauled only 6.5 percent of the Nation's travelers. By 1954, that figure had jumped more than four times to 28.2 percent, and this year, it is estimated that 1 out of every 3 people traveling by other means than automobile, or better than 33 percent of all travelers, will travel by plane. Further, the national business fleet of airplanes is several times larger than all the aircraft in domestic airline operation. These airplanes fly more plane miles than the scheduled airline fleet. In addition, the use of civil airports by our military fleet is constantly increasing. That the Congress orginally anticipated this growth in some measure, is evidenced by the fact that the Federal Airport Act, which this bill seeks to amend, provided the means for an appropriation of over $500 million for airport construction aid through fiscal 1955. However, concurrent with an expansion in excess of that anticipated, the Congress has appropriated less than half the amount of funds originally intended for such purpose. That this acute problem is being more adequately dealt with in other nations, is evidenced by the fact that Canada, our neighbor on the north, plans to spend $75 million on an airport development program this year.

SAFETY CONSIDERATIONS

"The responsibility for the safe and efficient conduct of a flight resides with the pilot. The excellent record of the past few years is evidence of the fact that his obligation in this regard has been effectively assumed. However, under present conditions and with modern airplanes, this obligation is becoming increasingly difficult to fulfill. In fact, our safety record will be impossible to maintain unless we provide the pilots with adequate tools to fufill this objective.

"A major part of the solution to this problem resides in proper airport development. This development in terms of safety must include the lowering, relocation, and marking and lighting of airport hazards, the elimination of those hazards in our approach lanes, runways of proper length and strength to accommodate the speed and weight of our transports, the proper marking of those runways to assist visual accommodation and the essential aids to navigation, such as runway approach lights and the proper instrument landing systems. One of our airline captains, with many thousands of hours experience, describes the airport approach problem as follows:

" 'Ten years ago the common weather minimum was 500 feet and one mile and the common approach speed was 90 miles per hour. Today, in some fields, we find minimums lowered to 200 feet and 1½ miles. Approach speed has risen to 150 miles per hour. True, the alinement problem is more accurately solved where ILS is available, but nevertheless, the time available for the pilot to orientate himself properly after becoming visual has decreased tremendously—40 seconds to 12 seconds.' "

INADEQUATE FACILITIES

"Airline travelers have been inconvenienced at times by the fact that the pilot could not land at a particlar airport and it became necessary to conduct the flight to an airport other than that of intended landing. However, as Mr. R. B. Rowe of the Sperry Gyroscope Co., recently said, 'This is no reflection on the professional ability of the airline pilot for he is doing the best possible job with the tools at hand. It does, however, demonstrate graphically the inadequacy of his tools.' It is a somewhat surprising fact that many of the tools to eliminate these problems are immediately available. The industry and Government have reached agreement on many matters relating to approach lighting, runway strength and dimensional standards for civil airports, runway and taxi marking, uniform requirements for runway and landing strip lighting and miscellaneous criteria relating to airport development. For example, the industry has been in agreement on a proper configuration for approach lights for over 3 years. In fact, the configuration was approved by the Air Coordinating Committee in 1953 as a national standard. At the present date only six airports have this essential aid installed. The stumbling block has been the lack of sufficient funds to procure and install the necessary improvements."

NEED CITED

"The report of the President's Airport Commission, published on May 16, 1952, called the airport problem to the attention of the Nation. A strong recommendation, that matching funds for Federal aid to airports should be implemented by adequate appropriations, was included in that report. The record aptly demonstrates that development of our air transportation system is clearly in the public interest, both from an economic and national defense standpoint. The airports of this Nation constitute the originating and terminal points of the flow of interstate air commerce and the springboards for national defense. Unless funds are immediately appropriated to assist in the development of those airports, they will become an effective barrier to a maximum flow of that commerce. In fact, a reverse trend in the use of airports is already making itself felt as evidenced by previous testimony that air carriers in the past 4 years were forced to suspend service at 88 points throughout the country because of inadequate airport conditions.

"We are very hopeful that the Congress will recognize this very obvious problem and provide the appropriations under consideration as rapidly as possible. Such appropriation will, in our opinion, fall short of answering the problem, but will serve as a proper starting point."

Louis C. Cramton: Champion of Michigan's FEP Bill

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1955

Mr. DIGGS. Mr. Speaker, on July 6, 1955, in special ceremonies, Gov. G. Mennen Williams signed into law Michigan's fair employment practice bill. We, of Michigan, are exceedingly proud that our State legislature has through legislative mandate declared, confirmed, and evoked to practice the democratic principle of equality of opportunity. It is a paramount victory for democracy and in the words of our great Governor shall witness "the end of morally indefensible and economically wasteful hiring policies."

In this victory, the gratitude of the people of Michigan is fullheartedly extended to Representative Louis C. Cramton, Republican, of Lapeer, Mich., who was sponsorer and champion of the FEPC bill. The Honorable Mr. Cramton, a former United States Congressman representing the Seventh District of Michigan and a former circuit judge, stated that the principle of FEPC was burned into him by a friend he met in Washington, Dr. Mordecai Johnson, president of Howard University. As a Congressman, Mr. Cramton helped prepare the Federal budget for Howard and when he came back to Michigan, he said, he made up his mind he could not let his old friend down.

The enactment of FEPC legislation in a major industrial center such as Michigan is of great import to the Nation and to the world in its example of leadership in the realization of democratic concepts. The major issues which face our Nation today on a worldwide basis are concerned with human rights so that this action in Lansing, Mich., is of national and international consequence.

In recognition of this service, the Michigan civil liberties department of the Improved Benevolent Protective Order of Elks of the World in its State convention civil liberties program, held on June 17 in Saginaw, Mich., presented its 1955 annual award for outstanding public service to Representative Cramton. In the representative's absence, his son Leo Cramton, of Midland, Mich., received the award from Lt. Gov. Philip A. Hart.

The following letters and telegrams tell the story of this momentous occasion. I ask unanimous consent to include them in the RECORD:

Hon. CHARLES C. DIGGS, Jr.,
Congressman,
House of Representatives:

Many thanks for the invitation. The answer is "Yes." Am grateful for the opportunity.

PHILIP A. HART,
Lieutenant Governor.

Hon. CHARLES C. DIGGS, Jr.,
House Office Building:

I appreciate very greatly the honor you suggest but present commitments take me out of the State on June 7 and I will be in Miami on June 17. I particularly appreciate this suggestion from you. With my best wishes.

LOUIS C. CRAMTON.

HOUSE OF REPRESENTATIVES,
Lansing, Mich., June 2, 1955.

Hon. CHARLES C. DIGGS, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I am so appreciative of the honor suggested in your telegram which I have just received and your personal congratulations on the passage of our fair employment practices legislation, that I desire to write you more fully this letter following my telegram.

Mrs. Cramton went to Miami, Fla., by air 2 weeks ago with a definite promise on my part that I would drive down immediately after the close of the session to spend a little time with her in Miami and then drive her back to Michigan.

It is for that reason that I am leaving Lapeer next Tuesday morning to drive to

Miami and do not expect to be again in Michigan until about the end of June. I greatly appreciate the honor suggested and the invitation you extend to attend the State convention of the Elks at Saginaw June 17, but it is impossible.

I think you will be interested to know that I consider the bill as it goes to the Governor a very good one with sufficient authority to enable the Commission to render great service to the State.

With best wishes, I remain

Yours sincerely,

LOUIS C. CRAMTON.

STATE OF MICHIGAN,
OFFICE OF THE GOVERNOR,
Lansing, June 2, 1955.

Hon. CHARLES C. DIGGS, JR.,
Michigan State Representative,
House Office Building,
Washington, D. C.

DEAR CHARLEY: Thanks ever so much for your kind invitation to attend the civil-liberties program of the State Elks convention on Friday evening, June 17, in Saginaw.

It would indeed be a real pleasure to be on hand for this fine event and I certainly wish it were possible for me to do so. Unfortunately, however, previously arranged plans will take me to Detroit that night.

With every good wish for a most successful program.

Sincerely,

———,
Governor.

R. F. BAXTER,
General Chairman, Elks Michigan State Convention, IBPOE of W, care of Bethel African Methodist Episcopal Church:

Please extend my personal good wishes to all attending your annual State convention for a most successful and enjoyable get-together. Sincerely regret unable to be with you.

G. MENNEN WILLIAMS,
Governor of Michigan.

Hon. CHARLES C. DIGGS,
Member of Congress,
Bethel AME Church,
Saginaw, Mich.:

Please convey to the assembled group my sincere good wishes and my personal congratulations to Judge Cramton, a great champion of the people.

PAT MCNAMARA,
United States Senator.

Improved Benevolent and Protective Order of Elks of the World,
Care of Bethlemy Church:

Please extend my congratulations to Representative Cramton upon his receiving the civil-liberties award. The judge has a fine record of service to all the citizens of Michigan.

ALVIN M. BENTLEY,
Member of Congress.

Congress CHARLES C. DIGGS, Jr.,
Saginaw, Mich.:

Award to Judge Louis Cramton for contributions to civil rights by the civil liberties department of IBPOE of W is in keeping with highest traditions of Elkdom.

Fraternally,

State Senator CORA M. BROWN.

Congressman CHARLES C. DIGGS,
Elks Convention,
Civil Liberties Committee,
Saginaw, Mich.:

Congratulations to the committee and Representative Cramton on a great and courageous job in the interests of FEPC. Your work was outstanding. It expressed the sentiments of right-thinking people everywhere.

Representative JAMES BRADLEY,
Of Detroit.

Michigan Civil Liberties Committee of the Elks of Michigan, Saginaw, Mich.
Attention: Congressman CHARLES C. DIGGS, Jr.

Congratulations on your fine and timely recognition of Judge Louis Cramton. He is perhaps the outstanding legislator of this age. All Michigan is proud of him.

CHARLES M. DIGGS,
State Representative.

Congressman CHARLES C. DIGGS, Jr.,
Saginaw, Mich.:

Chairman of Michigan Civil Liberties Committee permit me to extend to you and your organization greetings. Sorry I cannot join you in paying tribute to Representative Louis Cramton with whom I have had the privilege of working for more than 6 years. I have learned to respect and admire him for the great leadership he has attained in his more than 50 years of public service. I admire him for his vigor and sincerity through humiliation to carry through with a fight to bring to the minorities by law and equal opportunity in employment regardless of race, creed, color, or national origin. May God bless and keep him.

EDGAR CURRIE,
State Representative.

Congressman CHARLES C. DIGGS, Jr.
Chairman, IBPOE Civil Liberties Committee, Saginaw, Mich.:

I wish to congratulate you for the untiring effort you put forth as chairman of the Civil Liberties Committee, enabling the State of Michigan to have an FEPC law. I personally know you were one of the guiding forces behind Representative Cramton in securing the passage of this law. Please express my best wishes to the officers and delegates for a successful convention. My best wishes for your continued success.

Representative ROGER TOWNSEND.

HOUSE OF REPRESENTATIVES,
LANSING, MICH., *July 6, 1955.*

Hon. CHARLES C. DIGGS,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN DIGGS: My son has reported to me fully on the honor given me even in my absence at the State Elks convention at Saginaw, and I very deeply regret that it was impossible for me to be there.

I assume that the award was set forth in a resolution or a citation. I very much desire to have a copy of such resolution or citation if it is possible.

Kay mentioned also some messages that were read at the convention and these I would like or copies of them for my files. I will greatly appreciate anything you can do to aid me in these matters.

I had hoped that the success of our campaign in enacting an FEPC law in this outstanding industrial State might be of material aid in the general battle against racial discrimination in the Nation, but little, if any, notice seems to have been taken of it by Congress or the press of the National Capital. I trust, however, that this very definite forward step by our State will have some effect in your national struggle.

Governor Williams used five pens in signing the new law which became Public Act 251 of 1955. He gave one to me and I sent that one on to my friend, Dr. Mordecai Johnson, at Howard University, whose friendship has meant so much to me.

I wish to express to you and your civil liberties committee and to your Elks' State organization my deepest appreciation of the honor given me and thank you.

With best wishes, I remain,

Yours sincerely,

LOUIS C. CRAMTON.

Report on Moral Rearmament Trip Through Asia

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. WILEY. Mr. President, the other day I received a copy of a letter from a friend of mine, Bill Grogan, a very great labor leader from Florida. He has been traveling with the Moral Rearmament Group in the Far East. He is peeking into scenes which none of us have had the pleasure of looking at. He is becoming acquainted with world situations by mingling with leaders and common people. The letter which I hold in my hand is a very interesting document, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

REPORT ON MRA TRIP THROUGH ASIA: No. 4

DEAR FRIENDS: The journey continues and after many touching scenes of farewell, we left Japan and winged our way toward Formosa. Formosa looks beautiful from the air—it's a mountainous country and is a beautiful verdant green. When we arrived at the airport we were stunned at all the elaborate preparations that were made to receive us. Crowds with banners at the airport, and all the roads were garlanded with flowers with banners across the streets with MRA slogans on them.

Gen. Ho Ying-chin, chairman of the Military Strategy Board, and wartime commander of the Chinese Army (he was the general who accepted the Japanese surrender for China and later he presented the sword which was surrendered to Dr. Buchmann, the founder of MRA) received us at a banquet for 400 people where he said, "This visit is unprecedented in the history of China, or, for that matter, I believe, to any other Asian nation before."

President Chiang Kai-shek gave a reception for us the next day and later the Prime Minister followed suit. I could not begin to quote the many speeches and statements made by all of the Government, civic, educational, business, and labor groups, who all lauded MRA and the sentiment is pretty well summed up by the editorial in the China Post which stated, "With the flashing clarity of an electric bolt from the heavens, a new group has appeared on the world scene. Moral rearmament, a unified mission of world peoples, has made itself known and its power is rapidly being felt over more and more of the world's surface. Free China, ready to join forces with the principles of MRA, stands as a springboard from which this new force may stride into the world and gain its objective of world peace and understanding. They have set up a great global strategy which is aimed at destroying the misunderstandings and differences which exist."

Chiang Kai-shek, after praising the aid received from United States of America said this moral aid was even greater because it

had raised the morale of the people as well as affecting all of the top officials in political and military life.

As you lived in Formosa, you had the sickening feeling that war was not too far away and that you never knew when the spark would flash that would ignite the next holocaust of war. The feeling lent real urgency and awareness to our mission. As a matter of fact, the day after we left Formosa, the Reds shot down a civilian plane and two MIGS were shot down in retaliation. As I see it now, the complacency in America is frightening and in the mad race of materialism, we are too engrossed in our own selfish personal interests to pause for a moment and give thought to the powerkegs that surround us.

After we left Formosa, I was convinced that we had penetrated every phase of community life in that island, and given those people the answer to the rebirth of a free China, with a people living and government based on observance of moral standards.

When we arrived in the Philippines, the mayor of Manila turned out all the city officials as well as a colorful crowd of young people dressed in the native costumes. After they had sung songs of welcome to us and our MRA chorus had reciprocated, we were whisked into town from the airport with a police escort with sirens at full blast and off we were to a new round of activities in Manila.

The pace is backbreaking and there is no letup. I thought I was used to long hours but this is the limit. We start about 7 a. m., and get back to our rooms after 12 midnight when the show is over, and no day off either. However, it really is wonderful how everyone works and gives everything they've got. It's amazing to be with a crowd where there is no trouble with drink, girls, or bickering, where everyone works as if the very world depended on him—inspired living—if we could get this devotion and dedication into political and trade-union activities, we'd really have something—and the amazing truth is that it is possible to achieve. But, there's an awful amount of personal change needed first—especially with a guy like me.

After the first flush of welcome died down, it looked as if we had a crisis on our hands, as the newspapers carried some statements allegedly made by the Catholic archbishop. This carried real significance as I was amazed to learn that the Philippines are 95 percent Roman Catholics. However, after a lot of confusion, I cut through to the source and was delighted to learn from the archbishop himself, that he had nothing against MRA and we had quite a good time with him.

President Magsaysay received us at the palace, and told us he was convinced that the principles of MRA were good and do work, referring in particular to our principle of absolute love among mankind and how to win over your enemies through real caring for them, he told us how he was opposed and ridiculed when he proposed to extend the hand of friendship to the Huks (Communists) in the mountains and his offer of amnesty—a piece of land—medical aid and food. Some people insisted "Kill the Communists," but he pointed out he knew that hungry bellies were the reason that made these people Communists and when he made his offer to them, over 9,000 surrendered and today, virtually only a handful of Huks remain in the mountains. He made a good point when he said, "You have to find out what made the patient sick and then cure the sickness—don't kill the patient."

It was heartening to hear a man like this putting our theory into practice. As he put it, "We've won these people over to us by being their friends and recognizing their needs and caring for them." That's MRA in action.

Some of us stay in the Manila Hotel, and they say from where you stand in the lobby you can look out on a big green where 106,000 Filipinos were killed in the last war. From the side of the hotel you can look over Manila Bay, where the hulks of sunken vessels stick out of the water. There were 73 Japanese vessels sunk in the bay. (The United States lost 150 planes sinking those 73 ships.) Across the bay you see Corregidor and Bataan. Yes, there are plenty of mementos of the war, and when you talk to the Philippine people about peace they know and appreciate what you are talking about.

The play is packed out each night, and the people really show their warm appreciation. On the opening night in Manila the Japanese team were on the stage, and when they were introduced an angry murmur swelled from the crowd when they heard the Japanese language. When Hoshizima, who is the supreme adviser to the Japanese Government and is assigned by the Premier to represent the Japanese Government on the team, spoke and told the audience that he wanted to apologize to the Philippine people for all the wrongs and horrors they brought to them, and humbly asked their forgiveness—a spontaneous "No"—but then just as quick they shouted "Yes," and burst out into a real wave of applause. What a thrilling experience.

One of the men on the Japanese team is Nakajima. He was one of the human torpedoes, and later that evening he confessed he was really scared to appear before that audience, and, frankly, under the circumstances, I would have been, too. However, this humble apology did an awful lot to heal the breach between these two nations who were former enemies. It was repeated over the radio and to Government officials, and the response guarantees unity between two more of our allies in the free world block.

The Philippine Government has officially assigned Congressman Limm to accompany the team on the rest of the mission representing the Philippine Government. It's great how the team picks up strength as we move along.

The team is leaving Manila today, bound for Bangkok, Thailand. However, it splits and another group, including my wife and I, goes to Saigon, Indochina, and then to Singapore, Malaya Peninsula. We'll then meet up again in Rangoon.

The Vice President gave a reception last night for us to celebrate a truly inspired Fourth of July. It was a stirring occasion. I stumble around trying to find words to explain things as they happen on this trip, and I know I'm totally inadequate. However, I'm enclosing a column from the Manila Evening News which tells a little about our play and the impact of our work. I hope you like it, as it says things much better than I can.

With all best wishes from your traveling salesman,

Sincerely,

BILL GROGAN.

Control of Bank Holding Companies

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1955

Mr. MULTER. Mr. Speaker, the following statement which I made before the Subcommittee on Banking of the Senate Committee on Banking and Currency on July 14, 1955, on bank holding company legislation, may be of interest to our colleagues:

STATEMENT OF ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Mr. Chairman and members of the committee, I appreciate the privilege of coming here this morning and hope that I may contribute something of value to your deliberations.

I do not have a prepared statement but with your permission will submit a complete statement to be made part of the record.

Senator FREAR. Without objection, it will be made part of the record, sir.

Mr. MULTER. I am presumptuous enough to come here and think that I can be of some help to the committee, not merely because as a member of the Banking and Currency Committee of the House I sat through the same hearing that you are conducting. I either heard or read every bit of evidence submitted there. I have read, I believe, almost every word of evidence submitted to this committee thus far by officials of our Government. I have read, I believe, almost every word that was submitted to the Judiciary Committee of the House by officials of our Government on the question of merger and consolidation of banks.

In addition, I bring to bear my own experience of some thirty-odd years of practice of the law in the city of New York, where much of my work has been devoted to representing banks, insurance companies, finance companies, and business enterprises of almost every nature.

The bill before you, I believe, is of tremendous importance. I, like many others, have from time to time said that I am not opposed to big corporations or big banks just because they are big, but as a result of all of this testimony I think we must amend our vocabulary, or at least the use of it, to a certain extent and possibly borrow from the motion-picture industry their words "stupendous" and "colossal" when we talk about bigness in the banking industry. I think we must differentiate between the "stupendous" and the "colossal" and the "big."

Without spending too much time on the philosophy behind the necessity for this legislation, I believe that everybody will agree that one thing that will lead to nationalization of our banks and the banking industry would be a concentration of wealth and a concentration of credit power. I think that is the history of nationalization of the Bank of England. That is what happened there. If we review the history of what they did in Russia, you will recall what happened when the Kerensky government was driven out by the Bolsheviks whom we now know as the Soviets. They tried to nationalize their banks and insurance companies and industries.

They very soon saw they could not just move in and take everything over, so they gave those enterprises back to private industry but concentrated each industry in the hands of a few. And after the enterprises got working smoothly in the hands of the few, the government was then able to walk back in and nationalize. And that is the way they operate there and in almost every satellite country.

I am sure that no member either of this committee or of the Congress wants to see anything like that happen. But it can happen here if we do not do something to prevent the concentration of economic power in the hands of the few.

Now, it is not necessary in order to support the bill that is before you or any one of the bills before you to determine that holding companies in and of themselves are bad or have done bad things, but if the potential for evil is there, then I think we must legislate on the subject.

May I recall to you that in 1945 the Federal Deposit Insurance Corporation issued a

unanimous report, and they said this with reference to holding companies, and I quote:

"Holding companies not only tend to become monopolistic but increase the problem of supervision. The ease with which assets may be transferred from one affiliated corporate unit to another and the possibility of the manipulation of the accounts of these enterprises make adequate examination of affiliated banks and the appraisal of their condition and capital position extremely difficult. The Corporation," meaning FDIC, "recommends that Congress enact legislation which will prohibit the future creation of holding companies and which will require the liquidation of existing holding companies after allowing a reasonable time for orderly distribution to their own stockholders of the bank stock which they now hold. The Corporation," meaning again FDIC, "believes that such legislation is distinctly preferable to the enactment of further regulatory laws in the bank holding company field."

There is some division of opinion in the FDIC today. That was a unanimous report. None of the legislation proposed now goes as far as that recommendation.

The legislation now before you does not recommend the complete liquidation of holding companies, but it does seek to regulate them both as they exist today and as they may exist in the future, as they may attempt to expand in the future, and I think that that is important.

One reason I believe that the Federal Reserve Board and the Comptroller of the Currency and the FDIC have not heretofore come in strongly urging regulatory legislation—and I get this from reading all of their testimony before this committee as well as before our committee on the House side and before the Judiciary Committee—I think might best be expressed in the words of Mr. Gidney, the Comptroller of the Currency, when testifying before the Judiciary Committee. He said in so many words that he was not always conscious of and indicated that he is not familiar with the antitrust legislation on our statute books. In his entire testimony there—and I think it is reflected by his testimony here and that too of Mr. Martin as Chairman of the Federal Reserve Board—there has been no attempt on the part of any of those Government officials, either the Comptroller of the Currency's Office, the FDIC, or the Federal Reserve Board, to examine into the extent to which holding companies evade the banking laws.

You will remember that there was written into the law provisions giving jurisdiction to the Federal Reserve Board to review those matters and take action with reference to any possible attempts to create a trust or monopoly in the banking field. There has not been a single recommendation all through the years by the Federal Reserve Board to the Attorney General for prosecution in that field. There has not been a single attempt all through the years by the Federal Reserve Board to do anything or, for that matter, by the Comptroller of the Currency to attempt to restrain expansion of banks. Not a single application for permission to merge or consolidate has been disapproved by either of them.

Now, what did I mean when I said a few moments ago that there has been an evasion of the banking laws? If the principle that is written into the statute is a good one, I think this must determine what you will do with this legislation. There has been writen into the State laws and into our national laws that banks should be restricted to banking, that they should not engage in any other business enterprises, and, further, that banks should be restricted to operating within the geographic limits of their own States. Neither State banks nor national banks under those laws are permitted to engage in any business except the banking business, and they are restricted to acting within their own States.

Now, if those principles are good, then you must enact this holding-company bill with restrictions that will apply the same way to bank holding companies. If they are bad or we do not agree with them any longer, then let's change the law and let's say banks can engage in any other enterprise and let's say they can spread out over the country and across State lines. But if we are going to adhere to those principles as they now exist in the law, then you must implement them by this bill.

The testimony as submitted shows that a bank holding company can go into my State or your State or any place in the union and qualify their dummies by buying stock for them.

Their applications to the Comptroller of the Currency show that a bank holding company—now let me strike out the word "bank"—that a holding company, because many of these holding companies do more than just banking business, will go into a community and using all of their own funds will recruit the personnel, stockholders, and directors and organize a bank, and the Comptroller of the Currency, the Federal Reserve Board, and the Federal Deposit Insurance Corporation all have gone along with that practice.

Now, again, if the statute is intended to mean what it says—it says that only individuals may be organizers of banks and only individuals may be directors who own enough stock to qualify them. True, it is a minimum; it is only a thousand dollars. But if the statute means what it says—that only individuals can organize banks and the individual directors must own qualifying shares—then I say to you that the Federal Reserve Board and the FDIC and the Comptroller of the Currency have been permitting through the years evasion of that statute. They have told us that when a holding company comes in with an application to organize a bank it sets forth the fact in its application that "we will put up all the capital and we will control this bank," and they get approval and open up new banks that way.

And, what is worse, they open new banks where branches have been denied to existing banks.

Again, if the law is intended to mean what it says, then we must see that it is enforced that way and that individuals from the community, as intended, are the majority of the owners of the bank and individuals from the community are the directors who will exercise their independent judgment.

I say to you, with all due deference to the gentlemen who testified here, that they were less than frank with you, Senator DOUGLAS, and with you, Senator LEHMAN, when in answer to your questions about option stock they did not tell you the full facts.

The fact of the matter is that in most instances of holding companies controlling the directorate, either they have the stock assigned back to them by the director, the qualifying shares, or they take from him an agreement requiring him to sell that stock back to them any time they want to buy it back. Not only must he sell it back to them when he resigns and ceases to be a director, but his agreement requires that he sell it back to them whenever they call upon him to do so.

Senator DOUGLAS. Would you pause for just a minute?

Mr. MULTER. Yes, sir.

Senator DOUGLAS. May I ask the clerk of the committee, Mr. Yingling, whether the Comptroller of the Currency has furnished the material on the so-called stock-option plan which I requested him to furnish, and which he promised to provide?

Mr. YINGLING. I do not believe it has come in yet.

Senator DOUGLAS. Mr. Chairman, may I suggest this: That the committee immediately request, by telegram or otherwise, the Comptroller of the Currency to immediately transmit this material. He has now had 10 days in which to furnish it.

Senator FREAR. Is there any objection?

Would you first like to have the clerk of the committee call and see what the prospects are?

Senator DOUGLAS. Yes.

Senator FREAR. Then if it is not forthcoming we will follow your instruction.

Senator DOUGLAS. Yes; that will be all right. (See p. 93.)

Mr. MULTER. You will be told by representatives of the bank holding companies, I am sure, as we were told in our committee, that they make sure that the directors are out of the community and exercise their independent judgment. But I am sure that you will agree with me that any director sitting on a board of directors of a bank or of any other organization who can sit there only as long as he owns some stock and who can sit there only so long as the owner of the stock does not require him to turn it over, either with or without a return, either with or without getting the thousand dollars, which may have been advanced by him or may have been advanced by the holding company for him, the man's job is dependent upon the owner of the stock who controls his right to sit there, and whether he does it consciously or unconsciously he looks to his boss to find out what policies he wants followed.

Senator DOUGLAS. Mr. Chairman, may I ask a question?

Senator FREAR. Senator DOUGLAS.

Senator DOUGLAS. Congressman, these are very interesting statements that you are making. Have you developed the facts behind these statements as a result of hearings in the House or your own independent investigation?

Mr. MULTER. I think that the hearings on the House side will substantiate to a large part what I have said, and my own experience in the field substantiates those facts, too.

I am sure that very few holding company representatives will dispute the fact that somehow or other, either through the option to buy or an out-and-out agreement they have the right to buy back the stock of the director. Once they buy a director's stock, they do not have to wait for an annual meeting. There is a vacancy immediately. The directorship is vacant once he surrenders his stock.

You will be told, as I have indicated, that these directors are left on their own, that they are free to exercise their own free judgment. Well, I say no man can exercise his own free judgment when he knows he is subject to removal by a call for his stock.

Senator FREAR. Senator DOUGLAS, the Congressman when he started his testimony said that he would give to this committee a full statement, which I am sure will substantiate the remarks he made.

Mr. MULTER. Yes; I will indicate it with examples wherever I can, sir.

Now, with that background, and having in mind the extensive hearings that have heretofore been conducted by this committee in prior years, I think everyone will agree that this legislation is essential, and I think we then must come to what form it shall take.

Your staff has done a very fine piece of work in the preparation of their tabular comparison for the use of your committee. I ask permission to have a copy of it and have it in front of me. I would like to now address myself briefly to a few of the dif-

ferences between the bills that are before you that were introduced on the Senate side and the bill as passed by the House.

I start with the definition. We thought on the House side we were following the practice originally laid down by the Federal Reserve Board when we put into the definition the words which meant that a holding company owning a single bank would be exempted from the provisions of the act. We did that because under the limited jurisdiction the Federal Reserve Board has had through the years to control holding companies, and that was in their granting them a permit to vote the bank stock which they owned if they applied for it when they wanted to vote the stock. The Federal Reserve Board through the years has made a blanket exemption in favor of all holding companies that owned a single bank.

Possibly we should have inquired more closely into why they did it and whether there was a good reason for it. Instead, we proceeded on the assumption that there was good reason behind it, and that is why we exempted in our bill, in the House bill, holding companies that own a single bank.

Senator FREAR. Well, Congressman, in your experience do you think that the bill that came from the House is quite an appropriate and a proper one? In other words, do you believe that single banks should be exempted?

Mr. MULTER. I would not raise any serious objection to a single bank owned by a holding company, that is, the holding company which owns a single bank, coming within the jurisdiction or under the provisions of the laws.

Senator FREAR. Giving the Federal Reserve the authority to exempt it?

Mr. MULTER. Yes.

Senator FREAR. I mean your experience has not proven anything but what you would go along with that?

Mr. MULTER. I cannot think of a single instance where it is needed. But, of course, what will apply to 2 banks may very well apply to 1 bank. But where we are talking about the concentration of power, economic power, across State lines in the main, and going into nonbanking businesses, I do not think it applies as much to a holding company owning a single bank as it does to the ones that own more than one bank.

But I can easily see where it can be developed and might become the implement of evading the statute.

As I say, if it is going to engage in business other than the banking business, let it divest itself of its bank interest and engage in any business it pleases other than banking. But if it is going to be in the banking business, it should be solely in the banking business and divest itself of other business interests. It could easily become an implement of evasion of the statute where a corporation does own other interests and also own a single bank. That probably could happen only where branch banking is permitted.

Now, there have been some instances where, for instance, the Grace Line owns a single bank, and there are other companies of the same kind. A company would open a bank because nobody else would come into the area and open it, and they needed it for the convenience of their own customers in the area who could not otherwise get banking facilities, or they needed it for the convenience of their own employees.

Now, the philosophy of that I am not going to argue, but I can see that in those instances it is good and rendering a public service. But I also can see that there may be instances where it will be used for evasion.

So I think if you give the Federal Reserve Board, so far as members of the Federal Reserve System, or the Comptroller of the Currency, or the FDIC as to State banks which are insured but are not otherwise subject to the jurisdiction of the Federal Reserve Board the right to say yes or no to the holding company that owns the single bank, I think we may close a possible loophole.

But I do not think that you do violence to the principle if you should exempt the holding company that owns a single bank.

Now, the next provision is on the question of exemptions. The Federal Reserve Board indicated that they wanted no discretion with reference to this particular matter and preferred that you set forth precisely who should be exempt and who should not be exempt and indicated their objections to various exemptions.

In S. 2350 you have a provision requiring corporations owning a majority of the stock, while in the bill as passed by the House it has less than a majority of the outstanding stock. As far back as 1947 the distinguished ranking minority member, who was then chairman of the House Banking and Currency Committee, Mr. Wolcott, introduced a bill in which he provided that as little as 10 percent of ownership of bank stock should make them subject to this bill. I think what he had in mind was that one large holding company which crosses State lines, engages in both business enterprises and banking, with as little as 11 percent of the outstanding stock, controls the election of directors. And that is possible because, as we know, many stockholders neither sign proxies nor attend annual meetings at which the directors are elected, and once a quorum is established a majority of the quorum elects.

That is why I think it is important that the House bill provision be continued or be adopted by this body, which will permit the supervising agencies to determine whether or not there is actual control of the bank even though there is less than a majority of the stock owned by the holding company. Without that kind of provision, you will not reach the holding companies that you want to reach under this bill.

Going to item 5 as listed in the comparative analysis, you have a provision in S. 2350 which does not appear in the House bill. I think it should be incorporated in the House bill. That provides for a merger or consolidation of bank holding companies with any other bank holding company being prohibited without approval of the Board. That is the provision that is in S. 2350. It does not appear in either of the other two bills. Frankly, I think it was overlooked. No one on the House side suggested that that provision be inserted. I think it belongs in the bill or you will have evasion of the principle.

I noted that the Chairman of the Federal Reserve Board indicated that there was no need to have a provision in this bill, and there is none in S. 2350, requiring approval of the Board before acquisition of bank assets. I think that is as important a provision as acquisition of bank stocks. As a matter of fact, the matter was pointed up very strongly when the Congress enacted, the amendment to the antitrust laws, so as to include acquisition of assets as well as stock.

At the present time I think the House Judiciary Committee is ready to report a bill which will have the same restriction as to banks. There is now a restriction in the Clayton Act against acquiring bank stocks if it is going to lessen competition. We seek to amend the law and I trust it will pass both Houses so it will apply also to acquisition of assets.

If that principle is good there, it is just as important that it be applied to the holding companies.

Senator DOUGLAS. Mr. Chairman, may I ask a question?

Senator FREAR. Senator DOUGLAS.

Senator DOUGLAS. In other words, what you are saying is that you should apply to the bank holding companies the same principle as in the Celler-Kefauver Act, for industrial companies?

Mr. MULTER. Yes, sir. And I believe there is a similar bill on this side now as to acquisition of bank assets, which is similar to the Celler bill on the other side which is about to be reported there.

Senator LEHMAN. May I ask a question even thought I am not a member of the subcommittee?

Senator FREAR. Surely, Senator LEHMAN.

Senator LEHMAN. As to these large mergers that have taken place in New York over the last few years, how were they effected? Was that through a purchase of the stock or through the acquisition of the assets of one bank by the other?

Mr. MULTER. It is my recollection, Senator, that it was done mainly by stock acquisition. And where informal representations were made that they could not do it on the national level because they involved a national bank and the Federal authorities might oppose it, they did it on the State level and became a State bank and got out of the national bank system.

But there it was done I believe in the main by stock purchase. But it can be just as easily accomplished by acquisition of the bank assets.

Since testifying before your committee, on July 15, 1955, United States Deputy Comptroller of the Currency Jennings, told the House Banking and Currency Committee that in 1954 there were voluntary liquidations of 58 banks after their assets were sold. I believe a large part of that was by State banks taking over the assets of national banks in order to evade the necessity of getting approval to merge or consolidate.

Now I pass on to item No. 8 in the comparative analysis. There we have the Federal Reserve Board, and I believe the FDIC chairmen also, recommending that the Board shall be required to consider the views of the interested State and Federal agencies before approving an acquisition of bank stock or assets by a holding company, while in the House bill, which is the same in large part as S. 880, before approving the acquisition of bank stock the Board must notify the Comptroller of the Currency as to national banks, and if he vetoes it that is the end of it. As to State banks it must notify the State banking authority, and if the State banking authority says "No," the Board would go no further.

I think that the provision in S. 2350 giving discretion to the Federal Reserve Board to review and take into account what the Comptroller of the Currency may say or what the State superintendent of banks may say in a particular instance and merely consider it is a bad provision.

You must bear in mind that what we have tried to do is keep the dual system a dual system.

If a State banking authority says, "This State bank subject to our State laws and our State supervision should remain a State bank and should not become part of a holding company," I do not think the Federal Reserve Board should be vested with the power to override that. And if the Comptroller of the Currency is properly vested with the right to say when a new bank should be organized and when it may or may not have branch banks, then the Federal Reserve Board shou'd not be in a position to overrule that as to holding companies. If these authorities have decided that a bank does not need another branch or there should not be another national bank in an area, the bank holding company device should not be availed of to get around that kind of a ruling, and it has been done many times.

In many instances where the Comptroller of the Currency has ruled or a State banking authority has ruled there is no need for any additional banking facility in a particular area, that decision has been evaded by the device of the bank holding company. If we are to maintain the right of a State to supervise its State institutions and the right of

the Comptroller of the Currency to determine when and where new banks should be organized, then we must give them the same right as to bank holding companies.

Now, it may be that it will be necessary to have very sympathetic administration to accomplish the legislative intent, but I think in writing the principles we should assume we will get sympathetic administration of the principles that we write into the bill.

Senator DOUGLAS. Congressman, it is sometimes said that one reason why the veto power being given to the State bank authority in the case of State banks and the Comptroller of the Currency in the case of national banks is preferable to ultimate discretion and decision on the part of the Federal Reserve Board is that the Federal Reserve Board is not as solicitous about small banks as the local banking authorities would be at least in the case of State banks. What do you think of that contention?

Mr. MULTER. I think there is much substance to the charge, Senator, that the smaller banks do not get the same consideration as the big banks.

Senator DOUGLAS. From the Federal Reserve?

Mr. MULTER. Yes. I am of the opinion that the Federal Reserve Board entirely overlooked their duties as imposed upon them by the Clayton Act through the years until the clamor arose against bank mergers and bank consolidations as they are happening in the present era. I think they entirely overlooked the fact that they had the right to say "There shall be no merger or no consolidation because of the provisions of the Clayton Act." Their entire tendency as indicated by their constant approvals, their failure to stand up and say, "No, this merger shan't go through, and that consolidation shan't go through," indicates a sympathy for the colossus, for the stupendous, in the banking industry.

Senator DOUGLAS. In justice to Mr. Eccles, however, should it not be said when he was Chairman of the Board of Governors of the Federal Reserve he called attention to the danger of bank companies and did his best to check at least some of the difficulties in that field?

Mr. MULTER. Yes; you are quite right that he did, sir. I think his was the lone voice in the Federal Reserve Board on the subject.

Senator DOUGLAS. And in recent years the ardor of the Federal Reserve Board has diminished on this subject?

Mr. MULTER. I think you are right, Senator?

I have not taken the time to indicate the tremendous concentration of banking in the various cities as a result of these mergers and consolidations, because I am sure your record is already full of it and will be filled even more before your hearings close. But there cannot be any doubt that there is an overconcentration of banking within large units in the various metropolitan communities.

I think back in 1900 four banks controlled 20 percent of the deposits and assets in the city of New York, and today 4 banks in New York City control more than 60 percent.

Senator DOUGLAS. Excluding mutuals?

Mr. MULTER. Yes, excluding mutuals. You have the same thing in Philadelphia. You have the same thing in Washington, D. C. Through the holding company device you have the same thing throughout the entire country, and I do not think it is good for the economy of the country.

Senator DOUGLAS. May I interrupt for a few minutes?

Senator FREAR. Yes.

Senator DOUGLAS. Congressman MULTER, may I ask you another question?

Mr. MULTER. Yes.

Senator DOUGLAS. It is sometimes said that the holding company device is only a fraction of the problem of concentration of economic power in banking. That in addition you have the problem of branches, you have the problem of mergers, you have this curious problem of trusteeship which affects one State, personal trusteeship, and therefore we should spend our time on these other problems rather than take up bank-holding companies. What do you say to that, Congressman?

Mr. MULTER. I say all of the problems are part of an overall problem. They all require our attention. I think we should give them as much attention as possible, but we should not say, "Let's push this bill aside now and take up a bill dealing with some other segment of our economy."

Let's take them one at a time and do the best we can with each of them as we go along and eventually try to correct the entire situation as it affects the overall economy.

With reference to that specific matter, I think it is important to emphasize that with the strengthening of the antitrust laws so far as banks, bank stocks and bank acquisitions are concerned, and if our Federal agencies will now be alerted to their duty to step in and make sure that there are no violations of the antitrust law—and the whole history of it up to date shows that there has been no attempt to look at this situation up to the present moment so far as banks are concerned with any view as to whether or not they will be monopolistic or in violation of the antitrust laws—the minute we strengthen those laws and the minute our enforcement agencies begin to look into this situation of bank-stock acquisition and bank-asset acquisition and begin to bring to bear the full force of the antitrust laws, then bank holding companies must become the device to evade the law unless we enact a bill such as this. They can accomplish the identical thing through the bank holding company that you are seeking to prevent by regulating bank acquisitions and bank-stock acquisition.

Senator FREAR. Senator BENNETT.

Senator BENNETT. I have been puzzled by a statement you made, Mr. MULTER, a little while ago, and I would like to have you clear it up.

As I understand it, you testified that if the State banking authorities decided that a particular area could not support another State bank and if the Comptroller of the Currency decided that the same area could not support a national bank, the bank holding company device could be used, presumably, to get another bank into the area. I would like to know how that can be worked.

Mr. MULTER. It can be worked only with the cooperation of the Comptroller of the Currency or the State authority.

Senator BENNETT. Well, that clears it up. It is impossible for the device by itself to put a bank in there. That seems to me obvious.

So it is your point then that the bank holding company has sufficient improper power that it can exert influence on the Comptroller or on the State banking authority to persuade them to put a bank holding bank in where they would not put a privately operated bank in?

Mr. MULTER. Let's not say "improper" but say "they have enough influence." And let me make this clear: If both the Comptroller of the Currency and the State banking authority were in agreement that there should be neither a State bank nor a national bank in the area, I do not think the holding company could get in with a new bank. But if the State banking authority says there is no need for another banking facility here and by that they do not mean another national bank or another State bank but they mean there is no need for an additional banking facility either national or State they still have no right to tell the Comptroller of the Currency what to do and they can only recommend to him what to do. The State will turn the application down, as has happened in New York State many times. The banking authority, the banking superintendent, has gone in and made a complete study and he said, "There is no need for an additional banking facility in this area." Then the same people came down to the Comptroller of the Currency and got a new national bank charter or another existing national bank in the area got a new branch bank from the Comptroller of the Currency.

Sometimes it has happened just the other way. The Comptroller of the Currency has said, "You do not need another bank there, national or State." But he has no right to tell the State authority what to do.

Senator BENNETT. Is not that situation inherent in our dual banking system?

Mr. MULTER. Yes; and I say keep that inherent in the bank holding company situation by continuing to give the State authority the right to say whether a bank holding company which is a State corporation may come in. There are no national holding corporations. None of them are chartered by the Federal Reserve Board or the Comptroller of the Currency or by any Federal statute. They are creatures of the State. And if a State says, as it has a right to say, "We want no holding company in here," or "We want our holding companies regulated in accordance with the same way we regulate our banks," then we should let the State do that as to the State institutions.

Senator BENNETT. I do not think this bill changes that; does it?

Mr. MULTER. S. 2350 says that the Federal Reserve Board will review the matter, having in mind the recommendations of the State authority, but it gives the Federal Reserve Board the right to overrule the State banking authority if the Board so desires, and I say that is wrong.

Senator BENNETT. Well, I have got to get straightened out on that one step deeper. If the State authority says no bank, no State bank, should go in this area and the Comptroller agrees with him and says that no national bank should go in this area, then the Federal Reserve has no power to overrule either of those or both of those and put a bank in there just because it is owned by a holding company; does it?

Mr. MULTER. No; the Federal Reserve cannot put a bank anywhere.

Senator BENNETT. That is the point I wanted to make, and I think your testimony left the inference—at least it did with me—that there was a device that the holding company had by which it could overrule both the State and the Comptroller and get a bank in an area when these people said no bank should go in.

Mr. MULTER. No; I am sorry if I created that impression. I am very happy you called my attention to it, because I did not want to create that impression.

But I do want to make clear that the holding company device can be used to evade a State bank authority's veto of a new bank there as to the State bank. It can be used to evade on the State level, with State cooperation of course, the national bank veto.

Senator BENNETT. In other words, it can only operate through cooperation with the agency that does not refuse?

Mr. MULTER. That is right.

Senator BENNETT. All right.

Mr. MULTER. And I say that when the agency refuses a bank holding company the right to acquire an additional bank in its State, the Federal Reserve Board should not be able to say, "You, Mr. Holding Company, a New York State corporation, go in nevertheless and acquire a State bank in New York."

Senator BENNETT. That is a different problem.

Mr. MULTER. Yes.

Senator BENNETT. That is a completely different problem.

Mr. MULTER. Yes.

Senator BENNETT. We must not get them mixed up.

Mr. MULTER. No, we should not.

Senator BENNETT. All right.

Mr. MULTER. I think if I have indicated now precisely why H. R. 6227 is better than S. 2350 in that respect, I have made my point.

In other words, S. 2350 gives the Federal Reserve Board the discretion to do what it pleases with bank holding company acquisitions.

Senator DOUGLAS. That is, existing banks.

Mr. MULTER. Of existing banks, yes. And we will have to strengthen the law—it is not in this bill—so as to prohibit or at least we can say in our report that we mean the National Banking Act means exactly what it says and holding companies cannot organize new national banks as they are now permitted to do by what I call administrative misinterpretation of the law.

Now, you can write into this provision that a bank holding company shall be prohibited from organizing new banks. I think you could. It is not there now.

Senator DOUGLAS. New national banks?

Mr. MULTER. Yes.

Now going on to item 11 in the comparative analysis, S. 2350 provides for an exemption of companies which manage or control banks. If that language remains in any bill that is passed, you defeat the entire purpose of the bill. It is not in H. R. 6227 or S. 880, and I do not think it should be in either bill as finally passed.

Senator DOUGLAS. Would you develop that point, Congressman?

Mr. MULTER. Yes, sir. The language in S. 2350 will permit a company to manage a bank. Now, it is my understanding of the very principle and very purpose of this legislation that it will be to stop just that kind of activity. If the holding company without owning the stock is going to actually operate and manage the bank, you do not get the kind of personal management that the banking laws are intended to require of banks. The stockholders should elect directors responsible to them, and those directors should be men who will exercise their independent judgment in accordance with the statute and the regulations of the various regulatory bodies and their best judgment, in order to do a good banking job. If you are going to have some holding company, whether it owns the stock or not or is just hired to manage the bank, you are supplanting the discretion and the judgment of the individual directors by some other authority that is not responsive to the stockholders.

If our theory is that bank directors should run the bank and be responsible for the exercise of their own discretion and judgment, then you cannot countenance any other company being called in to manage or operate the bank.

Oh, yes, when it gets into difficulty and FDIC must come in to supervise and try to bring it back to a solvent position or prevent it going into insolvency, you have a different situation, but there it is a Government agency coming in and saying what should be done. It is not some private company.

Senator BENNETT. Then that is a weakness of H. R. 6227 because it provides for the same thing.

Mr. MULTER. You are quite right, sir. It is a weakness in both bills. There should be no outside company permitted to manage the bank. The directors of each bank should be charged with and fulfill their responsibility of directors using their own judgment and not look to some outside company as to what they should do, how they should do it, or when and where they should do it, and I suggest its elimination from any bill that is enacted.

Senator LEHMAN. May I ask a question?

Senator FREAR. Senator LEHMAN.

Senator LEHMAN. I wanted some education on this point. The provision is made that a holding company can operate a bank if it has even a minority ownership of the bank.

Mr. MULTER. Yes, sir.

Senator LEHMAN. The amount of stock varies. Twenty-five percent, I believe you mentioned, and even as low as 10 percent.

Mr. MULTER. Eleven percent in one instance, sir.

Senator LEHMAN. In either case a majority of the stock is not necessarily held in certain cases by the holding company.

Mr. MULTER. That is correct.

Senator LEHMAN. How can the bona fide owners of the stock in a majority amount assert themselves?

Mr. MULTER. Only by attending the annual meeting or sending a representative there as their proxy to represent them. But you see the difficulty is that much of this stock is held in small sums, in small quantities, by diversified interests. Much stock is held in pension funds and by foundations. The practice seems to be among the pension funds, the trustees of pension funds, and the trustees of foundations not to get involved in management.

They will buy the stock for investment because of its potentiality of continued good return, the potentiality of capital increment, and they do not want to get mixed up in the management. By and large, you will find they do not execute proxies and do not send a representative to vote their shares.

That is one reason why you get in large corporations and in large banks a small minority actually in control of the institution. These trustees will step in occasionally when their attention is specifically called to the fact that there is something very bad about the management. Then they reluctantly sometimes will get into the picture and authorize somebody to vote their proxy.

Senator LEHMAN. Do you know whether the proxies are sent out to the stockholders of the bank by the holding company or by the alleged management of the bank?

Mr. MULTER. The holding company would not have to send out any requests for proxies except in those instances where they controlled a minority of the stock of the bank. In most instances you will find the holding company owns a large portion or percentage over and above a bare majority of the bank stock. It will only be necessary in those instances where they own less than a majority that they solicit proxies.

I believe that you raised the question of proxy solicitation during the course of this hearing, and I think the regulations with reference to solicitation of bank proxies, proxies for bank stock, require strengthening. I do not think that is the subject of this bill, but I think attention must be given to that and possibly——

Senator LEHMAN. I was not referring to those cases in which the company holds a majority or more than a majority of the stock. I am referring to those cases in which the bank holding company holds 25 percent, 15 percent. What I am getting at is this: Let's assume a bank holding company owns 25 percent, leaving 75 percent in other hands. What recourse have the 75 percent of the owners of the stock to take a bank out from under the hoding company?

Mr. MULTER. Only to attend an annual meeting and make their voices heard and offer an appropriate operational procedure to the stockholders and ask for action on it.

Now, in some instances it might require their getting control of the board of directors first. In others it may be possible for them to take action directly at a stockholders' meeting. But that would depend upon the bylaws and the State statutes in each particular instance.

I do not see that there is any way of their doing it effectively, except that they actually attend the stockholders' meeting and assert their rights at an annual meeting when it comes to the election of the directors and then follow through with the election of directors who would respond to their will.

Senator LEHMAN. Thank you.

Mr. MULTER. I have taken much more time than I know this committee has to devote to me. You have many other witnesses you want to hear. I will try to hurry along and finish up on this analysis of the bills.

S. 2350 has no provision against so-called self-dealing.

Senator BENNETT. Will you identify the number you are talking about?

Mr. MULTER. Yes. Under item No. 15. That is the provision against self-dealing—that is, a holding company borrowing from the bank it controls or the bank lending to the holding company.

I believe that a provision of that kind is important and should be contained in any legislation that is passed.

The matter of judicial review in item 16 I think is extremely important. I believe that it works both ways. There may be a holding company that seeks the right to go in and acquire a bank and the supervising agency says no. They certainly should have the right to go in and urge that the supervising agency, whether it be the board or the comptroller or the State supervising authority, has erred and made a mistake and they should have that right of review.

On the other hand, where they have granted the right to a holding company to go in and acquire a bank, I think if a stockholder of the bank has come in before the granting of the application and has submitted good and substantial objections to the acquisition and the supervising authority nevertheless overrules that objection, that stockholder has a vital interest in the matter and should have the right to have the matter reviewed just as much as the holding company should have a right to review an adverse decision.

I disagree with Chairman Martin of the Federal Reserve Board when he says that this provision will let "everybody and his brother" come in and review the matter. The act does not permit "everybody and his brother" to come in and butt into it. The man who comes in and objects will have to have some substantial interest in the matter. If I am not a stockholder in either the holding company or in the bank, I have no right to be heard. But if I am a stockholder, I have a right to be heard. If I come in with a substantial objection that has been capriciously or arbitrarily shunted aside, I should have a right to have it reviewed.

The same way if the bank holding company making the application has been denied the right to acquire the bank and there is good reason why it should and the action in denying the application has been arbitrary or capricious, there should be review.

Therefore, I say that the H. R. 6227 and S. 880 provisions in that regard should be incorporated in any bill that is finally passed.

Now, then, passing on to item No. 19, technical amendments to existing law. The provisions of existing law as to voting permits I believe will become obsolete and unnecessary if we have this legislation enacted. We do not have a similar provision in S. 2350. If you have this complete regulation of the holding company activity, then I do not think you need burden the Federal Reserve Board with the right or the duty of passing on whether or not a holding company should vote the stock of the bank it holds.

Now, on item No. 20, which is the last item in the matter of reports, S. 2350 requires a report sometime before 5 years after the enactment of the law. H. R. 6227 has a pro-

vision requiring such a report within 1 year and requires the report to state practically the same matters as S. 2350 does. I think because of the newness of this approach, not in our review of the situation but of the legislation, we ought to sit on it rather closely and watch it carefully, and I think that the 1-year report provision is much better than waiting for 5 years.

I am sorry I have taken so much time, gentlemen. I appreciate the opportunity of being heard. If I can be of any further assistance to the committee, I will be very happy to respond.

Senator FREAR. Thank you, Congressman. We are very happy that you came over and gave us your views, and I am sure the subcommittee and the full committee will be interested in your testimony.

Mr. MULTER. Thank you.

Senator DOUGLAS. May I express my appreciation to you, Congressman MULTER, for your able testimony.

Mr. MULTER. Thank you, sir.

Senator FREAR. Congressman, the testimony should be corrected and any additional testimony that you would like to present should be in by 4 p. m. tomorrow. The subcommittee will meet next Tuesday, and in order to have this printed the deadline has been established at 4 p. m. Can you do that?

Mr. MULTER. I will do my best. I may have to shorten my statement very much. I will try not to add too much to what I have already said, but my corrected testimony surely will be back by that time.

Senator FREAR. Thank you.

Mr. MULTER. Thank you very much.

In view of the pressure of time, I will merely correct my testimony and will be compelled to forego the opportunity of submitting a complete statement for the record.

To Foresee Probable Future Actions of Red China It Is Necessary To Study What the Communists Are Doing Within China

---

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an article by Kenneth Medley, from Nation's Business, reporting the essential findings of a 4-year study of Communist China by Air Force evaluators under the direction of Dr. Maurice T. Price, at Maxwell Air Force Base.

FORMOSA AS RED CHINA SEES IT

(By Kenneth W. Medley)

Communism has firm control over China and there appears to be no chance that this control will be shaken soon, either by forces inside China or outside.

Because of this strength, seizure of Formosa—like Korea, Indochina, and the Tachen Islands—is a step toward Asiatic domination that Mao Tse-tung can be expected to take as soon as he believes he can win.

This is the inference to be drawn from an extensive study of Red China's strengths and vulnerabilities. The study, begun in 1951, was made for the Air Force by a special staff at the University of Southern California, under the direction of Dr. Theodore H. E. Chen, head of the University's Department of Asiatic Studies.

Called the Chinese documents project, it was initiated by the Air Force as a broad introductory effort to learn how communism works in China, how the people live under it, how they accept—and comply with—the dictates of the Red regime.

The study was made by a group of Chinese social scientists and an American.

With that one exception, all were born in China. All got their early education in China. All have done graduate work.

The researchers used almost exclusively documents in the Chinese language from behind the Bamboo Curtain. They studied some 1,000 Chinese books and pamphlets, files of about 15 Chinese-language newspapers, and key Chinese periodicals. Some personal letters and a few reports in English were also used.

The project consists of 20 reports which total more than 2,500 pages.

These reveal the extent to which the people have been forced to bow to communism. control over more than 600 million individuals is so utterly complete that dissent is not tolerated.

The overwhelming fact about the communization of China is that it has eliminated a freedom heretofore unrecognized—the freedom to remain silent. Each citizen is required to demonstrate his enthusiasm. He must cheer the Communist parade. This is the essence of brainwashing.

Mao Tse-tung expects Red China to dominate the Asiatic flank of world communism. The final liberation of the proletariat in any country, he says, depends upon the liberation of the proletariat in all countries.

In this program the capture of Formosa is merely a step. It is a step similar to the victories in Korea, Indochina, the Tachen Islands, and any other islands along the China coast which the Red leaders may consider worth taking. Such victories are less strategic than psychological. The United States is pictured in China as the No. 1 enemy. Wherever Mao can engage the No. 1 enemy—and win—he will do so. Since the Chinese are told that America intends to invade China, even a military stalemate becomes a victory as the Reds see it.

When will Formosa be invaded and how? To answer this means delving into the mind of a strategist. There is no hurry, Mao would say. Time is on his side. Strategy may require other victories first.

The Chinese documents project, though cut off when only two-thirds completed, provides the Air Force, both at policy levels and in training programs, with a more thorough knowledge of life behind the Bamboo Curtain. By understanding Red China's vulnerabilities, in continuing studies of this nature, Air Force strategists can plan for any eventuality.

To learn the significant findings thus far, Nation's Business interviewed Dr. Maurice T. Price, an Air Force evaluator at Maxwell Air Force Base who is the official in charge of the study. Dr. Price's answers come solely from the Chinese documents project.

INSIDE RED CHINA: AN AIR FORCE SURVEY

What are the Chinese Communists' intentions regarding Formosa?

Formosa, like Indochina and Korea, is a step in a vast, anticipated campaign. Although the study does not touch on Formosa directly, it does reveal persistent principles which indicate probable policy.

First, Chinese Communist leaders think of their regime as linked with the Soviet Union in a world-wide struggle in which the United States is the chief antagonist. Anti-American feeling, which was bitter in the forties, was passionately increased in connection with Communist China's part in the Korean war.

The Communists also harp on the United States' successive steps in establishing military bases, diplomatic alignments and military assistance, interpreted as move against the world Communist bloc. Particularly emphasized have been United States support of Chiang Kai-shek and invasion of Formosa.

Furthermore, Mao Tse-tung has definitely claimed that the final liberation of the proletariat in any country depends on the liberation of the proletariat in all countries. Liberation of Formosa is, by this reasoning, a necessary Communist act.

DOES COMMUNIST CHINA WANT WAR?

China is developing and modernizing her war machine and military forces with utmost speed. In addition, the overriding principle of expediency and of rationalizing whatever action is decided upon a basic in the Communist operational code. Basic considerations of ideology, of attitude, of operational policy led to outright military opposition to the United States in Korea. There is no significant evidence that they have abated.

The Chinese Communists' military policy has been to strike only where and when they thought they had overwhelming superiority.

What do mainland Chinese think of Chiang Kai-shek?

They have been filled with accusations and propaganda against him and the corruption of his regime. But those who remember his rule know that his land policy was more lenient than Mao's. He did not force his family code upon the people. He did not use a veritable army to compel compliance with farm and family policies. He encouraged business and cooperated with the business community.

For these and for other reasons, Chiang's policies would be rated more favorably by large numbers of Chinese people than they were previously.

How do the Communists reconcile China's military policy with her peace campaigns?

They say the Chinese have been put on a war footing because China supports the peace movement led by Soviet Russia. Internationally, America is portrayed as the warmonger and aggressor.

Do the people support Mao's international policy?

If support of the regime is measured in terms of the government's ability to mobilize the people for great efforts, then we must say that the people are supporting the international policies.

However, there is no true measure of resistance. There have been a great many cases of individual and group opposition, but there is no valid way to determine the enthusiasm with which a farm youth volunteers for the army in preference to going to slave labor camp.

How do the Communists gain this support?

By propaganda, threat, and some promises. Where these fail, compulsion and liquidation are used.

The regime has one of the largest and most powerful propaganda machines in the world. It permeates the entire population and reaches admost everyone. Propaganda is a required activity in every unit of the Communist Party.

What is the general nature of the propaganda?

The Communists themselves say it is basically political warfare. As such, it is carried on against the people of China. Lenin's dictum that the Soviet regime rested on a balance of coercion and persuasion is often quoted in Chinese Communist literature. It probably best describes one of the most important aspects of Chinese communism. It is a master key to understanding the dynamics of Chinese Communist society.

How is propaganda handled?

The regime controls all the forms of public mass communication. It has a net work organized to reach 500 million or 600 million individuals. This network has supposedly come to involve 4 million or 5 million workers.

Propaganda includes the educational process and the school system. It includes the use of the arts, from literature to the village theater. Most of all it involves agitation for

specific activities, including local Communist objectives such as economic production, raising money, etc., as well as things to be done in the local factory, or vilage, or family life.

Broadly, it also includes the reforming or brainwashing of individuals who do not loudly advocate the party line. Anyone who does not applaud the Communist line, even in the local situation, is subject to brainwashing. He is forced to make confessions and criticize himself severely. Even the party leaders are subject to this.

Toward whom is propaganda aimed?

Toward three groups—the lower officialdom of the Communist regime, the broad masses, and the intelligentsia.

Judging by severe newspaper criticism of the Communist cadres, the party has real difficulty indoctrinating many of its own workers—keeping them in line. Indoctrination of this group is never ending. It is necessarily complicated because of the constant changing of objectives.

The second group—the broad masses—is largely illiterate. To reach these people the Communists have developed a personal network of propagandists who address them at meetings, in small groups, and in casual personal contact. Their methods also include use of pictures, comic books, loud speakers, and so on.

For the intelligentsia, the special propaganda device is brainwashing. This is undertaken according to elaborate plans in each educational institution or section of a community. In the case of schoolteachers, it involves remolding of thought.

Two publications are devoted to brainwashing. One is called Hsueh Hsi, which means study, learning, training. It is aimed at the intellectual and educated class. The other, Hsueh Hsi Ch'u Chi Pan, which means study primer, is aimed at persons of a lower educational level.

Is anti-Americanism the central theme of their propaganda?

Not exactly. It is a device. During the Korean war, anti-Americanism became the basis for gaining support for numerous programs—not only for backing up the cost of mobilization but also for supporting such things as working harder to increase production on farms and in factories, and for making cash contributions. It helped the Communists gain general support for the regime.

The Communists attempted to build up a concept of America as an imperialist power, aggressive against China for 100 years. According to this concept, America is accused of invading Formosa and Korea, bombing the Manchurian border, supporting Chiang Kai-shek, refusing to admit delegates of the People's Republic into the United Nations and the Allied Council in Japan, supporting fascism in Japan, rearming Japan, developing a chain of military bases from the Aleutians to Burma and India, sponsoring espionage activities throughout the Far East.

The Communists told their people that had the Korean invasion been successful, American forces would have proceeded through Manchuria into China.

Today a handbook called How To Understand America has wide distribution in China. It stresses three reasons for hating America:

1. Her imperialistic policies toward China.

2. Her false democracy at home and abroad.

3. Her foreign policy, said to be characterized by the exploitation of other peoples and the instigation of war.

What has this campaign had to say about United States military strength?

It emphasizes that China should scorn America's reported military might. It teaches that America is a paper tiger and, if she dares start a war, she will suffer worse defeat than Hitler and Japan.

Do the people believe this?

This question cannot be answered satisfactorily so long as Chinese Communists are in power and the anti-American policy remains unchanged. One might raise the question of whether or not American friendship and influence in China in the past 100 years have been a total loss. American missionaries who have lived under the communists report many evidences of friendship between the suppressed Chinese and the United States. Thousands of Chinese have been in contact with these missionaries and educators in China. Other thousands have been to American universities, cities and homes in this country. Some of these people have been liquidated and the communists are doing their best to brainwash the others.

There is no doubt that American economic, political and cultural influences in China have greatly diminished.

Do the Chinese people resent the communists?

A public opinion poll in China today would not register the real sentiment of the people toward Russia—or toward America, for that matter. Fear keeps people from expressing their real sentiments. Spying penetrates even the family and communists have taken great pains to liquidate secret organizations which do not support them.

Back in 1949, some 3,000 agents lost their lives in trying to collect taxes for the regime. This resistance continues.

Yet there is a certain amount of idealizing Russia.

What groups are loyal?

The 5 million or 6 million members of the Communist Party are loyal. They are the privileged elite. People of the military forces have been made a group with special privileges. This generates loyalty among them.

Also loyal are many who are profiting by supporting the regime—these are called the people as against the nationals. The former are workers, peasants, petty bourgeoisie, and the larger industrialists, businessmen, bankers, and others who are tolerated in the present transitional period.

The nationals are landlords, or other capitalists and counterrevolutionaries who are subject to brainwashing, reeducation in labor camps, liquidation.

Does the Communist Party represent a unified block of single minded workers?

The party consists of 75 to 100 top leaders, a broad selected and trained body of lower rank leaders called cadres, and the rank and file membership. Thet top leaders have felt it imperative to insist upon continuous learning or study campaigns, periodical ideological remodeling campaigns, and what is called inner party struggle conducted through many forms of ruthless criticism.

In addition to these came the noted three-anti campaign against corruption, waste, and bureaucratism, which led to actual replacement of tens of thousands of cadres. Taken together these various measures may be referred to as a party rectification and consolidation movement. Obviously the party has its troubles.

How important is the leadership of any individual?

Mao has more influence than any other person in China. However, a small, undefined group is closely associated with him. Eight or ten of these top leaders make up a Politburo.

In 1953, 29, including these Politburo members, had important positions in all three of the chief power institutions of the regime. A wider group of 80 to 90 persons constituted the top leadership at that time. Each held several positions.

Of this larger group, the majority are in their forties and fifties. The largest number from any one province are those from Hunan, the revolutionary province of central China. None came from Chiang Kai-shek's home province of Chekiang on the east coast. Very few of them came from workers' families.

Of those whose fathers' occupations are known, most are of peasant origin. About half have had at least a high-school education. More than half have had contact with foreign countries. The majority have been associated with the party for more than 25 years. The majority are well experienced in military affairs. About a fifth of them are propaganda specialists. About two-fifths are organization specialists.

Has China's new position of power and influence aroused national pride?

Yes. The success of Chinese soldiers in forcing back United Nations forces in Korea appears to have done more than any other single thing in China to gain support for the Communists' programs. The people are proud of a winner.

What is the likelihood that the Red regime will collapse, or that the people will revolt?

No evidence was found of any group with power enough to overthrow the regime in any considerable region.

Is there a possibility of a split within the party?

A study of top leadership since the founding of the People's Republic in 1949 gives no evidence of any faction powerful enough to threaten either Mao's position or his leadership. There have been no sweeping purges like those in Russia.

Dissension and even friction possibly exist among the top leadership, but it is too early to speculate whether it will lead to major splits in the party.

There is a lot of talk by non-Communists on the fringe of China about cliques that exist within the leadership. For instance, in terms of international policy, they mention the pro-Soviet clique versus the native clique. In terms of regional loyalties, they mention the Hunan clique (central Chinese) versus the Szechuan clique (west Chinese). In spite of such talk, there appears to be no evidence now, with Mao Tse-tung still alive, for regarding these rifts as threatening the unity of the party.

Has there been any widespread discontent?

There has been discontent among the intellectuals although they are a small segment of the total population.

Discontent has also been prevalent among the business groups—shopkeepers, industrial people, traders, and so on—against whom the famous five-anti campaign was waged. This campaign was a form of aggressive class war against the bourgeoisie. The Communists called it "counteroffensive to repel the ferocious attacks on state economic organization by the bourgeoisie." The five evils proclaimed by the Communists were bribery, tax evasion, fraud, theft of state assets, and leakage of state economic secrets.

The most widespread discontent has been in the countryside. The main cause has been the so-called aggrarian reform. It arose when the larger landlords were dispossessed and their land distributed to the farm laborers and poorest peasants. This was accompanied by severe taxation and the demand for gifts or donations to support various propagandic movements. Peasant resistance to this taxation has appeared throughout the whole country.

How was farm reform carried out?

In three broad phases. The first was the redistribution of the larger land holdings. The second was the launching of mutual-aid teams and agricultural producer cooperatives. The third is the establishment of collective farms.

Is collectivization their long-range objective?

Yes. But the Communists could not wait for collective farms to increase production, so they have achieved as complete control of production as possible by regulating production and requiring that all crops be sold to the Government.

Did reform increase production?

Production dipped in the period when redistribution was going on.

Later the Communists claimed an increase.

But this increased production, if true, is probably due more to such things as favorable weather conditions than to reform.

Other contributing factors were relative peace on the countryside, improvements in water conservation, and reclamation of wasteland. Government pressure may have had both positive and negative effects.

Have the transfer of land ownership and the asserted increase in production helped the peasants?

They have contributed nothing to the financial position of the peasants as a class. The reasons are: Increased farm taxes and heavy donations and contributions levied against the peasants' savings and income.

It must be remembered that, under the forcible land distribution, land, on the whole, was merely wrested from one group of peasants and transferred to another group. Except in suburban areas, where the confiscated land was nationalized, the aggregate of land in private ownership remained practically unchanged.

What is the agricultural outlook?

Controls over the farm economy have been gradually tightened. Since the landlord class has been eliminated, there is greater dependence on the Government and its agricultural measures such as marketing, credit, crop policy, and so on.

Therefore, future development of the farm economy will depend on considerable part on two things: One is the adequacy of Government help, and the other is the attitude of peasants toward collectivist pressures and policies.

What has happened to farm labor manpower?

First, the Communists have drawn off large numbers of the vigorous young men for the army and for party and Government duty. Second, large numbers of resistors have also been drafted into slave labor camps. Third, women have been encouraged to assist more in production on the farm as well as elsewhere.

After the redistribution of land, there was some labor surplus. There was, however, considerable seasonal shortage. Mutual aid teams and cooperatives and more women working have tended to relieve the shortages but it is too early to tell what the long-range effect will be.

Does the Chinese Communist attitude toward ownership of property differ from that in Russia?

The Communists have followed up Sun-Yat-sen's program of state ownership of major industries—as advocated by the Nationalists—and have both expanded state ownership and greatly increased state control of industry and business. The air force project was terminated before such comparisons with the Soviet Union could be made.

How effective has the industrialization program been?

China has had comparatively little modern industrialization. The income of the country has been predominately a farm income. Therefore, the greatest effort has been to increase farm producion to feed the large army and to provide exports for purchasing industrial equipment and modernized army equipment—largely from Russia.

Are the Communist Party and government officials corrupt?

Out of about 1,400 letters to Chinese newspaper editors sampled from files of six Chinese-language newspapers covering June, 1949, to June, 1952, 8½ percent dealt with corrupt public employees. This was more than those dealing with treacherous merchants or production efficiency, each 8 percent, or counterrevolutionary elements, 5 percent.

Probably the most striking testimony is the widely heralded three-anti campaign aimed to expose and to eradicate corruption, waste, and bureaucratism from government organs and public enterprises. This, however, had several purposes, including greater productive efficiency, and the elimination of various persons not wanted any longer, as well as riddance of the untrustworthy. The great attention given to the subject of replacements suggested that this lower level purge was a sizable one. It has been called the biggest purge so far undertaken.

How far is the People's Republic of China really democratic?

First of all, note that Mao Tse-tung's other name for it is "The Peoples' Democratic Dictatorship." This dictatorship is nominally over the nonpeople or nationals. They are the reactionaries such as "the running dogs of imperialism, the landlord class, the bureaucratic nationalists, and their representatives the Kuomintang reactionaries." These, in spite of universal suffrage, are deprived of political rights.

Second, the basic principle of political organization in Communist China is the famous "democratic centralism," the principle which in China as in the Soviet Union is carefully calculated and manipulated so as to keep government under the control of the Communist Party's top leadership. This means the dictatorship is over the people as well as the nationals.

What are the people's courts?

They were intended as a predominantly political weapon. In the name of justice they intensified the class struggle against landlords and others who did not go along with the practices of the Communists.

They consist of well-rehearsed accusation meetings and public trials before people's tribunals where, in typical instances, planted cadres shout accusations and in mob atmosphere individuals go up and beat, bite, and even kill a so-called defendant before he is convicted.

No case was found where the defendant was acquitted. It is conservative to say that hundreds of thousands of persons have been executed in these courts.

What significant changes have taken place in Chinese society?

Such nonreversible events as the killing of perhaps several million landlords and other resisting bourgeoisie and the destruction of land deeds in many places. Temporarily the army has gained a superior status; and the former intellectuals have lost theirs.

What features of the Communist rule are most hated?

There is no definite knowledge—but blood has been spilled on every level of the population and over big and little matters of all sorts and the revolution is only beginning to be implemented.

Do the people know that Russia dominates the regime?

They are constantly told that the Soviet is helping the regime in many ways and she is held up as an ideal.

Are there many Chinese political prisoners?

The actual number was not estimated. But evidence is conclusive that slave labor is a firm and settled policy of the regime.

Is ideology as important to Red China's leaders as to the Kremlin bosses?

Probably more so. Heavy emphasis is put on Marxism-Leninism and Mao's interpretation of it. Twelve classics on Marxism, Leninism, and Stalinism are required reading for all cadres. They range from the Communist Manifesto, by Marx and Engels, and Socialism, Utopian and Scientific, by Engels, to History of the Communist Party of the Soviet Union.

Indoctrination is emphasized as essential for all leaders. Intellectuals particularly are required to saturate themselves in Communist ideology and to abandon all contrary ideological positions. This includes all schoolteachers.

Are the conditions shown in the survey likely to continue?

They are dynamic and changing. The country is in a transition to a genuinely communistic phase which will be introduced only as fast as the Communists believe feasible. That goal is not yet discussed or disclosed publicly. One must expect new developments from month to month.

Of what value, then, is this past record?

You cannot understand and evaluate present actions and objectives except in the light of the experience and trends of recent years.

The Poles Among Us

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled, "The Poles Among Us," written by Albert Q. Maisel, which appeared in the Reader's Digest, June 1955. As Representative of Pennsylvania's 11th Congressional District, where thousands of fine citizens of Polish ancestry live, I concur wholeheartedly with Mr. Maisel—the Polish people have contributed mightily to this country in all phases of our society. They are extremely industrious, inventive, and loyal. I am proud to represent such a group in the Congress.

The article follows:

THE POLES AMONG US

(By Albert Q. Maisel)

Barely a year after it was founded, England's first settlement in America stood on the verge of collapse. Jamestown had a magnificent leader in the tall young soldier, Capt. John Smith; but most of the colonists sent out with him were "gentleman adventurers"—no match for the tough job they faced in the wilderness. Soon Smith was beseeching his London backers to "send but 30 carpenters, blacksmiths, and masons rather than a thousand such as we have here."

On September 25, 1608, the small ship *Good Speed* sailed up the James River bearing six broad-backed artisans. Axes in hand, they followed Smith into the woods and set about making a clearing. Within 3 weeks they had a roaring fire going under a glass furnace, the first factory in the English Colonies in America. They tapped the pine trees and distilled tar and pitch. They set up a soap works and erected a sawmill. Presently, goaded by their example, the entire settlement was hard at work.

Surprisingly, this handful to whom Smith later gave credit for saving the colony—thus insuring that America would develop as an English-speaking nation—were not Englishmen at all. Their names were Michal Lowicki, Zbigniew Stefanski, Jur Mata, Jan Bogdan, Karol Zrenica, and Stanislaw Sadowski—and they landed in America 12 years before the *Mayflower*.

A few years later these earliest Polish immigrants set another precedent. Virginia's

new Governor had authorized the election of the first legislative body in America, but only natives of England were to be allowed to vote. Indignantly, the Poles laid down their tools until they were granted full equality. In this, America's first strike—staged not for economic gains but to establish the principle of universal suffrage—the all-essential craftsmen scored a quick and total victory.

Today the Poles among us—and their American-born descendants—total 6 million. Yet their essential character has never changed. Fleeing from impoverishment and oppression, most Polish immigrants have come to America endowed with two precious possessions—an astounding capacity for hard work and a flaming love for freedom denied their in their homeland.

Among the early Americans of Polish stock, men outnumbered women 10 to 1. Many married the daughters of Dutch or English families and in time their native tongue and customs were largely forgotten. But their names—though often simplified for the convenience of their neighbors—were proudly perpetuated. Typical was the Indian trader, Jan Antoni Sadowski, whose name—because it sounded that way to Americans—was soon turned to Jonathan Sandusky. In 1735 he pushed through the Alleghenies, 200 miles beyond the nearest English settlement, and set up a trading post near the western end of Lake Erie where the city of Sandusky now stands.

In the American Resolution the Poles, with hardly an exception, joined the fight for independence. At least a thousand names of unmistakably Polish origin can be identified in the muster rolls of the Continental Army. The achievements of these Poles who were already Americans have been largely overshadowed, however, by the fame of two spectacular young volunteers from abroad, Tadeusz Kościuszko and Casimir Pulaski. Both had been exiled from Poland for resisting the dismemberment of their country, by Russia, Prussia, and Austria. With a love of liberty that knew no national borders, they saw America's struggle as their own.

Even before the Declaration of Independence was signed, Kościuszko—the first foreign officer to arrive here—offered his services to General Washington. Commissioned a Colonel of Engineers in October 1776, he erected soon thereafter the breastworks at Saratoga from which Burgoyne was battered into surrender. Later he fought as a cavalry leader through the Carolinas and played a major role in driving the British from Charleston.

Jefferson hailed him as "the purest son of liberty I have ever known." Congress voted him a grant of 500 acres and a cash award of over $12,000. But Kościuszko never used these funds. As he boarded a ship for Europe, he handed Jefferson his will, directing that his estate be used to purchase Negro slaves and give them their liberty.

Pulaski fled into exile only after he had held the czar's armies at bay for 4 bitter years. When he offered both his services and his sizable fortune to America, he did not wait for official recognition. He was heading a troop of cavalry at the time of Washington's Brandywine retreat and was credited with saving much of the Army by his slashing rear-guard raids. Four days after the battle, Congress hurriedly voted him a generalship.

During the winter at Valley Forge, Pulaski repeatedly led raids through the British lines, returning with captured food and supplies. Then he begged permission to form the independent cavalry corps that became known as the Pulaski Legion, and spent $16,000 of his own funds to equip it. His career was ended at Savannah where, charging the enemy, he was killed by grapeshot.

Through all the years the followed, America opened its gates and its heart to Polish patriots. Most of these were young members of the educated classes who came here with professional or artistic training. Thus our arts were enriched by such great musicians as Leopold Stokowski, Artur Rodzinski, Josef Hofmann; opera stars Marcella Sembrich and Jan Kiepura; the Shakespeareon actress Helena Hodjeska, and the silent-movie star Pola Negri. Among scientists were the world-famed anthropologist Bronislaw Malinowski; the University of Michigan's pioneer Professor of Aeronautics Felix Pawlowski and its equally distinguished mathematician, Prof. Louis Karpinski; the engineer Ralph Modjeski, who built the spectacular 8-mile bridge between San Francisco and Oakland and more than a score of other great bridges.

From 1880 onward, however, the majority of Polish immigrants were of different degree. At that time, Poland, partitioned among the great powers, was ruled with ruthless oppression. Peasants saw their sons conscripted into the German, Russian and Austrian armies. Rapidly growing population condemned many to work for starvation wages as laborers on the big estates. Repeated crop failures brought misery to those who still owned a few acres.

So, first by dozens and later by the tens of thousands, the young men of Poland's peasant villages set out for America. From an insignificant 30,000 in 1870, our Polish population grew to over 1 million in 1900. By 1910, 875,000 more had arrived. The tide reached its crest in 1912, when nearly 175,000 came in a single year.

Soon Poles formed a large segment of the working force wherever heavy industry had need for their sturdy muscles. In Chicago they became meat packers; in Detroit, engine-block casters; in Buffalo and Pittsburgh they worked the Bessemer converters and the blooming mills; in Scranton and Wilkes-Barre they replaced the Irish and the Welsh who'd had enough of coal mining.

Deeply devoted to their religion, they began to attend the existing Roman Catholic churches wherever they settled. But they missed the elaborate pageantry of their village churches in Poland. After some resistance, the right to set up their own churches, manned by Polish priests and following Polish customs, was granted to them. Today there are more than 900 such parishes.

It became the goal of almost every Polish family to live within walking distance of its own church, around which all sorts of social activities centered. Thus, in many cities densely populated Polish neighborhoods developed. But these were seldom slum areas. Unabale to express their peasant love for the land in any other way, Polish industrial workers scrimped and saved to buy homes of their own with at least a backyard in which to raise vegetables. In Bayonne, N. J., Americans of Polish stock own 60 percent of all the real property. And Hamtramck, Mich., the most solidly Polish city in America, has the highest ratio of homeowners in the Nation.

Lack of education condemned most of the immigrant generation to work all their lives in humble, heavy-labor jobs. Yet they never ceased to think of America as the land of opportunity. And, in the tremendous advances of their children have made here, they found full vindication for that belief.

A good measure of their progress can be found in the field of sports. Until 1915 only a few Polish-Americans stood out as athletes: among them, Frank Piekarski, who made the all-American football team in 1904, and Stanley Ketchel (originally Stanislaus Kiecal), who won the middleweight boxing title in 1907. Today, in baseball alone, the list of Polish-American stars is impressively long. Stan Musial, who gets $80,000 a year from the St. Louis Cardinals, has been batting champion of his league six times. Ted Kluszewski hit 49 homers last year for Cincinnati to earn himself a $50,000 contract. Then there are Ed Lopat, Joe Collins, Jim Konstanty, Ray Jablonski, Hank Majeski, Steve Gromek, George Shuba, and more than 20 others.

In college football, all-American honors have been pinned on one or more Americans of Polish descent in almost every year since 1927. At one point the "Fighting Irish" of Notre Dame had so many boys with Polish names on their squad that Knute Rockne was asked how he picked his players. "It's a cinch," he answered with a grin. "When I can't pronounce 'em, they're good." Today there are about 300 Polish-Americans on major college teams.

In recent years Poles have moved to the top in other sports. In golf there are Ted Kroll, Bob Toski, and the speculator Ed Furgol, who, despite a withered arm, won last year's National Open Championship. Frank Parker ranked among the top 10 in tennis for more than 15 years. Stella Walsh, one of the greatest all-round women athletes, has captured 41 National AAU championships and set 65 world and national track records.

But the performers who currently exercise the greatest influence—among the jukebox set, at any rate—are the leaders of polka bands. For many years such groups provided Polish-language radio programs with lively mazurkas and polkas, attracting only Polish audiences. Then they changed their style, put in a Gene Krupa beat (he too is a Pole), wrote a batch of lively new lyrics. Suddenly, low-power radio stations found themselves capturing network audiences as millions of high-school live wires began arguing the relative merits of such hits as Frank Wojnarowski's pressing of the "Broke-but-Happy Polka," and Bernie Witkowski's recording of "Whá, He Say Mambo." In Chicago recently, one disc jockey casually asked his listeners to name their favorite polka band—and in 3 days received 22,000 postcards.

Comparatively few among the immigrant generation from Poland ever entered the world of business, except to open small stores that relied on the trade of their fellow immigrants. Similarly, today, most of the young Polish-Americans who have attended our universities have chosen to enter the professions rather than business. There are now, for example, about 5,000 American physicians of Polish descent, including such distinguished men as Dr. Thaddeus Danowski, professor of research medicine at the University of Pittsburgh; Dr. Joseph Adamkiewicz, assistant clinical professor of surgery at Marquette University; Lt. Col. Edwin Pulaski, formerly chief assistant surgeon at Walter Reed Hospital.

The last decade has seen the rise of a whole crop of young Polish-American physicists and engineers, foremost among whom is the 43-year-old Emil J. Konopinski, who has been credited with much of the theoretical work that made possible the development of the H-bomb. Other atomic physicists include Dr. Gerald Pawlicki of the Oak Ridge National Laboratory; Dr. Bruno J. Zwolinski, of the National Science Foundation; and Dr. Roman Smoluchowski, professor of physics and metallurgical engineering at Carnegie Institue of Technology. In engineering, the firm of Piasecki Helicopter Corp. is pioneering in helicopter development.

Coming from lands where the opinions of Poles—and particularly of peasants—were never consulted, the immigrants at first had no experience to guide them in American politics. But their horizons have broadened remarkably. Since 1932 the membership of the United States House of Representatives has included from 10 to 12 Congressmen of Polish stock. JOHN DINGELL, with 20 years of seniority, is a member of the powerful

Ways and Means Committee. ALFRED SIEMINSKI is now serving his third term in Congress as a member of the Appropriations Committee. The election of Edmund S. Muskie as Governor of Maine last fall indicates that non-Polish voters will readily support a strong candidate without regard for his ancestry.

In the defense of America, recent generations of Polish-Americans have played as devoted a role as did their predecessors in Revolutionary days. When we entered World War I the astounding total of 40,000 Polish names was on the roll of the first 100,000 to enlist. Before that conflict ended, 300,000 Polish-Americans served. In World War II more than 900,000 served in the Armed Forces.

That conflict returned Poland's history to an old and dismal course. Invaded and ravaged, first by Germany, then by Russia, its people emerged from the struggle to find themselves behind the Iron Curtain with Soviet troops in occupation and Communists in full control. Once again America resumed its traditional role as a haven for exiled Poles. Since 1945 nearly 180,000 have been admitted here under the various refugee relief acts.

Through recent years our culture has been enriched by the skills and talents of such Polish exiles as Florian Znaniecki, professor emeritus of sociology at the University of Illinois; Dr. Hilary Koprowski, assistant director of virus research at Lederle Laboratories; historians Oscar Halecki of Fordham and Jan Karski of Georgetown; the Arctic explorer Henryk Arctowski, formerly at the astorphysical observatory of the Smithsonian Institution—and hundreds of others.

For Americans of Polish birth, the current condition of Poland poses a particularly heartrending dilemma. Everything in their tradition and background leads them to reject communism. Yet ties of sympathy and family relationship bind them closely to the Polish people. They resolve the dilemma by drawing a careful distinction between the Poles and the Communist Government that controls them. Through more than 100,000 food packages a month, they try to relieve the suffering of their relatives in the old country. But at the same time, in every letter they send, they seek to keep alive the thirst for Polish freedom.

Their primary interest, however, lies in America. As they view Poland's present travail, they value all the more highly the freedom, the opportunity and the human dignity that has become their American birthright.

Palmyra 100 Years Old

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. MACK of Illinois. Mr. Speaker, I am extremely proud to represent the people of Palmyra, Ill., who are celebrating the 100th anniversary of their city this week. Perhaps this celebration would be somewhat insignificant from a national point of view if it were not for the fact that Palmyra embraces the spirit which has made our country great. Situated in the agricultural area of Illinois, this progressive little city survived a most devastating fire which wiped out most of the business area, and in a year's time the progressive people of this community converted their charred ruins into a city with a new look, which included modern and attractive business buildings which Palmyra proudly displays today.

This week, Palmyra has been selected as the honor town of the week, and I wish to include the following editorial from the Illinois State Register, Springfield, Ill., paying tribute to this typical midwestern town whose citizens I proudly claim as my constituents:

One of the most progressive communities in Macoupin County, the village of Palmyra, will observe its 100th birthday anniversary this weekend. For the 750 residents of the town, the forthcoming celebration has a very special significance.

A little over 4 years ago, a devastating fire swept through the Palmyra business district. Eleven buildings were destroyed. The heart of the community was a charred ruin. Rebuilding looked like an almost impossible task to Palmyra citizens, but pledging themselves to work for a newer, more progressive town, they began reconstruction immediately.

Today, through the efforts of these public-spirited people, Palmyra boasts one of the most modern, attractive business districts in central Illinois. When the festivities begin Saturday, Palmyra citizens can proudly show off their town to centennial visitors.

For its inspiring triumph over disaster, the Illinois State Register happily salutes Palmyra on this festive occasion as honor town of the week.

Our Changing City: Flatbush to Coney Island

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. MULTER. Mr. Speaker, as the Member of Congress representing the Coney Island section of Brooklyn, N. Y., I am proud to direct the attention of our colleagues to the following article, written by Charles G. Bennett, which appeared in the July 25, 1955, issue of the New York Times:

OUR CHANGING CITY: FLATBUSH TO CONEY ISLAND—ONCE-DOWDY SECTION IS ACQUIRING POLISH AND POPULATION

(By Charles G. Bennett)

Much of the Flatbush-to-Coney Island region of Brooklyn, once staid and a bit frowzy at the edges, is growing up to be educated, alert, and sophisticated.

In the middle 1930's Brooklyn took its place among the boroughs having a municipal college campus. Brooklyn College, before then inadequately housed in scattered buildings in the downtown business district, moved into its own buildings on a tract at Bedford Avenue and Avenue H.

A recent report showed an enrollment of 8,112 day students and 12,017 night students, nearly up to Manhattan's City College.

For many years this physical plant of higher education in the heart of Flatbush was little changed. But recently expansion got under way.

The initial investment in the college buildings and site was about $11 million. Last fall the city completed and put into use the $4,700,000 Whitman Hall, the new college arts and student center. Last October the board of estimate approved plans for a library extension building at a cost of $2,482,000.

If all of this were not enough to establish the place of Flatbush as an educational center, one could add the $14 million basic sciences building of the State University's Downstate Medical Center on Clarkson Avenue between New York and Brooklyn Avenues in Flatbush.

Now under construction, this 800-room 11-story building will house the basic science department of the country's largest college of medicine when it is opened. The building, it is expected, will be turned over to the trustees of the State University by June 1956.

Nor are the lower levels of education being forgotten in the Flatbush-to-Coney Island area.

There, since the end of World War II, the city has built 12 elementary and secondary schools. And in the near future work will begin on a $2,600,000 modernization of Erasmus Hall High School on Flatbush Avenue, near Church Avenue, and on a $6,900,000 high school for Sheepshead Bay.

EXPANSION IN HOUSING

For the entire area, maturity in education has gone hand-in-hand with population growth and an expansion in housing, both public and private. The Shore Parkway section of the Belt Parkway system, skirting much of the southern rim of the region, has been a vital factor in the housing growth.

As for Coney Island, now as for many years a haven for recreation seekers from far and wide, it is fast trading in its storied glitter for genuine glamor.

Between Flatbush and Coney Island, as the Brighton train of the B. M. T. subway line travels, Sheepshead Bay has maintained for the last quarter century its popularity with boating enthusiasts and others who like a typically shore atmosphere.

Excellent restaurants near or directly on the waterfront still tempt those who delight in shore dinners. At all times when weather permits, fishermen abound. Throughout the boating season the picturesque bay itself is dotted with pleasure craft.

A general street-widening and rehabilitation program carried out during the 1930's helped to keep Sheepshead Bay bright and shining.

Coney, formerly administered by the Brooklyn borough president, was taken over in 1938 by the parks department and its all-pervading commissioner, Robert Moses. He decided he wanted better conditions for the millions who visit the beach.

In 1940 three-fourths of a mile of boardwalk was moved 200 feet inshore, tremendous quantities of sand were pumped in, and maintenance forces assigned. Tides no longer touched the boardwalk. In 1941, after the city acquired Brighton Beach, the boardwalk and beach were extended several miles farther.

To the east of Coney Island, the Manhattan Beach section, for many years a private swimmining development and later occupied by the Coast Guard, is being developed for park purposes. The area extending 1,700 feet east of Ocean Avenue and south of Oriental Boulevard—a 40-acre tract—is gradually becoming a bathing beach, including promenade and picnic and play areas.

The city is considering a proposal to take for park use a 2,000-foot existing waterfront walk, privately owned and known as the Esplanade. Assuming it is rebuilt as a connection between Manhattan and Brighton Beaches, it will complete a 3-mile waterfront promenade from the west end of Coney Island to the east end of Manhattan Beach.

A new aquarium now being built just off the boardwalk near West Eighth Street is

emerging as a symbol of the resurgence of Coney Island. Ground was broken October 24, 1954, for the first portion of the structure—a $1,500,000 segment of the $10,000,000 ultimate building.

The aquarium—replacing the old one at the Battery which was closed October 1, 1941, to make way for the Brooklyn-Battery Tunnel—is a joint undertaking of the New York Zoological Society and the Parks Department. The section now being built is slated for completion in the early summer of 1956.

Also being built is a pedestrian ramp that Coney visitors may use to walk from the reconstructed West Eighth Street station of the B. M. T. Subway to the aquarium.

Zoning, drafted by the city planning commission under the leadership of Chairman John J. Bennett, is the key to many of the changes taking place at Coney Island. Through a new zoning pattern, new housing there is being encouraged. Honky-tonks are being confined to the traditional amusement area.

New housing is taking advantage of the welcome mat. A 634-apartment Gravesend Houses—a public-housing project—is already in operation for low-income tenants.

The City Housing Authority is building a 534-unit Coney Island Houses for middle-income families. One more public-housing project is in sight—the 1,200-apartment Luna Park Houses is slated to rise on the site of the burned-out amusement center, Luna Park, near West Eighth Street.

POPULATION IS GROWING

The population of the Flatbush-to-Coney Island region grew from 604,203 persons in 1930 to 796,300 persons at the end of 1954. Included in these figures was a white population that went up from 600,798 in 1930 to 787,300 in 1954, and a nonwhite population that grew from 3,405 in 1930 to 5,800 last year.

In the 25-year period Puerto Ricans moved into part of the area, with 3,200 living there at the end of 1954.

City statisticians estimate that 10 percent of the families in the area are in the upper-income bracket—$5,000 a year and better. Some 38,000 families reported incomes of more than $10,000. Eighty-three percent of the families are in the middle-income level, $3,000 to $5,000 a year, while 7 percent are low-income living on less than $3,000 a year.

In the last few years substantial apartment houses have sprung up in once remote territory made accessible largely by the Belt Parkway.

A majority of these have been single-building apartment houses accommodating about 100 families each. But some larger developments have sprung up. In the Marine Park area, at Gerritsen Avenue, Avenue U and Avenue W, there is Brigham Park, an 18-building cooperative housing 1,080 families.

Fred C. Trump, Brooklyn realty man, has erected Beach Haven, a 31-building private development north of the Belt Parkway and west of Ocean Parkway.

Nowhere has the spurt in housing been more dramatic than in the Sheepshead Bay territory bounded roughly by Bedford Avenue, Shellbank Creek, Avenue U, and the bay itself. In 1930 this tract was largely farmland. It is now bristling with 1- and 2-family houses.

Along Ocean Avenue and in the Midwood and Flatbush areas there is a substantial amount of top middle-income housing with rentals near $50 a room a month. Flatbush now, as 25 years ago, represents good, solid almost suburban living, with many large, prosperous one-family homes still in evidence.

More and more, however, apartment buildings have invaded Flatbush. Many garden apartments have appeared not only here, but also in Bensonhurst, Bath Beach, and Coney Island.

In addition to the new developments at Coney Island, public housing already has been provided for 3,392 middle-income families in the Flatbush-to-Coney Island region. Also, 1,610 units are under construction in the area for middle-income families and 1,765 apartments for low-income families.

There are those who say that residential Flatbush has changed little over the years. In fact, Brooklyn Borough President John Cashmore recently wrote:

"From its beginning as a small hamlet more than 300 years ago, Flatbush has never failed to give expression to the spirit of good neighborliness and the Golden Rule."

Throughout the area progress has been marked in many fields. For 25 years the 1,792-acre Marine Park has been slowly emerging from a desolate tract to a filled-in play area complete with golf course, baseball diamonds, picnic groves, sitting spaces, and a boat basin. Much work remains to be done, but the long-awaited improvement is on its way.

The 394-acre Floyd Bennett Field (Municipal Airport No. 1) has been operated since May 26, 1941, by the United States Navy and other military units as a major service airfield. From 1931, when it was opened, to 1941 it was owned and operated by New York City, with sightseeing plane jaunts a specialty.

Many years ago Flatbush, the cradle of the $1 billion motion-picture industry, lost out to Hollywood.

STUDIO IS BEING REVIVED

But now the old Flatbush Vitagraph Studio at Elm Avenue and East 15th Street will relive its old glory. The National Broadcasting Co. has spent $3,500,000 to convert the sprawling structure, which in the early nineteen hundreds sheltered the beginning of big-scale movie production, into the largest in the network's nationwide chain of television studios. The studio will be used largely for color telecasting.

Two events recently occurred in this Brooklyn region, which perhaps prove that the old and wornout must go, but that the popular will endure:

1. The old Brighton Theater at Ocean Parkway and Brighton Beach Avenue, once a gay amusement spot for a now vanished race of prosperous all-summer Brooklyn beach vacationists, was demolished 4 months ago to make way for a new apartment house.

2. Nathan's Famous, Inc., on Surf Avenue near Stillwell Avenue, has been dispensing hotdogs and other resort delicacies since 1916. Last July 6 the place commemorated a milestone in its business career—it sold its 100-millionth frankfurter.

Iowa Farmers, Religious Groups, and the Boston Symphony Orchestra Aid the President in Lifting the Iron Curtain—I

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, in the New York Times of Saturday, July 23, 1955, Anthony Leviero gives President Eisenhower's proposal to lift the Iron Curtain a better chance of success in Washington than his plan for a mutual inspection of defenses. Both countries will have to tear down many barriers, real and psychological, before ideas, people, and trade can flow freely between them, according to Mr. Leviero who goes on to say, quite accurately, I believe, that the chances for freer trade with the Soviet bloc are poorer than those for an exchange of peoples and ideas, "at least until the Soviet Union gives some convincing evidence of seriousness in the search for peace."

Beginning with the historic speech which William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, delivered at the National Press Club in Washington last February, there has been an increasing amount of interest among broad masses of our people in cultural interchange with foreign countries to meet the challenge of competitive coexistence with communism. This movement culminated in the President's proposals at Geneva for lifting the Iron Curtain.

I include articles from the New York Times and the Washington Star newspapers which document the interest of the American people in the success of the President's plans:

[From the New York Times of July 23, 1955]

CAPITAL ASSESSES IRON CURTAIN BID—GIVES PRESIDENT'S CULTURAL PLEA TO REDS BETTER CHANCE THAN ARMS SCRUTINY PLAN

(By Anthony Leviero)

WASHINGTON, July 22.—President Eisenhower's proposal to lift the Iron Curtain was given a better chance of success in Washington than his plan for a mutual inspection of defenses.

Nevertheless, both countries would have to tear down many barriers, real and psychological, before ideas, people and trade could flow freely between them. Observers believed that the chances for freer trade with the Soviet bloc were poorer than those for an exchange of peoples and ideas, at least until the Soviet Union gives some convincing evidence of seriousness in the search for peace.

The United States is expected, however, to accept a Soviet proposal for a world economic conference, if it is made at Geneva. In the recent 10th anniversary celebration of the United Nations in San Francisco Soviet Foreign Minister Vyacheslav M. Molotov said the time had come for such a conference "to facilitate the development of world trade."

By the executive order of the President, strict controls are maintained to prevent the sale of hundreds of items of strategic goods to the Soviet Union or its satellites and Communist China. A general revision of these controls, as officials see it, would occur only if there were a drastic improvement in East-West political relations.

However, the President and his advisers went to Geneva with comprehensive statistics on East-West trade and the possibility of increasing commerce in peaceful goods.

In anticipation of the conference, Joseph M. Dodge, special adviser to the President on foreign trade policy, called on all the agencies concerned to supply the needed data.

INQUIRIES BY INDUSTRY

Interest in more trade with the Communist countries has also been indicated by industry in its inquiries to the Bureau of Foreign Commerce of the State Department. Exporters of automobiles, producers of light machine tools and parts, manufacturers of processed food and producers of tractors and other farm machinery have been seeking the trade information.

In his 1954 report to Congress on export controls, Sinclair Weeks, Secretary of Commerce, said that in the last quarter of 1954 export licenses with a value of $10,355,000 were approved for shipments to the Soviet Union and its European satellites. This was $1,340,000 more than in the previous quarter,

and $2,043,000 more than the last quarter of 1953.

In the realm of ideas and people some of the barriers are just as concrete as the embargo on strategic goods. The Soviet Union has been turning a smile to the West since Nikita S. Khrushchev became dominant in the Kremlin. Westerners, by comparison with the Stalin era, are now swarming over the Soviet Union under a liberalized visa policy.

Russians are free to come here, too, but they must submit to fingerprinting. This requirement kept a group of Soviet school editors from coming here. It is true, American officials were somewhat suspicious about some of the editors when they learned that some were in the 40-year-old bracket. Student editors in this country range in the twenties.

The fingerprinting requirement was dropped to admit the Russian farmers who are having a bourgeois good time in Iowa. That was done by the Government's winking at the law and admitting them as officials who along with diplomats and United Nations representatives are exempt from the fingerprinting requirement.

Only Congress can do way with this requirement, and it is unlikely to do so in its present mood, because it is a provision of the Immigration and Naturalization (McCarran-Walter Act.

The exchange of people, if present mutual visiting means anything is expected by officials to go a long way toward mutual understanding and easing of tensions, Russian farmers gulping ice cream sodas and being feted by chambers of commerce in the Middle West, stronghold of American conservatism, are being accepted as people rather than as Russians.

And similarly well-dressed American farmers, asked in disbelief to show their callouses to Ukranians to prove they live by the soil, are giving Russians a more wholesome understanding of Americans.

The big hit made by the American chess team in Moscow is also viewed as a measure of how easy understanding may be achieved.

JAMMING VOICE OF AMERICA

But the Kremlin still keeps an electronic curtain around the Soviet Union in an effort to keep the message of the Voice of America from getting through. It is reported here that an estimated 1,000 jamming units are operated in the vicinity of Moscow in the costly effort to swamp the Voice.

The Soviet Union still severely restricts the admission of United States books and periodicals while the Post Office Department here has been intercepting and withholding printed materials from the Soviet bloc that it deems to be propaganda.

Both countries still strictly limit the movements of the other's diplomats. In reprisal for long-existing Soviet restrictions, the United States earlier this year listed large areas of the United States that were proscribed, as far as Soviet representatives were concerned. The State Department informed Moscow we were ready to relax the restrictions any time the Russians did the same.

RUSSIANS IN IOWA

(By Harrison E. Salisbury)

DES MOINES.—A fabulous combination—corn and hogs—has given Iowa the most successful farm economy in the world. Twelve Russians, with smiles on their faces and many questions on their lips, are trying to find the secret of how this combination works. It is the first time any of them—all important in the Soviet agricultural hierarchy—has seen the tall-corn State. And the first time most of Iowa has ever seen any Soviet Russian.

The meeting of Russians and Iowans has been somewhat more successful than in all probability either side thought it would be. Most of the Soviet delegates, including their chief, Acting Agricultural Minister Vladimir V. Matskevich, hail from the Ukraine, which is Russia's closest approximation of Iowa. Ukrainians are traditionally warm and outgoing, and the Soviet delegation is in that tradition. The result has been a spontaneous demonstration of Russian-American good feeling such as has not been seen since Churchill made the "cold war" official with his speech at Fulton, in neighboring Missouri.

The moment they hit Des Moines the Russians took off their coats, rolled up their sleeves, and, with many a wisecrack, went about seeking answers. Before they arrived a good many Iowans wondered whether they were genuinely interested in farming. After watching them clamber over farm machinery, duck under barbed-wire fences, give the hogs a familiar slap on the flanks, and sift the corn-producing soil with their fingers—as shown in these pictures—Iowans have rapidly lost their skepticism. There is no doubt: the Russian delegation is seriously interested in the business of turning corn into hogs, and particularly in why Iowans can do it so well. And Matskevich says freely he and his colleagues are intrigued by the income side of farming as well as the technology.

SYMPHONY OFFERS TO PLAY IN SOVIET—BOSTON ORCHESTRA IS EAGER TO AID IN EISENHOWER PLEA TO LIFT IRON CURTAIN

(By Howard Taubman)

LENOX, MASS., July 23.—The Boston Symphony Orchestra offered today to tour in the Soviet Union as a step toward implementing President Eisenhower's request in Geneva yesterday for lifting of the Iron Curtain.

The orchestra is planning a European trip in September 1956. It also would be willing to play in the satellite countries.

After consulting with other officials of the Boston Symphony who are here at Tanglewood, Henry B. Cabot, president of the orchestra's trustees, issued this statement:

"We welcome the President's suggestions to help remove the Iron Curtain by a cultural and intellectual exchange with the Soviet Union. The Boston Symphony Orchestra is ready and eager, if the President wishes, to be the first American orchestra to play in Moscow."

As far as the records show, no American orchestra has ever visited Russia, either in Czarist days or since the Communists took over power. A few individual American musicians have appeared there, but virtually none since the cold war started.

Mr. Cabot disclosed that in the early years of World War II, when Serge Koussevitzky, Russian-born conductor, was head of the Boston Symphony, an invitation was sent to Moscow through the State Department to Eugen Mravinsky, Leningrad conductor, to be a guest leader in Boston.

Though Mr. Mravinsky cabled that he would be delighted to come, neither the Boston Symphony nor the United States received an official reply, and he did not come.

Charles Munch, conductor of the Boston Symphony since the late Mr. Koussevitzky's retirement in 1949, expressed enthusiasm about the plan to take the Boston Symphony to the Soviet Union.

Since foreign tours by modern symphony orchestras comprising more than a hundred men take a lot of arranging, the Boston officials feel that it would not be a moment too soon to start negotiations.

The New York Philharmonic Symphony will be touring in Europe this September. But it has a full schedule and could not be rerouted to Soviet cities without canceling engagements in other European capitals.

By coincidence, an official of the International Exchange Program, which has been arranging the sending of American cultural units to foreign lands, arrived at Tanglewood today. Robert C. Schnitzer, executive secretary of the program sponsored by the American National Theatre and Academy, was here to confer with Thomas D. Perry, Jr., the Boston Orchestra's manager, about the next year's European trip.

Mr. Cabot said that should the Boston Symphony make the Soviet trip and should the Russians respond by sending an orchestra or ballet to the United States, the Boston Symphony would be glad to sponsor the performances in Boston.

[From the Washington (D. C.) Sunday Star of July 24, 1955]

COEXISTENCE PROGRAM PLANNED FOR CHURCHES

A coexistence program between Soviet and Western religious groups is underway. Some Western church leaders are hopeful the development will go beyond mere coexistence and lead to real fellowship.

Whether this hope is justified only the future can tell. Since religious leaders in the Soviet orbit are subject to the political policy of the Communists the outcome of the current trend will likely depend upon the genuineness of Russian pretensions of goodwill toward the West.

For the moment, Western Protestant and Anglican leaders are taking advantage of the new policy to promote contacts with churchmen in Iron Curtain countries, a goal which they have sought for some time. Eastern Orthodox leaders seem to be somewhat more cautious.

The outstanding development has been the 2-week visit of an 8-man delegation of Soviet church leaders of Great Britain which ended this week. Four members of the party were Russian Orthodox theologians, 2 were Lutheran bishops, and 2 Baptist leaders.

The most striking result of their visit was a tentative decision by the Orthodox theologians and representatives of the Church of England to hold a joint conference in Moscow next year. Purpose of this conference will be to discuss intercommunion between the two churches.

The decision to hold the Moscow meeting emerged from preliminary talks on intercommunion held at Lambeth Palace in London between Anglican officials and the four Russion Orthodox theologians. At this meeting an agenda for the Moscow conference was drawn up.

During their visit to England the Soviet delegation stayed at Lambeth Palace, headquarters of Dr. Geoffrey Francis Fisher, Archbishop of Canterbury.

Earlier, Metropolitan Pitirim of Minsk and Byelorussia, leader of the Orthodox members of the delegation, told newsmen he had been authorized to invite group of British church leaders to visit the Soviet Union.

Presumably, such a delegation would be selected by the British Council of Churches under whose auspices the Soviet church party visited Britain.

It was believed in London that should such a visit to Russia materialize it will coincide with the Russian Orthodox-Anglican talks in Moscow. The occasion also is expected to be utilized by other Christian groups in the Soviet Union—such as the Baptists—to discuss matters of common interest with their coreligionists in the British delegation.

Meanwhile, several delegations of Western churchmen who visited Russia reported on the state of the church there, as they saw it.

A four-man group of Dutch protestant theologians said Russian Orthodox leaders are eager to establish contacts with religious

bodies outside the Iron Curtain. They reported that religion is deeply rooted in the life of the Russian people.

Seven Church of England parish priests said relations between officials of the Russian Orthodox Church and the Soviet Government can be described as "peaceful coexistence." The group reported they saw packed congregations in churches.

But a Norwegian theologian who visited Moscow and Leningrad said the great danger facing the church in the Soviet Union is that of a "museum death."

Prof. Nils Alstrup Dahl, dean of the University of Oslo, theological faculty, said there is no persecution and, within its limited sphere, the church has freedom.

"But the state has succeeded to a considerable extent in keeping the church 'on a reservation' similar to the way Indians were treated in the United States," he said. "The reservations are under the state's protection and visitors may go to them to see how well 'this special type of human being' is cared for."

Other visits by Western church delegations to Russia are in the offing. Four prominent Baptist clergymen, including three Americans, are scheduled to arrive in Moscow early in August.

Iowa Farmers, Religious Groups, and the Boston Symphony Orchestra Aid the President in Lifting the Iron Curtain—II

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, hearings are being held by the House Education and Labor Committee on a number of bills which would establish a program of cultural interchange with foreign countries to meet the challenge of competitive coexistence with communism. Primarily, these bills would make the activities being carried on under the President's Emergency Fund a permanent part of the armament of the United States during this cold-war period.

Senator JAMES E. MURRAY, of Montana, has just introduced in the Senate a bill, S. 2613, which is a companion measure to the bills being considered by the Subcommittee on Distinguished Civilian Awards and Cultural Interchange and Development of the Committee on Education and Labor of the House. The program which these bills would authorize was given great impetus by William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, in a highly important speech which he delivered at the National Press Club in February of this year.

I include here a letter which I have received from Theodore C. Streibert, Director of the United States Information Agency, as well as a statement by Abbott Washburn, Deputy Director of that Agency, in support of the bills which Senator MURRAY and I have sponsored.

The letter and statement follow:

UNITED STATES INFORMATION AGENCY,
Washington, July 21, 1955.

The Honorable FRANK THOMPSON, Jr.
House of Representatives.

DEAR MR. THOMPSON: Please accept my sincere thanks in behalf of the Agency for your fine work in support of the President's Emergency Fund. I am sure your interest and help were factors which led the committee to refrain from further cutting the President's request.

We hopefully anticipate restoration of the fund in the Senate Appropriations Committee and will look forward to your continuing interest when the bill returns to the floor of the House.

Sincerely yours,

THEODORE C. STREIBERT,
Director.

STATEMENT BY ABBOTT WASHBURN, DEPUTY DIRECTOR, UNITED STATES INFORMATION AGENCY, PRESENTED TO THE SUBCOMMITTEE ON DISTINGUISHED CIVILIAN AWARDS AND CULTURAL INTERCHANGE AND DEVELOPMENT OF THE COMMITTEE ON EDUCATION AND LABOR OF THE HOUSE OF REPRESENTATIVES ON H. R. 6874

It might be helpful if I prefaced my comments with a brief remark or two about the United States Information Agency. This will show the nature of our interest in the subject matter of the bill before your committee (H. R. 6874).

As you perhaps know, the United States Information Agency is an independent Agency established by the President in August 1953, to carry on the overseas information program of the Government. Formerly this function was carried on by the State Department, but the President and Mr. Dulles felt it should be handled as an independent operation. Shortly after the Agency was established, the President issued a formal directive defining the task of the new Agency. It is a short directive and reads as follows:

"In carrying out its responsibilities in accordance with pertinent statutes and Presidential directives, the United States Information Agency shall be guided by the following:

"The purpose of the United States Information Agency shall be to submit evidence to peoples of other nations by means of communication techniques that the objectives and policies of the United States are in harmony with and will advance their legitimate aspirations for freedom, progress, and peace.

"The purpose in the paragraph above is to be carried out primarily:

"1. By explaining and interpreting to foreign peoples the objectives and policies of the United States Government.

"2. By depicting imaginatively the correlation between United States policies and the legitimate aspirations of other peoples of the world.

"3. By unmasking and countering hostile attempts to distort or to frustrate the objectives and poliices of the United States.

"4. By delineating those important aspects of the life and culture of the people of the United States which facilitate understanding of the policies and objectives of the Government of the United States."

The Agency carries out this mission through a variety of means. We have some 209 information posts in 78 countries abroad, operating as an integral part of the United States diplomatic missions. Through our Voice of America facilities we broadcast all over the world. We also have an extensive library system, a press division, and a motion-picture production and distribution program.

The essence of our task is to encourage favorable attitudes toward the United States and toward our policies and objectives. One of the biggest obstacles we face in this effort is an opinion prevalent in many parts of the world that the United States is a materialistic, artistically illiterate society—that we are "cultural adolescents." Therefore, anything that is done to show people abroad that this is ont true will not only make the Information Agency's job easier but will immeasurably help the effectiveness of our country's foreign policy. Obviously the United States cannot maintain its position or fulfill its function as one of the leading nations in the world if we cannot command the respect of the nations with which we deal.

Actually, the high level of artistic, literary, and other cultural achievement in the United States is something we can all be proud of. Anything that will further raise the level of such cultural activities is all to the good. For this reason the information agency is in sympathy with the general objectives of this bill.

Whether the particular methods recommended in the part of the bill having to do with cultural development here in the United States are sound is, however, a matter on which I do not feel qualified to comment. Our job is strictly an overseas one: we do not have the competence to comment on domestic policies nor do we feel it appropriate for us to do so.

I would like, however, to comment on title I of the bill, which concerns overseas activities.

This title would authorize a continuing program for sending artists, athletes, dramatic and ballet companies, symphony orchestras, and other talented groups abroad to demonstrate our country's true cultural achievements. We in the information agency (and Mr. Nelson Rockefeller's group in the White House) believe strongly in this type of program. As you know, this has been done extensively during the past year under a special $5 million Presidential emergency appropriation. (Two million two hundred and fifty thousand dollars of this fund has been, or is being, used for cultural presentations; $2½ million for trade fairs; and the remaining $250,000 for promotion and exploitation of these events.) The administration is now seeking $6 million from the Congress for the same purposes during fiscal 1956.

The importance of a cultural program of this kind cannot be exaggerated. In recent years the Soviet Union has been putting a great deal of effort into such activities. The number of delegations into and out of the U. S. S. R. in 1954 was over 1,000—double the number in 1953. Their musicians, ballet companies, soccer teams, and other performers are journeying to all parts of the world. The Chinese Communists are also heavily engaged in this cultural offensive. The Peking Opera just a couple of weeks ago, scored a tremendous success in Paris. The number of trade fairs the Communists plan to participate in during 1955 is somewhere in the neighborhood of 65. This compares with 45 in 1954. There's no question about it. The Communists got the jump on us in this field, but under the President's emergency program we have done a great deal ourselves during the past year, and the reaction has been overwhelmingly favorable.

In the case of major projects such as the "Porgy and Bess" tour and the NBC "Symphony of the Air" concerts, the enthusiastic press reaction abroad has been unprecedented.

The impact 100 men equipped with musical instruments can have upon a whole nation's attitudes toward the United States is demonstrated by the remark of a Japanese cabinet minister on the subject of the "Symphony of the Air" as reported by an American

journalist: "If America were to withdraw all their security forces from Japan, I am sure that we would defend your orchestra to the last man." On this same subject, Bob Considine recently reported in his column:

"Japan has never before been visited by a Western symphony orchestra. Every seat was sold within 2 hours of the announcement of the playing dates. For student concerts kids stood in line for as long as 30 hours.

"The men of the orchestra have created such a flood of good will and understanding of what America stands for that we have emerged in a wholly new light to tens of thousands of Japanese who considered our culture questionable.

"Mind you, this is not a propaganda deal as such. The orchestra doesn't know from propaganda, caps or lowercase. The men regard themselves merely as American musicians, playing good music as well as they can. If they have overwhelmed Japan, they are just as overwhelmed themselves. * * *

"The cost to our Government of this tour is a tiny fraction of what it pays for a single fighting plane. We buy the plane in the hope that we'll never have to use it in anger. How about buying a little more of the first, and using it more and more all over the world?"

How can we make more of these presentations possible? Unfortunately, private commercial presentations in many of those areas of the world where they are needed most are just not feasible. The box office returns and other receipts are inadequate to support the venture. In the past a few projects have been supported by the Department of State, USIA, or by private philanthropic groups. The task now is far beyond those resources, and a program of the kind contemplated by the bill before you—together with adequate appropriations—is imperative if we are to meet the challenge of the Communist cultural offensive.

While the Information Agency is strongly in favor of a continuing program of the kind authorized by the bill, the executive branch has not reached a decision as to what kind of permanent legislation is desirable. I cannot, therefore, speak for the executive branch. However, the following is our thinking on the bill:

First of all, it seems to me there ought to be something on participation in trade fairs in the same legislation. The President's emergency program embraces trade fairs as well as cultural activities. And we have scored outstanding successes at some of these fairs. Cinerama was a smash hit at Damascus. Later, at Bangkok, the Reds were scared out completely by Cinerama. The United States exhibit at Paris was outstanding, too. Such fairs give us an opportunity to show that our free system is the most productive in the world, and that we are producing primarily for peace, not war, contrary to the constant charges of Communist propaganda. The Communists, as I mentioned, have also been stepping up their activities at international fairs, trying to show that their system is more productive than the free ecenomies of the West. Incidentally, the productivity of the Soviet economy—and for that matter even the Red Chinese—while it appears second-class to us, looks wonderful to the people of underdeveloped areas. In my opinion, then, a trade-fair program ought to go arm-in-arm with any cultural program abroad. (Sports participation, by the way, is included in the cultural program.)

Secondly, any legislation ought to provide for full promotion and publicity of these activities. This is a big part of the job the Information Agency does for the President's program. We see to it that any coming visit by a United States artist or performing group, or United States representatives to a trade fair, is made known in advance to the local people. We also see to it that the performance gets full publicity over the radio, in newspapers, and magazines, etc. In this way the effect of what the United States does is multiplied many times. For every person who actually sees what the United States has brought to his country, hundreds hear about it, and hear what local critics or commentators have to say about it. This is a most important part of the program. It maximizes the results to the taxpayer of the dollars put into the President's program.

Finally, I think any legislation in this field ought to vest authority and appropriations in the President and give him broad discretion as to the precise administrative means to carry out the program. Vesting authority and appropriations in the President will make sure that the left hand always knows what the right hand is doing, that the several parts of the program work together and complement each other, and do not gradually drift apart. It will also give the program the stature that it needs and the necessary flexibility. The experience gained in the past year in operating within the framework of the President's emergency fund should be taken into consideration in setting up the legislative means to implement this important program in the future.

H. R. 7474, Utility Reimbursement

EXTENSION OF REMARKS
OF
HON. BRADY GENTRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. GENTRY. Mr. Speaker, H. R. 7474 contains a provision that 50 percent of the cost of relocating utility facilities necessitated by the construction of projects on the interstate, Federal primary, secondary and urban highway system may be paid from Federal funds whenever, under the laws of the States where the project is being constructed, the entire relocation cost is to be borne by the utilities.

Stated rather baldly, this means that even though a utility has made a solemn, written, legal contract with a State that it will relocate its facilities in consideration of being given the use of highway rights-of-way, or even though it has requested and accepted a franchise to enter upon highway rights-of-way as a result of a statute enacted by a State legislature by which it specifically obligated itself to relocate its facilities to permit highway improvement—this reimbursement provision nevertheless would induce a vitiation of the legal contract, a violation of the valid State law and shatter every principle of State sovereignty.

This provision in the bill might have been stated another way in complete truthfulness and frankness. It might have said that if a State has passed a law which is sound in morals and in equity; a law that is solely and completely within the police power of the States, and completely without the powers and jurisdiction of the Government; and if, under such law, solemn, written contracts have been made between the utilities and the States at the specific request of the utilities by which the utilities gained valuable rights that saved them great expense—all in consideration of their one contractual promise to relocate their facilities when necessary to permit highway improvement—then, in that event, will not you, Mr. Sovereign State, vitiate your solemn contracts, violate your valid State laws, and destroy your sovereign rights by giving the poor utilities—such as the American Telephone & Telegraph Co., Western Union, and the great electric-power companies—50 percent of their relocation costs out of this money that we have collected from your citizens, presumably to build highways, but which we now send back to you only in part.

Before considering other aspects of a provision which can result in $970 million of these road funds being given to the utilities, let us treat for a moment some of its legal aspects.

State legislatures have sovereign control over highways—a control that is ordinarily delegated to its State highway department and lesser agencies of State government. The primary use of highways is for the traveling public, but other uses that serve the public interest are generally allowed. Thus, it is generally accepted that utilities may be permitted to place their facilities on highway rights-of-way under certain considerations and restrictions—always provided, of course, that their use does not inconvenience the traveling public in its primary use. Even though a utility is allowed to do this, its rights are secondary and subordinate to the interest of the traveling public, and always remain so.

No utility ever acquires a vested right to remain in any specific location on the highway. That is true because neither the State nor its delegated agency can make any contract which impairs its police power. It is universally held that highways is a proper subject for the exercise of police power.

Every decision in courts of last resort, without exception, has held that the State, acting through its legislature, its highway department, or its local governmental units has every legal right and reason to require a utility, at its own expense, to relocate any facilities on the public rights-of-way in order to permit highway improvement. Nothing in the nature of a Federal program of highway aid alters the fact that the State, in the exercise of its police power, has every right to request the readjustment of utility facilities in order to properly serve the highway user. Federal aid to highways consists merely in the appropriation of money derived in taxes on citizens of the States, to be matched in some amount by the States, and spent on a designated system of highways, provided certain standards are met. The Federal Government does not initiate these highway projects. The States have the sole discretion of determining whether highway projects are undertaken, the nature of the project, and whether it will be financed from State funds or from both Federal and State funds.

Thus Federal participation does not prevent the State from exercising its solemn police power in connection with

a highway project. And, the Federal Government exercises no such control over these projects that would make highway departments merely agents of the Government. The Federal grants recognize only that the Federal Government has legitimate national interest in the improvement of highways.

Recognizing that the police power of the States, exercised through delegated agents, is supreme in the matter of rights-of-way as against everyone, let us revert to the present situation with reference to the utility provision in the highway bill.

Why should the Congress think of doing this? What is causing all the deep solicitude for the poor utilities? Just what is the reason for this effort not only to break State laws and vitiate solemn, legal contracts which the utilities requested and signed, but also to destroy the sovereign police power of the States, even though the States are now pleading with us that they want and need no intervention in this matter by Congress?

Just what would this provision do? In cases where valid State laws have given a franchise to a utility for use of rights-of-way, conditioned on their removal to permit highway improvement, it would authorize the States, regardless of such condition under their law, to pay 50 percent of removal costs out of Federal funds. Secondly, it would authorize the States to pay 50 percent of removal costs even though the States have made, and there are in existence, valid written contracts with the utilities, entered into at the utilities' own request, whereby the utilities gain the valuable right to occupy rights-of-way, free of any charge, as a result of their contractual promise to pay their costs of removal to permit highway improvement. Thirdly, it would authorize the payment of these removal costs with Federal funds even though the State has both a legal enactment and a valid, written contract with the utilities which pledged the utilities to pay its own removal costs in return for use of rights-of-way.

Stated quite bluntly, this is no business of the Congress. A powerful lobby, over a course of 2 or 3 years, has attempted to exert a pressure which would make the Congress do something which is wrong legally, equitably, and morally. It is something which should not be legislated in this body. Its effect, under the circumstances and in the manner it is being attempted, would destroy every remaining vestige of state sovereignty. This is made no less true because of the subtle approach and the seemingly benign language of the provision in question. The language is permissive in the House bill but it is mandatory in the provision passed by the other body and it likely will be mandatory in the conference report provided we pass it in any manner here. The result sought to be attained, that of getting the money for the utilities, is the same in both measures and there is little doubt that it would bring about that result.

If Congress has determined to wipe out State capitols in their entirety and make Washington a completely all-powerful, centralized bureaucracy regardless of the laws of the States, regardless of existing legal, written contracts made by the States, and regardless of the States' sovereign police power, it has picked a perfect issue on which to do so.

What are some of the facts of this case which show the extent, the import, and the viciousness of this provision? Forty-three States either have legally enacted laws providing for the issuance of franchises permitting utilities to use highway rights-of-way under the condition that their facilities must be moved by them when highway improvement is needed or have entered into legal written contracts with the utilities, at the utilities' specific request, in which the utilities solemnly contracted to readjust and relocate their facilities in order to secure rights-of-way.

These laws were passed and these contracts were made under their sovereign State police power. Were these laws enacted by the States and the contracts entered into by the States at the request of the utilities, fair laws and fair contracts? Are they equitably and morally just? Were they entered into to protect the primary use of the traveling public on the highways? Were they a proper and just exercise of the police power of the States through their delegated agencies, the State highway departments? They would seem to be all of these. Then why should we even consider doing something which would subvert the laws passed by the States, which would vitiate contracts legally made by the States for the protection of its citizens, and, worst of all, why an effort which would effectively destroy the sovereignty of the States in the exercise of their police power?

The laws permitting utilities to use rights-of-way, under certain conditions and restrictions, were enacted because the utilities asked for them. The contracts they have made with the States were at their own insistence. They have saved great sums of money as a result of these laws and contracts. Rights-of-way have been maintained for them at the expense and inconvenience of highway users and without expense to them. The new rights-of-way required for the interstate system will cost the highway users billions of dollars. The utilities will not pay 1 cent of it, but they expect to occupy it free of any charge. They expect it to be maintained for them, also free of charge. But the spokesmen of the utilities now demand, in this legislation, that the highway users not only build new rights-of-way for them, and maintain it for them, forever, but that they also move the facilities on to any new location and pay the removal bill, all without legal sanction, and, in most cases, in direct contravention of solemn contracts which the utilities asked the States to make with them by which they acquired the valuable right to enter upon the highways in the first instance. This would completely and permanently change the historic and legal relationship between the parties. It would destroy the States police power in regard to highway rights-of-way and would make the States completely subordinate to the utilities, instead of the reverse, as it is at present under the sovereign power of the States.

But possibly there are some who feel that the utilities are in such desperate financial straits that any action, however extreme and however destructive of State sovereignty, is justified. That could be the only possible reason by which anyone might seek to justify what is being attempted here. Let us see what the facts are in that regard.

Moody's Manual of Investments gives figures which show that the utilities will make for their owners during the 13-year period of the proposed road program clear net profits, after all taxes and expenses, of considerably more than $25 billion. Now let us say that removal costs will be $2 billion in those 13 years, a figure higher than I have heard estimated. Two billion dollars in removal expenses would cost the utilities less than $1 billion, since 52 percent of the $2 billion would otherwise be paid in taxes. Are not the removal costs, then, almost insignificant when compared with the lush guaranteed profits of the utility owners?

Now, under the facts, who actually would get the almost $1 billion handout, provided the highly benevolent and philanthropic spirit of Congress toward the utilities is expressed through the passage of this provision of the highway bill?

American Telephone & Telegraph Co., by its own statement, owns 90 percent of all telephone lines. That means it will get more than 90 percent of all reimbursements paid to telephone utilities, one of the largest of our utility groups Since it has no legal right to any payment whatever the only question that remains is whether it has any moral claim to reimbursement. That seems to be conclusively answered by the fact that it has made a great number of contracts throughout the years with the States, many of them recently, in which, in order to secure free rights-of-way for its facilities, it pledged itself in writing to remove such facilities to permit highway improvement. Every one of these agreements is a legal contract and is in full force and effect today. They have saved American Telephone & Telegraph Co. great sums of money. Does it need the money it will get under this provision? In addition to the cash yearly dividend of $9 paid for many years on each of the 50 million shares of stock owned by its stockholders, it recentely reported retained earnings of almost $800 million. Does not such prosperity, practically guaranteed under present laws, give a conclusive answer as to whether it needs the approximately $200 million which could be paid to it under section 7 of the highway bill? Should we pass a law which says to the States that we are willing to have them pay A. T. & T. approximately $200 million of any highway funds we provide them? I am not willing for the States to have congressional authority to do that because A. T. & T. is not entitled to it. Certainly it does not need the benefits of this beneficient provision nearly

as much as does our Treasury and our highways.

Then we have our telegraph utilities. Really it is now only one utility since Western Union, with Government approval, became a complete telegraph monopoly a few years back. Does Western Union, contrary to State laws and contrary to its legal contracts with the States by which it is obligated to pay its removal costs, need a handout? Within the last 3 years—and since it became a monopoly—its common stock has increased in value more than 800 percent. I do not believe we should suggest to the States that our Treasury be raided to give Western Union a considerable sum of taxpayers' money. In fact, I don't believe we should even say to the States that we would pay one cent to Western Union, the circumstances being what they are.

Then we come to the electric power companies. There is little need for comment as to their solvency or even as to the state of their financial prosperity. Their prosperity is guaranteed as much as anything can be guaranteed in this country of ours. The class A and B utilities alone—the biggest ones, of course—in recent reports show retained earnings of $2,200,000,000 over and above dividend payments through the years. What a nice, fat, backlog that is. Just $2,200,000,000. A conservative estimate would seem to be that the electric power companies will receive a cut of some $250 million of the bounty provided in section 7 of the highway bill. Do you want to give the States the permission to hand them all this money when you know it would not only be a violation of State laws but a vitiation of legal contracts these companies have themselves made with the States by which they secured valuable rights enabling them to save great sums of money, part of it at the expense of the highway user? I can hardly believe that you want to do that, but that is exactly what this bill does.

But there are those who say that they know of a small utility which may need a little help. It is being reported that the representatives of the major utilities, which will get at least 90 percent of the benefits from this reimbursement provision, are saying in the corridors of the Capitol and the House Office Buildings that their great interest is in some small utilities which they feel might be unduly burdened if it is not passed. Their great concern for some little man, imaginary or otherwise, is, I am sure, responsible for their tremendous effort, sustained for some time now, to pass this legislation.

It might be well to remember in this connection that employees of the State Highway Departments live and work in every section of every State of the Union. There are few counties in our country which do not have residents who are employees of the State highway department. These employees take their place in the life of their communities and they know its problems. They mix, mingle, and go to churches and clubs with the people among whom they live. Should there happen to be a small utility for which road improvement would create a burden, would not the highway department know about it? If the State felt it a highly meritorious case it would require no act of Congress for it to be helped. Certainly it would not require the payment of hundreds of millions of dollars of taxpayers' funds to the major utilities of our country in order to move a few poles for some little fellow in Podunk, Pa.

What do the State agencies exercising the State police power in the matter of States rights-of-way have to say of this reimbursement provision? They have come to Washington from great distances twice in recent months and even though they welcome the opportunity to build the great highway system which they feel the country needs, they had the courage to state their very strong opposition on each occasion to the inclusion of this provision.

The president of the American highway officials characterized it as an effort on the part of the utilities to avoid contractual obligations by Federal legislation. Could anything be stronger, or a more correct appraisal, than that?

We should remember that by this provision the Congress is saying to the States that they may do something which the States have been insisting, and are still insisting, that they do not want to do and which they feel would be very unjust for them or anybody else to do. In that position, the States seem to be on eminently sound ground.

Purely Commentary

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1955

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by the distinguished editor of the Jewish News, Mr. Philip Slomovitz. It is a forceful commentary on Russia and Her Jews, significant in terms of our peace negotiations and the prime objectives for which America must strive.

The article follows:

PURELY COMMENTARY

(By Philip Slomovitz)

THE FRIGHT OF THE RUSSIAN JEWS

Haim Shurer, in an article in the Davar of Tel Aviv, describing his recent visit in Russia, made some interesting revelations.

It is evident that Jews there are frightened. The very mention of the word Israel or Zionism scares them away from the messenger from both.

He relates several interesting stories. He had met three men with definite Semitic features and asked them to be directed to a synagogue. In surprise, they asked him, "Why, do you have to say Kaddish?" When he replied, "No, but I'm from Israel and I'd like to visit a synagogue," one of the men started to get away, pulling another with him, and "only the third paused long enough to tell me how to get there."

Another incident: In the Moscow "Metro" he struck up a conversation with a woman "with a Jewish face" whom he told he was from abroad. "'Where are you from?' she asked. 'Israel,' I answered. She looked around her as soon as I had said that and made a quick getaway."

Jews, apparently, are not the only ones who are frightened. Shurer tells about a non-Jewish woman who evidenced an interest in his visit: "When she suggested that we get together to talk about it the next day, I asked whether, as a party member she could make a date with a foreigner. Surprised and angry, she affirmed that she would come. She did not."

Shurer's article also relates the following incidents that are most revealing about Russia and her Jews:

"At a hotel in yet another city a Jewish youth asked me whether I really meant it that I came from Israel. A few minutes later he invited me to lunch with him. 'And you are not afraid of inviting me to your house?' I asked, the wiser by my earlier experiences. He jumped in anger. 'Why? What is there to be afraid of? I am a party member, and I do not see why I should be forbidden to talk to you.' Then he excused himself, saying that he'd be back in half an hour to take me to his home. He did not come.

"And somewhere else I had a short conversation with my neighbor at a restaurant table. 'Come over to my shop tomorrow,' he said, 'I don't see why you shouldn't.' When I got there, a woman came forward to meet me. The man was sick, she told me.

"But as I passed a market where kolkhoz farmers sell the produce from their private plots one late afternoon, all of a sudden I heard the snatches of a conversation in Yiddish, and, unable to repress my curiosity, I came closer. There were 5 young Jewish cart-drivers, sitting in their wagons and standing about them. They were young and strong, and they reminded me of Zalman Schneur's Noah Pandre.

"'Where are you from, Yidden?'

"'From here. And you?'

"'From Eretz Yisrael.'

"They laughed. They thought that I was joking. Then they surrounded me and started asking me how many Jews there were 'over there,' how they lived 'over there,' what the situation was between us and the Arabs, and so forth.

"I replied briefly, and they were surprised to hear that I had been 'over there' for over 40 years. And they found it difficult to believe that I had simply asked to visit Russia as a journalist, and been granted permission.

"All of a sudden they started to whisper among themselves, and I told myself 'There it goes. They've remembered that it is dangerous to carry on this conversation in public.' Aloud, I asked what was going on.

"'Come over and have a drink with us,' said one of them.

"It was an out-and-out surprise. It never occurred to me that in the market place of a Soviet town Jewish cart-drivers would want to invite me to a glass of wine. I made no secret of my second thoughts about the wisdom of this genial offer. They had some too, but stood their ground.

"'And where do you want to go to drink?'

"'Not a long way from here. Two streets down, at a Jewish stand.'

"One of them went before me, the rest put their carts in order and came along too.

"They filled large glasses with red wine and each took up a piece of brinzza cheese. We drank 'Lehaim.'

"'Come over, Moishe,' they called out to the owner. 'It's a Jew from Eretz Israel. Have a drink too.'

"He had a drink too.

"I looked at those friendly, healthy lads. They did not talk much, they did not ask many questions, they told no stories, and they did not complain. They were simply expressing their brotherhood in an invita-

tion to have a glass of wine and cheese with them.

"It was getting dark. I said goodbye and each of them shook my hand. There was sadness in their eyes, and one of them said longingly:

" 'You couldn't take me along inside your trunk, could you?' "

And so—there was a redeeming feature in the affirmation of the belief that freedoms are taboo in Russia. Our visitor did find some Jews who dared make a "Lehaim" with him. And we learn from his report a very important fact: At least one Jew wanted to be taken along to Israel "inside your trunk." Knowing what we know, he is not the only one.

YITZCHOK GORDON KEEPS YEVSEKTZIA'S SPIRIT ALIVE

The Canadian Jewish Standard carries this news item under the heading "Yevsektzia Spirit Still Lives On":

"The spirit of the Yevsektzia still lives on years after its liquidation. (The Yevsektzia was the Jewish section of the Bolshevik party whose assignment in the early years of the Russian revolution was to eradicate all elements of religion and tradition from Jewish life). In a Yiddish-language broadcast from Radio Warsaw on the occasion of the 12th anniversary of the ghetto revolt, the speaker, Yitzchok Gordon, laid the blame for World War II on the 'obscurantists, cosmopolitans, Bundists, the Zionists, lackeys of imperialism who wouldn't listen to Moscow's warnings.' Yitzchok Gordon was a Communist in prewar Poland escaping to the U. S. S. R. in 1939. Despite his record he was arrested as a Polish spy, his wife was executed, and he was sentenced to 10 years' imprisonment. After the war he was released and returned to People's Poland to resume his political career as a Communist."

Thus, an echo from the days when Jews persecuted Jews. But the bigots who began as henchmen of the Bolsheviks still hold on to the stupid view that Jews were responsible for the war: Jews caused a war which culminated in the death of 6 million of their kinsmen. How stupid can people be? Cairo would welcome Yitzchok Gordon as an ally against Israel. What's he doing in Warsaw?

Meeting With Red China To Discuss Formosa and Asia

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. DODD. Mr. Speaker, last Sunday a distinguished and experienced Member of the other body of this Congress publicly suggested over certain television facilities that the Secretary of State of the United States meet soon with the so-called Foreign Minister of Red China to discuss Formosa and other questions in Asia.

Because of the prestige which this distinguished Member of the other body enjoys in this land, and because it appears that this suggestion is part of a calculated and well-planned effort to bring about recognition of the Red Chinese Government by the United States, and because the distinguished Member of the other body is a member of the Democratic Party, in which I also have membership, I am compelled to publicly state as a matter of record that this suggestion does not represent my views or the views of many other Members of Congress and that it is contrary to the best interests of the United States and of the free world.

Besides, it is opposed to the expressed will of Congress; and moreover, in conflict, I believe, with the will of a majority of the American people.

Curiously, this suggestion with respect to Red China comes from one who appears to be close to the foreign-policy makers of this administration.

Interestingly, the suggestion was made the day that the President arrived home from Geneva, and only a day before the State Department announced that the American Ambassador to Czechoslovakia would meet with Red Chinese delegates in Switzerland next week to discuss American prisoners presently confined in Communist China.

Remarkably, a similar suggestion was made by this same distinguished Member of the other body over the same facilities on the same program some months ago, and no spokesman for the administration criticized or repudiated the proposal made at that time.

In addition, and in the course of making this suggestion, it was intimated that the proposed meeting take place while Congress was not in session to avoid possible "trouble" with Congress.

Further, when it is recalled that this same distinguished Member of the other body with increasing frequency has been hailed as the congressional bipartisan spokesman on foreign policy, I feel compelled to warn the Members of this House and the public at large that there is ample evidence of a plan to rig de facto recognition of Red China now, and ultimately to obtain de jure recognition as an easy consequence of these now suggested diplomatic negotiations.

Those who would bring about the recognition of the lawless warmaking Red Chinese Government must be aware of the fact that in order to accomplish their aims, a back-door route, and devious methods and devices must be utilized.

To enter into these suggested conversations on a foreign minister level would alienate our friends in the Far East, would weaken our influence in the world, and debase our honor.

Because I fear that this suggestion will be carried into effect while the Congress is in recess, I record these words of warning and of exception today.

What Is Ahead for the Members of the House on the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. HESELTON. Mr. Speaker, I suppose that every member of the House Committee on Interstate and Foreign Commerce is confronted, as I am, dozens of times each day with the entirely legitimate question, "What is going to happen on the gas bill?"

I doubt if any member of that committee has been or is able to answer that question with any certainty.

We do know that when the amended bill was before the committee back in June, the first vote was 14 to 14 and that then after reconsideration was moved and carried, H. R. 6645 was reported out by a vote of 16 to 15.

These facts are of particular significance for the following reasons:

First. The subject matter of exempting producers and gatherers of natural gas from regulation by the Federal Power Commission has been before that committee for several years but up to date the proponents of exemption have not been successful in their efforts.

Second. One of the most significant votes with reference to such exemption occurred on March 31, 1950, upon the adoption of a rule which would have taken such an exemption bill from the Speaker's table "to the end that the Senate amendment be, and the same is hereby, agreed to."

Third. Those who are still members of the House will probably recall that the rule was called up and considered at approximately 6 p. m. on Friday, March 31, 1950. The rollcall vote was 176 for the rule, 174 against it and 2 present. Thereafter this bill was vetoed by the President and there was no further consideration of the matter for obvious reasons.

Fourth. The committee held extensive hearings on H. R. 4560—the predecessor bill to H. R. 6645—during March, April, and May of this year. The printed record of the hearings includes nearly 2,000 pages.

H. R. 6645, which was reported by a majority of 1, with the full membership of the committee present and voting, was reported on June 28, 1955.

There followed a period of considerable uncertainty, even more confusion, and extensive polling of the House Members as to the possibility of passing the bill. In the interim, statements were published in the press and made over the radio and television to the effect that only President Eisenhower could bring about the passage of this bill by his active support of it.

Although this did not result in any such action by the President, a hearing was scheduled before the Rules Committee for Tuesday, July 26, 1955, at 10:30 a. m.

Fifth. If anything was demonstrated at that hearing, it was that this bill is a highly controversial one, technical in the extreme and one that cannot be considered adequately by Members of the House at this late date even though a most liberal rule for debate should be granted.

During this public hearing before the Rules Committee, the point was repeatedly brought up and emphasized that it would be most unfortunate if such a bill should be sent to the floor of the House during these closing days and hours of

the current session. It was also pointed out that the morning press had quoted the acting leader of the other body as stating, after a 2-hour conference with the Democratic policy committee of that body, that this bill with one other bill was informally shelved for the session.

The question naturally arises as to why such an extraordinary effort should be made at this time to force this particular bill to a fruitless vote by the House. The answer to this question must be determined by each Member of the House who may be called upon to take any action with reference to H. R. 6645 during the next few days.

What Are the Facts About the Independent Producers Who Would Be Exempted From Regulation by the Federal Power Commission Under H. R. 6645?

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. HESELTON. Mr. Speaker, among the other confusing aspects of the testimony before the House Interstate and Foreign Commerce Committee with reference to the exemption of producers of natural gas from regulation is the lack of anything like exact or adequate information with reference to those producers.

This cannot be attributed to any lack of interest or effort on the part of members of that committee. Rather, despite the reported $1½ million educational campaign on the part of those seeking exemption, any careful reading of the printed hearings will disclose a noticeable inadequacy of factual information from those producers themselves as to the essential facts of their activities.

However, fortunately, Members of the House who may be called upon to vote upon this bill during the last few days or even hours of this session can have certain information of considerable significance.

From data compiled by the Federal Power Commission, it appears that in 1953 there were 4,365 independent producers who sold natural gas to natural-gas companies.

Of this number, 174 such producers, with sales exceeding 2 million thousand-cubic feet per year, sold 90.74 percent of the total volume of such gas.

Conversely, 3,736 such producers sold only 2.1 percent of such gas.

The balance was devoted to other purposes.

Next, any examination of the available statistics makes it crystal clear that there is an enormous concentration in a few producers so far as natural-gas production and ownership of reserves are concerned.

According to these statistics in 1953, something over 4¼ billion thousand-cubic feet was so sold.

Twenty-nine producers accounted for sales in excess of 2¼ billion thousand cubic feet.

Turning to the sales of individual producers, it appears that Phillips Petroleum Co. was by far the leader, accounting for 457,445,147 thousand cubic feet.

The next company, Stanolind Oil & Gas Co., a subsidiary of the Standard Oil Company of Indiana, sold 202,562,446 thousand cubic feet.

The third company, Humble Oil & Refining Co., a subsidiary of the Standard Oil Company of New Jersey, sold 175,975,859 thousand cubic feet.

The fourth company, Magnolia Petroleum Co., a subsidiary of Socony-Vacuum Oil Co., sold 157,553,211 thousand cubic feet.

The fifth company was the Shell Oil Co., with sales of 156,356,923 thousand cubic feet.

In short, these 5 companies alone sold in this period 27.07 percent of all the natural gas sold by nontransporting producers to the interstate pipeline companies.

There then appear such extensive and prosperous activities as those undertaken by the Gulf Oil Co., the Atlantic Refining Co., Skelly Oil Co., the Texas Co., Sun Ray Oil Corp., Union Oil Company of California, Continental Oil Co., Pure Oil Co., Tidewater Associated Oil Co., and Sinclair Oil & Gas Co.

The conclusion has not been disputed and cannot be disputed that in this period 29 producers, mostly large oil companies, sold 63.24 percent of such natural gas.

It was because of facts such as these and because of the complaints arising as to hardships which might be placed upon small producers under Federal regulation that I introduced H. R. 4924, which would exempt approximately 96 percent of the natural-gas producers who sell less than 2 billion cubic feet a year.

It is clearly established that such a classification is entirely legal.

I wish to cite the following cases in support of that legal proposal: *Wilson* v. *New* (243 U. S. 332), and *Chicago, Rock Island & Pacific Railway Co.* v. *United States* (284 U. S. 80, 93).

Moreover, I do not think it will be disputed that the elimination of this large body of the very small independent producers would remove a most substantial administrative burden from the Federal Power Commission. Incidentally, this has been and undoubtedly will be used as an argument in favor of the overall exemption provided by H. R. 6645.

Furthermore, I do not think anyone can study these statistics without coming to the positive conclusion that these thousands of small producers could not, under any stretch of the imagination, affect or control the price of natural gas in interstate commerce.

It is my intention to offer the substance of this bill as an amendment at the proper point in the consideration of H. R. 6645 if the bill is brought up for consideration on the floor.

I hope that this brief explanation of the reasons justifying such an amendment will result in the support of all those who are interested in a realistic and effective regulation of the flow of natural gas in interstate commerce, which is clearly a congressional responsibility.

The Pursuit of Peace Is a Challenge to American Intelligence and Patience

EXTENSION OF REMARKS
OF
HON. HAROLD. D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a most thought-provoking article entitled "The Long Road Peaceward," which appeared in the June 22, 1955, issue of the Christian Science Monitor.

This summary analysis of the underlying currents in the struggle for peace very forcefully reminds us that success in our objective rests in great measure upon the average American's capacity for persevering patience and intelligent understanding.

The editorial follows:

THE LONG ROAD PEACEWARD

In the big brownstone edifice of the Pacific Union Club at the summit of San Francisco's Nob Hill the Western Big Three have begun what may prove to be a very long chapter in East-West diplomacy. They have worked out suggestions for conducting talks at another summit—the coming top-level Big Four conference at Geneva.

These suggestions aim at limiting the time of the heads-of-state meeting to a matter of days. They would also keep it general enough to promote a relaxation of feelings. This, it is hoped, will make settlement of specific issues easier to reach in later Foreign Ministers' meetings.

But the Nob Hill proposals do not envisage any time limit for reaching specific agreements. These may take years to work out in the view of the Western leaders.

There are at least two points worth noting about this Western position.

STRENGTH AND LIABILITY

For one thing, it is a position of obvious diplomatic strength. Not only is the West now—as it was not a few months ago—ready to negotiate and therefore in better standing before nations neutral or uncommitted in the cold war; the West also is in the comfortable position of a bargainer who is prepared to wait.

Western governments are under no compelling necessity to achieve a quick and spectacular result for their own sake.

The second point, however, is that a liability exists for the West's cause in long-range negotiation. It is that democratically ruled peoples can make their impatience felt more readily by their governments than peoples under totalitarian regimes. And Americans, perhaps more quickly than even Britons or Frenchmen, can both generate and effectively express their impatience with what they may assume is appeasement or unnecessary compromise, or too-devious diplomacy.

For this reason the Big Three may sometimes find themselves under pressure to get on with the job—to reach a settlement or force a showdown—just when to do so will play into their opponents' hands.

This will not happen, however, if Western peoples recognize that they may now be entering a period more like normal for diplomacy than they have seen for decades. Something like a world balance of power has appeared, due to the combined influence of arms, alliances, and a vast and more assertive body of neutral opinion in the world.

Future negotiations must, therefore, aim not simply at great solutions to provide underpinnings for future peace, but at preserving the balance on which a present absence of war rests. The latter has been a traditional function of diplomacy. It promises to become very important again in the period now opening.

CRUSADES AND SHOWDOWNS

This does not mean that aims of Western peoples, such as restoration of freedom to those who have lost it to communism and increase of self-government in colonial or other dependent areas, must be abandoned. It may well mean, however, that pressures for reforms must take less popular forms than merely emotionally satisfying crusades.

It also may mean that showdown is out, and that new emphasis must be placed on avoidance of clash—as between East and West, so also, logically, as between allies.

For "older" nations like the Europeans this would require less readjustment of outlook than among newer leaders in world affairs. But if method seems to become somewhat "old world" in this process, it need not and should not follow that "new world" convictions are to be disregarded. They will not be, for they are too strong.

Sometimes they may seem almost hidden by method, however, and it is at such times that free peoples will be called upon for special discernment as to what causes are really being served and how well.

A MORAL EQUIVALENT

Just as the United Nations has spread responsibility for keeping world peace more widely than it had been spread before, so has the Nob Hill meeting. Taking place on the same stage with the UN's 10th anniversary celebration, Nob Hill forecasts new and more challenging responsibilities for peoples as well as statesmen.

The fundamental challenge is to wage peace and reform without aid of sheer excitement that usually goes with waging war or revolution. Or, better still, to discover a "moral equivalent" for such excitement in satisfactions which come from discovering unsuspected depths of steadiness and steadfastness in ourselves.

Government Spending in the National Economy

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely article entitled "Government's Role," appearing in the June 22, 1955, issue of the Worcester (Mass.) Telegram, which points up the practical wisdom of initiating a study now to determine how greatly American economic standards are dependent upon Government activities.

The editorial follows:

GOVERNMENT'S ROLE

Solomon Fabricant, research director of the National Bureau of Economic Research, says an intensive study should be made of the scope of Government activities, and their effect on the Nation's living standards.

This is a field that has been scarcely touched, because the big impact of Government activities did not come until the New Deal era. As Mr. Fabricant suggests, the Nation needs a thorough understanding of the Government's role in our present economy.

A few figures tell in themselves the importance of Government. Last year, for instance, Government at all levels employed 15 percent of the total working force, and some 17 percent of all personal income came from the same source. In 1954, Government made 32 percent of the Nation's expenditures on new construction and equipment, and it bought some $46 billion worth of goods and services from private business enterprises.

A big operation like that certainly has a tremendous effect economically, and has certainly been a factor in keeping the postwar boom rolling. But there are questions involved in such a heavy reliance on Government spending and employment, and a survey might help answer them. For, after all, Government itself is not productive of goods, and heavy Government spending can be definitely inflationary. And every dollar spent by Government comes from a taxpayer—either an individual or a corporation—and is, therefore, not available for private spending.

If the Nation becomes dependent on Government spending to keep its economy rolling, it is headed for trouble.

No Use Hemming and Hawing About Ghee, Let's Import It

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. GWINN. Mr. Speaker, under leave to extend my remarks I wish to include the editorial No Use Hemming and Hawing About Ghee, Let's Import It, which appeared in the July issue of the Farm Bureau News, written by Mr. Leland J. Melrose. Ghee, the subject of this piece, is made out of spoiling butter in India. He have plenty of that. Why not send it to India and get back ghee in trade? It has marvelous medicinal health-giving values we have not yet discovered. Mr. Melrose says:

Only orientals and readers of Kipling knew there was such a thing as ghee until recently. Now we know a lot about it.

Ghee is a wonderful dairy product. We should import it.

Ghee is the highly prized cooking fat of the people of India and Pakistan. A luxury to the poor, they still manage to buy a lot of it.

Ghee will keep endlessly in any climate. It has been known to keep for a hundred years, with no worsening of flavor.

Ghee is used to treat eye diseases, wounds, dyspepsia, and ulcers. It increases mental powers and improves the voice and personal appearance.

Ghee is made of boiled buffalo milk, with sour milk added to speed up curdling. Then the oil is skimmed off. This is ghee. It can be made of cow's milk, too.

A product with all these qualities surely should be imported. A great market is waiting in the United States.

Right now the makings of ghee are being shipped from Commodity Credit butter stocks, as they start to spoil, to India and Pakistan. The butter oil we ship there goes through final processing in the ages-old methods of these ancient lands. Life-giving, voice-improving ghee is the result.

But none of this wonderful stuff, so far as we know, is being imported into the United States.

The market is crying for it, or would if some merchandising genius geared himself in on the product. People who eat oleo should be just nuts about it. We have never heard that oleo improves mental processes, as ghee does. We have assumed that oleo has the opposite effect; otherwise one purchase would be enough.

The One Worlders, who are always tinkering with international matters but have not yet succeeded in giving everything we own to our listless friends and active enemies overseas, should be able to do wonders with ghee. Let the United States Government buy all the good United States butter it can get its hands on to support the market, let this butter start spoiling in the storage facilities that cost the taxpayers up toward a million dollars a day and after processing it into oil ship it to India, where it gets another going over that turns it into fine eye medicine and a voice treatment that will make radio crooners of everybody, Saints forbid.

Then, after the ghee has been created, ship it back here to fill a yawning void. Just why the One Worlders and the social planners haven't worked this one out proves that they are not infallible. They have overlooked a bet.

You might write to your Senators and Congressmen about it. Set them to work on this ghee business and thus pull them off from more harmful didoes.

Until we can start importing ghee how about making out as best we can with butter, before it gets into the hands of the Government and the One Worlders and the social planners?

If you have dyspepsia, take butter. If you have ulcers, take butter. If your voice is harsh rather than dulcet, take butter. Make believe that butter is ghee. Buy it and use it as ghee.

You might try using more of it as butter, too. There's nothing that compares with butter as a spread on bread. Not even ghee.

Election Day in Israel

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. ASHLEY. Mr. Speaker, because free elections are the symbol of a genuine democracy, I believe that all Members of this body rejoice in the fact that in one of the youngest democracies in the world, Israel, today is election day. Every citizen of Israel, over the age of 18, regardless of race, color, creed, or previous nationality, has the right to vote and it is estimated that 85 percent of the citizens of Israel will today make use of that right. The voters will go to the polls to determine the composition of the Knesset, or Parliament of Israel, the most important governmental body in the country. The current election will produce the third Knesset in the 7 years of Israel's history as a modern republic.

Mr. Speaker, here in the United States many millions of Americans have followed with pride and hope the struggle of this new nation to build a free land. It is encouraging indeed to see this vigorous people strengthening the cause of freedom and democracy in the Middle East.

A Move in the Right Direction

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, before Uncle Sam gets a dollar someone has to earn it and then turn it over to the tax collector.

Without those tax payments, Uncle Sam could not stir a foot nor lift a hand. Of that fact, everyone is aware.

Nevertheless, there are those who have been able to entice some agency or department of the Federal Government to go into business in competition with taxpayers. Always the result has been to deprive some taxpayer of his opportunity to establish and continue a business, give employment, and meet tax levies.

Usually the Government has gone into competition with private business because some Congressman or some group of Congressmen, at the request of their constituents, insisted that Uncle Sam engage in a specific business so as to benefit the local community.

The 83d Congress last year passed a bill which died in the Senate, which it was my privilege to introduce, the purpose of which was to have the Government discontinue the activities of its departments which were in direct competition with individuals, or private corporations, and which could be carried on by those private interests, without injury to the national defense.

A similar bill was introduced this year, is now pending before the Committee on Government Operations, and it was hoped that it would go through Congress before adjournment.

Not waiting for the enactment of this proposed legislation, but acting on its own initiative, as is proper and commendable, the administration—and here I mean the President—has instructed the Department of Defense, wherever it can be done without impairing our national security, to discontinue its competition with the taxpayers.

The Department of Defense, notwithstanding bitter and vicious criticism from some Members of Congress, has already discontinued 143 establishments operated by the Army, Navy, Marine Corps, and Air Force, including tire retreading activities, cobbler shops, sawmills, bakeries, office equipment, furniture and automotive repair shops, laundries and dry-cleaning establishments, ice and cement-mixing plants, tree and garden nurseries.

The Department recently ordered the discontinuance of some 37 additional facilities, including scrap-metal baling, coffee-roasting plants, rope and paint manufacturing.

Recently, when Congress inserted in the $31 billion defense appropriations bill a provision which, if enforced, hampered the President in his effort to minimize this ruinous competition, the President asserted that under the Constitution the Congress could not prevent the use of the order which he had made, and that unless the courts ruled otherwise, he would continue to get the Government out of competition with private enterprise.

A statement of the facts shows that the President is on sound ground, both from a legal and economic standpoint.

The administration is to be commended for this forthright, effective, courageous action.

Guaranteed Disarmament Is a Necessity for World Peace

EXTENSION OF REMARKS
OF
HON. HAROLD. D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1955

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely article entitled "Achieving Disarmament, An American Dream," which appeared in the June 16, 1955, issue of the Worcester (Mass.) Evening Gazette. Let us pray that this disarmament dream is one of those destined to come true in the near future.

The editorial follows:

ACHIEVING DISARMAMENT, AN AMERICAN DREAM

Disarmament, said West Germany's Chancellor Konrad Adenauer on Tuesday, is the basic point in restoring Europe's security against war. Dr. Adenauer wants both Russia and the United States to work with determination for the reality of controlled disarmament when the Big Four prime ministers meet in Geneva next month.

Dr. Adenauer, we hope, will be assured during his visit here that the United States sincerely wants disarmament. We hope he will be able to observe that the American people, like the people of his own new republic, see their real advantages and material gains in an economy which wastes as little as possible on purely military production.

At the same time, the chancellor will probably find that few Americans are now hopeful of disarmament as a policy unrelated to the facts of life in world diplomacy. Nothing is more desirable than some arrangement by which both the Western World and the Soviet empire can both disarm at the same time—each assured that the other is acting in good faith.

But disarmament, as we see it, must evolve from new diplomatic situations which render further armament needless. Such situations must be physical facts, like the physical liberation of East Germany and other areas held by the Reds. A Soviet policy which lifted the Iron Curtain could lead to disarmament.

If disarmament itself is not discussed at Geneva, it is certainly our intention to discuss matters leading to disarmament. We hope, with Chancellor Adenauer, that Russia will enter the discussions with similar genuine purposes.

Conservationists Restate Stand on Upper Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. SAYLOR. Mr. Speaker, one of the most controversial issues before the 84th Congress has been the legislation providing for the construction of the upper Colorado River storage project and participating projects.

The conservationists of our country have been opposed to this project in view of the construction of the Echo Park Dam in the Dinosaur National Monument, stated by the Bureau of Reclamation of the Department of the Interior as the heart of the project, which would thereby establish a precedent for the future invasion of our national parks system.

A statement of the conservationists position is fully stated in the letter to Senator WATKINS from Fred Smith, director, council of conservationists. The letter follows:

AN OPEN LETTER TO SENATOR WATKINS SETTING THE RECORD STRAIGHT

JULY 23, 1955.

MY DEAR SENATOR WATKINS: It is regrettable that we must answer in so blatant a fashion as this the charges against the country's leading conservationists, which you so quietly slipped into the CONGRESSIONAL RECORD of July 14. The Council of Conservationists, which you call a now-perverted organization, does not have the freedom nor the immunity of the Senate floor to expound its opinions and its points of view. It cannot place long, diffuse, misleading, and accusing statements in the hallowed CONGRESSIONAL RECORD with an eye to quick distribution on the eve of an important House action—knowing that the action is likely to take place before the truth can overtake the groundless accusations. So forgive this billboard. It is our only possible chance to focus attention on the facts in the case, in time.

First of all, may I ask why, among all the exhibits poured into the July 14 RECORD, you did not include a copy of the letter upon which you based your blast at the Council of Conservationists?

Could it be that you do not want your fellow Senators—and the Congressmen who are considering the upper Colorado project—to read the letter and discover for themselves how meticulously you picked it apart, segment by segment (but leaving out some of the more vital segments) so you could instruct your associates, with your superior wisdom, how to read perfectly plain, unmistakable English?

Let me reproduce the letter that appeared in the Washington Post:

"To the EDITOR OF THE WASHINGTON POST:

"Last Tuesday's thoughtful editorial concerning the "shearing" of the Colorado project, raises a few points that should be explained.

"The position of the conservationist forces on this issue should be made abundantly clear. The conservationists of the country have supported in a gratifying way the campaign to prevent the invasion of Dinosaur National Monument. This is all we oppose. We do not oppose water for the West. We would not oppose an upper Colorado River

project which did not invade protected public lands in which we are interested.

"We are fighting the present upper Colorado River project, because we have no choice but to believe Senator WATKINS and the Department of the Interior when they say that Echo Park 'is the piston in the engine,' and is indivisible from the project as presently planned. We are against the project also because congressional supporters of the project have published statements pointing out that in spite of the House committee action, 'Echo Park Dam is not dead,' and they intend to restore Echo Park Dam either in the House-Senate conference, or at some later date.

"If we expect to kill Echo Park Dam, we have no course but to do our utmost to defeat the project in which they expect to restore Echo Park Dam one way or another.

"Our record in fighting the project has been straightforward and aboveboard from the day we started. Here is that record:

"1. Last November, before any upper Colorado legislation was introduced, a meeting was held under the auspices of the National Parks Association. At this meeting, representatives of 22 major conservation, garden, and women's clubs, agreed to fight Echo Park Dam if it appeared in the legislation; and if the proponents made Echo Park Dam indivisible from the project as a whole, we would then fight the project by calling public attention to the project's many economic weaknesses which were already apparent.

"2. This position was made clear to the proponents of the project previous to the introduction of legislation. We were ignored.

"3. The project's supporters took the position that there could be no upper Colorado project without Echo Park Dam.

"4. Senator WATKINS attempted to prove that Dinosaur National Monument was not really a protected area insofar as power dams were concerned, and he implied that the present boundaries of the monument are probably illegal anyway. This indicated the lengths to which people would go to invade protected land.

"5. When a supporter of the conservationists' position introduced an amendment in the subcommittee to remove Echo Park Dam, it was defeated. When reintroduced later by another Congressman, it was passed and immediately nullified by ASPINALL'S time-bomb amendment to appoint a committee of engineers (with no interest in conservation) who would again decide that Echo Park Dam is essential to the project. This course of action had been clearly delineated well ahead of time in the Salt Lake papers, where it was explained that the dam would be taken out of the project while the House voted, and put back later by a special committee that would find it essential.

"6. The full committee, made fully aware of this previously revealed strategy, wisely removed the time-bomb amendment. If an amendment had been substituted, in place of the Aspinall time-bomb amendment, to investigate all alternative sites but not Echo Park Dam, the conservationists would have supported it. Must we believe that the upper Colorado people do not want this project badly enough to even seek an alternative for Echo Park?

"In the face of this evidence, what course do we have, except to continue to bring about the defeat of the present project, which we are repeatedly told by its designers must include Echo Park Dam to be successful? How can we take any different position with the proponents of Echo Park reiterating, over and over again, that they will get Echo Park Dam back into the project if it passes the House?

"If we did anything but follow the clearly marked road, we would be unfaithful to our quarter-million cooperating conservationists, and the millions of people who actually use the national parks, many of whom have joined in waging so unselfish and commendable a battle to prevent this major invasion of a national monument area—which we are convinced would be the beginning of the end of the National Parks System.

"None of the leadership of the conservationist forces, and certainly an infinitesimally small minority (if any) of the cooperating conservationists, have any direct interest in any water compact that may exist, or in the division of water from the Colorado now or in the future, nor have they any quarrel with the principle of reclamation, nor with the known need and desire of the West for more water. Our campaign has had no support, financially or otherwise, from any person, group, or agency directly concerned with the use of Colorado water. We have no concern except the pure conservationist considerations involved, and our financial sources—which the records will show, have provided only a fraction as much as the supporters of the upper Colorado River project have been able to raise—came wholly from conservationists concerned exclusively with conservation and national park principles.

"If the people of the upper Colorado Basin some day are given a plan that doesn't need a dam in Echo Park, or doesn't in some other way attempt to exploit protected public lands and resources that concern conservationists, they need have no fear that the present effective opposition will again be aroused.

"Sincerely yours,

"FRED SMITH."

My dear Senator, can there be any honest doubt what this letter says? Can anyone seriously question the reason for writing it?

The Post suggested in its editorial that the conservationists had won their battle, and the project might now well be authorized. Inferentially, it wondered why we were still fighting the battle of Echo Park, now that the House committee had removed the dam. That is an eminently fair question to ask, and one that deserved an answer. This was the time to say, in irrefutable black and white so there could be no possible question of doubt about it, that "if the people of the upper Colorado Basin someday are given a plan that doesn't need a dam in Echo Park, or doesn't in some other way attempt to exploit protected public lands and resources that concern conservationists, they need have no fear that the present effective opposition will again be aroused."

Could anything in the world be clearer than that?

But we wanted the Post to know that in these days of unimpeded, high-speed transportation, we manage to keep abreast of what is printed in the Sale Lake papers, and these papers have repeatedly quoted you, Senator WATKINS, and your associates as saying that Echo Park Dam is not really dead at all, and implying in unmistakable terms that it will somehow be returned to the project, some time after the House votes on its version of the bill. For this reason, we wanted the Post to know, we had to continue the policy we established last November: That we would oppose the project as long as Echo Park remains even potentially a part of it.

So, Senator WATKINS, it is not we who have changed our policy, but you. You change your policy every time you cross the Mississippi River, taking one determined stand—that the dam is not dead—in the West, and quite the opposite—that the House has killed the dam—in the East. My poor smalltown mind, in spite of the agility which you attribute to it, simply cannot accommodate this flexibility; so I have ardently supported the position that we should play it safe and plug away tirelessly in an honest effort to prevent this major invasion of our National Parks system. We owe that much to the thousands of conservationists who are counting on us not to fall asleep at the switch.

If I may burden you with a few more facts, I should like to correct some other misconceptions which seem to have you terribly confused.

1. No one has taken over the council of conservationists as you charge. The Johnny-come-latelies in the organization, which you condemn so vehemently, simply don't exist.

Our executive committee, consisting almost wholly of what you call honest conservationists, has not changed, and its members maintain their original close and friendly relationships, and have agreed on everything we have done. The council has no supporters now that it didn't have last November. The cooperating groups have grown, but all the new ones have joined because of their interest in conservation, and for no other reason.

2. As far as I know, no one in our organization is (to quote you) "opposed to the Colorado River storage project and to water resource development generally," except inso far as such projects impinge actually or potentially upon the interests of conservationists. This includes David Brower, of California, whom you single out for special suspicions. He certainly has never attempted to alter the policies of the Council of Conservationists.

3. I doubt whether the sincere and honest conservationist will deeply regret our position, as you predict; nor do I think they will feel in the slightest deceived by our position of being strictly from Missouri on whether or not Echo Park Dam is really out of the project. Those conservationists, myself, and our executive committee stand by our previous and oft-repeated statements that "we are mindful of the extreme importance of water in the West," and we are "sincerely interested in any sound upper Colorado water development that can effectively utilize water without seriously threatening the national parks system." We only want to make sure Echo Park is really dead, and the park system is really no longer threatened. The problem gets down to whether or not the present upper Colorado project will work without Echo Park Dam. Reclamation says it won't. You say it won't. We are not engineers, so we cannot effectively take issue with either of you on your position. We have to assume you are right, and fight on.

4. You say "but the real conservationists represent just a small, and now definitely minor part of the Council of Conservationists." This is news to me. As I have just stated, the council has not materially changed in any way since last November, except that we have had a vast amount of correspondence with people whom we don't know, but who represent garden clubs, conservation sections of women's clubs, and others in the same general category. An almost infinitesimal minority of our correspondents have been inspired to get in touch with us by the writings of Mr. Moley, Governor Miller, taxpayers' groups, or others who oppose the upper Colorado project for reasons far removed from ours. Virtually all of our moral support and 100 percent of our severely limited financial support has come from conservation-minded people who are interested in the National Parks system.

5. You quote at some length, and reprint among your exhibits, the interview I gave Mr. Wing of the New York Herald Tribune News Service last December. I assumed when Mr. Wing breezed into my office that he had been sent by the newspapers in your area to find out what the Council of Conservationists was all about and what we were up to. I welcomed the opportunity to tell him exactly what I thought you would like to know, and to inform the people of your area of the policy established—back last November, remember—that "we don't care about the upper Colorado project as such—we have no interest in it. But as long as

Echo Park Dam remains a part of it, then we are forced to fight the project, too." This statement, big as life, is in the interview which you inserted in the RECORD. I even went so far as to tell you, through Mr. Wing, where our money for expenses was coming from, because I hoped in this way to prove to you that we had—and have—no ulterior motives; that this could easily be one of the cleanest and most straightforward important conservation battles ever waged, because nobody involved is interested in anything but conservation. I said in this interview that we might accept funds from other people with the stipulation that we "would not continue fighting the project if the dam were not in it, or if we were satisfied that the dam was permanently knocked out of it." That stipulation was made deliberately to "include out" any stray water lobbyists, or die-hard foes of reclamation who might attempt to use us for their purposes. As it happens, we neither sought nor received any outside money. We do not need it. Virtue is on our side, and public support for our cause has come more readily than anyone would have believed possible. If I knew exactly how much money the council has spent, I would not object telling you here and now, but I won't know until the figures are complete. You are going to be surprised and deflated. I am sure that the big-league $80,000-a-year lobbyist talked about, will regard us as strictly from the sandlots. It will all be in the record and filed in Washington very shortly, including the sources. We have not, as you charge, made a concerted effort to raise money from individuals. We have had a few unsolicited contributions, such as one which came in last week: a check for $25 on a Texas bank, sent by a Colorado professor who wrote across the face of the check: "For the Echo Park fight. Keep up the good work."

6. You suggest pointedly that there is some relationship between myself, the Council of Conservationists and the $80,000-a-year lobbist, Mr. Northcutt Ely "who has been the directing genius behind southern California's still strenuous efforts * * *." In your heart, Senator, you know there is not a fragment of truth in this nefarious accusation.

I don't know Mr. Ely. I never saw him. I have had no correspondence with him, or anyone connected with him. If I were sure he gets $80,000 a year, I might make his acquaintance for the sole purpose of being able to tell my old friends back in Troy, Ohio, that I know a lobbyist who makes $80,000 a year. But I am sure I would not be interested in his clients or his projects.

In what appears to be a squinting, clucking sort of way, you suggest that the Senate ought to investigate the possible tie-in between the council and the lobbyist, and piously indicate that true conservationists would welcome such an investigation. In this case you may inadvertently be telling the truth: as a conservationist—if not an honest one by your standards—I would myself support such an investigation if there is any possibility that anyone anywhere believes you when you say the Council of Conservationists serves "as a front for, or the unsuspecting pawn of, a water power lobby," or any other selfish group.

7. You say: "Mr. Smith is serving notice on the House of Representatives that even if they pass a bill without Echo Park Dam in it, the great Mr. Smith * * * will continue to bring about the defeat of the present project." I would say the shoe is on the other foot. Senator WATKINS seems to have served notice in his hometown papers that if the House of Representatives passes a bill without Echo Park Dam, in it, the great Senator will put the dam back into it at his earliest convenience.

8. As a final point, I should like to clear up the misconception you are promoting that I have somehow lured into my lair a group of honest, sincere, unsuspecting conservationist dupes. It will interest you not at all to know that the honest conservationists, whom you admire—and you should—came to the council and asked for help because it was obvious that, as Peter Edson so clearly pointed out, we were about to have an exhibition of logrolling that would put a Paul Bunyon to shame.

The honest conservationist recognized that the facilities which you possess would be difficult to meet or match with their relatively poor equipment, no matter how sincere their views or how terribly they feared this invasion of the Parks system. Therefore, they asked the Council of Conservationists (which had been set up earlier for another unselfish conservation project in New York State) to cooperate and lend facilities to their forces. I agreed to help because I am interested, and because the preservation of national parks is dear to the hearts of some of my very closest friends. It has taken a lot of time that I might more profitably have spent otherwise, but I am gratified with the progress that the honest conservationists, the council, and others who have worked tirelessly, have been able to make—with the minimum of funds, against the most formidable of odds.

Our cause must be just, or we would have been out of the race long ago.

Sincerely,

FRED SMITH,
Director, Council of Conservationists.

Communist Peace Offensive and United States Policy Initiative

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an analysis of the current Communist peace offensive prepared on May 30, 1955, by Russell D. L. Wirth, Jr., of Milwaukee, Wis., an analysis worthy of thought and consideration by others:

COMMUNIST PEACE OFFENSIVE AND U. S. POLICY INITIATIVE

(By Russell D. L. Wirth, Jr.)

In the early glow of summer there swells throughout the world a new and radiant hope. A hope that the cold war may at last have ended. A hope shared by all mankind that the Communists may have permanently abandoned the icy hostility of world revolution for the more seasonable warmth of peaceful coexistence.

Here at home this hope is expressed in a thousand different forms. In the taxpayers' dream that we may soon shrug off the heavy burden of aid and defense expentiture, amounting to over two-thirds of the United States budget. In mothers' prayers that we have seen the end of brushfire warfare which, in Korea alone, cost American homes some 150,000 casualties. And, in the rejoicing of little people the world over, that mankind may at last have come out from beneath the grim shadow and unspeakable horror of world war III. A war in which civilization itself might perish.

This great hope is born of the most extensive Communist peace offensive since the beginning of the cold war. In the past 2 months, the Communist Chinese, the Soviet Russians, and the East European satellites have concerted policy behind a wave of concessions on almost every major issue and at almost every trouble point on the globe.

In the Far East, the Soviets have reversed their policy of postwar hostility in order to negotiate a peace treaty with Japan. Hints continue to flow of possible return of the Soviet-held Kuriles, or Southern Sakhalin, or repatriation of 10,000 Japanese prisoners, or a seat in the United Nations, in return for Japanese friendship and the neutralization of this vital United States defense bastion.

The Communist Chinese have muted their warlike claims to Formosa with indications that they would welcome a relaxing of tensions in the Straits. Peking's assurance that "the Chinese people do not want war with the United States," has been followed by the deportation to freedom of four illegally held United States airmen. A treaty of friendship with Indonesia has released 2½ million overseas Chinese citizens from any arbitrary obligations to the Communist mainland. SEATO members Thailand and the Philippines have been promised that Peking would "not make any aggression or direct threats" against either. While shaky Laos and Cambodia have been reassured that Communist China has "no intention whatsoever to intervene in the internal affairs" of Southeast Asia. Hence, the Communists argue, there is little need either to arm in defense or to join military pacts with the West.

The Soviet Russians have gone even further, perhaps having led their more bellicose Sino-allies along the peace road. The Soviets suddenly negotiated a withdrawal of troops and a treaty of peace involving armed neutrality for Austria. They followed friendship bids to Yugoslavia with the humbling visit of Khrushchev and Bulganin to Marshall Tito. Here, for the first time, the rigid Stalinist code of orthodoxy was rejected with the formal acceptance of Titoist heresy and of doctrinal differences within the Communist empire. The Soviets have followed their Yugoslav venture with friendship feelers in Greece, Turkey, and Egypt. They have extended an open invitation to oft-denounced West German Chancellor Adenauer to discuss the reestablishment of diplomatic, cultural, and commercial relations. They suddenly repaid Iran $12 million in gold for services rendered during World War II. The Soviets capped everything with an announced willingness to negotiate an overall "end to international tensions" at a 4-power conference between heads of state this July.

One topic at this conference, in all likelihood, will be disarmament. The Soviets at once seized the propaganda initiative by proposing outward concessions to the Western position. These involve acceptance in principle of ceilings on armed forces, step-by-step reduction of atomic and conventional weapons, inspection and enforcement of atomic disarmament, and possible mutual withdrawal of troops and bases from foreign soils.

Looking at the global string of Communist concessions and peace moves, all concentrated within a period of 2 months, one cannot but ask what caused this sudden policy reversal? A very strong case can be made for a very simple answer: Today, largely as a result of United States foreign policy achievements, the free world has obtained a temporary favorable balance of power relative to the World Communists. The Communists want a genuine relaxation of tensions in order to reverse this balance before their next revolutionary advance.

In support of this argument, we might tick-off the actual facts of present free world strength and temporary Communist weakness.

The present power position of the free world is due, more than anything else, to

certain revolutionary advances in United States foreign policy and political thought.

For the first time in history, the United States has realized that free political institutions cannot survive anywhere except under conditions of reasonable economic freedom, prosperity, and growth. The United States has given more to building economic freedom abroad than has ever been given by any nation heretofore. Of over $50 billion worth of United States foreign aid, more than $33 billion has been economic aid to rebuild the free world from its war-shattered chaos to its present thriving state.

For the first time in peacetime history, the United States has accepted the principle that military strength, when confronting a world aggressor, is the necessary price of freedom. As a result, it maintains the largest defense force in peacetime history. Perhaps the most effective components of this force are the 1,500 jet B–47's. Stationed on 100 foreign bases, these United States medium jet bombers are capable of instant air-atomic retaliation against the World Communists anywhere along a 14,000 mile front.

Despite past continental isolation, the United States now recognizes that, in the air-atomic age, peace is indivisible. As a result, it is committee to the military defense of 39 foreign nations with an overall military aid program including some 63. Overall United States defense interests now extend to half of the land area and two-thirds of the peoples of the globe.

The United States has likewise recognized that permanent peace cannot be maintained outside of framework of law. In contrast with past ostrichlike rejection of the League of Nations, it has led in postwar international organization. The United States pioneering efforts in establishing the UN, NATO, SEATO and such functional organizations as UNESCO, GATT, and WHO, have encouraged perhaps the highest level of international cooperation in modern peacetime history.

The net result of these United States policy changes has been dramatized in two recent achievements: West German rearmament and Asian anti-Communism. Despite the most ominous Communist threats, the French signed the Paris Accords granting West Germany sovereignty and the right to rearm within a Western European Army. Despite the most polished pacifism of Premier Chou En-Lai, Asian delegates at the Bandung Conference refused to swallow the Communist line and damned imperialism of the left as heartily as that of the right.

On the scales opposing present Free World strength, are the multiple indications of Communist weakness. Temporary weakness, ironically, may largely be the product of the breakneck Communist drive to total power.

At the very summit of the World Communist empire there is no solution to the conflict for leadership. And it is doubtful whether this can ever be solved except through the process of destructive terror, assassination, and power seizure. Some 2 years after the death of Stalin, at least 6 top Soviet leaders continue to jockey for absolute power. Despite the purge of Beria and the removal of Malenkov, it is still difficult to say who will eventully replace the collective leadership of the Soviet State. In Communist China, puppet boss of Manchuria, Kao Kang has been purged for plotting to seize power in conjunction with army dissidents. There are continued reports of a split at the top between doctrinate party members, desiring to accelerate socialism at home and conflict abroad, and state and military leaders, who have become more conservative with their rise to power.

Agricultural failures and shortages continue to plague the world Communist empire. The Russian people are reported consuming 30 percent less meat per capita than before collectivization in 1928. It is estimated that the Soviet city laborer must work some 40 percent longer than in 1928 just to provide the minimum wherewithal for his family. In the past year, Communist China has been stricken with the worst combination of floods, frosts, and drought in a century. Official papers acknowledge that some 150 million peasants are short of food. The Peking government has cut food rations 20 to 50 percent in the cities.

The real standard of living within the Communist empire may actually be declining as a result of concentration on heavy industry and war production. With over 65 percent of the Soviets and 45 percent of the Communist Chinese budgets devoted to heavy industrialization, consumer output tends to lag behind rising population.

Both agricultural shortages and declining living standards have heightened discontent within the Communist empire. The summer revolts throughout satellite Europe in 1953 were but the outward signs of opposition to the Communist slave economy. Wholesale rioting was reported in the slave labor camps upon the death of Stalin. And present discontent with collectivization is heightened by famine conditions in Communist China. The official Peoples' Daily openly admits that Chinese party leaders are "afraid to lead" because of peasant opposition in the famine area.

As a final sign of temporary weakness, the Soviet Communists have expressed well-founded fear of United States air-atomic power. The Soviets mentioned United States foreign airbases three times in their latest disarmament proposal. They at one time even admitted that communism itself could perish in an all-out atomic war. Their present estimated stockpile of some 500 atomic weapons does not match United States stockpiles either in quantity or in quality.

Nor does the present striking power of the Soviet strategic air force equal that of the United States. With 1,500 B–47's on some 100 overseas airbases, the United States can strike at the Communist empire from any direction along a 14,000 mile front at an average range of but 1,600 miles. The Soviets, with no foreign bases and less medium jet bombers, can strike effectively only over a 1,800 mile northern arc at an extended average range of 4,000 miles. Despite rapid gains, it is doubtful that the Soviets could win even a sneak air-atomic war at the present.

In view of underlying temporary Communist weakness and free world strength, what general conclusions can be drawn about the present Communist peace offensive?

First, it appears obvious that the Communists genuinely desire a relaxation of tensions. For, they are not only promising, but are actually acting on promises, as in their negotiations with Austria. They furthermore appear carefully coordinating their policy throughout the globe so as to make no hostile move to belie peaceful intent.

Historically, it is important to remember that this same relaxation of tensions was desired by the Bolsheviks in 1917, under the policy of peace, land, and bread. It was desired in 1935 with the growing threat of nazism, under the policy of united fronts with all anti-Fascist elements. It was desired in 1953 upon the death of Stalin, under the Communist new look peace offensive. Yet, none of these relaxations involved a change in the Communist aim of world conquest. Nor did they result in abandonment of 19 successful revolutionary gains. Nor did they involve liquidation of the world Communist empire, which today enslaves one-third of the peoples and one-fourth of the land area of the globe.

Second, many of the present peace concessions merely involve promises by the Communists not to do what they never should have done to begin with. Without justification in international law and in violation of the Korean truce terms, the Communist Chinese illegally hold United States prisoners of war. Yet, they gained great credit in world opinion for yielding up 4, while continuing to detain 63. The Austrian Peace Treaty could have been negotiated at almost any of 400 prior meetings between the occupying authorities except for Soviet obstructionism. When the Soviets suddenly advanced those very points which they had previously willfully opposed, they gained worldwide acclaim for their peace initiative. Likewise, Communist China, by merely promising not to subvert southeast Asian regimes, won substantial praise for relaxation of tensions.

Thirdly, many of the present peace concessions are designed to build a propaganda advantage for communism while cloaking a demand for unequal sacrifices from the West. The prime example is, of course, the new Soviet disarmament scheme. By merely modifying past proposals which they had advanced in public and then repudiated in private, the Soviets further impressed world opinion with their new concessions.

Hidden within the Soviet disarmament proposal are a number of unequal sacrifices demanded of the West. The suggested withdrawal of occupation troops from Germany to their national frontiers would result in Soviet troops moving but the short distance back into Russia, while United States troops withdrew 3,500 miles across the Atlantic. The proposal to freeze and then reduce armed forces as of their December 31, 1954, strengths, would prevent West German rearmament, in that Bonn had no army as of 1954. The suggested withdrawal from all foreign military bases would neutralize United States striking superiority from 100 foreign airbases and might even involve abandoning the Panama defenses. The proposal to grant security-council control over defensive use of nuclear weapons would provide a Soviet veto over United States defense policy. The proposed nuclear weapons inspection and enforcement system, patterned on the Korean International Armistice Commission, would have all the limitations of its forerunner which has allowed an illegal threefold buildup in Communist striking power in North Korea.

Finally, all of the present Communist peace moves are obviously designed to induce widespread belief that the Communists have at last abandoned their goal of world domination and now are willing to pursue a consistent course of peaceful coexistence.

This Communist policy of peaceful coexistence is perhaps as old as world communism itself. Stalin spelled it out most concisely when he stated that the very survival of communism depends "on whether we succeed in delaying war with the capitalist countries, which is inevitable," until communism has gained decisive power. The actual technique of a peace offensive was perhaps best revealed by Manuilsky, one of the leading Communist revolutionaries. In a much-quoted address to the Lenin School of Subversive Warfare, Manuilsky states "war to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack * * * to win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we will begin by launching the most spectacular peace movement on record, * * * the capitalist countries, stupid and decadent will * * * cooperate in their own destruction." The logic of peaceful coexistence is further spelled out in a statement of the Communist international that there is a "glaring contradiction between the imperialists' policy of piling up armaments and their hypocritical talk about peace. * * * (But, there is no such contradiction * * * between the Soviet Government's preparations * * * for revolutionary war and a consistent peace policy."

May not the Communists today be doing exactly what these statements have implied

in the past: Outwardly talking and acting out a peace policy while inwardly preparing for heightened political and military warfare. A number of facts support this view.

The Soviet Communists are today allocating one-half of their entire industrial output to war production. They have enslaved 13 million people and are forcing their oppressed population to reinvest at five times the United States rate in heavy nonconsumer industry in order to support their war machine. The Chinese Communists are making every sacrifice, including starving their peasant population and enslaving some 15 million people, in their breakneck effort to build economic war potential.

As a result of this economic concentration on war, the world Communists have built what is perhaps the most powerful military machine in history. Today, they maintain the greatest land army, tactical air arm, and submarine fleet in the world. They outnumber free world forces 2 to 1 on the ground, and 4 to 1 in the air in Europe. They outnumber free world forces 8 to 1 on the ground, and 3 to 1 in the air in Asia.

In the postwar years, the Soviet Communists spent some $45 billion on naval construction alone, to raise their fleet from seventh to second place in the world. Their naval manpower today exceeds that of the United States. Their submarine fleet of 375 vessels is double that of the United States. And, it is estimated, that at present rates they will surpass the United States in overall naval strength within 5 to 10 years.

The Soviet Air Force today has several times more jet fighters and interceptors than the United States. It surpasses the United States in numbers of intercontinental jet bombers. It is challenging United States qualitative air superiority with its new TU-39 medium and TU-37 intercontinental bombers. Both are reported powered by jet engines with 70 percent more thrust than the best engines in the West. This alone may provide the key to overall Communist air superiority in the near future.

Although the Soviet stockpile of nuclear weapons is reported at but 500, there are only 215 targets worthy of atomic attack in the United States. Hence, both sides will soon reach a saturation point wherein sufficient nuclear weapons will exist for all potential targets. The Soviets are reported to have increased their nuclear weapons budget 1½ times and to have increased warplane production to twice present United States rates. On the basis of this concentration of effort, former Secretary of Air Finletter estimates that, as early as 1956 the balance of air-atomic power may shift decisively in favor of communism.

An analysis of Communist psychological warfare further reveals preparations for world revolution despite professions of peace. This year the Communists will spend some $3 billion to focus man's hate against the West and to identify his hope with themselves. This represents 35 times the amount spent by America on its Campaign of Truth. Communist psychological warfare is waged by some 6 million professional revolutionaries and by 26 million Communist Party members throughout the world. The continuous training of 325,000 propagandists, in such Soviet institutions as the Lenin School of Subversive Warfare, is neither theoretical nor diffuse. As a recent graduate stated, "We had target practice, science of civil warfare, revolutionary uprising * * * how to develop a general strike out of a local strike, how to develop a general strike into a city uprising, a city uprising into a national uprising."

With this general perspective of the Communist peace offensive, we may come to two alternative conclusions as to its objectives:

First, it may be waged to gain time to perfect the military weapons and techniques for final world revolution, or global war with the West, which the Communists have always believed inevitable. Today every basic Communist text repeats Lenin's classic statement that the coexistence of communism with the free world "for a long time is unthinkabe * * * before * * * (the end) * * * a series of frightful collisions * * * will be inevitable." Communist writings likewise repeat the doctrine that the free world today is in its final period of general crisis during which its complete destruction by world revolution is possible. This possibility is reflected in postwar official Communist journals, in which statements have appeared that "the second half of the 20th century will bring the complete victory of communism throughout the world."

The necessity for added time to build decisive military power is reflected in the present increase in the Soviet military budget for 1955 by some 12 percent. It is reflected in the fact that the Soviets have not yet developed an intercontinental rocket with a hydrogen bomb warhead. Soviet rocket experts have devoted some 30 years, Nazi experts some 20 years, to developing just such a rocket. At the end of World War II the Soviets not only captured 2,000 Nazi specialists, but also the principal rocket development centers at Peenemunde and Thuringia, along with plans for a rocket designed to bombard New York from Berlin.

Now these same scientists are reported to have developed the most advanced rocket motor in existence, with a 2 million horsepower thrust, to power an intercontinental rocket missile. At the same time, the Soviets are reported constructing missile launching sites along their Arctic, western, and eastern coasts. These sites plus rocket developments suggest that the Russians may be capable of bombarding the Baltic States, Japan, and North America with hydrogen missiles sometime within 4 to 6 years at the latest. There are no known defenses against such an attack. And the Soviets may now be playing for time until they can strike the decisive blow.

In line with this possibility, there has been a sudden change in the tone of Soviet military articles since the new regime has come into power. These articles, aimed not at the Western or Communist reading public but at the Soviet military leadership, formerly emphasized Communist defensive power and strength. Since late this spring, there has been increasing admission that there are no perfect defenses against surprise air-atomic attack. That Western "massive retaliation" may mean just such an attack. And, finally, that the key to survival may be soft talk, intensive weapons development, and Soviet surprise attack once present weapons have been perfected. As Deputy Minister of Defense Vasilesky wrote this May: "Soviet warriors are preparing themselves for difficult struggle against a powerful * * * enemy * * * (and) are being trained in a spirit of decisive offensive operations * * *."

Secondly, the present peace offensive may be designed to foster worldwide neutralism, to induce free world leaders to differ, and to establish a ring of isolated buffer states around the world Communist empire. Through manipulating the tools of neutralism and mutual differences, the Communists might then apply their proven technique of political-psychological warfare to penetrate and subvert the isolated buffers one-by-one in a gradual wearing-away process which would provide no clear provocation for massive retaliation.

The Sino-Communists are today fostering neutralist policy in India and throughout all of Southeast Asia with every blandishment and with arguments that joining military blocs will only heighten tensions. The Soviet Russians are attempting to complete the buffer ring by neutralizing an area from the Baltic to the Sudan to Kabul. The Soviet's humbling visit to Yugoslavia; their turnabout proposal to reestablish relations with West Germany; their friendship feelers with Turkey, Greece, Egypt, and Afghanistan; and their suggested general nonaggression pact to replace NATO—all fit into this policy pattern.

A successful neutralist policy might lead to decreased United States aid to free Asia and expanded East-West trade, in the belief that there was no longer a revolutionary threat. A cutback in further United States military support for SEATO and NATO along with continued inadequate United States weapons development and defense measures, as the Communists soft-pedaled all talk of war. An indefinite delay in German rearmament and a further cut in NATO military budgets, impelled by French fears and European neutralism. A piecemeal attrition of the coastal island defense and eventual complete neutralization of Chiang on Formosa, as United States opinion tired of petty tensions in the Straits. And, finally, a successful Communist policy would assuredly lead to world revolution against a weakened, disunited, and unprepared free world.

However, assuming an understanding of the present Communist peace offensive, it should be possible for the United States to reverse the tables, to regain the policy initiative, and make a decisive move in the cold war. At the present juncture, the Communists might be forced, either to abandon their illegal gains or else stand revealed as a continued threat to free mankind. And, should the latter prove the case, it should be possible to unite world sentiment behind an all-out effort to win the cold war before it is too late.

This twofold objective could be achieved through a formal United States policy statement, publicized throughout the world, to serve as the basis for United States negotiations at the July four-power conference. The United States policy statement could begin by documenting in detail the 19 Communist illegal power seizures. It could outline the exact revolutionary and terrorist methods employed, along with a chronological account of subsequent abuses of power by the Communist regimes. This documentation would provide the basis for a ringing declaration that mankind can never exist permanently half enslaved and half free. That, therefore, the United States will lead the free world in concerting all peaceful measures to grant freedom of choice to Communist-dominated peoples.

Freedom of choice might stem in part from widening each of the present Communist peace proposals. Thereby it would be possible to demand withdrawal of Communist troops and internationally supervised free elections in each of the satellite areas of Eastern Europe, North Korea, Vietnam, and Tibet.

Likewise, the present Communist disarmament proposals could be widened into a detailed, overall, staged, and enforced disarmament scheme. The United States could lead the free world in a formal commitment to accept this scheme once the Communists allowed a complete and worldwide inspection of all nuclear and military facilities and agreed on a formal written report to serve as the basis for subsequent disarmament.

The present Communist hints of unity for Germany in return for neutralism could be widened to apply to China, Korea, and Indochina. The United States might agree in advance to support any unified regime in these areas whose policies were determined by internationally supervised elections free of the threat of Communist troops or terror.

The United States policy statement might further include a detailed offer of food and consumer aid to all the various satellite peoples. Communist regimes would either have to accept this aid and, along with it, Communist economic inferiority, or else stand between their oppressed peoples and their own economic welfare.

Finally, the United States might propose a global campaign against economic want to be financed out of present free world defense budgets, provided only that the Communists accept disarmament proposals.

Should the Communists fail to negotiate in good faith upon a policy statement of this nature, they could then be revealed as pursuing present peace only to destroy future freedom. By dramatizing this fact, the United States might unite free world and neutralist opinion behind an all-out effort to win the very real race in the present cold war; a race to free some 800 million enslaved people before their will to freedom is destroyed by generations of Communist terror; a race to eliminate the Communist world revolutionary menace before it has developed tools of aggression against which there are no known defenses.

An all-out effort to win the cold war would involve sacrifices. It would involve an intensive program to regain superiority in air-atomic weapons and to overcome the Soviet lead in intercontinental rockets. It would involve building a highly trained and mobile land striking force and increased training of native troops. It would involve meeting and repelling Communist brushfire warfare and subversion wherever it occurred throughout the globe. It would involve extensive economic aid and trade within the free world to build a strong and integrated economy, while utilizing these same economic tools to encourage dissent and revolt within the Communist bloc. It would involve a massive psychological warfare effort to bombard the Communist-enslaved peoples with a global campaign of truth and with real offers of economic support and political aid.

Most of all, winning the cold war would involve fighting the Communist power cult with a creed of even greater intensity based upon the God-given right of man to freedom, for until this creed is pursued with an intensity equal to that of communism, until we recognize that the only alternative to victory in the cold war is defeat and heightened possibility of third world war, the present Communist peace offensive may, indeed, pave the way for future Communist world revolution.

Big Four Meeting Very Disquieting to Many Churchmen, Legislators

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1955

Mr. FEIGHAN. Mr. Speaker, I believe that millions of Americans see the point which I and other legislators have been trying to make in relation to Russia in recent years. We see very little reflection of our viewpoint among the men who skim the top of the news, but among those who are farseeing and have a knowledge of history and events long gone, we find quite a bit of justification for our viewpoint of being suspicious of the Russians.

One of the Washington newsmen who has continuously expressed a realistic opinion on the objectives of the Russian Communists is Larston D. Farrar, editor of the Washington Religious Review. Mr. Farrar is primarily a business writer with a large audience of readers, but he has equal skill in understanding and expressing in his public writings the issues of the days in which we live. While a resident of Washington for more than a decade and editing the Washington Religious Review for some years, he has acquired a continuity of knowledge that is equalled by few journalists. As we all know, politics can get very bitter, so can religious controversy. Mr. Farrar has been an able writer on both religion and politics who has been able to present the facts and the viewpoint of all major groups on questions of importance.

The latest copy of the Washington Religious Review which has just come to my attention discusses the meeting at the summit which was held last week. Because of its timeliness and because it will have a bearing on the after thoughts of the Big Four conference, I ask unanimous consent to insert it in the RECORD:

BIG FOUR MEETING VERY DISQUIETING TO MANY CHURCHMEN, LEGISLATORS

Quotation of the week: "The world seeks peace and liberty, but it seeks them on the path of trouble and slavery." (Jean Baptiste Lacordaire (1802–61).)

What started out to be a bit of campaign verbiage in British politics has become the most widely heralded meeting of chiefs-of-state of this decade. Literally hundreds of millions of people, it can be said without fear of contradiction, have their eyes glued on Geneva, Switzerland, this week, and their ears attuned to every word uttered by the Big Four leaders gathered there. Prime Minister Winston Churchill, emeritus, of Great Britain, plugged for this "meeting at the summit" and won President Dwight D. Eisenhower grudging acquiescence for it as a part of the strategy to make for a Conservative victory in Great Britain.

Because the Soviet leaders seem to have eagerly wanted to meet in a summit and because the results of the Yalta Conference and the Potsdam Conference seemed to bring little about which to rejoice among freedom-lovers, there are many who have viewed this conference with a jaundiced eye. Even while praying that it may be productive of good, these skeptics have pointed to the more-or-less obvious pitfalls entailed in such a meeting. The skeptics include plenty of churchmen, lay and clerical, as well as many legislators, particularly those of the Roman Catholic persuasion.

If President Eisenhower pays attention to what Congressmen say or do (and, in most instances, he doesn't), he could have obtained some gratuitous advice from Capitol Hill right up until the moment he enplaned for Europe, for legislators were declaiming all over the place.

"The Nation's legislators have joined ranks—regardless of political affiliation—behind President Eisenhower and the American delegation attending the Geneva Conference," Representative CLARENCE BROWN, Republican of Ohio, reported to his people. "While few Members of Congress believe many present worldwide problems will be solved at Geneva, they are hopeful the conference will pave the way for later meetings which may bring an end to the cold war and at least temporary peace to the world."

This cautious appraisal, carefully hedging Mr. Brown in case the Geneva Conference brings unforseen bad results, seems to be the usual thing among Congressmen. Just how closely Mr. Brown acts as a weather vane for the shrewder politicians may be seen by comparing what he hazards with what Representative CHARLES A. HALLECK, Republican of Indiana, a Methodist and the minority whip, has reported to his constituents:

"The atmosphere in the Congress prior to President Eisenhower's departure for Geneva was a mixture of misgivings and cautious optimism. Pages of the CONGRESSIONAL RECORD were filled for days with advice and expressions of good wishes to the President on the eve of his trip overseas. The inclination of the free world to be suspicious of Russian motives is understandable. The Soviet record of promise and performance in years past is not one to inspire confidence among men of good will. As a result, no one believes that all dangers of Communist aggression have suddenly dissipated and that trust and understanding will now replace all fear and distrust in international relations. We dare not be that naive * * *. Prudence dictates that America keep its guard up * * *.

"I do not share the undue pessimism of those who fear that the free world will lose ground at the Geneva Conference; that we will give more than we get; that we will compromise with principle; that we will be outmaneuvered, out-talked or out-guessed. One thing we all know: Dwight D. Eisenhower will never sell humanity short."

In short, Mr. HALLECK, like Mr. Brown, is straddling the fence, trying to encompass every possible viewpoint so that if in some future date he finds belatedly that something has gone wrong, he can claim to have foreseen it. Both men, and many others, are hoping that President Eisenhower will not pull a faux pas, or make any disastrous concessions to the Russians, as a result of too much vodka at one time or a temporary exhilaration of spirits due to reminiscence with Marshal Zukhov, with whom he was such a hail-fellow-well-met in Berlin 11 years ago, as they toasted one another until the dawn. It was this same Zukhov who imbued Mr. Eisenhower at that time with the idea that the Russians ought to get quick possession of some $8 billion worth of machinery, much of it in the Western Zone, without paying a single ruble for it. Since that time, this machinery has been replaced, at the expense of the United States taxpayer Mr. Eisenhower now represents in Geneva, but most Americans are so groggy with taxes they don't even remember this particular blunder. The marshal also found General Eisenhower in those days quite willing to acquiesce in giving his permission for the Russians to spirit away literally hundreds of the most intelligent German scientists, many of whom no doubt still are living and are contributing mightily to the growing Russian power in jet planes, guided missiles and atomic weapons.

Perhaps the memory of these things is what prompted one Member, a leading Republican, of the House Committee on Foreign Affairs, to say to Representative JERRY FORD, Republican, Michigan: "Russia will offer to give up policies which have been unsuccesful in return for which the United States and our allies may give up polices which have been successful." Another Republican cracked that the boo-boo on the ticker in the Republican cloakroom undoubtedly presaged the truth about the Big Four Conference. By error, the ticker read: "Ike To Be Given Big Deception In Geneva." A correction made it read "Reception."

Representatives JAMES T. PATTERSON, Republican, New Jersey, introduced a resolution in the House of Representatives calling for the Sunday before the opening of the Big Four Conference to be observed as a day of prayer for its success.

"I think we should ask Almighty God to grant his peace and wisdom to our negotiators at the conference table, so that they may deal with the other nations of the world, and they with us, in the truest spirit of honor, justice, and charity," Mr. Patterson told the House of Representatives.

His words were echoed in Congress by several others, and, in fact, ministers, priests, and rabbis throughout the Nation, from the President's pastor on down, did pray for the success of the Big Four Conference.

Senator JOSEPH R. MCCARTHY, Republican, Wisconsin, for whom the Big Four Conference has been a godsend, in that it has afforded him a means of regaining newspaper

notice without constant references to his "censure," inserted in the CONGRESSIONAL RECORD a lengthy article by R. H. Shackford, carried in the Washington, D. C. Daily News, in which the broken Soviet promises and pledges of other years were enumerated. However, many observers, who have noticed Mr. Eisenhower's own proficiency in making promises and then blithely ignoring them, did not feel that this factor alone was a cause for alarm.

Representative ISIDORE DOLLINGER, Democrat, of New York, inserted in the CONGRESSIONAL RECORD a Memorandum of Urgency, prepared by the Jewish Labor Committee of New York, N. Y., in which the organization implored both the President and Secretary of State John Foster Dulles to discuss the fate of some 2 million Jews in the U. S. S. R. at the Geneva Conference. The memorandum is not likely to come up for discussion at Geneva, but it is well worthy of study by religious and political leaders in this country, for its points to "the critical condition of Jews in the Soviet Union, the practical liquidation of Jewish culture, Jewish religion, Jewish literature and language" revealed in recent years.

Perhaps the most scholarly critique of the Big Four Conference to be given by a legislator who personally was opposed to the meeting—and certainly the most significant from the standpoint of understanding the viewpoint of what seems to be a vast majority of Roman Catholics in this country—was the speech of Representative MICHAEL A. FEIGHAN, Democrat, of Ohio, delivered even as President Eisenhower was packing his bags downtown. Handsome, pleasant-voiced, and scholarly, "MIKE" FEIGHAN is a fellow member of the Burning Tree Country Club with the President, but they've never played together. Another difference in the men is that Mr. FEIGHAN long ago was foretelling various moves of the Russians, and, although he always has voted on the side of labor in the House of Representatives, and long has been noted as a liberal, he never has trusted the Russians in their negotiations with this country. There is no question but that, on this issue, he speaks the considered judgment of countless Roman Catholics and millions of other citizens who have followed closely international power politics in recent decades.

In his judgment, "to put it bluntly, personal diplomacy is a dangerous practice when it involves the welfare of a nation or the cause of human freedom."

"The Russians will be represented by Bulganin, who may be the titular head of the presidium, but everyone should realize that the top man in the international Russian Communist conspiracy is Khrushchev. While Khrushchev can speak with authority for the conspiracy, we should not mislead people into believing that he will yield one single inch of real estate confiscated by the Russian autocrats or ease the chains of slavery which bind all the nations and people in the empire. Nor should we be so foolish as to believe that Zukhov, should he appear at the summit, will use his personal influence on Khrushchev or that he possesses any real sympathy for our ideals or our way of life.

"The Russians have been attempting to create the notion that they have eased up their tyrannical hold on the captive people. They have created all sorts of slogans which serve as a cover for their infamous treatment of the non-Russian nations and people which they now enslave. A classic example of my point can be found in what that popularity-contest boy, Khrushchev, has called a volunteer program for the development of new agricultural areas on the desert lands of Turkestan and in the tundra regions that lie above the Arctic Circle. Through this program, which has also been likened to the efforts of the sturdy pioneers who built America, funmaker Khrushchev has concealed the forced deportation and ruthless exploitation of additional millions of non-Russian anti-Communist patriots. There is also much talk coming out of the Russian propaganda machine about amnesties for those who cease to be enemies of the state. Such talk of amnesties is another boobytrap which the Russians are using to ensnare leaders of resistance movements behind the Iron Curtain, as well as those who escaped from the tyranny of the Communist empire into the free world. While all these things are being give lipservice by the Communist leaders, there has been no breath of freedom allowed by them and human rights are trampled under boots of finer grain, but just as heavy as those in the past.

"The Russians never yield on anything that they were not compelled by force to yield on. In this instance, hundreds of millions of non-Russian people enslaved by the Russian Communists have brought such pressure against their enslavers that the Kremlin knows it must yield or there will be an explosion hundreds of times more powerful than that caused by the hydrogen bomb. The failure of the agricultural program within the Russian Communist empire is, in my opinion, a classic example of the pressure the enslaved people are bringing against the Russian tyrants. Another example is the failure of the Russians to provide consumer commodities, both in quality and quantity, necessary to pacify the people. The Russians are begging for trade in which they will use gold which drips the blood of slave labor to purchase our surplus foods and other wonderful commodities of free labor in order to stem the rising tide of resistance by the common man throughout the entire slave empire. There can be no doubt whatever but what the Russians will appear at the Geneva Conference in the weakest position they have been in since 1941—the year when the tyrant Hitler could have won victory over the conspiracy of communism were he not possessed by the evil theories of racism and superstatism. Therefore, the Russian pleading for peaceful coexistence is nothing more than a plea for time—time to tighten the chains of slavery; time to liquidate millions more of those people who oppose the regime; time in which to mold a new generation of racial fanatics responsive only to the will of the masters in the Kremlin. That is what lies back of that Russian propaganda line of peaceful coexistence.

"The hopes of the American people have been stimulated to a point that suggests we are on the threshold of a just and lasting peace. This situation is best reflected by the tippy-toe artists in the Department of State who scream and shout that there should be no rocking of the ship of state (in obvious reference to the McCarthy resolutions of several weeks ago, which the Department of State fought viciously) lest we change the wooing mood of the Russian bear. These tiptoe artists do not lack uninformed supporters in this House any more than Nero lacked a fiddle to soothe his ego as he watched the destruction of a great civilization in which he was a recognized leader. Since these advocates of delicate diplomacy have had their generous share of allotted time, I consider the time opportune for some old-fashioned, down-to-earth American talk (this kind of thing can get a man censured these days).

"For some strange reason, there has been a steady and well-planned effort to prevent Members of Congress from getting into a full-blown discussion of the issues which should be taken up at the Conference. There has been a companion maneuver to confuse and dissipate all efforts calculated to bring about a clear and concise expression from Congress on the minimum goals which we should seek in our efforts to ease world tensions and to pry open the door to the road which leads to peace and freedom.

"How strange it is that here in the Congress, the very seat of free speech, it should even be alleged that if we dare to speak out on this critical issue which has to do with peace or war—freedom or slavery—we will thereby tie the hands of the President in the so-called Conference at the summit. Those who support this fallacy, in effect, hold that the conduct of our foreign affairs is above the test of congressional debate and that we, the representatives of the people, are or should be disinterested in the causes of war. * * * Such people as make this allegation had best turn their attention to preventing the Russians from tying a rope around the throat of American freedom rather than crying 'wolf' about tying the President's hands. Let us ask the question, 'Who is tying whom?' "

W. o. c.'s in Government

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1955

Mr. CELLER. Mr. Speaker, a w. o. c.'s is a Government official who serves without compensation from the Government. At the same time he receives income from nongovernmental sources, usually his prior employer. W. o. c.'s generally have been brought into service during emergencies to supply the Government the benefit of specialized knowledge or skills not otherwise available. During the First and Second World Wars persons serving the Government without compensation were termed "dollar-a-year" men because at that time such persons were required to sign contracts to work for the Government for the nominal amount of $1 a year.

In order for w. o. c.'s to be used by the Government exemptions must be made to the conflict of interests statutes. This purpose of the conflict of interests laws is to write into law the historic concept that a public office is a public trust. They express the principle that no man can serve two masters. To that end they provide that no public officer or employee of the Federal Government may engage in activities which are incompatible with the duties of his public office.

Section 1914 of the Criminal Code, for example, states:

> Whoever being a Government official or employee receives any salary in connection with his services as such an official or employee from any source other than the Government of the United States except as may be contributed out of the treasury of any State, county or municipality * * * shall be fined not more than $1,000 or imprisoned not more than 6 months or both.

This law also prohibits any person, association or corporation from contributing to or supplementing the salary of any Government employee for the services performed by him for the Government.

Other laws prohibit Government officials while employed and for 2 years after leaving Federal service from prosecuting claims against the Government or from

receiving compensation or acting as a representative in matters in which the United States has an interest.

Activities of Government officials and employees barred by provisions of the conflict of interests statutes have been a continuing problem in Government. The most recent example which has been brought to public attention concerns the activities of the Secretary of the Air Force, Harold E. Talbott, in connection with his interest in the Mulligan firm. This matter is now under investigation by Congress and I refer to it here only to illustrate an instance where the activities of a full-time Government official are called into question under the statutes. These laws set forth a sound and basic principle of Government which is suspended for w. o. c.'s.

One of the most obvious conflicts that can be imagined occurs when a man employed and paid by a private firm serves in a Government agency charged with regulating the industry of which his employer is a part. In time of war, however, full mobilization requires the Government to call upon business to provide staff needed to carry out the industrial mobilization program. No alternative has yet been found to permitting most of these men to continue to receive their salaries from their private employers.

Investigations by committees of Congress in past emergencies disclosed many instances where the dual loyalties of w. o. c.'s created situations adversely affecting the public interest and demonstrated the need for stringent safeguards in the use of w. o. c.'s. For example, the Truman committee, in investigating the use of dollar-a-year men in World War II reported:

Although the contracts obtained by the companies loaning the services of dollar a year and w. o. c. men are not passed upon by the men so loaned, such companies do obtain very substantial benefits from the practice. The dollar-a-year and w. o. c. men so loaned spend a considerable portion of their time during office hours in familiarizing themselves with the defense program. They are, therefore, in a much better position than the ordinary man in the street to know what type of contracts the Government is about to let and how their companies may best proceed to obtain consideration. They also are in an excellent position to know what shortages are imminent and to advise their companies on how best to proceed, either to build up inventories against future shortages, or to apply for early consideration for priorities. They can even advise them as to how to phrase their requests for priorities. In addition, such men are frequently close personal friends and social intimates of the dollar-a-year and w. o. c. men who do pass upon the contracts in which their companies are interested.

These are only a few of the advantages which large companies have obtained from the practice, and it should be especially noted that they are the very same ones which the small and intermediate businessmen attempt to obtain by hiring people who they believe have "Inside Information" and "friends on the inside" who could assist them in obtaining favorable consideration of contracts. Therefore, in a very real sense the dollar-a-year and w. o. c. men can be termed "lobbyists" * * *.

The committee is opposed to a policy of taking free services from persons with axes to grind, and the committee believes that the Government should not continue to the loan of dollar-a-year and w. o. c. by companies with so large a stake in the defense program.

During the hot-war period of the Korean conflict a committee of which I was chairman investigated into activities of w. o. c.'s and our investigation demonstrated that the same problems were present during that emergency. The committee concluded that from its investigation "the employment of w. o. c.'s during the mobilization period should be kept at a minimum."

We must recognize that the skill of men trained in industry may be of inestimable value to the Government in carrying out its proper and legitimate functions. On the other hand, we must recognize the dangers inherent in w. o. c. employment. At all times it must be remembered that the w. o. c. is in the awkward position of possessing dual loyalties: to the government for which he works and to the private employer to whom he looks for his salary.

W. o. c.'s in policymaking jobs are in a position to direct governmental lines of thought in a manner favorable toward their own companies or toward particular segments of the economy. Unfortunately, many of the practices legitimate in the give-and-take world of competition becomes inequitable when done in the manner of government, the supposed impartial arbiter.

The House Antitrust Subcommittee of which I am chairman has launched an investigation into the current use of w. o. c.'s by the Government. This investigation has started with an examination into the operations of the Department of Commerce where it is the deliberate policy of Secretary Weeks to use w. o. c.'s to head up many of his operating industry divisions. Our investigation already has disclosed instances where the w. o. c.'s activities extend far beyond those normally considered to be functions of public servants.

Our investigation also includes the use of advisory groups by Government agencies. Since advisory groups are organized to render advice and give recommendations to Government officials we will look into the relationships of these committees to w. o. c.'s. Certain elite advisory organizations are composed of the principal executives of some of the most important business firms in the country. W. o. c.'s serving as Government officials in charge of divisions dealing with a particular industry often are important but subordinate officials in these same firms. We intend to ascertain whether in operation the advisory committee procedures have the practical effect of creating a mechanism wherein fundamental questions of basic policy are initially resolved in the committee and the resulting Government action amounts to no more than giving effect to decisions already made by industry.

One advisory group used by the Government which we intend to investigate thoroughly is the Business Advisory Council to the Department of Commerce. The Business Advisory Council was organized in 1933 by the Secretary of Commerce to render advice and to make recommendations to him, and through him to other Government agencies and to the Congress. Its membership consists of representatives from the largest and most important companies in the United States.

The council is not a governmental organization but is an organization of private individuals acting in a voluntary capacity as Government advisers. It has private records, meets its operating expenses from contributions of its membership, and employs its own staff. It has operated during the period of its existence in an aura of secrecy. The press and the public have been barred from its meeting. Its documents and reports are not publicly available. Public information relating to the functions and the activities of the council are almost nonexistent. We intend to scrutinize carefully the operations of the council and to ascertain whether the use of this private organization in the Department of Commerce has resulted in the creation of a potent lobby within the executive branch of the Government.

Description of 23 Relief Portraits and 2 Paintings in the Redecorated Chamber of the United States House of Representatives

---

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. DOYLE. Mr. Speaker, having been heretofore granted unanimous consent so to do, I am pleased to present for the information and identification of all of my colleagues and any others who read the same, the instructive information about the 23 relief portraits of historical characters in the history of legislation and lawgiving, which relief portraits occupy valuable space upon the walls above the gallery of the House of Representatives.

I also include similar information as to the two large paintings of George Washington and General Lafayette.

Some of the reasons which caused me to make the necessary inquiry and study to obtain the information and data about these relief portraits on which we look each day, and the only two paintings which occupy our working Chamber, are as follows:

First. The lettering underneath each relief portrait giving the name of the historical legislator or lawgiver is so small and indistinct that as we sit on the floor of the House, many Members cannot readily read the name of each relief portrait because they are so far away from us.

Second. I have had many inquiries about said relief portraits and have been asked many times as to who each of these historical persons are as relates to the legislative processes. I frankly state that I have not heretofore been able to satisfactorily answer such inquiries.

Furthermore, I know that many Members have been similarly situated in being asked that same question.

Third. For myself, I have been sure that it would add to my information and inspiration as a Member of this great legislative body if I did know at whom I was looking when I daily sit in this great legislative body and look at these 23 portraits which appear in the marble high over the gallery doors and surrounding gallery walls of the Chamber of our House of Representatives, wherein I recognize the great privilege and honor I have of now serving my ninth year.

Fourth. I felt it would be of considerable interest to a great many American citizens and students of Congress to have this necessarily brief word picture of what is carried upon the walls of the House of Representatives.

These relief portraits were placed in the Chamber of the House of Representatives during congressional recess of the years 1949–50. You will remember, Mr. Speaker, that when we returned to our daily duties in January 1951, there were many interesting questions and many queries raised by some Members of the House in their speaking about it as to why these particular relief portraits occupied the valuable and significant space on the walls of the House of Representatives of the United States of America. Furthermore, and not least of all, queries were made by some Members of the House as to why so many of these relief portraits were those of historical characters of ancient times and from foreign nations. Well, Mr. Speaker, the text of the information I herein set forth, which was furnished me upon request by the Library of Congress, will give you some data on these relief portraits. I hope this data will not only prove of interest but of real value and assistance to Members and to their many friends who make inquiry on the subject. But before I do that, Mr. Speaker, I am sure we are all interested in that magnificent, large painting of George Washington which honors the wall of the Chamber at floor level just to your right as you stand in the Speaker's rostrum facing the membership of the House. It was painted by John Vanderlyn and was acquired by the House of Representatives in 1834 for the total sum of $2,500, by virtue of House resolutions in 1832 and 1834. The magnificent, large painting of General Lafayette was painted by the distinguished artist, Ary Scheffer, which honors the walls of the Chamber just to your left as you stand in the rostrum and was made a gift to the House of Representatives by the artist. These two paintings are the only paintings gracing the walls of the Chamber of the House of Representatives. Neither are there photographs or other paintings within the Chamber itself but in the private entrance hallway to the Chamber, which is largely limited to use by Members, are the large paintings of each of the distinguished Speakers in the history of the House of Representatives.

Mr. Speaker, behind your chair rests the flag of the United States of America, which is so beautifully draped. It is a daily inspiration to us Members as we sit in our respective places and listen to your scholarly, able, and fair parliamentary rulings and decision.

Mr. Speaker, because I am herewith endeavoring to make at least a simple word picture of the decorations of what is on the walls of the House and in the Chamber of the House itself, in addition to our seats and the 4 large mahogany tables, 2 of which are on each side of the political aisle, I herewith include a part of the text describing the mace, which rests to your right as you sit or stand facing the Members which you so ably govern in their parliamentary and legislative problems and procedures.

The mace of the House of Representatives is, aside from the flag, the only visible symbol of Federal Government authority. It has no counterpart in the United States Senate, none in the Supreme Court. It is as old as the Government itself, having been provided for in a resolution adopted by the House during the First Congress in 1789. Ever since it has served as the active symbol of authority of the Sergeant at Arms, who is charged with the duty of preserving order on the floor of the House.

The first mace used by the House was destroyed by fire when a British Army burned the Capitol in 1814. Thereafter a mace of painted wood did service until 1841, when the present mace—a fine example of the silversmith's art—was made by William Adams of New York in reproduction of the original. It is 46 inches in height and consists of a bundle of 13 ebony rods, representing the Original Thirteen States of the Union, bound together with a band of silver in imitation of the fasces originally carried by the lictors in ancient Rome. From the center of this bundle of rods protrudes the stem of a silver globe which is 4½ inches in diameter. The globe is surmounted by an eagle of solid silver with outspread wings.

When the House is called to order each day an assistant Sergeant at Arms places the mace on a cylindrical pedestal of polished green marble at the right of the Speaker's desk. From the moment the Speaker raps for order it begins to play a silent but important part in the day's proceedings. While the House itself remains in session the mace is kept in position at the Speaker's right, but is removed to a lower pedestal by the desk of the Sergeant at Arms when the House resolves itself into Committee of the Whole. Members can thus tell by a glance at the position of the mace whether the House is in session or in committee. This is significant because it requires 218 Members to constitute a quorum for business in the House and only 100 when the House is sitting as a Committee of the Whole.

The cost of the mace was very small, considering its intrinsic and historic value. An interesting item in the statement of the expenditure of the contingent fund of the House of Representatives from December 1, 1841, to December 1, 1842, reads, "William Adams, a mace for hall, H. R., $400." Today its value, real and sentimental, far exceeds that figure.

It was originally proposed following English parliamentary usage, that the mace should be placed on the Clerk's table during sittings of the House and under it when the House should be in Committee of the Whole. The proposal however, was rejected by the House, which adopted the present far more impressive practice, under which the great symbol is kept always in view of Members on the floor of the Chamber and of the ever-changing groups of visitors in the galleries.

OF ANCIENT ORIGIN

The mace is of ancient origin, deriving from the fasces of Roman antiquity. When the first empire was overthrown and the Roman Republic was established, the fasces assumed a new civic dignity.

MACE OF THE HOUSE OF COMMONS

The mace now borne before the Speaker in the House of Commons was made in 1649 by Thomas Maundy for the Commonwealth Government of Oliver Cromwell, altered, however, in insignia. What became of the mace used prior to the Cromwell period is not recorded.

In 1880 the Speaker undertook to quell an incipient fight between two Representatives, William A. J. Sparks, of Illinois, and J. B. Weaver, of Iowa, when they used such menacing words and threatening actions toward each other that many Members rose to separate them. Whereupon the Sergeant at Arms moved about the House with his mace of office and order was restored.

HISTORIC MACES

There are two historic maces in America which antedate the mace of the House of Representatives, indeed antedate the organization of the Federal Government. The older of these, an ornate specimen, was presented to the Corporation of Norfolk, Va., in 1753. The other is still in honorable service in the House of Representatives of South Carolina and was made in London in 1756 at a cost of 90 guineas.

Mr. Speaker, while I do not herein name or identify or place each of the great seals of each of the States of the United States which surround the lower ceiling of the House, I do state that the great seal of the United States of America is in position almost directly above you as you stand facing the Members, while to the left and right thereof are the seals of the Territories of Hawaii and Alaska, and then extending further to the left and the right respectfully the beautiful seals of the States themselves.

Following is the identification of the relief portraits referred to: To the east of the Speaker's rostrum as the Speaker faces the membership: First, Jefferson; second, Napoleon; third, Blackstone; fourth, Grotius; fifth, Simon de Montfort; sixth, Innocent III; seventh, Suleiman; eighth, Maimonides; ninth, Gaius; tenth, Papinian; and eleventh, Solon.

To the west of the Speaker's rostrum as the Speaker faces the membership of the House: First, Mason; second, Pothier; third, Colbert; fourth, Edward I; fifth, Alphonso I; sixth, Gregory IX; seventh, St. Louis; eighth, Justinian; ninth; Tribonian; tenth, Lycurgus; and eleventh, Hammurabi. In the center of the north wall is Moses.

A brief biographical sketch of each of the relief portraits is as follows:

RELIEF PORTRAITS IN THE REDECORATED CHAMBER OF THE UNITED STATES HOUSE OF REPRESENTATIVES

The redecorated Chamber of the United States House of Representatives features a series of medallions portraying 23 historic characters. These individuals were chosen as representative of the great lawgivers of the world who contributed to the American law system. An inscription that accompanies them, appearing high above and behind the Speaker's desk, reads:

"Let us develop the resources of our land, call forth its powers, build up its institutions, promote all its great interests and see whether we also in our day may not accomplish something worthy to be remembered."—Daniel Webster.

This is the only quotation or verse or saying on the walls of the House.

The subjects of these relief portraits were selected by the Architect of the Capitol, after consultation with many authorities and approval by the Special House Roof and Chamber Committee. A biographic sketch of each of these great men is attached hereto.

The statements given above and the list of subjects have been provided by the office of the Architect of the Capitol. The sketches summarize salient—and apropos—material found in the Encyclopedia Britannica (1942 edition) and the first and second editions of the Columbia Encyclopedia. Articles in these sources were found to complement one another and material from both sources was used in every sketch, with the exception of that of Pothier, who is not listed in the Columbia Encyclopedia.

The Architect of the Capitol has released a statement that serves to explain why each man was chosen for inclusion in this group. It is attached as an appendix to this report. Some of the material therein does not appear in the following biographical sketches because it does not appear in the sources used in their preparation.

HAMMURABI—FLOURISHED CIRCA 2100 B. C.

Hammurabi was a great king of Babylonia. His military and political achievement of establishing a central and efficient Government at Babylon is regarded as one of the most far-reaching events in ancient history. Henceforth Babylon was to be the political and intellectual center of West Asiatic history right down to the Christian era.

Hammurabi's name is particularly associated with the great law code which he was declared to have received from the sun god, Shamash. This is one of the greatest of ancient codes. Promulgated for the use of the courts throughout the empire, it is particularly strong in its prohibition of defrauding the helpless. It is genuinely humanitarian, although one savage feature is the retributive nature of punishment, which follows "an eye for an eye" literally.

MOSES—FLOURISHED CIRCA 1400 B. C.

The lawgiver of Israel and the founder of her nationality and religion, Moses stands out as one of the greatest figures in history.

From his infancy, according to Exodus, there were constant signs of God's selection of Moses to lead His people. His leadership in the Exodus and his prominence in the great covenant at Sinai are well known and documented. It was he who welded into one people the various kindred tribes under his leadership. But further details must be a matter of conjecture.

Not only the Ten Commandments, but the whole Mosiac Law as found in Leviticus, Exodus, and Deuteronomy are ascribed to Moses. However, close study of the Bible makes it difficult if not impossible to accept the tradition which accredits to him every detail of Israel's legal and cultural institutions. Even the earliest code of laws in the Bible (Ex. xxi–xxiii) is simply a local and national form of the civil law common to Babylonia, Assyria and the Hittites and was probably adopted by Israel after the settlement in Canaan.

LYCURGUS—FLOURISHED 7TH-9TH CENTURY B. C.

Lycurgus is the reputed founder of the Spartan Constitution. According to a standand hypothesis he lived in the seventh century B. C. He may be a mythical figure.

Tradition represents Lycurgus as finding Sparta the prey of disunion, weakness and lawlessness, and leaving her united, strong and subject to the most stable government which the Greek world had ever seen. To him we may attribute the unification of the several component parts of the State, the strict military organization and training which soon made the Spartan hoplite the best soldier in Greece, and above all the elaborate and rigid system of education.

His subordination of the individual citizen to the all-powerful state has been the model of subsequent police states, but it has yet no parallel in the history of the world.

SOLON—CIRCA 635–559 B. C.

Solon was an Athenian statesman and lawgiver. His amatory poems and patriotic and didactic verse won him inclusion among the Seven Sages. He led the Athenians in a victorious military campaign. But his enduring renown rests on his economic and constitutional reforms.

Solon was elected archon at a time when the nobles held unchecked all the governing power of Athens and the new capitalists virtually owned the entire peasant class. Receiving the unlimited powers of a dictator, he annulled all mortgages and debts, put narrow limits on the amount of land anyone could add to his holdings, outlawed contracts in which a person's liberty was pledged, and put limits on the amount one might spend on various functions, such as funerals. Other state controls included those over exports, education, the use and sinking of wells, bee-farming, the planting of olives and figs, and the cutting down of olive trees.

Solon's new constitution laid the foundations of the Athenian democracy and paved the way for its later developments. The assembly was thrown open to all freemen. He erected a whole new law code that tends toward democratization. His reforms were characterized everywhere by a moderation that made him the model of Greek statesmen.

GAIUS—CIRCA 110–180 A. D.

Gaius was a celebrated Roman jurist of the second century A. D. Of his personal history very little is known. Indeed, it is impossible to discover even his full name, Gaius being merely the given name.

Gaius is remembered for his institutes, which contributed materially to our knowledge of early Roman law, and on which much of Justinian's work is based. The Emperor Valentinian named him, along with Papinian, Ulpian, Modestinus, and Paulus, as one of the five jurists whose opinions were to be followed by judicial officers in deciding cases.

Besides the institutes, which are a complete exposition of the elements of Roman law, Gaius was the author of several other works. His interest in the antiquities of Roman law makes his work valuable to the historian of early institutions.

PAPINIAN—DIED A. D. 212

Papinian (Aemilius Papinianus) is generally considered to be the greatest of Roman jurists. He was magister libellorum and afterwards Praetorian perfect under the emperor Septimius Severus. An intimate friend of the emperior, Papinian accompanied him to Britain and became the guardian of his two sons. In 212, one of these brothers, after committing fratricide, had Papinian put to death.

Papinian was noted not only as a jurist of wide learning and great comprehension, but as a stern moralist. His works are known to us through the numerous quotations of them in the Theodosian Code and in the Digest of the Corpus Juris Civilis (see Justinian). The constitution of Theodosius II and Valentinian named him the principal of 5 jurists set up as authorities to be cited in future decisions of the courts (see Gaius).

JUSTINIAN—A. D. 483–565

Justinian I (Flavius Anicius Justinianus), surnamed The Great, is the most famous of all emperors of the Eastern Roman (Byzantine) Empire. He recovered Africa from the Vandals and Italy from the Ostrogoths, but met with less success in fighting Persia. He insisted upon the supremacy of the emperor over the Church, not only in matters of organization, but also in matters of dogma. He engaged in various important controversies about dogma, but never succeeded in creating unity.

It is as a legislator and organizer of the law that Justinian's name is most familiar to the modern world. His greatest accomplishment was the compilation of the Corpus Juris Civilis, which has influenced all subsequent legal history. Finding the law of the Roman empire in great confusion, he ordered the preparation of this work—consisting of the Codex Constitutionum (a collection and revision of the imperial constitutions from the time of Hadrian), the Digesta or Pandectae (a revision, abridgment and rearrangement of the classical jurists), the Institutiones (a handbook for students), and the Novellae (the new laws instituted by Justinian). The Corpus was not a codification but a consolidation. Thus regarded, Justinian's work may appear to entitle him and Tribonian to much less credit than they have received.

TRIBONIAN—DIED A. D. 545

Tribonian (Tribonianus) was a famous jurist and chief legal minister to the emperor Justinian. Under the command of Justinian, he directed the compilation of the Corpus Juris Civilis, the most important collection of Roman law and the basic document of modern civil law.

It is not possible to determine exactly what Tribonian himself contributed to the Corpus Juris Civilis. In all likelihood he wrote a large part out of his encyclopedic knowledge of Roman law. Of the four parts of the Corpus, he was the most important editor of the Digest, Institutes, and Codex. Of the Novels (the new laws) he must have been a principal author, as chief legal minister. Tribonian was probably not a juridical thinker, like the great five jurists (see Gaius), but his knowledge of Roman law and his somewhat pedantic erudition was absolutely essential to the great project that he directed.

MAIMONIDES—A. D. 1135–1204

Maimonides (Rabbi Moses Ben Maimon, or Rambam) was born in Spain and migrated to Cairo, Egypt, where he became the greatest of all medieval Jewish scholars. He produced a great commentary on the six orders of Mishna[1] (where he was the first to enumerate the fundamental dogmas of Judaism), a collection of discourses, a work on logic, a treatise on the calendar, several medical books—including an important work on hygiene—and the great philosophical work, Moreh Nebukim (Guide for the Perplexed). In the latter work he explains the esoteric ideas in the Bible, formulates a proof of the existence of God, expounds the principle of creation, and elucidates baffling metaphysical and religious problems. The work has dominated Jewish thought and exerted a profound influence upon Christian and Arabian thinkers.

[1] The Mishna is the text of the oral law, in contradistinction to the scriptural, or written, law of the Jews.

The greatest scholastic work of this savant-Physician-Philosopher was the Mishna Torah, a classified compendium of the Jewish law. This attempt to organize and systematize the vast mass of Jewish oral law became a reference book for laymen as well as rabbis and judges.

GREGORY IX—A. D. 1145–1241

The papacy of Gregory IX (Ungolino Conti de Segni) was largely devoted to hostilities against Frederick II, Emperor of the Holy Roman Empire. Gregory systematized the Medieval Inquisition. His zeal for the entirpation of heresy made him generally disliked. The people of Rome, disapproving his temporal power, exiled him for a part of his reign. He died as Frederick was invading the Papal States.

Gregory ordered the condensing of five compilations of decretals[2] into a single collection. The editor, Raymond of Pennaforte, did not attempt any original work and the Pope had no idea of codifying the whole of canon law. However, the collection was an important step toward codifying canon law.

INNOCENT III—CIRCA A. D. 1161–1216

Innocent III (Lotario de' Conti de Segni) was elected Pope at the age of 37. The effective assertion of world power is the characteristic feature of his pontificate. Working from a theory that since things of the spirit take preeminence over things of the body, and since the church rules the spirit and earthly monarchs rule the body, earthly monarchs must be in all things in subjection to the church. Innocent effectively exercised his ideal that the Pope is the political ruler of the world.

Innocent's exalted ambitions were eventually their own undoing, and had the effect of setting almost every resolute Christian prince automatically against the church. The triumph of his pontificate was the fourth Lateran council (1215), a great assembly of States that did little more than listen to and endorse the decretals read by the Pope.

The Pope's interest in law was active: he constantly held court, with a good name for impartiality. He instituted ecclesiastical reforms, centralizing the administration at Rome and his authority within the church exceeded that of his predecessors. Innocent is remembered for his abrogation of the Magna Carta. Supporting King John, against the barons who demanded the great document, Innocent declared it null as a forcibly exacted promise.

SIMON DE MONTFORT—CIRCA A. D. 1200–1265

Simon de Montfort, Earl of Leicester, spent the most active part of his life giving skillful and ruthless support to, then leading revolts against, Henry III of England. At the "Mad Parliament" of Oxford he headed the opposition. In civil war he became master of England, which was placed under a constitutional government. De Montfort was practically dictator after his victory on the battlefield at Lewes, in May 1264. However, he promulgated a scheme for establishing a thorough parliamentary control over the executive. He was killed in a resurgence of civil war.

Simon is an important figure in the history of legislative bodies because the great Parliament which he summoned in 1265 was a revolutionary assembly that established an important precedent—it contained not only knights from each shire to represent the rural nobility, but also representatives from the towns and boroughs. He left a heritage in the precedent he had established in championing the cause of the nobles and the people against the king and in calling the parliament of 1265. For years after his death he was revered by the commons as a martyr.

[2] The decretals are papal decisions and decrees to be considered authoritative and binding in future decisions.

LOUIS IX—A. D. 1214–1270

Saint Louis, or Louis IX, king of France, was an accomplished knight, physically strong, fearless in battle, heroic in adversity, of imperious temperament, unyielding when convinced of the justness of his cause, energetic and firm. He stands in history as the ideal kind of the middle ages. Here was an ascetic who gave charity to over a hundred beggars daily, yet safeguarded the royal dignity by bringing them in at the back door—and by a courtly display greater than ever before in France. He made presents of haircloth shirts to his friends and went on two crusades. He was canonized in 1297. His reign was comparatively uneventful.

Louis was active in arbitration, adjusting territorial claims, imposing peace upon warring factions of his nobility, and setting succession disputes in neighboring countries. He simplified administration, improved the distribution of taxes, abolished the judicial duel, and sought to introduce uniform Roman law. The English barons (see Simon de Montfort) submitted their quarrels with Henry III to him, but his judgment in favor of the king led to civil war and the victory of Simon at Lewes. This judgment, known as the Mise of Amiens, was a flat denial of the parliamentary reforms known as the Provisions of Oxford. However, it expressly declared that the decision was not to invalidate the privileges and liberties of the realm of England, which had existed before the time of these provisions.

ALPHONSO X—A. D. 1221–1284

Alphonso the Wise, or Alfonso X, king of Castile and Leon, ruled from 1252 until he was deposed by the Cortes in 1282. He is perhaps the most interesting—though he was far from being the most capable—of the Spanish kings of the middle ages. As a ruler he was weak, unstable and obstinate and he ruined the economy of his lands while endeavoring to secure his election as emperor of the Holy Roman empire.

El Sabio (the Sage) is called the father of Castilian prose. Under his patronage and editorship a number of vast works were undertaken, including Las Siete partidas, the earliest known Spanish-vernacular chronicle, valuable compilations from Arabic sources such as the Alfonsine Tables in astronomy, an illustrated book of games, and one of the greatest collections of mediaeval poetry and music. Under his patronage the flow of Oriental culture into Western Europe was greatly accelerated.

Alphonso showed legislative capacity and a very commendable wish to provide his kingdoms with a code of laws and a consistent judicial system. He was largely responsible for the Siete partidas, a compilation of Roman and canon law which was promulgated by his grandson, and other codes: The Fuero de las leyes or Fuero Real and an Espejo de Fueros.

EDWARD I—A. D. 1239–1307

Edward I, King of England, failed in the chief ambition of his life, the conquest of Scotland. (He did humiliate Scotland by removing the coronation stone of Scone to Westminster.) Yet, his conquest of Wales, his legislation, and his triumph over his barons, his ecclesiastics, and the greatest of French medieval kings indicates the strength and permanence of his work.

Edward is remembered for the developments in law and constitution that have caused him to be called the English Justinian. Before he became king he appropriated some of Simon de Montfort's ideals. The general effect of his work was to eliminate feudalism from public life. The Statutes of Westminster I and II formulated much unwritten law. The Statute of Mortmain was a landmark in his struggle with the church, resulting from his dislike of authority not emanating from himself. The Statute of Winchester established police and militia regulations. Westminster III, also called Quia emptores, prohibited subinfeudation.

Thus Edward brought within the formulated law the gains of a century of common law, supplementing them. He gave a tremendous impetus to the development of law and courts, and built up the central administration.

Some important developments were wrung from Edward against his will. The parliamentary constitution of England was established as the result of his convocation of the Model Parliament of 1295. "What touches all," ran Edward's writ of summons, "should be approved by all, and it is also clear that common dangers should be met by measures agreed upon in common." This action marks a tremendous forward step in the development of a powerful representative body. Two years later, the rising hostility of his subjects, barons, merchants, and clergy forced Edward to issue the confirmation of the charters granted by John and Henry III, including the Magna Charta.

SULEIMAN—A. D. 1494–1566

Suleiman, the Magnificent, was the most fortunate of Ottoman sultans. He lived during the most glorious period in the history of Islam and ruled without a worthy rival. He inherited a well-organized country, a disciplined army, and a full treasury. Although his campaigns were not always wisely and prudently planned, they added great territories to his realm. In his days Turkey became a first-rate seapower and attained the culminating point of her glory. Suleiman is remembered for his encouragement of learning and the arts. He wrote verses and it is from his time that historians date the rise of the occult influence of the harem on Turkish political development.

In Turkey, Suleiman is known as the Lawgiver. His claims to renown as a legislator rest mainly on his organization of the Ulema, or clerical (religious) class, in its hierarchical order. The judges belonged to this class, but all executive and administrative power remained outside it, in the hands of the military. Suleiman's administration was, relatively, one of the best of his time. His amelioration of the lot of his Christian subjects is not his least title to fame. However, his record of magnanimity was marred by the murder of his two sons, at the insistence of his favorite wife.

GROTIUS—A. D. 1583–1645

Hugo Grotius, or Huig van Groot, was a Dutch jurist and humanist. He strove vainly to reunite the Christian sects and the European countries. He wrote valuable works in theology, history and classical study, but his fame rests chiefly on the De jure belli et pacis, which he prepared in Paris after fleeing life imprisonment in his native country.

Concerning the law of war and peace, the De jure belli et pacis, is a systematic study of the bases and principles of positive natural law. Though not the first attempt in modern times to ascertain the principles of jurisprudence, it went far more fundamentally into the discussion than any one had done before. The work is startling in its originality and in the scope of its consideration of international law and international ethics. One of the great masterpieces of legal literature, it is usually considered to be the first definitive text on international law.

COLBERT—A. D. 1619–1683

Jean Baptiste Colbert was a statesman who did much for France. Nevertheless, his rule was a very bad example of overgovernment. He did not believe in popular liberty. The parlements and states-general received no support from him. The technicalities of justice he never allowed to interfere with his plans. He trafficked in public offices for profit.

Colbert became the chief power in the administration of Louis XIV, where he cleansed the financial administration ruthlessly. His ambitious scheme of encouragement of industry and trade involved subsidies, state planning and rigid control of every detail of production, including quality and price. Similar policies were applied to agriculture. His greatest and most lasting achievement was the establishment of the French Marine. (To supply oarsmen for his galleys, he required judges to sentence as many persons as possible; the convict, once chained to the bench, was seldom released at the expiration of his sentence. Colbert never thought of the long agony of those who filled his needs.) Colbert extended his scheme of paternalism to the arts and literature. His industry was colossal; he even found time for the improvement of the breed of horses.

Colbert reformed certain aspects of the legal administration and codified ordinances.

POTHIER—A. D. 1699–1772

Robert Joseph Pothier was a French judge and professor of law. He paid particular attention to the text of the Pandects, or Digests, of the Corpus Juris Civilis (see Justinian, Tribonium, etc.). His Pandectae Justinianae in novum ordinem digestae is a classic in the study of Roman law. He wrote many learned monographs on French law and much of his work was incorporated almost verbatim in the French Civil Code.

BLACKSTONE—A. D. 1723–80

The fame of Sir William Blackstone rests on his Commentaries on the Law of England. His career in Parliament, to which he was elected first in 1761, was somewhat inglorious, as he disliked attendance there. In the 10 years of his judgeship he administered the law satisfactorily but attained no special distinction. He inaugurated courses in English law at the British universities, which had previously confined themselves to Roman law.

The commentaries of Blackstone have been regarded as the most thorough treatment of the whole of English law ever produced by one man. Whether it is owing to its literary graces, or to its success in flattering the prejudices of the public to which it was addressed, the influence of the work has been extraordinary. It may be more correct to regard it as a handbook for laymen than as a legal treatise. Yet, it has been used as the standard textbook in English law for generations.

The fame of Blackstone is greatest in the United States, where the commentaries was, for many years, almost the only source of knowledge of English law.

MASON—A. D. 1725–92

George Mason exercised great influence in local and Virginia legislative bodies. As a member of the Virginia convention, he drafted the Virginia constitution and the famous Bill of Rights, a radically democratic document which had great influence on American political institutions. This great work was extensively copied by other American States and had some influence on the French Declaration of the Rights of Man.

Mason was a member of the Federal Constitutional Convention at Philadelphia in 1787 and took an active part in drafting the Constitution. However, he objected to the large and indefinite powers given to Congress, the compromises on the tariff and slave-trade issues, and failure to include a bill of rights. He refused to sign the Constitution, and, with Patrick Henry, he led the fight in Virginia against its ratification. Failing in this, he suggested amendments, the substance of several of which was afterward embodied in the first 10 amendments—the Bill of Rights—to the American Constitution.

Mason believed that local government should be kept strong and central government weak; his democratic theories have had much influence in Southern and Western States.

NAPOLEON—A. D. 1769–1821

Napoleon I, Emperor of the French, was a spectacular military genius of unlimited ambition. One of the greatest conquerors history has ever known, he made France paramount in Europe, rearranged its map, and set his relatives upon its thrones.

In France, Napoleon consolidated the results of the Revolution and sought a new conservative balance by his reforms. He centralized the administration, established the Bank of France, inaugurated financial reforms, made peace with the church, and instituted legal reforms to pave the way for the Code Napoleon. His excessive centralization made the state supreme over the entire people—a system singularly favorable to statism.

The Code Napoleon, sometimes called the Code Civil, was the first code of French civil law. It embodies the private substantive law of France, fusing the preexisting Germanic and Roman civil law applied in France with additions resulting from the French Revolution. The code has been in force, as changed by legislative amendment, since it was first promulgated. Still in force in Belgium and Holland, it has served as a model for—and has exercised the greatest influence in—many other countries. The Spanish Civil Code was largely based on the Code Civil, as were the civil codes of most of the South American States, Quebec, and Louisiana.

JEFFERSON—A. D. 1743–1826

Thomas Jefferson is the outstanding apostle of American democracy and one of the greatest liberals of all time. He held a great range of public offices; he was prominent in many, and foremost member of several, of the most important deliberative and legislative bodies in American history. He is famous for many contributions to the American democratic system, as Governor of Virginia, member of the Continental Congresses, Minister to France, Secretary of State, Vice President, and President.

Jefferson was the chief inspirer and most ardent worker for reforms embodied in a revision of the laws of Virginia. These included the statute for religious freedom—the first law of its kind in Christendom—abolition of primogeniture, and the repeal of laws of entail. Here, he was the first American statesman to make education by the State a fundamental article of democratic faith. He gained his greatest fame as author of the Declaration of Independence. As Vice President and presiding officer of the Senate, he wrote the influential Manual of Parliamentary Practice, which is still used in both Houses of Congress.

In Jefferson the Nation had a great scholar and philosopher, who was at the same time one of her most competent political managers—a leader with unlimited faith in the people. The ideas he advocated have become the very foundations of our Government. His importance as a maker of modern America is unequalled; it can hardly be overstated.

APPENDIX

RELIEF PORTRAITS IN MARBLE OVER HOUSE GALLERY DOORS

The relief portraits on the upper walls of the House Chamber are of men noted in history for the part they have played in the evolution of what has become American law. There has grown a great body of judicial tradition and a mass of legislation embodying the rules and standards by which the American people, regardless of State lines, are content to guide their lives.

The Colonists brought to this country the common law of England, its concepts of property, liberty, and justice, but they took pains to make themselves free of governmental tyranny. But though our law is mainly derived from the British system it also owes something to French law, and both of these great systems derive from Roman law, and the laws of earlier peoples.

These great lawgivers, in chronological order, are:

Hammurabi, the first King of Babylonia, reigned about 2067–2025 B. C.

The great law code bearing his name is recognized in legal literature as, perhaps, the earliest surviving, naturally characterized by its primitiveness.

Moses—circa 1571–1451 B. C.: Hebrew prophet and lawgiver. Amongst all lawgivers, founders of states, and teachers of mankind, none has excelled Moses, who transformed a horde of slaves and wanderers into a nation, disciplined a race, and breathed into it its character. To him is attributed the delivery of the Ten Commandments.

Lycurgus—circa 900 B. C.: Legislator, traditional author of laws and institutions of Sparta (by present standards a harsh code).

Solon—circa 594 B. C.: The great Athenian lawgiver, author of constitutional and legal reforms.

Gaius—circa A. D. 110–180: A celebrated Roman jurist, probably a native of the eastern empire. He was the author of numerous works on the civil law, the most noted being The Institutes.

Papinian—circa A. D. 200: A Roman, remarkable not only for his juridical genius, for his independence of judgment, lucidity, and firmness, but for his sense of right and morality by which he frequently rose above the barriers of national prejudices, and merited the highest veneration of succeeding centuries.

Justinian—A. D. 483–565: One of the most important events of the reign of this Byzantine Emperor was the publication of the Justinian Code, the body of the Roman law compiled and annotated, the most important of all monuments of jurisprudence.

Tribonian—circa A. D. 500–547: A Byzantine jurist, he was head of the commission which codified the laws under Justinian.

Maimonides—A. D. 1135–1204: Jewish philosopher of Cordova; he compiled a systematic exposition of the whole of Jewish law as contained in the Pentateuch and in Talmudic literature.

Gregory IX—circa A. D. 1147–1241: Author of a compilation of decretals on canon law; during a critical period he accomplished much in maintaining the remnants of Roman law.

Innocent III—A. D. 1161–1216: A profound student of canon and civil law, his accomplishments during a dark and critical period of human history were much the same as those of Gregory IX, preservation of the remnants of Roman law.

Simon de Montfort—A. D. 1200–1265: Celebrated English statesman, he originated the first appearance of the House of Commons of England.

St. Louis—A. D. 1214–1270: King of France, author of the Mise of Amiens.

Alphonso X, the Wise—A. D. 1221–1284: King of Leon and Castile, he was the author of the code Las Siete Partidas, the basis of Spanish jurisprudence.

Edward I—A. D. 1239–1307: King of England, founder of the parliamentary constitution of England and eliminator of feudalism from political life. "What touches all should be approved by all, and common dangers should be met by measures agreed upon in common."

Suleiman—A. D. 1494–1566: "The lawgiver," Sultan of Turkey, reformer and improver of civil and military codes. His amelioration of the lot of his Christian subjects is not his least title to fame.

Grotius—A. D. 1583–1645: Dutch statesman, advocate general of Holland and Zealand. Author of De Jure Belli et Pacis, first treatise on international law.

Colbert—A. D. 1619–1683: French statesman, codifier of the ordinances, reformer of the French legal system.

Pothier—A. D. 1699–1772: French jurist, author of Digest of the Pandects. He assembled and codified the remnants of Roman law and the prevalent French law.

Blackstone—A. D. 1723–1780: A celebrated English jurist, professor of common law at Oxford, his Commentaries on the Laws of England had considerable influence on the importation and adaptation of English common law in this country.

George Mason—A. D. 1726–1792: He drafted the Virginia Declaration of Rights, 1776, was a member of the Constitutional Convention in 1787, but led opposition to the ratification of the Constitution until the Bill of Rights was inserted in it.

Napoleon—A. D. 1769–1821: He appointed a commission which produced the Code Napoleon and saw that it was enforced. It is prevailing law even now in Louisiana, quite influential in Florida, New Mexico, and California.

Thomas Jefferson—A. D. 1743–1826: Third President of the United States, he was author of the Declaration of Independence and of the Statute of Virginia for religious freedom.

Men of Yesterday Don't Fit in the World of Tomorrow

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled "Men of Yesterday Don't Fit In the World of Tomorrow," which appeared in the Reading Times of July 25.

MEN OF YESTERDAY DON'T FIT IN THE WORLD OF TOMORROW

The world of tomorrow with its electronically-operated homes, atom-powered transportation and regularly scheduled flights to the moon and from thence to the plants and outer space has long been the dream of imaginative children, the goal of trained scientists and the psychological escape mechanism of science fiction fans.

Prior to Hiroshima and Nagasaki, visionaries placed this utopia at a comfortable distance in the future, deriving a certain degree of satisfaction from tossing around such dates as A. D. 2000, the year 5000, or, drawing on the limits of literary license, 30,000 years from now.

Then the bomb fell.

With it, a new era was ushered in. Unlimited horizons appeared, but with them, new responsibilities for us as individuals, groups and nations.

For the past decade, scientists have been revising their original estimates of that time chart for the beginning of this utopia steadily downward. As it draws closer, many people are beginning to find their anticipation diluted with trepidation. For the world of tomorrow means change and change means adjustment. People fear adjustment.

This past week, scientists have set the target date for the onset of this nuclear revolution so close that most of us will live to see it—1960, to be exact. And, barring the possibility of war, atomic energy will be put to use not only in submarines and other instruments of destruction, but in inventions which will radically alter our industrial and domestic lives.

It is predicted that Mrs. Housewife will be introduced to the atom in the next 5 years, with meats, fruits, and vegetables treated by atomic rays to preserve their flavor and freshness for weeks, months, and perhaps years. And that's only a beginning. Within the next 50 years, atomic energy is expected to be running practically everything in the world.

So atomic energy, whether in the form of a bomb dropped on an American city or an automated factory will have a pronounced effect on our society.

All that means change and adjustment, yes, and that's where we come in. The world of tomorrow promises to be a wonderful place, providing it is not filled with men of yesterday.

Are we ready for and worthy of this world of tomorrow? Can we handle this Janus-like weapon for good rather than evil? Can we make the adjustments, both collectively and individually, to discard 19th century thinking in preparation for a 21st century world?

Those questions cannot be answered casually. Whenever social and political adjustments have been accelerated, society has undergone a growth spasm because most people are not ready for change.

Have we learned, for instance, that toying with the atomic bomb and its senior grade companies, the hydrogen and cobalt bombs, is no longer war, but mass suicide? The world's greatest political leaders met only last week to iron out kinks in international relations which could lead to the unleashing of this fury. How well they succeeded is a matter of public record through news releases.

But it isn't necessary to gage our preparation for this "brave new world" by thinking of the United States and Russia. What about the invisible lines of sectionalism, partyism, classism, and racialism here in this country? How well do you get along with your neighbor? How well do you get along with yourself?

It seems very futile, doesn't it, to be yearning for the world of tomorrow if you can't get along in the world of today.' It's more than a matter of gadgets and push-button living. Its' a matter of growing up, of becoming a man or woman mature enough to be worthy of this utopia.

Otherwise, we will remain slightly-veneered savages in a world of marvels—Alices in Wonderland.

An Authoritative Word on the Peaceful Use of the Atom

EXTENSION OF REMARKS
OF
HON. HAROLD. D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1955

Mr. DONOHUE. Mr. Speaker, it is a pleasure to include a very timely editorial entitled "Where Atomic Secrecy Has No Place," which appeared in the June 15, 1955, issue of the Worcester (Mass.) Evening Gazette, which contains heartening words on the peaceful use of the atom uttered by the distinguished president of the Massachusetts Institute of Technology.

The article follows:

WHERE ATOMIC SECRECY HAS NO PLACE

Against the background of furitiveness, suspicion, and public misconceptions accompanying the scientific inquiry into nuclear energy, it was particularly good to hear the announcement made the other day by Dr. James R. Killian, president of the Massachusetts Institute of Technology.

Dt. Killian, talking to MIT alumni, announced plans for a new nuclear reactor which the institute will build. What we liked was the way Dr. Killian described it—"a tame and cool one, rather than a hot type," having "nothing to do with bombs." This reactor, he said, "will be nonsecret and dedicated to the unrestricted advancement of knowledge and the peaceful use of the atom."

Atomic science, if it is ever to give us the wonderful abundance that it promises, has got to be a cool business, tame, nonsecret, and unhampered by military characters with bombs on their minds who go around locking up discoveries as fast as the men in the laboratories make them.

The Outrage on General Taxpayers of Federal Reclamation

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. GWINN. Mr. Speaker, I dare say that the great majority of the Members of this House has no idea of the scandalous operations of the Bureau of Reclamation. They have been going on for 50 years. What is more, it appears that the Members from the central West and the East and South and some from the far West have been dead asleep. We hope this is not true of the present Members. While they slept in the past the Government took, mostly from their States, over $2,175,000,000 as of June 30, 1952. And they are now committed to at least $1,588,000,000 more, a total of at least $3,745,000,000, and maybe double that. No one can tell.

For example, a vast new project before Congress is called the upper Colorado storage project. Just to get started the Bureau wants an authorization of $1,093,000,000. To complete it will take 25 years or more. Goodness knows what the figure will be for our grandchildren to pay. No one can even guess that. The Bureau itself does not know and says so. Of course, Congress does not know. Yet by the logrolling, back-scratching game of politics the taxpayers have been committed for years and years to come.

The Hoover Commission task force pointed out that "the Federal Government has used water resources and power development projects, which should be undertaken exclusively for economic purposes, to accomplish indirect social and political ends. Instead of being undertaken and operated for the purposes stated, Federal water resource development projects have been used in some instances to promote collateral objectives." The Hoover task force "found that project costs are frequently under-

estimated, that benefits advanced by various Federal agencies as justification for projects are often exaggerated, that unsupported and unsupportable claims are made for indirect benefits. In some instances projects have been recommended and authorized without economic justification of any kind. Overestimation of irrigation benefits has reached a point where the Bureau of Reclamation has claimed justification for the expenditure of $1,000 to $2,000 an acre for the development of irrigated land which, on the basis of information available to the task force, would not be worth more than $200 an acre."

According to the Bureau of Reclamation reports, out of 34 irrigation projects, 31 would produce more hay and grass to produce more dairy products, viz, butter, cheese, and dried milk. Then more tax dollars will be required to buy them up and put them in storage. They may mold and waste away. Twenty-seven out of thirty-four projects would grow more grass and hay to grow more sheep to produce more surplus wool to put in storage at more taxpayer expense. The cost to the Nation's taxpayers will be as high as $5,000 an acre to bring water to the hay and grass fields. The land reclaimed would not be worth $200 per acre. No hay and grass fields are worth more than that. Yet, W. A. Dexheimer, Commissioner of the Bureau of Reclamation, represents to Congress and the taxpayers that these reclamation projects will not add to surplus agricultural products in his press release of May 13, 1955, when he says "most products of western irrigated farms are not under price support or acreage control and are not surplus."

This illustrates how characteristic and common misrepresentation is when bureaucrats engage in improper functions of government. And all this is an improper function of limited constitutional government. It becomes even ridiculous. For example, the Department of Agriculture calls for lower price supports for certain agricultural products we cannot use. It orders a decrease in acreage allotments so as to reduce unneeded production and the burden on taxpayers. Another bureau of Government, the Bureau of Reclamation, under Mr. Dexheimer, calls for spending billions of the same taxpayers' dollars for more Western mountainous desert acres which will grow more farm surplus prdoucts, viz, butter, milk, and wool, to buy up and put in storage. None of it makes any sense to taxpayers. But the taxpayers are unorganized. Besides they do not know about these things. Only those who get the benefits are organized and they trade their votes for these benefits. It is as bad as a shell game. It is worse because it is all so vast even Congresmen on the ground cannot fathom it.

When politicians support a project like the upper Colorado River boondoggle, they must be thinking of votes. Such a project means enormous gifts of money to a few persons; it means brief boom times for a few desert towns; it means that craftsmen and laborers must be transported at great public expense to remote areas of the mountain west; it means some wild spending; and most of all it means a successful raid on the Treasury of the United States. There is an unbroken record of "no returns" to the Federal taxpayers. The payments made by the few projects that have nearly paid out or are now paying on account are not paid back to reduce the advances by taxpayers but are paid out again for new projects. A Government that will wrongly take private property to do special favors for a group of voters in return for their votes will, of course, resort to misrepresentations and deceit to develop some more of the same. Not one of these irrigation projects started since 1902 has paid for itself.

The Bureau of Reclamation recently issued to the House Interior Committee a table purporting to show how much each State would receive back for services, materials, and equipment for the construction of the upper Colorado River project. For instance, my own State of New York, according to the Bureau, would benefit to the extent of $77,398,000 for possibly some machinery orders. How the Bureau guesses the amount of benefits does not appear. The phony part, the deceitful part, is the careful omission of the cost to my State and to all taxpayers in each State for the whole project. For instance, New York taxpayers in order to get back $77,398,000 in business orders would be assessed $493 million as their share of the $4 billion subsidy necessary to complete the project, according to the Council of State Chambers of Commerce bulletin No. 134, June 1955. Its net contribution to Rocky Mountain farmlands would be $416,202,000. How the other States would fare is as follows:

State	Amount Bureau says it will receive	Cost to taxpayers
Arizona	$37,036,000	$20,400,000
Alabama	7,025,000	46,000,000
Arkansas	2,145,000	27,200,000
California	125,248,000	372,800,000
Colorado	47,981,000	36,400,000
Connecticut	15,181,000	69,600,000
Delaware	1,429,000	14,800,000
District of Columbia	774,000	
Florida	2,797,000	67,600,000
Georgia	8,157,000	61,200,000
Idaho	5,963,000	13,600,000
Illinois	53,463,000	276,000,000
Indiana	23,815,000	102,400,000
Iowa	5,357,000	62,000,000
Kansas	10,270,000	52,400,000
Kentucky	5,953,000	50,800,000
Louisiana	5,536,000	53,600,000
Maine	3,452,000	18,800,000
Maryland	9,108,000	102,400,000
Massachusetts	26,970,000	127,600,000
Michigan	41,556,000	196,400,000
Minnesota	8,157,000	69,600,000
Mississippi	2,382,000	26,000,000
Missouri	12,980,000	100,000,000
Montana	4,275,000	16,000,000
Nebraska	6,547,000	34,000,000
Nevada	4,667,000	6,800,000
New Hampshire	2,441,000	12,000,000
New Jersey	33,400,000	144,000,000
New Mexico	17,006,000	15,200,000
New York	77,398,000	433,600,000
North Carolina	13,158,000	66,800,000
North Dakota	1,403,000	12,000,000
Ohio	50,844,000	236,000,000
Oklahoma	7,800,000	44,800,000
Oregon	9,847,000	44,000,000
Pennsylvania	55,549,000	277,600,000
Rhode Island	5,240,000	20,800,000
South Carolina	6,370,000	34,400,000
South Dakota	2,056,000	13,200,000
Tennessee	7,681,000	55,600,000
Texas	34,575,000	194,400,000
Utah	61,716,000	16,000,000
Vermont	$1,191,000	$7,600,000
Virginia	8,395,000	67,600,000
Washington	14,631,000	68,400,000
West Virginia	5,299,000	35,600,000
Wisconsin	18,100,000	88,000,000
Wyoming	10,719,000	8,000,000

When the Bureau gets through with this upper Colorado River project it has a list of 269 additional projects it hopes to build in the future. The Bureau regards itself as permanently in the business of "the investigation of water resources of the West is (as) a continuous process." It has no intention that the taxpayers will ever get their money back.

If the taxpayers are going to remain so dumb as to let their Government stay in this kind of business we must expect a repetition of the past. For example, the Bureau of Reclamation admitted that on the Colorado-Big Thompson project after they got the water canals all built the water froze up and would not run. The project had to be scrapped or else cement covers had to be put on miles of canals in the frozen mountains to keep the water from freezing. Congress could not be made to look ridiculous so it appropriated $4,150,000 to try to salvage the whole project from the ice. The additional cost not now contemplated for the Frying Pan-Arkansas project will be more than $64 million when this has to be done, according to engineers' testimony before the House Interior Committee. No one can expect the taxpayers to get back a cent from such crazy schemes. They have not done so in the last 50 years. There is less reason to expect it in the next 50.

To make the picture complete a maximum of only 6 million acres could possibly be irrigated and reclaimed in the desert country by the year 1975, according to the Bureau's program. According to the Department of Agriculture that would be a little over one-half of 1 percent of the present total land in farms now in use. To reclaim western arid lands costs from 20 to 50 times that of draining and clearing ordinary farmlands in the humid areas with plenty of annual water fall. There are 20 million acres of fine crop land available when needed. Besides that, they are located much nearer the big city markets.

Congress may commit a great asset—water for four States—to grow forage crops for dairy cows and wool on sheep's backs in the mountainous uplands of the Rockies. Former Governor Miller, of Wyoming, Chairman, Natural Resources Task Force, First Hoover Commission, stated that every thousand gallons of water in this area would grow 10 cents' worth of such crops:

> It could be used to produce $5 worth of industrial products.

And of course it should be preserved for that if not necessary for human consumption. Adm. Ben Moreel, Chairman of the Task Force on Water Resources and Power, said that our precious water resource "should be committed sparingly in order to retain the maximum de-

gree of flexibility in our rapidly changing future economy."

The answer to the reclamation business is too obvious. Yet a governor of a State and the Congressmen in that State may not be reelected unless they continue to whoop it up for more and more of the same old reclamation and electric power dam projects. The Governor of Wyoming wrote asking me and other Congressmen to support the upper Colorado River project. My reply follows:

JULY 8, 1955.

Hon. MILWARD L. SIMPSON,
Governor of Wyoming,
Executive Department,
Cheyenne, Wyo.

DEAR GOVERNOR SIMPSON: Your letter of June 10 to me indicates that the enclosed Denver Post editorial of May 10 adequately states the feelings of the majority of the people in Wyoming favoring the Colorado River storage project and participating projects. It may take more presently unascertainable billions from the taxpayers. But, Governor, the majority, whoever they are, now turn out to be dead wrong on nearly all reclamation projects for the last 50 years. Of the earlier irrigation projects a very few were economically feasible. The cost per acre was low, the land was fertile, the growing season long, and high-value crops such as melons, grapes, beans, celery, tomatoes, asparagus, etc., have been grown as in the Central Valley project of California.

But in this Colorado project the Congress is being asked to provide funds to irrigate lands in the mountainous uplands, at altitudes between 5,000 and 7,500 feet. At these altitudes, as you well know, the winters are long and cold and the summer growing season short. The crops are mostly grass and hay which is of very low value, and it frosts nearly the year round.

Upper Colorado project construction costs for the hydroelectric projects per kilowatt capacity are almost 5 times higher than Hoover Dam and 6 times that of the Grand Coulee. In terms of cost per kilowatt-hour, it ranges from 4 to 6 times that of the existing hydro-electric dams. It would be cheaper to generate the power from the greatest coal deposits in the world, located in the upper Colorado region including your own State. Surely the upper Colorado is the worst possible project for the development of hydroelectric power.

The Government estimates of cost for reclamation projects has been so uniformly wrong as to indicate a deliberate intent to deceive the Congress in these undertakings. According to their own testimony before the Subcommittee To Study Civil Works, 82d Congress, 2d session, House Committee print No. 21, page 17, the Bureau of Reclamation admitted that on the basis of its present authorized construction program, actual construction costs run about 106 percent above the estimated costs prepared.

The bills call for an expenditure of $1,658,460,000. The total interest charges that will have to be absorbed by the United States taxpayer will amount to $1,153 million according to Mr. C. W. Crosthwait, acting Commissioner of the Bureau of Reclamation. Isn't it true, then, that the actual estimated cost at the moment is $2,811,460,000? But on the record of performance for the Federal agencies for over 50 years we must assume that estimates are deceptive and that the actual cost of the upper Colorado project will be 106 percent higher, making an ultimate cost of at least twice $2,811,460,000 or $5,622,920,000. That is $140 for every American family plus the deficits in operation plus the exemption of taxes on that capital which would otherwise be in private business which amounts to more billions the general taxpayers must pay because the upper Colorado projects are made tax exempt.

In the larger projects like this the deceptions are the most shocking. For example, the total estimated cost for the Missouri Basin project as originally proposed was $1,257,645,700. Some 10 years later, as set forth in the hearings before the House Appropriations Subcommittee, 83d Congress, 2d session, "Interior Department Appropriations for 1955" the estimate of cost had risen to $5,449,827,000 which was an increase of $4,192,181,300 or 333 percent. Federal agencies repeat such mistakes so regularly that lack of plain honesty is the only conclusion possible. They fool one Congress, then a new project comes before a new Congress and the same type of deception is worked over and over again.

Such is the evidence of political irresponsibility, logrolling, and buying of votes is common to all Government projects that go beyond the legitimate functioning of government. Proper government must always be defensive or protective in character. Then it can be and generally is honest. When it goes beyond that it is always dishonest and corrupt in its purposes and its means of carrying it out. To illustrate, the Hoover Commission task force on water resources and power in its report, June 15, 1955, stated that it "has been forced to the rather depressing conclusion in view of the general competence and quality of performance of the Federal agencies, that most of the weaknesses revealed by its studies are inherent in bureaucracy."

The cost of the three projects in your State on a new lands basis, including the interest on the bonds, paid not by the people to be benefited but by the general taxpayers in far distant States, is as follows: Costs of irrigation for the LaBarge project is estimated at $472 per acre. Costs of irrigation for the Seedskadee and Lyman projects, respectively, is estimated at $861 and $1,755 per acre. Since the Department's record for deliberately underestimating costs is 106 percent for 50 years, you must more than double the estimates. So on the basis of experience the costs for irrigating the 3 projects will be nearer $944, $1,722, and $3,510 per acre, respectively. In view of this record, how can you logically ask me to support these projects for new land when our most valuable farmlands for hay, grass, and silage do not exceed $250 per acre?

Stack all this alongside of the mountains of surplus agricultural products we already have: the $8 billion taken from the people to pay growers of butter, milk, wool, corn, wheat, cotton, peanuts, tobacco, etc., because there are too many acres under cultivation.

The ridiculous consequences of our own socialistic management of our economy now requires the Secretary of Agriculture to propose cuts of acreage of various crops by possibly 20 million acres. Wheat acreage has been cut from 78 to 55 million acres.

So when and if our needs for additional crop acreage increases in future years, this acreage and many other millions of unused acres can be brought into cultivation. Besides, according to the Department of Agriculture and the American Society of Agricultural Engineers, there are over 20 million acres of fertile wet or swampland nearer the markets that can be drained at less than $100 an acre without continuing annual charges for irrigation.

Surely the time has come to stop this uneconomic and immoral game of groups organizing to get theirs from the public feed trough because others are getting theirs. To do that the States legislatures must reassert the constitutional limitations on the Congress and limit its taxing and spending powers. Government must be reconfined to its true function of defending American life and property instead of managing them.

Sincerely yours,

RALPH W. GWINN.

New Jersey's Refugee Program Should Be Adopted by Other States, Says New York Times

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, Governor Meyner, of New Jersey, and a 27-member refugee relief committee have formulated a program designed to enlist broad support in New Jersey.

The committee is taking a grassroots approach to the problems of refugees and to the equally important problem of stimulating interest in the local communities in work with refugees. Neighborhood churches, local organizations, and welfare agencies are being asked to obtain pledges of employment and support for prospective immigrants.

The New York Times of July 16, 1955, says editorially that—

Governor Meyner has described as "dismal" our national record thus far in bringing persons fleeing Red rule to the United States. The New Jersey undertaking will direct attention to this record on a local basis and give the people themselves an opportunity to aid in getting our refugee program moving more swiftly. We think that the plan has real merit and its adoption by other States could hasten the entrance of those who need and deserve our sanctuary.

As I have sponsored three important bills dealing with immigration in the present Congress I naturally have a very keen and direct interest in the success of the New Jersey plan. I commend this plan to my colleagues, and include the New York Times editorial, a list of the members of the committee, and the remarks of Governor Meyner at the swearing-in of the committee on refugee relief:

REMARKS OF GOV. ROBERT B. MEYNER, OF NEW JERSEY, AT SWEARING IN OF COMMITTEE ON REFUGEE RELIEF

The refugee relief program offers an unprecedented opportunity for New Jersey citizens to augment their sympathies with remedies for the Communist-oppressed peoples of the cold war.

The New York Times carried an account on April 26 which described the reverse repatriation now underway in Central Europe. Thousands of anti-Communist refugees, dejected by Western red tape and neglect, are being wooed by the Soviets—often successfully—into returning to their former homelands. Bitterness and anti-American sentiment are replacing the earlier high hopes for a future in the new world. According to this account, the time required for a person fleeing the Iron Curtain to obtain an American visa runs something like this: 3 months to a year for a German investigation; 1 year for a United States intelligence check; 6 to 9 months for investigating and processing by the consulate; and a year or 2—if ever—to receive a promise of employment and support from the United States.

The Justice Department released data indicating the extent of this bottleneck. The present law would permit 102,000 Soviet bloc refugees in Western Europe, NATO countries, and Iran to enter by the end of 1956. Since 1953, only 1,061 had entered as of April 8. Of the 214,000 homeless which

this act would admit, less than 17,000 have reached the United States from all parts of the world.

It is my firm intention that this committee and its crucial efforts shall remain aloof from meaningless harangues and petty excuses. Nothing will serve the needs of America's prestige abroad or the privations of those who have fled Red rule but honest concern and workable solutions.

Members of Advisory Committee on Refugee Relief: Anthony W. Belluscio, Chairman, 551 First Avenue, Elizabeth, N. J.; Mrs. Frank Fobert, Vice Chairman, R. F. D. 1, Childs Road, Basking Ridge, N. J.; Rev. Edward Dunbar, Flemington, N. J.; Rev. C. E. Krumbholz, Dunnellen, N. J.; Msgr. James S. Foley, Perth Amboy, N. J.; Rabbi Isaac J. Wasserman, Somerville, N. J.; Mr. Henry Reed Bowen, Newark, N. J.; Rt. Rev. Alfred L. Banyard, Trenton, N. J.; Rev. Andrew S. Layman, Merchantville, N. J.; Col. Jack B. Dunn, Westfield, N. J.; Mr. Louis J. Piencikowski, Highland Park, N. J.; Mr. J. S. DeRose, Mr. Stephen Dudiak, Clifton, N. J.; Mr. Richard Weber, Newark, N. J.; Mr. Morris Fuch, New Jersey; Mr. Joel Jacobson, Newark, N. J.; Mr. Julius Kisiak, Jersey City, N. J.; Rt. Rev. Zolton Beky, Trenton, N. J.; Hon. Carl Holderman, commissioner of labor and industry; Mr. John J. Yenick, director, division of employment security; Col. Joseph D. Rutter, superintendent, State police; Dr. Frederick M. Raubinger, commissioner of education; Dr. Daniel Bergsma, commisisoner of health; Mr. William C. Lynn, assistant secretary, department of agriculture; Dr. Joseph E. McLean, commissioner, department of conservation and economic development; Mr. Edwin C. B. Clark, executive secretary, division of veterans' services.

[From the New York Times of July 16, 1955]

NEW REFUGEE PROGRAM

New Jersey's Governor Meyner and a 27-member refugee relief committee have formulated a program designed to enlist community support in their State for speeding the immigration of refugees from Communist-controlled countries. The so-called New Jersey plan will take a grassroots approach to the problem of stimulating interest in the merits of the refugee project. Committee members will work with neighborhood churches, organizations, and welfare agencies to obtain local pledges of employment and support for prospective immigrants.

Governor Meyner has described as "dismal" our national record thus far in bringing persons fleeing Red rule to the United States. The New Jersey undertaking will direct attention to this record on a local basis and give the people themselves an opportunity to aid in getting our refugee program moving more swiftly. We think that the plan has real merit and its adoption by other States could hasten the entrance of those who need and deserve our sanctuary.

We Need Wheat Legislation

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. HORAN. Mr. Speaker, I feel it my duty to call the attention of the Congress to the urgent need for immediate consideration by the Committee on Agriculture of H. R. 1834 and other bills to exempt certain wheat producers from marketing-quota penalties under the Agricultural Act of 1938 in cases where all of the wheat crop is fed or used for seed on the farm.

As you know, the Senate on March 28 passed S. 46, which is identical with H. R. 1834. It is my understanding that these measures, together with several other bills which seek to accomplish similar ends, have been referred to a subcommittee of the House Committee on Agriculture.

An intolerable situation is developing with respect to assessment of wheat-marketing-quota penalties. With certain exceptions, the farmers who market wheat in excess of their quotas are subject to marketing penalties currently set at $1.13 per bushel. Requests for suits to collect such penalties from wheatgrowers who exceeded their quotas on the 1954 wheat crop are being filed at an increasing rate. The Department of Agriculture estimates that there may be as many as 1,500 such cases this year, involving production of wheat in 1954. Unless action is taken to collect these penalties, it appears certain that there will be many more violations in 1956, which would normally come up for legal action a year hence.

In many cases farmers who seek to avoid penalties plead that their wheat was not sold in interstate commerce, that they did not want price support, and that all of the wheat was used for feed or seed on the farm. Under the holding in *Wickard* v. *Filburn* (317 U. S. 111 (1942)), the farmer is liable whether the wheat is fed or sold if he exceeds his acreage allotment unless the planted acreage of wheat does not exceed 15 acres or an acreage from which the normal production does not exceed 200 bushels.

Another unusual example which has come to our attention involves a monastery in Georgia. The monastery has followed the policy of producing the wheat necessary for food at the monastery. None of the wheat is sold. The amount required for 1954 was in excess of the marketing quota. The monastery now finds itself liable to the Government for a penalty of $1.13 per bushel on the excess.

Congress did not contemplate situations such as this arising under the penalty provisions of the Agricultural Act of 1938.

The Las Vegas High School Rhythmettes

EXTENSION OF REMARKS

OF

HON. CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. YOUNG. Mr. Speaker, it is my pleasure today to pay tribute to an outstanding group of Nevada young people upon the occasion of their arrival in Washington.

The 22 lovely and talented ladies of the Las Vegas High School Rhythmettes are on a nationwide tour sponsored by the Nevada State Elks. The only group of this kind in the United States, the Rhythmettes set extremely high standards of behavior and character for young people throughout the State of Nevada.

Their repertoire includes brilliant military numbers, contemporay dance production numbers, precision dance routines, and novelty production numbers.

Since leaving Nevada on July 3 the Rhythmettes have appeared on the Toast of the Town television show in New York, the national convention of the Elks in Philadelphia, and at Brooklyn's Ebbets Field. Not only have they appeared before record-breaking audiences of the general public, but they have taken the time from their crowded schedules to do special shows in service and veterans' hospitals.

The founder and director of the Rhythmettes is Miss Evelyn Stuckey and the motto of the group is "Perfection in performance reflects perfection in living."

It is my feeling that the qualifications of the Rhythmettes are particularly noteworthy:

First. Moral and behavior standards of the highest character.

Second. Maintenance of good grades.

Third. Perfect sense of rhythm and timing.

Fourth. Ability to accept responsibility.

Fifth. A highly cooperative and friendly nature.

Sixth. Excellent general appearance.

Seventh. Keen interest in school and all school activities.

Eighth. Enthusiasm—sincere desire to attain perfection.

Ninth. Excellent health.

Tenth. Creativeness.

Mr. Speaker, one of the pleasures and privileges of being a Member of the House of Representatives is being able to welcome such a fine group of young ladies to the Nation's Capital.

Joseph Kamp's Answer—Both Sides of the Story

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, because of certain articles placed in the CONGRESSIONAL RECORD, pages 5089, 5090, and 5091, on May 10, 1955, I desire to call the attention of the House to a few facts. First, I am personally familiar with the charges carried in two indictments against Joseph Kamp and which resulted in his conviction for contempt to Congress.

On the first charge, Joseph Kamp was sentenced for a 4-month term, which, less good time, he served. On the second charge—the one growing out of his refusal to give testimony to the so-called

Buchanan committee—he was convicted, but the charge was later dismissed.

The principles of law in this case were the same as those involved in the first case against Kamp and in the case against Edward Rumely, who was also convicted but whose conviction was set aside by the United States Circuit Court of Appeals which decision was affirmed by the United States Supreme Court. Had an appeal been properly taken, the first charge against Kamp would also have been dismissed.

The official record demonstrates beyond any argument that it was Congress which was in error, not Kamp. In view of the decision in the Rumely case—Case No. 87, October term, 1952, March 9, 1953—in neither case was Kamp guilty of contempt nor of any other offense.

Certain correspondence with Kamp reads as follows:

HEADLINES,
New York, N. Y., July 15, 1955.

HON. CLARE E. HOFFMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HOFFMAN: I am writing you with the hope that in the interest of justice and fair play you will find it possible to place this letter in the CONGRESSIONAL RECORD so that your colleagues in Congress and other readers will have the facts regarding certain derogatory statements about me which appeared in the RECORD some weeks ago. Your courtesy and consideration in this matter will be greatly appreciated.

On May 10, 1955, Representative ABRAHAM J. MULTER, of New York, in an extension of his remarks, inserted into the RECORD 2 newspaper articles which made false charges against me. As soon as this came to my attention, I wrote Congressman MULTER and called to his notice just a few of the more glaring inaccuracies. I also advised him that, no doubt unwittingly, he had based some of his own remarks on misinformation, and I cited the facts in support of my position. I asked, in all fairness, that he insert my letter into the RECORD.

In his response he ignored both my request and the specific refutations contained in my letter. I then wrote him again, pointing out that he had been misinformed regarding the contents of the publications he cited in justification of his allegations, and I renewed my request that he insert copies of our correspondence into the RECORD.

It is now almost a month since I wrote him last. I have had no answer, and it is obvious that Congressman MULTER does not intend to present my side of the story to his colleagues and other readers of his extended remarks.

I feel that I am entitled to have my answer to these unfair charges given equal notice in the CONGRESSIONAL RECORD, and I am, therefore, taking the liberty of quoting from my letters to him.

On May 18, 1955, I wrote Representative MULTER:

"I have just read your references to me in the CONGRESSIONAL RECORD of May 10 and I am amazed that any Member of Congress could be so wrong. I hesitate to believe that any man in a position of public trust would deliberately attempt to deceive his colleagues and so I am forced to the conclusion that you have been grossly misinformed regarding me and my activities.

"Let me give you an example. You charge that 'such great Americans as Chief Justice Warren have been the targets of his vilification and his abuse.'

"I have mentioned Chief Justice Warren just three times in my writings. In the March 15, 1952 issue of Headlines I gave the results of a Presidential straw poll taken by Overseas Weekly among American soldiers in Germany: 'Taft won 56 percent of the Republican ballots. Eisenhower and Earl Warren tied for second place with 22 percent each.'

"In the June 25, 1952 issue I wrote: 'Robert W. Kenny will be remembered as the man who was soundly beaten by Governor Warren for the Democratic nomination for governor in 1946.'

"In the August 2, 1952 issue I reported that Senator Jack Tenney had been reelected to the California State Senate in 1950 'by better than a million and a quarter votes, running ahead of both Governor Warren and Senator KNOWLAND.'

"Just how these references could constitute 'vilification and abuse' of Chief Justice Warren is beyond my understanding."

I then told Congressman MULTER that it was just such misinformation that had mislead him to charge that: "Kamp has long been one of the Nation's leading hatemongers."

Continuing, I wrote: "In your remarks in the CONGRESSIONAL RECORD you say: 'As far back as the midthirties, he (Kamp) won the commendation of the Nazis for his pro-Fascist sympathies.'

"Not only have the Nazis never 'commended' me, nor have I ever had any 'pro-Fascist sympathies,' but in the midthirties, on April 15, 1935, in my national newspaper the Awakener, I called on Congress to investigate all un-American movements and listed specifically: '(A) Nazi movements inspired by or subsidized by the Hitler Government of Germany * * * (B) Fascist movements inspired by or subsidized by the Italian Government * * * (C) Also any native American Fascist movements which can be charged with designs to subvert our form of government by the use of unconstitutional methods.'

"To bolster your own charges you put into the RECORD the concluding chapter of Jack Steele's phony series on 'Peddlers of Hate' which began with the false statement: 'Organized bigotry is on the upswing in the United States.'

"In this chapter Mr. Steele's theme is that 'In efforts to infiltrate right-wing groups, the forces of bigotry have adopted the fifth-column tactics of the Communists. They readily take over and preach the doctrines of the particular group they want to penetrate.'

"Significantly, Mr. Steele does not name a single group that any 'bigot' is trying to penetrate. Nevertheless, he cites my 'case history' as evidence of this tactic.

"As 'proof' of my contribution to this alleged current 'upswing' of 'bigotry' and my present effort 'to infiltrate right-wing groups.' Mr. Steele cites two issues of Headlines published in 1952, and a pamphlet published in July of last year in which I exposed the Red background of the author of a smear series attacking Senator JOSEPH R. MCCARTHY.

"Specifically he writes: 'Kamp's most recent pamphlets have attacked tax-exempt foundations.' These 'most recent' pamphlets could only refer to a booklet exposing the Ford Foundation's attempt to smear Congressional committees investigating Communist infiltration and subversion which was published in April, 1954—more than a year ago—and an issue of Headlines setting forth details of the support given to Red activity by various tax-free foundations which was published in February 1951 (more than 4 years ago). The only thing 'recent' in connection with my pamphlets is the fact that the charges I made in 1951 were fully verified in the Reece committee report released early this year.

"Just how any of the foregoing publications could possibly be used to 'infiltrate right-wing groups', Mr. Steele does not attempt to say.

"As for the second smear article which you placed in the RECORD in an attempt to give weight to your charges, let me point out that the author, the late Bert Andrews, also smeared the FBI and wrote a book criticizing the Government's loyalty program.

"Mr. Andrews merely repeats charges which have repeatedly been proven false, or which are so ludicrous as to insult the intelligence of the reading public. This piece which you endorse says, for instance, that I 'was a member of the committee which gave a testimonial dinner for Maj. Gen. George Van Horn Moseley, retired, in 1938 when General Moseley was so far to the right that he was almost all by himself.'

"The fact is that on the day in question General Moseley was honored at a public luncheon given by the New York Board of Trade, which was attended by hundreds of prominent businessmen. I had nothing to with the luncheon, but on that same evening General Moseley, who had just retired as Deputy Chief of Staff, was good enough to speak at a small meeting of which I was one of the sponsors. If General Moseley was highly enough regarded by the President of the United States be placed in the second highest position in the Army, and if he was important enough to be honored by the outstanding business leaders of New York, it is rather difficult to understand just how my sponsorship of a meeting at which he was a speaker can be construed as 'proof' that I am a 'hatemonger.'

"Both of the articles which you have placed in the RECORD are replete with scurrilous and viciously untrue charges. I am quite sure that if you had known this you would not have made yourself a party to this indefensible smearing of a fellow citizen.

"In your remarks you have called your colleagues attention to the fact that I have twice been cited for contempt of Congress and that I have served time in jail for contempt. If you will investigate the circumstances and consider them in all fairness and honesty I think you will conclude that instead of reflecting on me, it is just the other way around—this is a reflection on Congress for having permitted subversive outsiders to meddle in the affairs of its committees, in spite of my warnings.

"If you will just read the record you will discover that I was not cited for having defied Congress but rather for having refused to comply with a demand instigated by the head of the Communist spy ring in the Government, John Abt.

"You will find, too, that I went to jail on my own insistence; that I refused probation, because I said, I wanted justice, not mercy.

"You will also discover that the Courts have held that Congress was wrong when it cited me a second time.

"Now you change that my April issue of Headlines 'is a contempt of Congress.' You further charge that it contains 'a scurrilous and viciously untrue attack on leading national Jewish organizations and the House Committee on Un-American Activities for issuing its report on neo-Fascist and hate groups.'

"If you had read this issue of Headlines you would know that I make no attack on the House Committee on Un-American Activities. I contend that its 'Preliminary Report on Neo-Fascist and Hate Groups' is a fraud and a hoax, but I put the blame where it belongs. I charge that the report is based on malicious misinformation foisted on the Committee by the Anti-Defamation League of B'nai B'rith and the American Jewish Committee.

"I make other serious charges against the 'hate racketeers' who are in the leadership of these two organizations.

"You allege that my charges are false.

"I know they are true.

"I do not question your honesty or sincerity, but we can't both be right. I would like to think that you would want the Congress and the public to know the truth.

"Will you join me then, in the interest of decency and fair play, in requesting the House Committee on Un-American Activities to investigate my charges against the professional leaders of the American Jewish Committee and the Anti-Defamation League, as well as the charges you have made against me?"

"I will welcome an investigation of my career as an opponent of un-American activities, including Nazism and Fascism. I am proud of the fact that I have been actively fighting communism longer than anyone else in the United States.

"If you believe that the 'attack' I have made 'on leading national Jewish organizations'—meaning the American Jewish Committee and the Anti-Defamation League—is 'untrue' then I am sure you will welcome an investigation of my charges.

"In particular, I would like to have the Committee on Un-American Activities investigate the latest 'report' on Joseph Peter Kamp which alleges that I am 'a secret and deadly enemy of all genuine patriots' because I 'support and praise various Jews and Jewish organizations.' In 'proof' of this it is alleged that I am 'in close contact with false anti-Communists,' among whom is mentioned 'Representative ABE MULTER, who eulogized Vito Marcantonio and who alone opposed the Communist Control Act of 1954 to outlaw the Communist Party.'

"For some 20 years the Anti-Defamation League-American Jewish Committee spy and smear network has been trying unsuccessfully to prove that I am 'anti-Semitic.' Now, this 'report' which was circulated just last week by Jacob Spolansky, a long-time ADL-AJC 'investigator,' alleges that I am an agent of 'Jews and Jewish organizations.'

"Under the circumstances, if you actually believe what you told your colleagues about me, I am sure you will want the House Committee on Un-American Activities to investigate and clear you of any connection with Joseph Peter Kamp, whom you consider to be 'one of the Nation's leading hatemongers.'

"Therefore, I urge you to introduce a resolution in the House of Representatives calling for a thorough investigation of the activities of Joseph P. Kamp, the Anti-Defamation League, and the American Jewish Committee."

In my concluding paragraph I said that inasmuch as Congressman MULTER had placed his charges against me in the CONGRESSIONAL RECORD, "I respectfully request that you do the fair and honorable thing and place this letter in the RECORD, too."

On June 3, 1955, Congressman MULTER answered my letter with a single paragraph that was not at all responsive, and which completely ignored the request that my letter be placed in the CONGRESSIONAL RECORD.

Accordingly, I wrote him another letter on June 20, in which I said:

"DEAR CONGRESSMAN MULTER: Your response to my letter of May 18 not only confirms my statement that you 'have been grossly misinformed regarding me and my activities,' but it convinces me that you continue to have confidence in a source that now is making you appear either as dishonest or stupid. I feel sure that you are neither. I am still willing to believe that you are a man of intelligence and integrity who has unwittingly been imposed upon, and so I will make clear to you how ridiculous your answer is in the face of the facts.

"In my letter to you I pointed out that you were in error when you declared that 'such great Americans as * * * Chief Justice Warren have been the targets of his villification and his abuse,' and I quoted every reference in my writings that I have ever made about Chief Justice Warren, none of which were critical in any sense."

"In the next paragraph I referred to his charge that: "As far back as the mid-thirties, he (Kamp) won the commendation of the Nazis for his pro-Fascist sympathies." I then recalled what I had said in my previous letter: "To demonstrate that I have never had any pro-Fascist or pro-Nazi sympathies I quoted my own demand for a congressional investigation of Nazi, Fascist and native Fascist activities in the United States, published in 1935, which you could have verified at the Library of Congress."

"Your evasive and specious answer to these two explicit refutations reads: 'Your pamphlet of March 15, 1952, the New York World-Telegram of June 23, 1952, Time magazine of May 5, 1952, and other documents mentioned in the CONGRESSIONAL RECORD, in my opinion, sustain the statements that I made.'

"It is very evident that you have not read my pamphlet of March 15, 1952. If you will read it you will find, as I said before, that my only reference to Chief Justice Warren in this issue relates to the results of a presidential straw poll taken by Overseas Weekly, among American soldiers in Germany, and that it reads: 'Taft won 56 percent of the Republican ballots. Eisenhower and Earl Warren tied for second place with 22 percent each.'

"I am certain, too, that you did not read the article in the World Telegram of June 23, 1952, which you cite as justification for your charge that Chief Justice Warren was a target of my 'vilification' and 'abuse.' If you will read the article, you will find that it says only that some persons used smearing tactics against California's Gov. Earl Warren, and you will discover that this charge was not made against me. Whoever prepared your answer or supplied your data was either extremely careless or deliberately dishonest.

"I am also positive that you did not read the reference to me in Time magazine of May 5, 1952, which you offer to sustain your statement that I won the commendation of the Nazis for my pro-Fascist sympathies. Nowhere in this Time article is there a reference to any commendation, from anybody, nor is there any mention of my alleged pro-Fascist sympathies.

"In identifying me, Time magazine did make the gratuitous observation that I edited the Awakener—well loved by the Nazis, without attempting to cite a reason for its vicious slur. As a lawyer, I am sure you would not consider this competent evidence to sustain your charge that I won the commendation of the Nazis or that I have had pro-Fascist sympathies. Also, it should be clear to you that from a commonsense point of view, it would be impossible for Time magazine to explain how the Nazis could love a publication that was urging a congressional investigation of Nazi activities.

"Furthermore, there are no other documents mentioned in the CONGRESSIONAL RECORD which do or can sustain the statements that you have made.

"The only possible explanation is that your original remarks about me in the CONGRESSIONAL RECORD of May 10, and your inept attempt to justify them in your letter of June 3, were based upon malicious misinformation foisted upon you by thoroughly irresponsible people. Since you are a member of the Anti-Defamation League of B'nai B'rith, and such vilification and abuse is the stock in trade of the ADL, I am convinced that this was (your) source.

"Because you yourself have been victimized, and because you have done me a grave injustice, you should be anxious, and consider it your duty as a man of integrity, to see to it that the full truth is made available to your colleagues in Congress, to other readers of the CONGRESSIONAL RECORD, and to the American people.

"I therefore repeat my previous recommendation that you ask the House Committee on Un-American Activities to make a full investigation of my pro-American endeavors, as well as the un-American activities of the Anti-Defamation League of B'nai B'rith.

"You are also hereby again requested, in the interest of honesty, decency and fair play, to insert copies of our correspondence into the CONGRESSIONAL RECORD without further delay.

"I am sure that you will be glad to respond to these requests because you have often expressed yourself publicly against bigoted and intolerant attacks against minorities. You know that an unfair attack is a mean thing, and that even more demeaning is the denial of a defense. Your strictures against me have already been given wide public notice. I am hopeful that you will give my answer refuting your charges equal notice, and that you will not allow me to be discriminated against merely because I speak out for a minority, a little pro-American minority.

"Respectfully yours,"

Because of space limitations, the foregoing correspondence does not cover every charge made against me in Congressman MULTER's remarks nor in the articles which he inserted in the RECORD. However, each and every charge can be refuted, and I would welcome the opportunity to set the record straight. For this reason I am hopeful that the House Committee on Un-American Activities can be prevailed upon to investigate these charges and the un-American elements originally responsible for their dissemination—the professional hatemongers in the leadership of the Anti-Defamation League and the American Jewish Committee.

With many thanks for your anticipated cooperation, I am,

Very sincerely yours,

JOSEPH P. KAMP,
Editor and Publisher.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Address by Hon. Henry M. Jackson, of Washington

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27, 1955

Mr. MANSFIELD. Mr. President, the distinguished junior Senator from Washington [Mr. JACKSON], delivered an address before the annual fellowship dinner of the Grand Lodge of Masons of the State of Washington at Olympia, Wash., on Tuesday, June 21, 1955. There is so much meat in the address, and so much to think about, that I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. HENRY M. JACKSON, OF WASHINGTON, BEFORE THE ANNUAL FELLOWSHIP DINNER OF THE GRAND LODGE OF MASONS OF THE STATE OF WASHINGTON AT OLYMPIA, WASH., JUNE 21, 1955

In the past 3 months, Soviet foreign policy has made the most striking series of shifts since the beginning of the cold war in 1946. In no less than nine different cases, the iron fist of Stalin has been supplanted by the disarming diplomacy of Moscow and Peiping.

To underline this change, let us review these unexpected reversals of the Communist position.

In the Far East, Communist China has concurred in a de facto cease fire in the Formosa region and indicated a willingness to discuss a settlement. Four American fliers held in Chinese prisons for more than 2 years have been released. Russia, having refused to sign the original Treaty of Peace With Japan, is now discussing a bilateral agreement. The Kremlin has begun a concerted campaign to win favor with Nehru—the leader of the neutralist bloc.

In Europe, an effort is being made to heal the breach with Tito, who not long ago was being denounced from Moscow as a heretic. Concessions to the West's position on the reduction of conventional armaments have been indicated. Chancellor Adenauer has been invited to discuss resuming diplomatic relations after Russia's initial refusal to recognize Bonn. And following 7 years of obstruction, the Soviet signature has been placed on the Austrian Treaty.

On top of these events must be added the Russian agreement to join a four-power conference at Geneva next month.

The American people would be less than human if they did not take heart at this turn of events.

As always, however, there is another side to the coin. I am frank to question whether the current optimism can be justified by the realities of the situation.

The simple fact is that with Stalin's death there has come to power in Russia a group that is subtle, clever, and flexible—as opposed to the bluntness, rigidity, sometimes stupidity of the Stalin regime. Where Stalin was obvious, Khrushchev is devious.

Most of Stalin's failures stemmed from the clarity of the threat he posed to the free world. Recall for a moment our reactions at home to Soviet moves in Iran, Greece, Czechoslovakia, Berlin, and Korea. It was these threats that pushed us into a program of alliances, a military buildup, and a determined attempt to shore up the defenses of the free world.

The Russians' "good neighbor" policy of recent weeks, by apparently diminishing this threat, has placed us in a difficult position. On the surface, we are faced with a new, disarming and conciliatory Communist approach. Behind this front the basic aims of communism remain unchanged.

It is a front because the Khrushchev regime is building the greatest military machine in Soviet history. As they talk peace, their preparations for war exceed our greatest estimates of their military capabilities. Never, in fact, has any country boasted of peaceful intentions with such a large portion of its economy dedicated to armaments.

Let me document this point with a brief look at recent history. Six years ago, in the spring of 1949, our conventional forces were vastly outnumbered by those of the Communist world. As a matter of fact, they still are. But as against this, in 1949, our air-atomic power was incontestable. We possessed the B–36, then the world's only true long-range bomber. We had already flight-tested the B–47, the world's first strategic jet bomber. And above all—6 years ago—we had a monopoly of atomic weapons.

Intelligence reports told us then that our atomic monopoly would be long-lived. Some responsible officials declared that 10 or 20 years might pass before the Soviets mastered the riddle of atomic energy. The matter of stockpiling nuclear weapons in large numbers was even more remote. As for delivery aircraft, we were informed that Soviet jet bombers were many years in the future. In short, most of us believed in the spring of 1949 that America's trump card—our industrial and scientific supremacy—would indefinitely cancel out Moscow's superiority in conventional forces.

Today we know, or should know, otherwise. Far from requiring decades to split the atom, the Soviets achieved their first atomic bomb in 1949—years before the expected date. Their first hydrogen explosion occurred in the summer of 1953—only 9 months after our own first full-scale hydrogen test.

Had we been realistic, we should have assumed that a nation capable of mastering atomic energy so quickly would also soon have air fleets with long range jet bombers. Yet even after the Soviet hydrogen test confident officials soothingly declared that nuclear bombs were of no use unless they could be delivered against targets. As far as ability to deliver these bombs went, they said, our lead was clear and permanent.

Then came the Russians' air demonstration of May Day 1954. This revealed the existence of Soviet jet bombers comparable to our own medium-range B–47 and our long-range B–52. The intelligence communities of the free world were shocked. The Russian planes had been flown well before the expected date. In certain important respects—in the size of their jet engines, for instance—they were more advanced than our own bombers.

Despite these facts, the soothing voices were heard again. They said the Soviet planes were doubtless hand-tooled prototypes. They predicted that years would elapse before these first models could be mass-produced. The implication was clear that mass production was unique to the United States.

Six weeks ago we learned the truth. In their 1955 practice May Day displays the Soviets flew both their medium and long range jet bombers in operational numbers. Furthermore, they flew large numbers of a new day fighter. Performancewise, this is a better plane than any we ourselves are now flying in other than limited flight tests. In addition, they flew operational numbers of all-weather interceptors which are superior to any plane we ourselves have in combat units today.

Again, our defense planners were caught by surprise—just as they were surprised when thousands of MIG's flew in Korea at a time when the Soviets theoretically could not mass-produce fighters.

The American people are now being told that, as of today, we are still superior to the Soviets in long-range airpower. Those who issue these statements, however, do not say how we stand in relation to the Soviets in fighter aircraft. Neither do they say how we will stand in strategic airpower a few years from now.

Speaking as a member of the Senate Armed Services Committee and the Joint Committee on Atomic Energy, my own estimate of the present balance of airpower is this:

Long-range jet bombers. We are now in a neck-and-neck race with the Soviets. They may well be ahead of us.

Medium-range jet bombers. As of now, it is likely that we have more medium-range jet bombers than the Soviets possess. But they may well overtake and surpass us in a year or two.

Fighter aircraft. We are now vastly inferior to the Soviets in terms of numbers of high-performance fighters. As a matter of fact they are thousands ahead of us. Qualitatively, the latest Soviet fighters are at least the equal of our best planes—and they may be better.

The intercontinental ballistic missile. The race for this absolute weapon is now nip and tuck. We should not be surprised if the Soviets get it first.

What a shocking distance the Russians have traveled in 6 years. In 1949 our airpower lead was incontestable. Today, our only comfort lies in the fact that—in certain types of planes—we still appear to be ahead of the Russians. To put it bluntly, we find ourselves for the first time simply trying to keep up with Soviet progress in delivery vehicles—rather than being decisively ahead.

Nor is this all. All the evidence indicates that the Russians have been able to move from the design of prototype aircraft to mass-production models more quickly than we have. In other words, they now appear to be our superiors in the very techniques for which America has always been famous—quickly tooling up for mass production.

To cite an example. Our work on the B–52 bomber began in 1948. It was first tested in 1952. First production started in the spring of 1954. The comparable Soviet plane—the type 37—was apparently designed in 1950. It was tested in 1953 and produced in quantity in 1954. Although the United States had production facilities for a jet

bomber that the Soviet lacked, they gained at least 2 years on us in this race.

The growth of Soviet technology is documented in a recent speech by Allen Dulles, Director of the Central Intelligence Agency. "Military needs dominate their research programs," he said. And he added: "We who are in intelligence work have learned by now that it is rarely safe to assume that the Soviets do not have the basic skill, both theoretical and technical, to do in these fields what we can do." As an ominous footnote, Mr. Dulles reported that the Russians would graduate 1.2 million in the sciences in the decade from 1950 to 1960 compared to only 900,000 in the United States.

The meaning of these facts for the future is clear. What is past is prolog. In 1949 we led decisivley in the contest for air-atomic supremacy. Today, this same contest hangs in the balance. If the present trend continues, I put it to you as a fact that by 1960 the Soviets will be unquestionably ahead of us in airpower. When that day arrives—as it surely will if we do not change course—our historic trump card of technological supremacy will be nullified. To their present superiority in conventional forces our enemies will add superiority in advanced weapons systems—with fateful consequences for the future of the world.

What are we going to do about this challenge?

Certain things seem clear. We are now engaged in a struggle for our national survival. In this struggle, our foes are working around the clock. We cannot hope to win this contest if we ourselves work 1 shift on a 5-day basis.

More specifically, I propose the following six-point program:

First, I propose that our production of jet bombers and fighters be placed on a crash basis at once—on a wartime footing.

Second, I propose that there be an expansion of our present aircraft industrial capacity. Existing aircraft plants should now operate around the clock, 7 days a week.

Third, I propose that we immediately convene a board of top industrial experts to determine why are are now slower than the Soviets in tooling up for the mass production of aircraft. We cannot prevent wars with models sketched on drawing boards.

Fourth, I propose that we immediately assign supreme and overriding importance in our defense effort to the development of the intercontinental ballistic missile. This project must be tackled with the resources, the skills, the moneys, the urgency, and the priority given our war-time atomic effort. The question of war or peace may depend on our getting this ultimate weapon first.

Fifth, I propose that, as an absolute minimum, our ground forces be kept at their present level. Proposed cuts could be disastrous.

Sixth, I propose that we immediately undertake to expand our atomic weapons program.

The Military Applications Subcommittee of the Joint Committee on Atomic Energy, of which I have the honor to be chairman, is now completing an extended 3-month series of secret hearings on the general subject of our atomic preparedness. During these meetings, we have heard from the Secretary of State and the Secretary of Defense, the Chairman and members of the Joint Chiefs of Staff, the Secretaries of the three services, from the Strategic Air Command, the Continental Air Defense Command, the Commander of NATO and from ranking scientists.

These hearings have made it clear to me that our existing and planned atomic production facilities will be inadequate to meet the real needs of our Armed Forces for nuclear weapons. This is particularly the case with small weapons of relatively low destructive power which could be used for anti-aircraft defense and against troops in the field. Accordingly it is my earnest hope that the members of the joint committee will soon see fit to recommend to the President a major step-up in our atomic weapons output.

Yet atomic weapons in themselves can furnish us with no military protection unless we can deliver them against enemy targets. In all sincerity, I regard the recently announced acceleration of 35 percent in our B–52 production schedules as completely inadequate. I believe these schedules must be revised drastically upward. It is my fervent hope that we will not need another Russian May Day demonstration to jolt us into stepping up our military programs along the lines I have suggested, which surely represents the minimum price of national survival.

Will larger military budgets be required to strengthen our Air Force and to expand our atomic production? Of course they will. But defense in this atomic age cannot be purchased in bargain basements. Any peacetime military budget is small, and bearable, when compared with the incalculable cost and horror of the atomic war which may well befall us if our preparations are so weak as to invite attack. Our military preparations cannot and must not be budget limited. Instead, they must be based upon the needs of our Armed Forces and the requirements of our national survival.

Our top military leaders, testifying before the Joint Committee on Atomic Energy, have made it clear that we could not begin to mobilize our resources and step up arms production after an all-out atomic war had started. In such a war, our entire economy could be prostrated in a few days. This fact represents an historic change in our Nation's military position. In previous wars, we have been spared direct attack. With the impetus of a Pearl Harbor, we have had a period of grace to mobilize and produce the goods of war. Today, however, our industries are only a few hours away from the fields of the long-range Russian air force. The period of grace is a thing of the past. As a result we must now build up our armed strength to wartime footing in time of peace.

Some of you may feel that what I have said tonight is too much in the realm of saber-rattling. I have made this speech for the purpose of letting people know the military steps which must be taken to prevent war. In our present peacetime situation, the only rallying force we can use to speed our production and defense buildup is the device of honest information conveyed to the American people by their elected and appointed officials. I believe that an American public fully informed of the clear and present danger to our security will support an effective defense program now with the same vigor they showed in our mobilization effort after Pearl Harbor.

I should add that this is not a partisan speech or a partisan issue. Both the present administration and its Democratic predecessor have underestimated the strength and potential of the Soviets. This national shortcoming can be remedied only through national support for a new and vigorous defense program.

In light of this critical Russian threat, what can we expect from the forthcoming four-power conference? I hope you will agree that the Soviet military buildup dwarfs in significance the recent shifts in Soviet foreign policy. The real issue at this conference, and in the months of discussions ahead, is whether or not the Russians are prepared to show good faith in their dealings with the free world. The American people will not put much stock in Russian signatures on agreements. But assurance that Russia was genuinely interested in living up to commitments would be warmly received.

What could we regard in days ahead then as a show of good faith from the Soviets—a genuine change of heart? Three things, I suggest, Russia must do to reestablish her credit with the free world.

First, she must lift the Iron Curtain to allow the free flow of people and ideas between Russia and the non-Communist nations.

Second, she must withdraw her troops from the satellite countries occupied at the end of World War II.

Third, she must stop the activities of the Cominform—the agency devoted to the spread of international communism.

Unless the Russian attitude on these questions is changed, we cannot assume that the basic aims of the Kremlin are directed toward a real solution to the cold-war conflict. When the Kremlin moves to lift the Iron Curtain, free the satellites and abandon the Cominform, this will be the essential demonstration of good faith.

Until this time, we must remain hopeful but pessimistic as to Soviet intentions. And we must move promptly to meet the ominous challenge of the Russian military buildup.

The Late Cordell Hull

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. SMITH of Mississippi. Mr. Speaker, the late Cordell Hull was one of the giants of our age. His record of accomplishments in the long fight to achieve peace in the world will grow in stature in the long prospective of history. His career can be an inspiration to all Americans.

Under unanimous consent, I include the following editorial from the Memphis Commercial Appeal eulogizing Judge Hull:

HE HAD LIFTED UP HIS EYES

Cordell Hull's death leaves a State, a Nation and the decent peoples of the world bereaved.

He was one of Tennessee's historic sons. He was one of the greatest of contemporary Americans. He was a true world citizen who labored indefatigably on behalf of international amity and the betterment of humanity.

All peoples whose hearts yearn for peace will mourn him. All nations having respect for their pledged word will do him homage. This Nation will honor him as befits a first citizen in a democracy.

This State will pridefully grieve the passing of one whose vision was loftier than the peaks of the "Smokies," whose character was as rugged as the hill country which bore him, and whose courage was as indomitable as that of the pioneers who came through its gaps to build an American empire westward.

Most of all, Tennessee will mourn him because high honors, vast achievement and the plaudits of the crowd left him unspoiled and unspoiling—a simple man, a homespun man—a kinsman of the cove country over to the east.

Prophetically, characteristically he left a last message for the world's peoples and the statesmen upon whom their fates depend. Because he was Cordell Hull, it was a plea in behalf of reason. He has left behind many monuments to his building—ports open where they had been closed; free trade where there had been prohibitive, danger-creating

tariff walls; covenants of mutual good will where there had been trigger-itching distrust. None are more meaningful than this injunction written and given to the world at the closing of his life's busy day:

"Unity and cooperation must continue to be the predominant duty of statesmanship. No matter how laborious the task, if the large nations can agree and act together to that end, then there is hope that our military victories of a year ago will be turned into enduring peace."

Incalculable disaster would besult if these nations should become irreconcilably divided, either within or among themselves.

There is an overwhelming need today for every one of the United Nations to keep faith with those ideals of a brotherhood of peace, justice and freedom * * * to insure unity among us.

A rapier-keen mind had pierced the veil between present and future when that last clarion appeal was made to sanity and goodness.

God wills it that way, sometimes, to the great in spirit and the humble of heart.

He will be eulogized as the father of the United Nations; as one selected most worthy to have bestowed on him the Nobel prize for peace; as a founder of true hemispheric solidarity and pan-American friendship; as a foe of dangerous isolation; as a stanch defender of constitutional government. He was all of those things—successfully.

He will deserve every word spoken and written in his praise.

In a calmer day some impartial historian will evaluate the political personages of the Roosevelt years and assay the Hull accomplishments in measure of high importance.

To Tennessee he will, in memory, always be Judge Hull. Oldsters will recall the days when he served in the legislature and later on the circuit bench. They will tell colorful stories of his wit, wisdom, and native and unvarying personality. They will leave the eulogies on his statescraft to those who knew the statesman but didn't know the Judge.

They will talk of him in terms of "Maxwell House politics." That's what he liked to talk about and many an Ambassador cooled his heels in the State Department Building while Cordell Hull, Secretary of State, talked just that.

He never really got away from Tennessee and his desire to have intimates tell him what was going on back home was an accurate clue to his honest simplicity.

Cordell Hull had lifted his eyes up unto the hills when he was a child of Tennessee. He kept them lifted up throughout his long and splendidly useful life. He was of and part of them, and they gave him the strength of which the Psalmist sang.

They gave him strength to be in all things and to all men an American whose death will cause all America, its neighbors, and its friends, to grieve.

Report to My Constituents

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. MILLER of Nebraska. Mr. Speaker, the Congress is nearing adjournment, and its stamp has been impressed upon many vital phases of our life. It is advisable to pause and reflect upon the accomplishments of the first session of the 84th Congress. I have always followed this plan at the close of each session of Congress.

The Fourth Congressional District is one of the finest districts in the United States. The people are considerate, understanding, and 100 percent Americans. It has been my privilege for the past 13 years to serve the people who live in these 38 counties in central and western Nebraska as their Representative in the most important and powerful legislative body in the world. I have at at all times tried to be a conscientious elected servant to all of my constituents, regardless of their political affiliation. I am elected to represent all residents of the Fourth District. In making this report, I want the people to know how I have voted on legislation. I want them to know my philosophy of government, and I want them to know how I feel about the problems facing our Nation and the world.

It is incumbent upon all of us in the Congress to keep in touch with the citizens as closely as possible, and it is our duty to keep them informed because the intelligent citizen and the voter is the one who is the best advised. In this interest, I write a weekly newsletter that goes to 84 newspapers, 13 radio stations, and about 900 friends in the Fourth Congressional District. For 13 years I have recorded a weekly radio program entitled "What's Happening in the Nation's Capital," which is now broadcast by the following radio stations: KMMJ and KRGI, Grand Island; KODY and KNBR, North Platte; KGFW, Kearney; KNEB and KOLT, Scottsbluff; KCOW, Alliance; KCNI, Broken Bow; KRVN, Lexington; KSID, Sidney; KCSR, Chadron, and KOGA, Ogallala. We try to make these programs as informative as possible, and have been privileged to interview as our guests many Nebraskans visiting or working in Washington.

GOVERNMENT CLINICS AND QUESTIONNAIRES

In the off-election years I conduct "government clinics" at each of the 38 county seats in the Fourth Congressional District. The first hour is a "Youth Wants To Know" program. The last hour is for interested citizens who may attend. I am not there to make a speech but to render an account of my stewardship in the Congress and to answer any questions by the audience relative to our Government in Washington. The people may not always agree with my views or the way I have voted on the many bills in Congress; they may be right, and I may be wrong, but I do believe they are entitled to know how and why I have voted on the issues. The questions asked at these clinics—averaging about 50 in each 2-hour session—have been most helpful to me.

Every 2 years I prepare questionnaires dealing with many of the important current problems, and mail them to the 84,000 boxholders in the Fourth District. In alternate years I also send out farmers' bulletins. The response has been most encouraging and helpful.

It has been my practice for many years to attend a large number of county fairs and fall festivals, or other similar celebrations, so that I may have a chance to meet and talk more closely with the people I represent. I also try to keep as many speaking engagements as possible, before civic, farm and church groups in the district, when the Congress is not in session.

When we are in session, I seldom leave Washington, and have had to turn down many kind invitations to appear at various functions in Nebraska. The folks at home elected me to represent them as their Congressman, and if I am to do a good job, I must answer the rollcalls, attend the sessions and the meetings of my committees. The record will show that I have attended nearly every meeting of the House and my committees, and have missed few if any rollcalls.

WORLD PEACE

Mr. Speaker, I view the events of the past 6 months with mixed emotions. There are many things I believe we can enter on the plus side of the ledger. Here are some of them: First, and for this the whole world should give thanks, there is peace all over the face of the earth for the first time in many, many years. This is due, in great part, to the magnificent leadership of President Eisenhower. The Korean war was stopped shortly after President Eisenhower took office, and the battle fires that threatened Indonesia, China, Formosa, and the offshore islands, flickered briefly and died. It was reassuring that the President asked Congress for its advice by endorsement of the Formosa defense policy, showing a mutual confidence that has not existed for many years.

By taking the initiative in foreign affairs, the President arranged and attended meetings "at the summit" with the leaders of Russia, France, and Great Britain, to explore ways and means for nations to live together in peace. He has kept the people informed. There will be no secret deals as at Yalta or Potsdam out of these top meetings.

PROSPERITY

With peace, we now have a prosperity that has never been equaled. The value of the dollar has been stabilized, and has varied only a fractional percentage point in the past 2 years. Wages have reached record heights and continue on a steady incline. We are producing and selling more goods than ever before, with the highest national income in our history.

Great advancement has been made in the development of the atom for peaceful purposes. What was once the greatest destructive force the world has ever known will soon become an equally great tool for man's preservation. All this has been made possible because our scientists have been able to concentrate more and more on the peaceful application of their tremendous knowledge. Much credit should go to the President and his administration for their part in encouraging peacetime uses of atomic products.

Work stoppage, and production and income loss through strikes is at an all-time low. In all our history employment has never been higher, and unemployment lower, than now. College graduates, particularly those with technical skills have never before faced such a bright future.

All young men and women can look forward to better economic rewards and a higher standard of living than at any other previous time.

LOYAL GOVERNMENT

We can also be proud of the Government house-cleaning job that has been accomplished by the Eisenhower administration. Many thousands of unnecessary Government jobs have been eliminated. Security risks have been rooted out by the hundreds. By the end of June 1955, a total of 59 top Communists have been convicted in the Federal courts since this administration took over approximately 2 years ago, compared with 31 during the period 1948 to 1952, and none during the 1940 to 1948 period. This is not a "government by crony." The influence peddlers and 5-percenters have left Washington for greener pastures; there is no longer a market for their services in the Nation's Capital. Many significant income tax fraud cases, hushed up by previous administrations, have been brought to light and prosecuted. Honesty and confidence in government have been restored. Wrong doing is not tolerated by the President.

TAX CUT

Last year's Republican-controlled 83d Congress gave the people a $7.5 billion tax cut—the first in many years, and the largest ever. I am confident that, if President Eisenhower's program can be adopted and carried out, another tax cut will be forthcoming in 1956.

BALANCED BUDGET

This administration, in 2½ years, has come a long way toward balancing the budget. In the 1952 election campaign, Mr. Eisenhower publicly promised to cut Government spending and to bring our fiscal policies back to sanity. The deficit has been cut from the inherited $9.5 billion to an estimated $3.4 billion. The Secretary of the Treasury states further that if revenues continue at the present rate, and if economy moves proposed to the Congress can be carried out, this deficit will be wiped out and we will finish fiscal 1956 with a balanced budget.

GOVERNMENT SPENDING

Government spending has been reduced. In 1952 the Government spent more than $80 billion. We are now presenting an improved, more efficient Government, with more service to the people, for approximately $20 billion less. Even with the high requirements of the defense program, increased veterans' benefits, accumulated interest on the national debt, extended social-security benefits, enlarged atomic research and development programs and many innovations of the Eisenhower administration, during each year since 1952, the Government has spent less and less money. We are doing so by increased efficiency, less waste, and a forceful businesslike approach to this business of government. This was long overdue.

POLITICS

The work of the 84th Congress presents an interesting picture. The executive branch is controlled by the Republican Party, the Congress by the Democrats.

With presidential and congressional elections coming up in 1956, it is somewhat a time-honored tradition that much of the legislation and maneuvering will be aimed at these 1956 campaigns, and that the party out of control of the executive branch will devote a great part of its time to creating political issues. Throughout the session the Democratic leadership was trying desperately to find some issues on which to obtain public support and discredit the Eisenhower administration. These efforts ranged from squirrels, golf, the President's churchgoing, and Mrs. Eisenhower's health. The Democrats are attempting by this method to confuse and frustrate the President' efforts, because they have no real issues. It is hard to fight prosperity and peace. The Democratic controlled committees have kept their eyes on the political barometer. Other politically filled issues: the $20-tax cut, the postal pay raise, the highway bill, and much legislation originally suggested by the administration, but changed to give it a Democratic flavor.

AGRICULTURE

One of the dark spots on the picture comes from the trouble farmers are having in meeting rising costs with falling income. The Government storehouses are bulging with approximately an $8 billion surplus of many crops supported and urged during wartime. In wartimes these surpluses are not even called surpluses; they are blessed reserves. But in times of peace, they can sometime become a problem. We are doing everything we can to help the farmers share in the prosperity, through improved research, increased markets, assistance programs, and other plans that are being explored by the Congress and various departments of the Government. I have great confidence, too, in the ability of the farmers to solve many of their own problems. I believe agriculture is over the hump and better days are ahead.

SOCIAL SECURITY

The social-security law was broadened to include most of the professions, excluding medical doctors. Women are now eligible for retirement benefits at age 62 instead of 65. Disabled persons may draw social-security payments beginning at age 50; and the tax will be increased from 4 percent to 5 percent beginning January 1, 1956, if the House bill is approved.

IRRIGATION AND RECLAMATION

I have sponsored five bills in this session of the Congress dealing with and directly affecting irrigation, reclamation, and flood-control projects in Nebraska. One provides for Federal-local partnerships in small irrigation projects, similar to the bill I introduced in the 83d Congress.

A second would authorize the Bureau of Reclamation to begin construction of the Ainsworth irrigation project, which was included in the Missouri River Basin project by an earlier law.

A third would create a partnership between the Federal Government and the Midstate Reclamation District in Hall, Buffalo, and Merrick Counties, for irrigation and power on the Platte River.

A fourth provides for construction of the Farwell irrigation unit on the Middle Loup River, another facet of the Missouri River Basin project.

A fifth bill would authorize the Corps of Engineers to build several small flood control and conservation dams in the Gering Valley on the North Platte River. The need for such a project was recently emphasized by the heavy rains and resulting flood damage in that area.

It is my belief that the Congress must continue to cooperate in the planning and construction of irrigation and reclamation projects so long as they are sound and will pass the rigid tests of physical and economic feasibility. Money spent for irrigation and reclamation projects is a wise investment in the future of America. Water on good land at the right time produces crops and brings security and new wealth to a community.

ADJOURNMENT PLANS

I plan to return to Nebraska just as soon as the Congress adjourns, and I am looking forward to meeting and talking with as many of my friends in the Fourth District as time permits. I will attend many of the county fairs, rodeos, and other celebrations, and visit with as many service clubs and church groups as possible. I will hold Government clinics in each of the 38 counties in my district, beginning around the latter part of Septemebr and ending about a month later. Complete schedules will be sent out later. I hope the schools and public will again take an active part in these public forums. It is always good to get home.

Criminal Jurisdiction Over American Servicemen Abroad

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. BOW. Mr. Speaker, the Brooklyn Tablet has long been recognized as one of America's outstanding newspapers and a vigorous exponent of constitutional Americanism. I am pleased to offer for the RECORD the Tablet's excellent coverage of our efforts to modify or eliminate criminal jurisdiction over American servicemen in foreign lands:

SEEKS TO RESTORE AMERICAN RIGHTS TO SERVICEMEN—CONGRESS BILL AIMS TO SAVE CONSTITUTIONAL PRIVILEGES OF YOUTHS SERVING ABROAD—HEARINGS BEING HELD—REPRESENTATIVE BOW, OF OHIO, CRITICIZES STATUS OF FORCES TREATY, ASKS PROTECTION FOR BOYS

WASHINGTON.—"Treaties denying American servicemen their constitutional rights when overseas are a tragic abdication of national sovereignty that should be repudiated at the earliest possible date," Representative FRANK T. Bow, of Ohio, told the House Foreign Affairs Committee.

Representative Bow was the first witness in hearings on his resolution (H. J. Res. 309) which would require the President to renegotiate or denounce treaty provisions that

give foreign nations legal jurisdiction over American military personnel and their dependents.

In a prepared statement he presented precedent and documentation to support his resolution.

Principal target of the resolution is the NATO Status of Forces Agreement, ratified by a 72–15 vote by the United States Senate July 15, 1953. It had been negotiated in 1951, when Dean Acheson was Secretary of State, and was signed in London June 19, 1951.

Representative Bow said over 1,400 Americans were subjected to trial in foreign courts last year and 58 are serving sentences at last reports.

PRECEDENTS ARE CITED

"These 58 servicemen deprived of their constitutional rights, sentenced and convicted under foreign laws, are now confined virtually incommunicado in filthy, unheated, foreign prisons without proper food or medical care," he said. "They are martyrs to internationalism."

"Constitutional, moral and practical considerations dictate that the United States should never surrender to any foreign sovereign its right to protect and control the personnel of our Armed Forces," he declared.

He cited historical precedent under which he said "jurisdiction over members of the Armed Forces of the United States who commit offenses in the territory of a friendly foreign state in which the visiting armed force is by consent quartered or in passage remains in the visiting sovereign."

This principle of international law is recognized and quoted in the Manual for Courts-Martial of the United States.

"Our enlisted men take an oath to abide by the Uniform Code of Military Justice upon which the Courts-Martial Manual is based," he said.

"In fact, they find the Status of Forces Agreement completely contradicts the Uniform Code and the Manual and they do not have the protection it purports to give them."

The Ohio Congressman cited reports on French and Japanese prisons prepared by experts in those nations, both showing that prisons were unheated, infested with vermin, and without sanitary provisions to which Americans are accustomed. He said authorities of both nations admitted prisoners received inadequate food and medical care.

GUARANTIES ARE LOST

Representative Bow also read reports on French and German judicial procedures showing that the burden of proving his innocence rests upon the accused, that trial by jury is not guaranteed, and that conviction can be had on a majority vote.

"The American who unwittingly runs afoul of unknown or strange foreign law finds himself subjected to a judicial system he cannot understand, without American counsel and stripped of all the familiar guaranties contained in our Bill of Rights," he charged.

He said he has no complete list of nations with which agreements on criminal jurisdiction exist and that the State Department reported some nations were covered by arrangements "which in the national interest are classified." He said he could not understand the need for secrecy on such treaties.

"One may wonder if Russia or Communist China, in their disregard for the right of our American airmen, enjoy the protection of some international agreement," Representative Bow said.

SAYS IT CAN BE REVISED

Representative Bow continued:

"By the terms of the treaty its provisions can be denounced at the expiration of a period of 4 years from the date on which it became effective, which period would expire on July 24, 1957.

"It is for this reason that House Joint Resolution 309 directs the President to request the North Atlantic Council for a revision of article VIII of the agreement, acting under the provision of article XXII thereof; and as an alternative, if such revision cannot be brought about, that the President shall then denounce such agreement at the earliest date permitted.

"There are several methods by which action by the President to secure revision of article VII of the treaty might be directed and there is ample precedent to support a joint resolution as one of the methods.

"It is conceivable that supporters of the Status of Forces Agreement may contend that action by the House is not necessary, and also a possibility that the President may seek to ignore the resolution even though adopted; but in spite of these contingencies we owe it to our Armed Forces to let the world know that the overwhelming sentiment of the people of this country is against depriving our forces of the protection of our Constitution.

"Certainly we have every right to initiate a request for revocation forthwith of all secret agreements made by the executive department which gives criminal jurisdiction over our soldiers to foreign powers."

READS ADMINISTRATION STAND

Administration spokesmen strongly opposed the resolution. Bypassing Representative Bow's chief argument, that men serving overseas have lost their constitutional rights, they said the servicemen fare better in foreign trials than they would at courts-martial.

Representative H. R. GROSS, of Iowa, told the committee that the American people are generally unaware that American boys serving overseas are under foreign jurisdiction and are not protected by the Constitution. He recommended that service personnel should be informed that they are to be subject to foreign courts before they leave this country.

Representative GROSS said that he had received a letter from Bryce N. Harlow, administrative assistant to President Eisenhower, in which the latter stated the treaty provides "safeguards for a safe trial" and has been "working well in practice."

Mr. Harlow said that the treaty represented the maximum concessions obtainable from other governments and that there is "no reason evident why this matter should be reopened."

Committee members, recalling that President Theodore Roosevelt had sent armed forces to rescue American citizens in foreign lands, commented that the United States would have won the respect of the world by insisting on jurisdiction over its own men.

BROAD MIND TO FLAT HEAD

Assistant Secretary of State Thruston B. Morton wrote the committee that if the Bow resolution were passed, the United States might be compelled to withdraw its troops from abroad, thereby pleasing the Communists.

Representative MARGUERITE CHURCH, of Illinois, whose two sons served in World War II, demanded that the agencies of Government concerned inform the Congress of all secret agreements made with foreign governments with reference to foreign court jurisdiction over American servicemen.

Representative THOMAS J. DODD, of Connecticut, declared the Status of Forces Treaty was the product of fuzzy, flatheaded thinking." He added: "We're so broadminded we're getting flatheaded."

Both the American Legion and the Veterans of Foreign Wars urged repeal of the Status of Forces Treaty. Bruce P. Henderson, head of the Legion's national security commission, stressed basic differences in concepts of freedom and liberty here and abroad. For example, he said, "in the United States we take the position that a man is innocent until proved guilty. Abroad he is guilty until proved innocent."

A. M. Downer, legislative counsel of the Veterans of Foreign Wars, said no American soldier could get in a foreign court the trial which the Constitution guarantees him.

Philanthropic Giving by One American Corporation—Polish National Alliance Has Benefited American Education in the Amount of Over $4,250,000

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. MACHROWICZ. Mr. Speaker, as a graduate of the Alliance College in Cambridge Springs, Pa., to which I owe a debt of gratitude for my education and early training, I am extremely happy to insert into the CONGRESSIONAL RECORD the following report of a distinguished American educator and president of the Alliance College, Dr. Arthur P. Coleman.

The report follows:

In connection with the recent interest on the part of many American corporations in supporting independent higher education I take pleasure in calling attention to the record of the Polish National Alliance, a fraternal benefit insurance corporation doing business in 32 States and the District of Columbia. Founded in 1880 in historic Philadelphia, this great American institution is this year celebrating its diamond jubilee in many communities throughout the United States.

Up to 1929 the Polish National Alliance (headquarters now in Chicago) had given to education the considerable sum of $1,595,190.58. Annual gifts thereafter have amounted to—

1930	$119,985.73
1931	124,496.28
1932	124,377.04
1933	116,149.70
1934	116,995.60
1935	110,946.34
1936	133,449.21
1937	126,229.58
1938	129,032.77
1939	122,814.03
1940	82,240.37
1941	76,497.72
1942	76,143.68
1943	80,511.33
1944	81,486.23
1945	83,894.03
1946	85,588.14
1947	83,816.48
1948	135,208.75
1949	78,650.07
1950	80,515.73
1951	92,249.08
1952	123,079.46
1953	119,069.70
1954	119,161.12
1955 through 11/12 of year	105,747.92
Total from 1912 through May 31, 1955	4,323,526.82

This makes a grand total of over $4,250,000 already given to American education by this one American corporation, composed largely of the sons and daughters of immigrants from Poland, a land now suffering under a dreadful communistic dictatorship.

Alliance College, the benefactor of this generosity, is naturally grateful, but I submit

that the general American business community should be proud of the pioneer efforts on behalf of American education by this single corporation owned by some 360,000 Americans of Polish or Slavic extraction. With the Polish National Alliance corporate aid to education is not something new, rather it has been practiced for many years.

In this diamond jubilee year for the Polish National Alliance I should like, as an American educator, to express my admiration and gratitude for this distinguished pioneer example of wise and long-range aid to independent American education.

I believe Americans of older stock will agree with me that if independent higher education is to survive, we need many more such corporations.

Dr. ARTHUR P. COLEMAN,
President, Alliance College, Cambridge Springs, Pa.
JULY 4, 1955.

New York City Loses a Good Man

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the New York Journal-American of Monday, July 25, 1955. New York City has lost a great police commissioner and a fine public servant who will be hard to replace. Commissioner Adams made splendid progress toward decreasing the crime rate in New York City and made many improvements in the department. I join with his many friends in wishing him well upon his return to private law practice.

The editorial follows:

CITY LOSES A GOOD MAN

The resignation of Police Commissioner Adams will take from the city one of the best commissioners it has ever had.

He has shown courage and fairness in dealing with his men and for his men, and integrity toward the millions of citizens he served.

In his speech to New Yorkers yesterday the commissioner had reason to point with pride. Major crime decreased 13 percent in the first 6 months of this year as against a 9 percent jump in the similar period in 1954. Of major crimes reported, many more are being solved.

The chief reason for this encouraging news, Mr. Adams says, is that more police are on the streets and for that credit goes almost entirely to him. He eliminated frills, took cops from desk jobs and other soft touches and managed to put 1,500 more on patrol.

He has fought hard, too, for more men and more pay for his men and has managed little by little to get a measure of both. And he demonstrated by his saturation technique of a section of Harlem how a festering area of crime can be effectively attacked.

In his regime Mr. Adams has received a free hand from Mayor Wagner. Without this he would have been able to accomplish much less than he did.

The city will miss the services of Mr. Adams. We wish him well in his return to law. And we hope the mayor will be able to find a worthy successor.

My 6 Years in Red China—Bishop F. A. Donaghy, M. M., Gives an Eyewitness View of Life Behind the Bamboo Curtain

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. BOLAND. Mr. Speaker, Bishop Frederick A. Donaghy has authored one of the best articles on Red China that I have seen. His story written for the International News Service appeared in the Washington Post, Sunday, July 24, 1955. This distinguished prelate of the Catholic church speaks with authority, knowledge, and experience. He has seen with his own eyes the viciousness of the system that is being foisted upon the people of China. He has felt the brutality of its leaders. He has heard the phony promises made to the poor, gullible peasant who is powerless to resist. Because of all this, Mr. Speaker, Bishop Donaghy's opinions and conclusions are worth considerable weight.

Bishop Donaghy went to China in 1928 as a Roman Catholic Maryknoll missioner. He was head of the diocese at Wuchow in south China 20 years later when the Communists took over the country. He spent 5 months in a Red jail and lived under the Red China regime until he was tried and expelled by the Communists in June.

Mr. Speaker, I take pride in the fact that Bishop Donaghy is a son of Massachusetts and a native of New Bedford:

MY 6 YEARS IN RED CHINA

(By Bishop F. A. Donaghy, M. M.)

Wuchow is an old Chinese city of close to a quarter of a million people, located at the confluence of the Fu and West Rivers in south China. It is the headquarters for the Maryknoll Wuchow mission, embracing a large area of Kwangsi Province.

The year 1949 was a year that we lived under the threat of Communist invasion. There was only a token defense of the south when the "Liberation Army" arrived in Wuchow late that year.

The political arm of the new government went into power as soon as the armies had passed through the city. At first they were benign. They made big promises. They told the people that they had been given their freedom. There were to be no restrictions on the foreigners or on the church.

Actually, the Reds were following a blueprint. They had benefited by the experience of Russia, and by the mistakes they had made in north China. The blueprint called for complete entrenchment of the government before harsher measures yoked the people to Communist slavery.

Indoctrination in the new theories began within a few weeks. It was obligatory on everyone. Groups were brought to Wuchow for instruction from outlying villages. They were then sent home to act as instructors, and other groups were brought in. Communists from the north guided the courses of instruction and indoctrination.

Gradually the power of communism began to be felt. The once carefree Chinese were not free to come and go as they wished. Like creeping paralysis, the new thinking made over the lives of the Chinese. The change was as slow as it was deliberate.

The teachers, for example, were won over by being promised twice as much pay. Actually, when control was secured the teachers found their salary was reduced by two-thirds. Disillusionment set in, but it was too late.

If the Nationalists returned to China today, they would find wholehearted cooperation from the teaching group and many other classes. Government workers are particularly disillusioned in the matter of salary. Besides being fed up with constant indoctrination.

The soldiers, however, seem well fed, well clothed and well taken care of. They strut around with new power. Even here, though, I am not sure if some disillusionment may not have set in.

After 5 years of communism, the people have no illusions left. There is a certain amount of despair now, and they hope for another liberating army to come to save them. This hope is very strong. They realize they are prisoners.

Within a year, the Communists had built up their strength and gained complete control. A second military campaign was necessary to wipe out dissidents who had taken to the hill country. It was thorough and brutal. At the same time, the Communists systematically registered every individual and family—a momentous task. The Reds likewise proscribed by law the possession of any type of weapon by the people. Imprisonment and even death was the punishment.

The land reform was initiated in South China about a year after the indoctrination was put into effect. More than any other program, the redistribution of fields put the country under the yoke of communism.

To win the sympathies of the poorer people, the Reds first called for a drastic rent reduction. If this didn't induce the people to attend the nightly indoctrination courses, threats did.

The Communists called it "a preparatory stage of the land reform." Whipping the people to a fanatical and blind hatred of the "landlord" was termed "the political enlightenment of the peasant."

It became clear that the aim of this grandiose scheme was not to help the people, but to accustom the Chinese to a black, implacable hatred of any "enemy" who was so named by the state.

Class hatred was stirred up in groups where no one was actually "wealthy." Only after it was whipped to a fever pitch did a trial distribution of land begin. Often, Chinese wanted to reapportion the fields without the violence and bloodshed. The landed gentry were not universally hard on their tenants, and were not uniformly hated.

The Reds, however, prohibited the "land reform" without the blood bath preliminary. The poor duped peasants were guided on to be the executioners of their own neighbors. The landholder was taken into custody and long lists of charges preferred against him. All of his possessions were distributed to the poor.

Then the landholders were subjected to public trials. They were obliged to kneel on broken glass and stones, and the people were urged to beat them. Many died.

What benefits the land reform might have given to the poor were wiped out by the Communist system of taxation.

People who owned nothing were given 2 or 3 acres to cultivate. For them it was a dream fulfilled. But when their first crop was cut, the snake in the rice field became evident. Taxation was much higher than it had ever been. It has been getting progressively worse.

About a year ago, the farmers were urged to sell their surplus rice to the Government. The Government soon set up quotas, and the farmers were forced to sell even their food

rice. Then, when they asked for help, the Government refused to sell them rice.

A man-made famine resulted. In the last 6 months, conditions in south China have become really critical.

After almost 6 years of this kind of life, it is no wonder that the people have become disillusioned. There is no more land to work, because there are no more landlords. Each farmer has his own 2 or 3 acres, from which he can produce just about enough to live. Moreover, he must pay upwards of 30 percent in taxes.

All over China the farmers are disillusioned. They were duped and they know it.

In November 1950, I felt that the time of pressure upon the church was fast approaching.

By now the Reds had torn down the placards proclaiming religious freedom and protection for the foreigner. One of our priests had already been arrested. They claimed he was a spy who had been parachuted into the country by the Americans.

Some of the churches were guarded by soldiers to bar the entry of Catholics. Christianity was a frequent subject of the indoctrination classes. It was denounced as an arm of foreign invasion, and the missioners were assailed as espionage agents of China's capitalistic enemies.

In December, I began noticing people about the church property who didn't belong there.

On December 18, I received a telegram announcing that Father George Gilligan, of Brooklyn, had been arrested. Two members of the security police came to the house the next day, while I was in church. They sent for me. They said they had come to search the house, and led me straight to the bedroom where they had already been.

I went to a wardrobe to open it, suspecting there would be something inside it that I had never put there. The policeman pushed me aside, opened it, and gasped in indignation. There he had found a .45 revolver. He shouted and yelled and tried to make me admit ownership.

Meanwhile, the other policeman had opened a small drawer. He feigned great surprise at finding a package of raw opium—the first raw opium I had seen in all my years in China.

They arrested me and bound my arms. Then they arrested Father Justin Kennedy, of West Shokan, N. Y., who was in Wuchow to buy books for his Maryknoll School. In order to make the arrest official, they dropped some bullets in his luggage. He spent the same time in jail as I did.

We were taken to a house of detention. Throughout the day, others were brought in—among them Dr. William Wallace, an old friend from the Southern Baptist Hospital, and Sister Rosalia, one of the Maryknoll sisters.

We were moved across the Fu River to the Kwangsi jail. It had been built to hold 1,000 prisoners but the Communists crowded in a great many more than that.

The normal cell holds 16 prisoners, and has two-decker wooden beds. Each prisoner had enough room to stretch out but little more. Only one prisoner could walk up and down at a time.

The prison is surrounded by a high wall topped by barbed wire, which was said to be electrified. There were hundreds of soldiers there and it was absolutely impossible to escape.

The food in the prison was very meager—12 ounces of rice and one vegetable. We were given a small cup of water in the morning and another in the afternoon. This had to serve for drinking and washing. During my 5 months in jail I was allowed to go in the yard and take two baths in a small wooden basin. The second time I went out I became dizzy from the fresh air.

It was a distinct shock to the Chinese when the beloved Dr. William Wallace, probably the most outstanding citizen in Wuchow, was arrested. He was admired by everyone. He had a wonderful reputation for his fine surgical and medical work but he was loved for his kindness and devotion to the sick and the poor.

But the government declared him to be an outstanding spy. Teachers were instructed to tell how he deceived the people.

It was obvious that his arrest on planted evidence was a severe shock to him. He loved the Chinese people so much that he could not imagine this treatment in return. I tried to talk to him but he seemed to have no interest in what I said. He appeared dazed.

Then one morning (February 10) as the boy was dispensing water, he looked in Dr. Wallace's cell. He came running back shouting that the doctor was hanging in his cell. The guards hurried up, looked in, and then opened our cell. They insisted that Father Kennedy and I cut him down. Artificial respiration attempts were hopeless.

In the house of detention, the Reds had installed a loud speaker system. This was turned on and a tremendous tirade was delivered to stir up the people against Americans. Other loud speakers throughout the city carried out the same harangue.

I soon concluded that—as far as the adults were concerned—the effects of communism were rather superficial. In the schools the propaganda was more effective. There everything is interpreted on a patriotic basis. Love of country and love of Mao Tse-tung has an appeal to the youngsters. But those over 25 years of age seem reluctant to accept propaganda.

After 5 months in prison, I was suddenly released and allowed to return to my house.

During the past 3 years I lived alone with a Chinese priest. One by one, the Maryknoll missioners were arrested or put under detention. House arrest was often more wearing on them than being carted off to prison. Imprisonment ended the long uncertainty of what was going to happen.

The expulsion of priests and sisters from China got underway in January 1951. As the months passed, the stream of missioners escorted to the Chinese Hong Kong border swelled.

On the eve of the Communist invasion of South China there were 5,380 foreign priests, brothers and sisters working on the mainland. By the end of 1951, only 3,450 remained During the next 12-month period, an additional 1,612 were forced to leave. At the end of 1953, a mere 323 were still in the country. Many of these were in jails.

One by one, the churches were turned into granaries, schools, and public offices.

The Reds allowed me to live in my own house under a sort of semiofficial arrest. I was questioned several times about my daily walk to town, but it was never forbidden. A member of the secret police followed me, so I had to be very circumspect.

The sisters were not allowed to teach religion, had to dress in Chinese clothes, and were restricted to the city. They did wear, however, little medals on their jackets, so everyone in town knew who they were.

Our large Sacred Heart School in Wuchow, along with other schools, was taken over by the government. The Sacred Heart School is now known as Wuchow School No. 3. The prime purpose of the school in China today is to indoctrinate the young in communism.

I recall one day looking into a classroom. The woman teacher of the third grade was instructing the children to report to school authorities anything said at home by parents or relatives that was against the government or the Communist Party.

By reporting such talk they would prove their love of their country. Also, the teachers ridiculed the Christian students because of their belief in God.

The Catholic people stood very firm in the face of Communist threats. When the Reds tried to force them to join an independent Catholic Church, they gave no response.

All in all, I doubt if the Reds will have any success in eradicating the faith of the people who already have it. The Chinese Christians, of course, will suffer much for their beliefs. Many Christians are in forced-labor camps because they would not compromise.

The church has won great "face" in China. It is respected by the people as never before. This is because it has stood stanch and firm in the face of Communist attack.

After the Geneva Conference in 1954, a number of American priests were expelled from China; then for months the Communists seemed to forget the foreigners.

When suddenly last month I was summoned to the Security Police Bureau, I had no idea of expulsion. I thought I was going back to jail.

For 3 days I had to report to the Security Police Bureau, appearing before a panel of officials. The judge told me that they had four main accusations against me:

1. After the liberation, I had refused to allow a young Catholic to serve on a government committee to represent the Catholic Church. Therefore, I used my power against the people.

2. I had forbidden a young man to join a Communist youth organization. I was therefore reactionary.

3. I had threatened with excommunication anyone who signed a petition condemning Archbishop Riberi, the Holy Father's personal representative to China. I was a tool of foreign imperialism.

4. I had established the Legion of Mary throughout the diocese, and this was a reactionary organization.

There was no mention of the charges that had earlier put me in jail—the planted revolver and the raw opium.

I admitted the charges, saying that I had acted within my rights and that I did what was my duty. I denied that the Legion of Mary was reactionary.

I was a little angry at the injustice of the whole thing. A frameup was being staged to get rid of me. On the third day, the head judge read the sentence that I was to be banned forever from China. "This is to be put in effect immediately," he added.

I found out later that they had held the Canton boat at the customhouse waiting for me to join it.

One cannot shake off his thoughts of China merely by coming into the free territory of Hong Kong. All of us in the free world must be alerted to communism, recognizing it for what it is.

It is evil.

The Communist's hatred of religion should make us reexamine the part religion plays in our own lives. It should make this treasure more precious to us. It is the lack of religious conviction in the lives of free men that gives communism power. Without this conviction, the siren song of Communist propaganda can easily deceive us.

Since my return to the free world, I have often been asked whether or not we can have peaceful coexistence with the Communist nations.

In my opinion, our objectives are so diametrically opposed that I can see no hope of attaining peaceful coexistence. In fact, I do not think that there will even be a long coexistence between Russia and China. I know that adult Chinese are not keen to look upon the Russian people as their great Russian brothers. The Chinese people as a whole have an ingrained xenophobia. They do not want to be under a foreign power even in a secondary position.

It is wrong to say that the Chinese people have accepted communism. There are two strengths in China today. The strength of the bully which is communism exercising control through the army, and the strength and unity of suffering which is the vast mass of people.

The Communists know they do not have the people behind them. Given the opportunity, the people would rise against them, and the Reds know it. When I left China, people were openly talking about rebellion. The Chinese no longer believe Communist propaganda. The high standard of living of the Russians, the production which exceeds the production of all other nations, is played up in the press.

But the people in Wuchow know that there is not one single Russian item in any store for sale. There is still American merchandise, and the people are anxious to buy that.

The Chinese are of a religious nature. Now religion is derided and limited. One cannot take away fundamental liberties and not expect a tremendous reaction. This is as true for the Chinese people as it is for Americans.

Hon. Edith Nourse Rogers, of Massachusetts

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. CANFIELD. Mr. Speaker, recently I stopped at a gasoline station in Watertown, Mass., and while a young man was refueling my car, I said to him: "Who is the Congressman from this district?" He beamed as he replied: "She's a lady and her name is EDITH NOURSE ROGERS. She's the salt of the earth and everybody's for her because she is always doing things for folks most in need."

It developed in our brief conversation that the young man was a World War II veteran whom Mrs. ROGERS had helped in some relationship with the Veterans' Administration.

Circulating through the Fifth Congressional District of Massachusetts, I picked up much additional evidence bearing on the affection that the voters, both Republican and Democrat, have for "the gentle lady from Massachusetts." They are all for her because she is all for them and her every-day dedication to their best interests is a favorite topic of the area.

I regret I was not present some weeks back when our distinguished colleague was accorded many richly deserved encomiums on the anniversary of her 30th year as a Representative in Congress. Mrs. ROGERS has been most kind to me during my congressional service and I know something of her love of country and her intense devotion to those who have rendered service in our Armed Forces, particularly those who bear the scars of conflict. These have never had a better friend and I feel certain that this is realized throughout the Nation.

It was through Mrs. ROGERS that I first learned of the remarkable work being done by those dedicated men and women out at the Prosthetic Laboratory at Forest Glen in Maryland. Our veteran amputees look forward so much to her daily visits.

The New York Herald Tribune of last Sunday, July 24, 1955, under the caption "Mrs. ROGERS Has World's Record" said:

One of the things not discussed in laudatory congratulations to Mrs. EDITH NOURSE ROGERS on her recent observance of 30 years service in the House was that this tenure established a world's record. She has served longer than any other woman in history continuously in a national legislative assembly.

The "Lady from Lowell," Mass., has served in Congress since June 30, 1925, when she was chosen to succeed her deceased husband, has held a major chairmanship, something no Republican woman representative ever did previously.

Every Member of the House knows Mrs. ROGERS as an untiring crusader for the causes in which she believes and following her in just one day's routine makes it easy for one to understand why the young attendant at that Watertown, Mass. gasoline station called her "the salt of the earth."

Farmers Penalized in Transportation

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. CANNON. Mr. Speaker, there has been wide discussion of the breakdown in transportation of wheat to storage and markets through lack of the usual railroad facilities and the utilization of freight cars, usually allocated to meet this need at the peak of harvest, to other and less urgent purposes.

This week's issue of the Missouri Farmer carries an illuminating article on the subject by President F. V. Heinkel, of the Missouri Farmers Association, throwing light on the subject. As Mr. Heinkel points out our farmers are already laboring under the handicap of low prices and high costs of production, and this unnecessary situation should have prompt and effective attention.

Mr. Heinkel explains:

WHY DID CCC TIE UP CARS AT HARVESTTIME?

(By F. V. Heinkel, president, Missouri Farmers Association)

Every summer there is invariably a shortage of boxcars for the grain harvest. The railroads seem to always be short on cars when the need is greatest, even though their officials can't help knowing that there is a grain crop coming on every year.

The situation was the worst this year that it has ever been. But this time it was not the fault of the railroads. Every railroad serving Missouri told us that they had the cars ready, but just as our harvest began the Commodity Credit Corporation ordered thousands of carloads of stored wheat moved to ports on the gulf and the Great Lakes and to other points. CCC had 6,000 carloads of the stored grain shipped from Kansas City alone. They even moved corn out of the State of Illinois right at wheat harvesttime.

This tying up of cars for moving storage grains, just when they were needed for new wheat, created real havoc throughout the State. Wheat soon filled the local elevators, and at many points it had to be piled in the streets. In most communities combines had to be stopped. New wheat began to heat in local elevators and in piles, and farmers took great risks of weather damage to grain they were forced to let stand overlong in their fields.

In order that the railroads would have ample time to have boxcars available when the wheat was harvested, I have for the past several years asked the MFA Traffic Department to make a survey of MFA elevators and exchanges early in the spring and get estimates of their needs for grain cars throughout the summer season.

This year the estimates were forwarded to the railroads well ahead of harvest, and their response seemed to be better than usual. But by the time the harvest got underway in central Missouri hardly any grain cars were to be had.

We made scores of long distance telephone calls to various railroad officials, ranging from local train dispatchers to railroad presidents. Almost without exception, they told the same story—CCC had used nearly all of the available cars. Evidently the railroads have done the best they could under the circumstances.

This action by a branch of the United States Department of Agriculture cost Missouri farmers many thousands of dollars, and this at a time of low farm prices when they could ill afford to lose money. Doubtless, farmers in other States suffered severe losses from the same cause.

Why wasn't this stored grain moved before harvest time? Surely officials of USDA, and especially those of CCC whose business it is to deal with grain, knew another harvest was coming up, and when it was coming.

This movement of storage grain, if not timed deliberately by some one in the USDA in order to discredit the Federal farm program, was nothing short of criminal negligence. Secretary Benson, if he does his duty, will seek out those responsible and turn them out to grass. Also, Congress should look into it and make sure that it doesn't happen again this fall when soybeans and corn begin to move.

Farmers who have been squeezed between high costs and low prices cannot afford such losses, and should not be expected to stand for them when they are so unnecessary.

Meanwhile, though the service of the railroads has been improving in recent years, there is room for further improvement. Many of them still have an exasperating way of sending solicitors out looking for new business while the business that has come to them unsolicited is not being properly taken care of.

Whose Giveaway of Public Power?

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. MILLER of Nebraska. Mr. Speaker, we have heard the accusation many times that the Republican administration is "antipublic power—is giving away power to private industry," or is "violating the preference and withdrawal clauses." The Democrats groping for issues have seized upon these accusations with all the vigor of a minister denouncing sin.

However, let us look at the record. Whose giveaway is it? Who is violating the preference and withdrawal clauses? Who is really antipublic power?

Here is what the record shows. The Democrats controlled the legislative and executive branches of the Government for the greater part of 20 years, and were responsible for the power policy that developed from 1933 to 1953. When they came into office in 1933, they inherited a sound, constructive, and wholesome Republican program for development of the country's natural resources, fostered by the Reclamation Act of 1902, the Reclamation Act of 1906, and the Boulder Canyon Act of 1928. These acts, passed by Republican Congresses under Republican administrations, authorized utilization of water for irrigation and power development, and laid down the policy for the use and sale of these resources. Under the 1906 act it was provided that when the power was sold preference should be given to public and municipal uses, and a comparable provision appeared in the act of 1928 creating the magnificent Boulder Canyon project.

The Democrats, with their usual capacity for adopting Republican programs and converting them to their own use, injected a new philosophy into the field of public power with the passage of the Bonneville Act of 1937. The "preference clause," which previously applied to marketing agencies devoted to "public use," was extended to public bodies and cooperatives, without reference to the use of the power.

Now, how well have the Democrats carried on the public power program? How well have they protected the investment of the taxpayers in the many huge Federal power projects in the country? How much power did they give away to private industry? How well have they observed the preference and withdrawal policies?

As Al Smith used to say, "Let's look at the record." What does it show? The record shows that during the period of 1945–52 the Bureau of Reclamation, the Bonneville Power Administration, the Southwestern Power Administration, the Southeastern Power Administration, and other Federal power groups, under Democratic control entered into a total of 176 contracts with privately owned utilities demanding an energy delivery of 44,599,725 kilowatt-hours in 1952. Only 14 of the 176 contracts carried the preference or withdrawal clause. The record shows that these contracts were made with privately owned groups and were contracts for Federal power, at a time when a serious power shortage in several public power areas in the country was apparent. Some of these contracts, in the opinion of experts, were made at less than the cost of production. The contracts prices ranged from 1.5 mills to 3 mills. One contract was for nearly a million kilowatt-hours, made to a New Deal pet, the Kaiser Aluminum Co. It is still in effect and the price is less than the cost of production.

During this period more than 13 percent of the electrical power produced and marketed by the Federal Government was sold to privately owned utilities under contracts that did not provide for withdrawal, when the power was needed by preference customers. And much of it was sold at prices below the actual cost of production.

Who has benefited by the Democrat public power policy?

April 24, 1939: Arizona Public Service Co., contracted for 30,000 kilowatts of firm power.

March 16, 1940: El Paso Electric Co., contracted for 15,000 kilowatts of firm power.

July 15, 1940: Public Service Co. of New Mexico, contracted for 2,500 kilowatts.

May 29, 1941: South California Edison Co., contracted for 7.05 percent of the firm power at Hoover Dam.

April 11, 1945: Montana-Dakota Utilities Co., 5,000 kilowatts.

June 1, 1945: Community Public Service Co., region 5, 2,500 kilowatts.

July 1, 1945: Riverside Electric Co., Ltd., region 1, 7,541 kilowatts.

December 1, 1950: Community Public Service Co., region 5, 3,000 kilowatts.

December 15, 1950: Idaho Power Co., region 1, 2,000 kilowatts.

Here is the total record of such contracts from 1945 to 1952, made by the Bureau of Reclamation, Bonneville Power Administration, Southwestern Power Administration, and Southeastern Power Administration:

Contractor with the privately owned utilities	Number of contracts nonwithdrawable	1952 contract demand (kilowatt-hours)	1952 energy delivered (kilowatt-hours)
Bureau of Reclamation	33	32,720	2,733,815
Bonneville Power Administration	92	587,000	3,254,203
Southwestern Power Administration	36	149,000	237,018,525
Southeastern Power Administration	1	60,000	12,065,952
Total	162	828,720	255,072,495

The entire Democratic power philosophy seems to be that the savings in power costs, if any, at projects built at Government expense, should be passed on to those marketing agencies of a public nature, regardless of whether they use the power for public purposes or for resale to private users. In other words, the Federal Government should build all projects, sell the power to all comers, at cost or below, and then pass the cost back to the taxpayer. This is well illustrated by a memo by Harold Ickes on January 3, 1946, in which he stated:

> Active assistance, from the very beginning of the planning and authorization of a project, shall be given to the organization of public agencies and cooperatives for the distribution of power in each project area.
>
> The statutory objectives are not attained by merely waiting for a preferred customer to come forward and offer to purchase the power.

We Republicans do not understand public power in this sense. We understand it in the historical sense, that power, as all other resources, should be used for the benefit of the public. Preference must be given to those customers, whether State, local or private in organization, who devote this resource to the public good. This is the policy that went into the original reclamation acts and the Boulder Canyon Act, and it is the policy we are following today.

If the Democrats wish to draw the battleline upon the issues of irrigation, reclamation, and power, let them do so. If they wish to talk about public power and private power, let them do so. If they wish to talk about giveaway, let them do so. But let us find out whose giveaway it is. It is clearly shown by all records that the Democrats have violated over and over the preference clause in the sale of Federal power. Long-term contracts have been entered into which never would have been tolerated under the Republican policy of protecting preference customers.

Address by the Honorable Richard M. Nixon, Vice President of the United States, at the Dedication Exercises of the National Shrine for the Jewish Dead, Jewish War Veterans, U. S. A., National Memorial, Inc., May 22, 1955

EXTENSION OF REMARKS

OF

HON. DeWITT S. HYDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address made by Vice President NIXON before the members of the national executive committee of the Jewish War Veterans at the dedication exercises of the National Shrine for the Jewish Dead, on May 22, 1955:

Commander Dorfman, Commander Barr, Rabbi Goldberg, distinguished guests on the platform, and ladies and gentlemen, I want you to know that I consider it a privilege to have been able to rearrange my schedule, as Commander Dorfman has indicated, to be with you today to participate in these very solemn ceremonies.

It is true that the Vice President of the United States does have a number of official functions to perform during a week or during any particular day but I can assure you that there is not any one of them that I consider a greater honor or a greater privilege to perform than to be with you today.

This shrine which we are dedicating is one which I think can mean and will mean in the years ahead a number of things. Might I suggest just three things I think it would mean to me and, perhaps, to you and the American people.

First of all, it is a shrine which will be a reminder of the splendid contribution made to American life by the organization which has been responsible for its erection, the Jewish War Veterans. I think we all are appreciative of what has been done by Commander Barr and others who conceived the

idea of the shrine and then worked through the years until finally the idea has reached fruition. And then, second, this shrine will be a reminder for all Americans of the tremendous sacrifices and the great contribution made to America by Americans of Jewish faith in the wars in which this country has been engaged.

There are men like the Congressional Medal of Honor winner who was introduced just a few moments ago, Ben Kaufman; a man who was honored for his gallantry by nine Allied Governments in addition to our own, and a man who proved his greatness by refusing a commission so that he could stay in the ranks with the men with whom he had fought and for whom he had done so much.

He was a World War I Congressional Medal of Honor winner. Then, in World War II, there were other Congressional Medal of Honor winners of Jewish faith. Isidore Jackman, for example, was one man who made a great contribution—a paratrooper who because of his bravery was able to save the lives of perhaps a whole company to which he was attached.

And then, in addition to these men who have made such great sacrifices and whose contributions have been recognized by the government of their country, there are the thousands of others who had to do their routine jobs—routine jobs which had very little glamor but necessarily had to be done in order for the victory to be won. This shrine will be a reminder of the contributions they made as well as the contributions that were made by those whose exploits won the applause of the whole Nation and of the Congress of the United States through the award of the Congressional Medal of Honor.

And I was thinking, too, that this shrine might be a reminder of men of Jewish faith who have made contributions during our wars and have not even been members of the armed services but whose contributions, nevertheless, were perhaps as great.

In studying the history of the Revolutionary War, certainly there was no greater hero than Haym Salomon, the man who, time after time, came to Washington with the funds to pay the troops, to take care of the rations, and to provide the necessary equipment to assure victory.

His contribution, it has been estimated, would be $4 million in terms of money as we know it today. And the extent of his contribution is measured by the fact that he died penniless at the age of 45.

And so this shrine will be a reminder of the contributions made by the heroes, by the men in the ranks, and by those who have contributed in other ways than military service to defending this country. But I think it is more than that. I think we should have in mind, as American citizens, that this shrine, in a sense, is symbolic of the greatness of America.

I like to think of America's because no nation has had in modern times a greater history than ours. It is rather difficult to realize that it was only 160 years ago that there were only 3 million people in this country and that today there are 160 million. But 160 years ago there were only 13 colonies joined together on the Atlantic seaboard. Now we have a great continental power of 48 States, with Territories in other parts of the world as well.

It is hard to realize that that small, weak agricultural economy has grown to the point that today the United States produces over one-half the world's goods. It is hard to realize that a country that was despised by the rulers of the world as being too weak because it gave men too much power and gave governments too little today is recognized as the most powerful nation on the face of the globe.

Now how did it happen? You can give a lot of reasons if you ask different people people why America has progressed as it has. I know some will say that America has become great because it has had great natural resources. That is part of the reason, but not all, because other nations have had resources as great as ours and they have not progressed as we have in that period of time.

Then there are others who will give the answer that America has become great because we Americans have been and are a great people; but who are the American people? This is no master race. Americans came from all the continents, from all the countries of the world. All races, all creeds, all religions are here. It is inscribed in the immortal words of Emma Lazarus on the Statue of Liberty: "Give me your tired, your poor, your huddled masses yearning to breathe free." And so they came to America and, in the climate of freedom that men and women found here, their energies were released and they made contributions to progress greater than men and women had ever made to a civilization in the history of mankind.

And so, as we analyze America's greatness and the reasons for it, I think that we are a great Nation because we have recognized some fundamental truths.

We have differences in our country, differences in customs, traditions, and religions, but we have also recognized that if we have respect for our differences and if we have common beliefs in great principles of freedom, equality, and justice for all, we can transcend those differences, we can thereby create a united people whose power will be as great or greater than any people on the face of the earth. That is the American's creed. It is what America stands for. It has been and today is the hope of the world.

And so, as we dedicate this shrine, I say let us think not only of the organization which made it possible. Let us think not only of the men who have made sacrifices to whom this shrine is specifically dedicated, but let us also think of the country, the Nation, our Nation, which this shrine symbolizes.

And let us never forget that men in the past in the wars in which America has engaged have been willing to make the supreme sacrifice to defend our principles and our freedom, and that, in the future, the responsibility of military service which falls upon our young people is not one which should be shirked.

It is not one which should be complained about, but it is one that should be accepted as a privilege, a privilege to give our services in maintaining and perpetuating our great Nation in which we are privileged to live.

It has been an honor to be with you. And I trust that through the years this shrine will be a reminder of the principles which have made America and our people the great Nation and the great people we are.

Restore the Bill of Rights to Our Servicemen

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. BOW. Mr. Speaker, the plight of our soldiers under the Status of Forces Treaty is receiving attention from some of the Nation's most distinguished commentators on public affairs. Under leave to extend, I offer for the RECORD the following recent broadcast on this subject by Dr. Clarence E. Manion, a noted authority:

RESTORE THE BILL OF RIGHTS TO OUR SERVICEMEN

For the past several months Congress has been wrangling over provisions for military conscription in the new Army Reserve bill. During heated discussion in the House of Representatives last May 18, the House voted on a significant amendment proposed by the Honorable FRANK T. BOW, of Ohio.

The Bow amendment was short and to the point. In substance, it provided that hereafter no American military serviceman could be stationed in any foreign country to which the United States has surrendered criminal jurisdiction over American military personnel.

The fact is that the United States has surrendered such criminal jurisdiction to practically all countries in which American troops are now stationed abroad. This amendment would thus require drastic but wholesome changes in our entire military policy. To the surprise and shock of the Pentagon and the State Department, the Bow amendment was overwhelmingly adopted by the House of Representatives by a vote of more than 3 to 1 (175 to 56).

Since the administration refused to accept the critical amendment, the Reserve bill was subsequently withdrawn. Representative Bow and other House Members then introduced resolutions calling upon the President to denounce the infamous Status of Forces Treaty at which the Bow amendment had been directed. These resolutions are now before the Foreign Affairs Committee of the House of Representatives. Eventually they will be voted upon by Congress. It is obvious that a large majority of the House of Representatives is in favor of these resolutions, but without prompt, loud, and persistent popular support, the chances for their passage are very, very slim.

Here again, as is the case with so many patriotic enterprises, the big difficulty is popular apathy, plus a carefully cultivated area of calculated misunderstanding. Internationalists who are perpetually anxious to appease foreign nations by the continuous surrender of our cash and national sovereignty are always ready with slick, plausible defenses for the Status of Forces Treaty. As a matter of fact, however, and as the House vote on the Bow amendment indicates, this Status of Forces agreement is the most perfidious piece of bipartisan chicanery that our befuddled post-war diplomacy has produced.

This surrender idea was hatched in guarded secrecy by the Acheson State Department after the close of World War II. The Eisenhower administration found these disgraceful arrangements governing our servicemen in many parts of the world. The Bricker amendment would have outlawed these wicked arrangements, but in opposing the Bricker amendment, President Eisenhower and Secretary Dulles repeatedly disclaimed any intention to destroy the constitutional rights of any American by an international agreement.

This being so, these secret arrangements by Mr. Acheson should have been promptly and emphatically repudiated. Instead, Mr. Dulles and President Eisenhower requested that the surrender arrangements be made uniform by a treaty with all NATO countries. As a result of administration pressure and over the courageous and strenuous objections of 15 patriotic United States Senators (Bricker, Dirksen, Dworshak, Jenner, McCarthy, Malone, Schoeppel, Welker, Williams (Delaware), Frear, Johnston, Long, McCarran, Russell and Smathers), this so-called NATO Status of Forces Treaty was finally ratified by the Senate on July 15, 1953.

This infamous treaty changed military law that had been effective for United States

troops ever since the first inauguration of President George Washington. It took basic constitutional protections from 1 million American military servicemen along with those of their wives and dependents who are now stationed in more than 40 foreign countries.

Under the Constitution, as under the hitherto unbroken precedents of international law, the troops of friendly nations stationed in foreign countries are subject to the criminal laws and procedures of their home governments. Our soldiers, sailors and marines have fought all over the world in two world wars under this time-honored rule of law without trouble or serious objection from any of our Allies. In the interest of gratuitous post-war appeasement, however, the Status of Forces Treaty changed this basic rule and thus subjected all American military personnell to the criminal laws, courts, prosecutions and peculiar procedures in the foreign languages of the foreign countries to which our servicemen have been sent to defend.

The United States Constitution provides that Congress shall "make rules for the Government and Regulation of the land and naval forces" of the United States. (Art. 1, sec. 8, No. 14.) Pursuant to this authority, Congress has established a uniform code of procedure for the trial of American military personnel both here and abroad. When he is tried under that code for offenses alleged to have been committed off duty, the accused serviceman is assured of all of our traditional constitutional safeguards. Among other things, he will be presumed to be innocent until proven guilty beyond a reasonable doubt.

He may confront the witnesses against him. He can have a jury trial and the privilege of the writ of habeas corpus. He cannot be tried twice for the same offense, or be required to give testimony against himself. Finally, if convicted he can appeal to the President for pardon. These are some of the constitutional rights which the Status of Forces took away from the 1 million American servicemen now stationed in foreign lands where none of these protections are available.

What difference has that made in the life of these American boys stationed abroad since the Status of Forces Treaty took the Bill of Rights away from them 2 years ago? Some part of a million people, soldiers or civilians, anywhere, any time, will commit or be accused of committing many criminal offenses—major, minor, and in between.

Let us suppose that your son has been drafted into the Army and sent to one of the more highly civilized places where American troops are now stationed. Let us suppose that he was sent to France. After a few drinks at a sidewalk cafe, he begins to denounce communism—the evil thing which after all is the very reason why he is where he is. Remember that 1 out of every 4 voters in France is a Communist. This particular cafe may well be a Communist rendezvous. In the resulting brawl, the GI's get the worst of it.

Your son is accused, arrested, and hauled before a French judge. Here is the sixty-four dollar question proposed to Senator JOHN BRICKER in a letter from an American Air Force officer stationed in France: "How long do you think a French judge of a police court would last if he disregarded the testimony of a Communist policeman and accepted the testimony of a GI?" That is the question.

Does it make you feel any more complacent about that boy of yours, who may even now be talking through an interpreter to a judge in France, Italy, Turkey, Japan, or wherever he is tonight? Yet, the internationalists will assure you that treaties cannot take constitutional rights away from anybody. From bitter experience, thousands of our servicemen now know better.

Before Mr. Acheson hatched his secret surrender agreement, later confirmed by President Eisenhower in the Status of Forces Treaty, this American GI woud not have had to face that French judge. He would have been turned over to United States military authorities, who would have tried him in the English language before an American court, according to the Bill of Rights.

When Persident Eisenhower was urging the United States Senate to ratify the Status of Forces Treaty, he wrote that he was convinced "that our friends abroad will continue to cooperate as they have in the past, in turning over those charged with offenses against their laws, to our own military courts for trial." In other words, the President anticipated that although the Status of Forces Treaty would surrender our troops to these foreigners, the foreign governments would then generously hand our soldiers back, thus reducing the treaty to nothing more than a gracious American gesture. Unfortunately, it hasn't worked out as the President expected. For that reason, he should welcome the language of the Bow resolution and immediately reestablish the constitutional rights of our soldiers which he surrendered by overconfidence in the generosity of our allies.

The Pentagon is reluctant to release facts and figures concerning prosecutions by foreign governments under the status of forces surrender agreements. Wives and children of the convicted servicemen learn about it when their Army allotments are cut off, but beyond the fact of his conviction, it is often difficult to find out the nature of the soldier's offense. The Defense Department recently revealed that 178 American servicemen were sentenced to confinement by foreign courts during the first 11 months of 1954, and that as of February 10, 1955, 58 American servicemen were in foreign jails.

Some few details have broken through the censorship. We heard about the two soldiers who were sentenced to 5 years in solitary confinement for taking over a taxicab in France. Then there was the Air Force officer in Bermuda who was jailed for driving a car without the prescribed kind of insurance. Two American servicemen have been held without a trial in a Japanese jail for 9 months. There is no habeas corpus in Japan, where the wife of a serviceman was indicted because the house she rented accidentally caught fire. Even more serious is the status of American serviceman Jose Montijo, of Phoenix, Ariz., now held for the murder of a Frenchman in Paris. The accused denies his guilt, but the French newspapers want the American soldier to get the guillotine. American military authorities will not discuss the case.

The Status of Forces Treaty was being debated in the United States Senate just 2 years ago this month. In opposing its passage, Senator BRICKER said to the Senate: "Some day we can expect to witness an American soldier convicted and sentenced to die by a foreign court."

Jose Montijo is stripped of the Bill of Rights in Paris tonight, but an unnaturalized foreigner, caught redhanded in the United States, can plead the fifth amendment and every other provision of our Constitution. This brings up the internationalists' defense of the NATO Forces Surrender Treaty. Internationalists point out that the treaty is reciprocal; foreign governments get jurisdiction over American GI's, to be sure, but in return we are allowed to apply American law to foreign soldiers in this country.

How fortunate for the foreign soldier who gets the presumption of innocence here, instead of the presumption of guilt at home. How convenient for the foreign soldier who gets here in America the full protection of the Bill of Rights in exchange for the denial of the Bill of Rights to American soldiers all over the world.

This is a typical example of what our State Department regards as reciprocity between the United States and foreign nations. It is a principle which the State Department has generously declined to apply to its own employees in foreign countries. State Department agents are not subject to foreign jurisdictions. A separate treaty takes care of that. If Jose Montijo had been working for the State Department, wearing striped pants instead of the American Army uniform, he would not now be in danger of the guillotine.

Congressman Bow tells me that he does not know the number of countries to which the Status of Forces Agreement now applies. The State Department will not reveal the complete list. He says: "I can see no justification for secrecy with regard to any agreement of this type. The whole world knows that we have men now stationed in upwards of 40 countries around the globe. The American people and American servicemen have a right to know how many of these nations exercise the power of life or death over hapless American who may run afoul of strange and unknown foreign law. In view of the fact that we seem to be unable to secure release of our airmen jailed in Red China, the State Department's secrecy leaves us free to wonder whether one of the classified agreements may have been made with Red China or the U. S. S. R."

While we are wondering about that, we can plug for Congressman Bow's resolution. Our servicemen are the last people on earth from whom we should remove the protection of the Constitution. Yet, that is precisely what has been done in the disgraceful Status of Forces Agreements. Tell your Congressman that you want the rights of our soldiers restored, and at once.

The Criminal

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. BOW. Mr. Speaker, exemption from marketing penalties of wheat grown for use as feed or seed on the farm where it is grown has now been recommended by the Secretary of Agriculture.

I think this is sound and necessary legislation, and it is something I have advocated for many months. I believe it is embodied in legislation introduced some time ago by the gentleman from New York [Mr. REED]. I hope that the Agriculture Committee may see fit to act without delay so that this correction may be made in the law in time to be of benefit to farmers with regard to the 1955 crop.

The advantages are many. It will mean that dairy and poultry farmers who grow wheat for feed will be relieved of all of the unnecesary and unreasonable penalties that they may now suffer if in growing sufficient for their needs they exceed the allotment for their farms. It will relieve the Government of the expensive burden of administering controls for these farms, and of the necessity, now a matter of law, of prosecuting farmers who violate the present restrictions.

This is a deadly serious matter to hundreds of farmers who are now in

difficulty with the Government because of violations. I think it is very well handled, however, in the following editorial from the Wall Street Journal which shows how ridiculous this kind of control can become:

THE CRIMINAL

Farmers have paid some $5 million in fines to the Federal Government for growing more than the law allows.

So the black robed judge mounts his bench of a morning and calls the case of John Doe.

JUDGE. "What is the charge against this man?"

DISTRICT ATTORNEY. "He has been growing wheat, Your Honor."

JUDGE. "Growing wheat, eh. Let's see, Doe, haven't you been up here on the same charge before?"

DOE. "Twice, Your Honor. You see, I have a flock of chickens and I grow wheat to feed them. My father did the same thing for years and when we grow our own feed we produce chickens and eggs cheaper than when we have to buy feed. I know they say that is against the law but I just can't believe it."

JUDGE. "Well, you better believe it. You are a third offender and you come up here citing your father. Now there's your neighbor, Richard Roe. He used to grow wheat but he stopped."

DOE. "Yes, I know, Your Honor, but Roe lost his farm and had to go on relief. That was another thing father taught us—never to rely on other people for our living."

JUDGE. "Your father again. He had an old-fashioned point of view. I hope you are bringing your own children up in better fashion. There is enough juvenile delinquency now."

DISTRICT ATTORNEY. "I wish to correct the record. Richard Roe is not on relief. He is now a Government inspector. In fact he was the one who ferreted out what Mr. Doe was doing."

DOE (mumbling). "Father always said they were a bad lot."

JUDGE. "This man keeps talking about his father. It seems almost a mania."

DOE. "Well, someone is crazy."

JUDGE. "Doe, you are fined $100 for growing wheat and $1,000 for contempt of court."

Schenck To Confer With Residents of His District

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. SCHENCK. Mr. Speaker, it is my high honor and great privilege to represent the very important Third District of Ohio here in the Congress of the United States. I am humbly grateful for this opportunity to be of service and it is my constant aim to represent all of the people of my district in the very best and most sincere manner possible. It has also, Mr. Speaker, been my constant policy to keep in close personal contact with all of the people of the Third District so that I may know their opinions and feelings in the vital and challenging problems with which we are faced here in the Congress.

Our Third District, Mr. Speaker, is located in the great and beautiful Miami Valley of Ohio. The people of this area have made many outstanding contributions to the health, welfare, and progress of our Nation and the world. Not only is it the birthplace and cradle of aviation but many of its other inventions and products are serving people all over the world. Our people are skilled in many ways and we have developed scientific projects, manufacturing, and agriculture to an unusually high degree.

It has been my constant aim, Mr. Speaker, to not only keep well informed as to the opinions of my constituents but also to be the greatest possible and proper service to each and every person in the third district who has a personal problem with some department or agency of our Federal Government. Therefore, Mr. Speaker, I initiated the idea of holding "grassroots conferences" throughout the district 4 years ago and have continued to hold them each year during the time Congress is in adjournment. I also have a full time congressional service office at 314–315 United States Post Office Building in Dayton, where I can meet with people personally at such times as my official duties permit me to return to the district. During the times when my legislative and official duties require me to be in Washington, a competent secretary is in charge of my district congressional service office to assist anyone and to prepare reports and requests for me to properly help them in their problems involving some Federal department or agency. Thus, Mr. Speaker, I have sincerely tried to not only keep well informed as to the personal opinions of my constituents but I have also continuously and sincerely tried to be of every proper service to them.

Members of Congress, Mr. Speaker, as you well know, are constantly called upon to carefully and earnestly consider legislation in connection with many complex national and international problems. Such decisions often affect the lives and living of every citizen to an unbelievable extent. These personal, face-to-face conference, therefore, help me to serve them in a much more effective manner.

Again this year, Mr. Speaker, I will take time during the period of our official congressional recess to hold these "grassroots conferences" in the courthouses and city buildings of a number of our communities. Facilities for these conferences have been made available through the fine cooperation of many officials who agree with me on the value of this service to all our people.

This is the schedule I have arranged:

Hamilton, courthouse, September 6 and 7; 9 a. m. to 4 p. m.

Miamisburg, city building, September 8; 4 p. m. to 8 p. m.

Germantown, city building, September 9; 4 p. m. to 8 p. m.

Brookville, city building, September 10; 4 p. m. to 8 p. m.

Dayton, Federal building, September 12 and 13; 9 a. m. to 4 p. m.

Middletown, American Legion, September 14 and 15; 9 a. m. to 4 p. m.

Oxford, municipal building, September 16; 4 p. m. to 8 p. m.

Fairfield Village, town hall, September 17; 4 p. m. to 8 p. m.

It is surprising, Mr. Speaker, and highly gratifying to see how much can really be accomplished when a citizen and his Congressman can sit down face to face and talk over national and personal problems. The growing number of people each year attending these conferences is most encouraging. No special time appointments are necessary. I urge, Mr. Speaker, that any individual or group meet with me on the date and at the place most convenient to them. With the knowledge obtained from these "grassroots conferences," Mr. Speaker, I am enabled to render better legislative and personal service to all of the people of the important Third District of Ohio here in the Congress of the United States.

Address by Clarence A. Davis, Under Secretary of the Interior, Before the National Rivers and Harbors Congress, Washington, D. C., May 31, 1955

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. MILLER of Nebraska. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. Clarence A. Davis, Under Secretary of the Interior, before the National Rivers and Harbors Congress:

Mr. Chairman, I feel honored indeed to be invited to participate in the very distinguished program which you have assembled for the 42d national convention of the National Rivers and Harbors Congress.

The subject of this address, however, as printed in your program is the occasion of some little embarrassment.

The President used his address to your convention last year as the occasion for announcing the appointment of a committee to study national water resources and policies. That committee consisted of the Secretaries of the Departments of Defense, Agriculture, and Interior, with several other Departments and Agencies also participating.

I am sure it is proper for me to say to you that that committee has been meeting consistently during the last 12 months, exploring not only the numerous Federal activities relating to water resources, but also the entire problem of water.

The committee has not yet presented its report, and I am sure you will understand, therefore, that I shall not discuss it. However, I am sure it will not be amiss if I discuss with you for a few moments some of the various problems which arise in a survey of the water resources of the United States.

The thing I should like to most impress upon your minds is the fact that there is no single water problem in the United States; that there are a multitude of problems; that they are nationwide in scope; but they are not necessarily national.

I suspect that all of our minds tend to emphasize different aspects of the water problem according to our various backgrounds and our various local interests. This organization in its very nature has been primarily interested in rivers and harbors, in navigation and flood control. These are im-

portant segments of the water problem, but they are only segments.

Those of us from the West envisage the water problem as primarily one of the storage of water and its application to land—irrigation, the reclamation of arid lands, and the building of the agricultural economy of the Western States.

But that, too, is only another segment of the water problem.

In other and older parts of the country water and stream pollution are beginning to loom as major segments of the water problem.

Throughout the country there is a growing and insistent demand that more consideration be given to the preservation or enlargement of the fish and wildlife opportunities and the opportunities for public recreation.

In many places water supplies heretofore thought inexhaustible have begun to show signs of depletion, and the problem of adequate supply confronts areas and individual communities.

Let us bear in mind that we have pretty much taken water for granted in most of the United States. We have not looked upon it as a really vital matter. We have never been under the necessity of paying very much, if anything, for water, and consequently, we have neglected to find many of the facts about water, its availability, and its necessary uses.

The consumption of water in the United States has increased so tremendously even in the last 25 years, that it staggers the imagination. The industrial uses of water are almost beyond our comprehension, and as new industrial processes develop and new uses, such as air conditioning, increase and supplemental irrigation is expanded into new areas where heretofore it was not thought necessary, we are intensifying the burden that we put upon the Nation's water supply.

There is sufficient water to meet these tremendous needs, but the task of husbanding our resources will require the best efforts of us all.

Many of the things we do not know are fully as important as the things we do know. In some areas of the United States water is being withdrawn from the ground at a rate of thirty times the rate of water replenishment. In some coastal areas we have drawn down the water table to the point where the salt water of the sea has intruded under the land surface. I assume we have all noted that in the areas of both Virginia and Maryland adjacent to the District serious water problems are developing.

It is not too difficult to foresee in many regions that in the course of time water may be more valuable and more of an asset than any of the other natural resources.

I think I can foresee some future conflicts of a very basic nature.

It is obvious that domestic supplies and uses of water must be maintained in the first priority of use, and yet it is not difficult to visualize developments where providing an adequate domestic supply will cut into and curtail the industrial or agricultural use of water.

We have areas in the United States already in which the supply of water may become a limiting factor in the population growth of the area and present tremendous conflict of interest between vested uses of water and the growing demands of an expanding population.

The amounts of money involved in these problems are tremendous, and even in this day of budgets computed in billions, they are still of a magnitude worthy of careful attention. For instance, it is estimated by one of our departments that an annual expenditure of $750 million a year is necessary to merely keep abreast of the problem of stream pollution. Most of this, if not all of it, will be borne by municipalities and the industries contributing to that pollution.

It is estimated by both the public and private agencies that the capital requirements necessary to keep abreast of the hydroelectric and irrigation developments in the Pacific Northwest will require consistently some $300 million a year. I believe the last report of the Tennessee Valley Authority indicated an investment need there of some $150 million a year. And, yet, these are only small areas compared to the total national requirements.

These amounts are not only approximately double the amounts of the average appropriations to these areas during the last 10 years, but if anything like that proportion of appropriations were maintained for other sections of the country, we reach almost astronomical figures.

It seems to me we may, therefore, appropriately ask, Whose water problem? And it seems to me the necessary answer is that it is everybody's problem—Federal, State, local, and individual.

For that reason there must be the closest cooperation and coordination of the various Federal agencies entrusted with particular programs and with the States and the local interests working in this field.

The Corps of Engineers' program of work with rivers, flood control, and navigation must be coordinated with the Bureau of Reclamation's program of water storage for reclamation and irrigation, and the program of agriculture, now nationwide, with its multitude of developments of small watershed controls, including water storage, which is just in its infancy, must be coordinated with both if we are to avoid conflicts in policies and interagency rivalries, not to mention inadequate participation of States and local interests, many of which are fully able to carry a substantial proportion of the burden.

There are conflicts of interest in the very nature of the program. It is not always possible to serve the conflicting interests in water resources development. It is not possible to build a dam across a canyon and impound large amounts of water for the irrigation of land, the improvement of the economy of a region, the enhancement of the fish and wildlife resources, and the improvement of recreational facilities without at the same time altering the natural beauties of nature and the isolated, solitary aspects which many people wish to see preserved.

As our population increases and our economy develops, I suspect these conflicts will become more apparent. What will happen when increasing domestic uses of available water supplies begin to curtail agricultural development and perhaps curtail industrial uses? How will we solve the great problems that arise with relation to the diversion of water from its natural courses to other uses?

We are in the midst of serious conflicts involving profound constitutional questions of the legal rights of the Federal Government and the States and individuals with reference to the ownership and control of inland waters.

We have inherent conflicts between the water appropriation laws of the West by which the right to use water has long been considered a property right under the laws of the States where all our property rights originate and the powers of the Congress under the commerce and defense clauses.

In some areas of the country there appear to be vast reservoirs of underground water, adequate for all foreseeable uses of the overlying land, and possibly providing surpluses. In other areas limited underground waters are available, but in some of these areas we are pulling water out of the ground much faster than nature is replenishing it. This means, of course, that sooner or later such areas are not only headed toward a water storage, but perhaps such a failure of supply as will render agriculture in the areas impossible and may seriously handicap the region.

We need much more intelligent study and much more intelligent regulation by the States with reference to the use of underground waters, yet most of the States have been reluctant to invade this field, and in many cases there is not adequate information available by which it can be intelligently invaded.

A second potentiality in which Interior is engaged is a study of the problem of saline-water conversion. The Congress has made approximately $400,000 a year available for that purpose, and the method of handling has been to make research grants to colleges, scientific and industrial organizations to attract to this problem the finest minds of the country to discover, if possible, a cheap and practical process.

I am glad to report to you that a great deal of progress has been made. While the costs are still much in excess of the amounts which you and I would like to pay and are still too high for uses in a competitive industry, they are at a point where the burden of cost could be borne for strictly limited domestic uses. All of the processes involve the use of energy, however it may be obtained. The amounts required are great. But the scientists are continuing on their way. Perhaps solar energy in areas where sunshine can be depended upon, perhaps windpower and geothermal energy offer possiblities. All these sources are being explored.

If any cheap process for desalting water could be devised, the benefits can only be measured by the scope of our imagination. There are millions of acres of land in the world, readily irrigable with only slight lifts from the oceans, if that water could be made available. Fresh water would produce the food supplies, improve the living conditions and alter the economy of large regions of the world. Such a process might work almost as great a change in the economic conditions and the standards of living of a large part of the world as will the development of atomic energy.

A third fascinating possibility is that of weather control, where exploration is still in its infancy, and our scientists are most reluctant to express opinions.

This is a thumbnail sketch of some of the water problems as I see them. It is apparent that they go far beyond any possibility of exclusive Federal action. They must be met by unified effort in a spirit of cooperation between all of the Federal agencies, the States and local interests.

While they have an effect upon the national economy, the direct benefits of most of these resource development projects are primarily local. For that reason, it would seem there should be substantial contributions by the beneficiaries, regardless of the agency constructing the project, whether it be Federal or non-Federal.

Just as all must assume some share of the responsibility, so it would seem to me that all should share the costs.

There are many auspicious signs of a general awakening of States and local interests, public and private, toward assuming responsibility in the resource field. The deauthorization of some Federal projects to permit local interests to proceed and the large number of projects in the planning and financing stages by States, public agencies, municipalities, public power districts, irrigation districts, drainage districts, and private interests are evidence of a general public awareness of their responsibilities for large parts of the program.

To many of them capital is readily available, as are the skills and technicians that are necessary. The task is great enough for all. The needs are pressing. May we all be given the vision to view these problems in their nationwide aspect, free from any personal or sectional views. May we do our part and help others to do theirs that this great and necessary program can go forward.

National System of Interstate and Defense Highways Act of 1955

SPEECH
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7474) to amend and supplement the Federal Aid Road Act approved July 11, 1916 (39 Stat. 355), as amended and supplemented, to authorize appropriations for continuing the construction of highways, and for other purposes.

Mr. GEORGE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to call the attention of the House to the fact that insofar as our utility laws are concerned under which we are operating at the present time, the Federal Government does reimburse the States where the States reimburse the utility companies up to 50 percent of their moving charges. In other words, if the State pays 50 percent, the Federal Government will pay the other 50 percent on moving the utilities. Most of the States are doing that at the present time on an optional and hardship basis. There are three States in the United States that are reimbursing the utilities at the rate of 100 percent. Michigan happens to be one of those States at the present time. In my judgment I do not think this Congress should upset or change the operation of the Federal bureau as it has been doing in the past, because I am sure it is fair to the REA and the small telephone lines, because the Federal Government reimburses them, where they, the States, will share 50 percent, where it is determined it is a hardship, and the States pay the other 50 percent on moving cost. I just give that information to the House.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. GEORGE. I yield to the gentleman from Iowa.

Mr. JENSEN. The gentleman is now referring to the Fallon bill?

Mr. GEORGE. I am referring to the law as it exists at the present time. The Fallon bill goes farther than that and says that they may, which infers, where the State reimburses none at all, they can get 50 percent Federal money if they apply and the State government O. K.'s it.

Mr. JENSEN. Let me ask the gentleman this question. Here we have a small town, a municipality, and they have sewers, water, telephone, and electric power lines, and we run a highway through that town and they have to move all of those utilities. Now, many of those small towns own their own utilities. Can the gentleman tell me how those small towns are going to pay this bill?

Mr. GEORGE. In our State that is part of the construction cost. And if they are on the streets and outside of the sidewalk line, as nearly all of them are, it is part of the construction cost and there is total reimbursement.

Mr. JENSEN. Reimbursement by whom?

Mr. GEORGE. By the State and Federal governments. If it is 50–50 money, they divide the cost 50–50. But if we pass this bill now with a provision for 90 percent Federal money and 10 percent State money, we leave the existing law alone. If we change it to 50 percent Federal money and say that the State "may," that means that the State can pay 50 percent Federal money but they do not have to put up any money of their own at all.

So what is going on at the present time is that 50 percent Federal money and 50 percent State money goes into the cost of moving utilities where the State determines that they owe an obligation so far as construction of the highway is concerned.

Mr. JENSEN. Does the gentleman say that that law is effective in every State except three?

Mr. GEORGE. Except three. And in those States they follow the policy of reimbursing 100 percent, regardless of where the utility is or what size it is.

Mr. JENSEN. I thank the gentleman.

A Fitting Tribute to a War Hero

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to proudly state that one of the gallant war heroes who resided in the city of Norwalk, in my congressional district of Connecticut, a posthumous winner of the Congressional Medal of Honor, will be fittingly honored next month when the 10th Infantry Division will dedicate an athletic field in Fort Riley, Kans., to his memory.

The late Pfc. John D. Magrath will go down in the annals of American history as one who made the supreme sacrifice for freedom's cause. He met death in the successful struggle against totalitarianism so that those who lived would live in freedom.

It is a fine thing the 10th Infantry Division has chosen to do. It is a fitting tribute to the memory of an exemplary young man to whom we are all indebted.

The following news story from the Norwalk Hour of July 22, tells this wonderful story in detail. Also included is the text of the Medal of Honor citation posthumously awarded to Private First Class Magrath:

The 10th Infantry Division will dedicate an athletic field at Fort Riley, Kans., the week of August 15 to the memory of one of its most intrepid members, the late Pfc. John D. Magrath of Norwalk, posthumous winner of the Congressional Medal of Honor in World War II for bravery against the Germans fighting in Italy.

Garry C. Magrath, of 17 Wallace Avenue, the hero's father, said today he would accept an invitation of Maj. Gen. George E. Martin, commanding general of the 10th Infantry Division, and Col. Milburn N. Huston, commanding officer of the 85th Infantry Regiment, expected to be present at the ceremonies, to be held on August 17. He will be accompanied by Mrs. Magrath.

TO FLY OUT

Mr. and Mrs. Magrath will fly to Kansas on either a United States Air Force or commercial plane. The tentative schedule calls for the local couple to leave on Monday, August 15. The ceremonies will take place August 17 and Mr. and Mrs. Magrath will return the following day.

ANNOUNCEMENT SURPRISE

The announcement of the tribute planned for Private, first class Magrath, son of Mr. Magrath and the late Mrs. Anna Magrath, came as a surprise this morning. The information was contained in a letter to the editor of the Norwalk Hour from Maj. Donald E. Zieg, public information office at Fort Riley, who requested the local newspaper to represent the Army in acquainting the Magraths with the plans.

DIED IN ITALY

Private, first class Magrath paid the supreme sacrifice on a mountainside in Italy in 1945 when he killed many Germans by seizing one of the enemy's machineguns and alerted his company comrades to the danger of ambush set up by the defending forces. Private, first class Magrath then went on to collect information for his unit and while blazing away at the enemy was killed as the Germans increased their mortar and artillery fire.

TO ISSUE INVITATION

The Fifth Army Headquarters will issue the orders containing the invitation to Mr. and Mrs. Magrath.

COMPLETE FACILITIES

The ceremonies are to include the unveiling of a bronze memorial on the site of the athletic installation at Camp Funston, which is the 10th Division area of Fort Riley. The area consists of an outdoor swimming pool, lighted softball, baseball, and football fields, horseshoe courts, and a fieldhouse containing a gymnasium, basketball courts, boxing ring, bowling alleys, etc.

OIL PORTRAIT PLANNED

During the exercises an oil portrait of Pfc Magrath will be presented to the commanding officer of Company G, 85th Infantry, the unit to which Magrath belonged at the time he won the medal.

On a mountainside in Italy, Pfc John D. Magrath won his Congressional Medal of Honor, the Nation's highest wartime tribute, while giving up his life to save a company of fellow infantrymen.

Serving with Company G of the 85th Infantry Regiment, 10th Mountain Division, Pfc Magrath on April 14, 1945, penetrated enemy territory, armed only with a rifle, and shot it out with a machinegun nest, killing the German soldiers defending the position. Taking the machinegun into his own arms, he wiped out three additional machinegun batteries, and warned his company of the German ambush ahead.

He volunteered a second time to scout enemy positions and despite heavy enemy gunfire, infiltrated deep into enemy territory, obtaining valuable information for his outfit, until he was killed during a mortar barrage.

Norwalk paid official tribute to its outstanding World War II hero when Gen. James J. Van Fleet, then deputy commander of the First Army, on September 9, 1946, dedicated a flagpole at memorial services in Veterans' Memorial Park.

This took place on the official welcome home ceremonies to Norwalk World War II veterans, a block party at Veterans' Memorial Park.

The body of Pfc Magrath arrived home on November 12, 1948, from an Italian cemetery. It was met at the railroad station

by veterans' leaders and escorted to the Raymond Funeral Home.

Religious services were held at Christ Episcopal Church and the remains interred in Riverside Cemetery.

Pfc Magrath was an Eagle Boy Scout and assistant scoutmaster. He had earned 21 merit badges and was active in Troop 16 which met at Christ Episcopal Church.

MEDAL OF HONOR CITATION (POSTHUMOUS)

Pfc. John D. Magrath, service No. 31326858, radio operator, company G, 85th Infantry, on April 14, 1945, displayed conspicuous gallantry and intrepidity above and beyond the call of duty when his company was pinned down by heavy artillery, mortar, and small-arms fire, near Castel d'Aiano, Italy. Volunteering to act as a scout, armed with only a rifle, he charged headlong into withering fire, killing 2 Germans and wounding 3 in order to capture a machinegun. Carrying this enemy weapon across an open field through heavy fire, he neutralized 2 more machinegun nests; he then circled behind 4 other Germans, killing them with a burst as they were firing on his company. Spotting another dangerous enemy position to his right, he kneeled with the machinegun in his arms and exchanged fire with the Germans until he had killed 2 and wounded 3. The enemy now poured increased mortar and artillery fire on the company's newly won position. Private Magrath fearlessly volunteered again to brave the shelling in order to collect a report of casualties. Heroically carrying out this task, he made the supreme sacrifice—a climax to the valor and courage that are in keeping with highest traditions of the military service.

The Dr. Jonas E. Salk Gold Medal

SPEECH
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. DAVIDSON. Mr. Speaker, I am deeply moved and gratified by the unanimous action of the House in approving the bill which I introduced to present a gold medal to Dr. Jonas E. Salk. In authorizing the coining of this special medal we recognize the accomplishment which he has made. This young doctor has opened the door to the conquest of infantile paralysis. As a result of his great work, made possible by the contributions of all Americans to the National Foundation for Infantile Paralysis March of Dimes campaigns, many lives will be saved; many children, our most precious national resource, will be spared untold agony. The parents of America and the world will no longer live in fear of this dread crippling disease.

During the last 16 years the National Foundation for Infantile Paralysis has expended a total of $25,541,662.14 for direct research for the development of a poliomyelitis vaccine. The annual March of Dimes campaign, conducted by the national foundation, received the support of the entire Nation. The money so generously contributed by the people made it possible for scientists to intensively study the problem. Dr. Jonas E. Salk first entered the fight against polio in 1942 when he joined the staff of the University of Michigan as the recipient of a National Foundation for Infantile Paralysis fellowship. In 1951 he began his direct research at the virus research laboratories of the University of Pittsburgh on the vaccine now being used.

The Salk vaccine is the result of a painstaking and intensive research program in which live polio virus is treated by chemicals so that a delicate balance is struck in which the ability of the virus to cause disease is eliminated by meticulously calculated chemical additions but still leaving the virus with sufficient potency to stimulate antibody production. Dr. Salk, as the name of the vaccine indicates, was able to develop this vaccine. In his tests at Pittsburgh he proved that the vaccine which he produced was able to raise the antibody level. In the nationwide field trial held by the National Foundation last year Dr. Salk's vaccine was proved highly effective in preventing paralysis. Over 1,830,000 children throughout the United States took part in this massive trial. During the last 2 years Dr. Salk wrote and pulished over 12 medical papers concerning immunization against poliomyelitis.

Dr Salk is a modest man; his parents, too, have with pardonable parental pride, shown great humility. I do not think I exaggerate, however, when I say that the people of the entire Nation and of New York, particularly those who live in my district, Manhattan's west side, take great pride, as I do, in Dr. Salk's achievement. We are proud of him and of the training which he received from his parents and the New York City school system which helped mold the great scientist we know today.

I think it fitting that we express our thanks and appreciation to Dr. Salk. This modest recognition of his work and that of his fellow scientists is the very least that a grateful Nation can do.

Reform of Immigration and Citizenship Laws

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27, 1955

Mr. LEHMAN. Mr. President, on July 2, the Boston Pilot, the organ of the Boston diocese of the Catholic Church, published the text of a moving speech delivered by his excellency, Archbishop Cushing, of the 50th anniversary of the death of Bishop John Baptist Scalabrini, founder of the Pious Society of the Missionaries of St. Charles.

This speech has been called to my attention because of the references Archbishop Cushing made to the subject of immigration, which was, in fact, one of the themes of the life of Bishop Scalabrini.

Archbishop Cushing, an outstanding humanitarian and long an advocate of essential reforms in our immigration and citizenship laws, makes clear his view that our immigration laws need to be thoroughly revised and made consistent with humanitarian principles, which Archbishop Cushing calls the "Law of God."

I ask unanimous consent that the highlights of Archbishop Cushing's speech, as reported by the Boston Pilot, together with the text of the speech, be printed in the appendix of the RECORD.

There being no objection, the highlights and address were ordered to be printed in the RECORD, as follows:

ARCHBISHOP CALLS FOR IMMIGRATION REVIEW

Archbishop Cushing, speaking at a dinner on the 50th anniversary of the death of a noted Italian missionary prelate, urged a reevaluation of the status of existing immigration laws and quotas. He spoke at a gathering in the Hotel Somerset on Thursday evening, June 30, on the anniversary of the death of Bishop John Baptist Scalabrini, founder of the Missionaries of St. Charles.

The question must be posed "whether we make sufficiently possible that emigration, from other lands to our own which would seem to be indicated by the law of God," the archbishop said.

The archbishop also scored the trend of thinking which has made the United States a home for "the well born." How shall we be able to justify * * * the self-righteousness that has led us to make of America an exclusive preserve for the well born?"

BELOVED ITALIAN PRELATE-FOUNDER HAILED AS FRIEND OF IMMIGRANTS

(EDITORS NOTE.—The following is the complete text of an address by Archbishop Cushing on the 50th anniversary of the death of Bishop John Baptist Scalabrini, founder of the Pious Society of the Missionaries of St. Charles.)

The commemoration of the 50th anniversary of the death of John Baptist Scalabrini, founder of the Pious Society of St. Charles, is most timely. It comes at a moment in history that confirms the religious, social, and political ideals of this outstanding churchman.

As we read the bishop's life and study his achievements, we come in contact with a prelate of burning zeal who made the influence of his faith felt in every field of human endeavor. Everywhere and always he was a courageous and genial pioneer.

FAR AHEAD

His life story began at Fino Mornasco, Como, where he was born on July 8, 1839. It ended on June 1, 1905, at Piacenza. It is the story of a never-ending outburst of new initiatives, studied, prepared, and executed in perfect harmony against great opposition and any doubts which might arise among individuals or among groups more or less conservative or reactionary.

Even as a young student he showed his inveterate, independent personality. During these years he lifted up his voice openly in praise of religion and gave of his time to the teaching of the Catechism, while others boasted of their anticlericalism and gloried in calling themselves free-thinkers. He went further and decided to join the ranks of the priesthood, which was not a very popular vocation in his day.

As parish priest, as rector of a seminary and bishop, he proved himself a servant of God with great vision and courage who brought forth a constructive program against the enemies of the church and in behalf of

the education and sanctity of the people. He was far ahead of his time. His works were many, heroic, amazing. No field of activity was neglected by him and no work was too small or too great for his extraordinary talents.

He conducted catechism classes and reformed this all-important work of religious instruction; he write textbooks for the education of the youth; he trained teachers, edited a magazine; he organized national catechetical congresses, and he encouraged men of strong faith and great integrity to enter the political arena.

IMMIGRANT AID

The most outstanding among the social and religious accomplishments of this dynamic bishop was his work in behalf of the Italian immigrants.

With a truly apostolic mind and heart he soon saw that his mission was not only to the people of his diocese but to those who were leaving his diocese and every diocese in Italy to cross the seas for the betterment of their economic condition. He perhaps more than any other figure must stand as the symbol of the concern and solicitude of the church in the mother country for her children scattered throughout the world.

Today the missionaries of Bishop Scalabrini work among the Italians in North and South America, Australia, and in almost all the countries of western Europe. In their seminaries of Italy, the United States and Brazil, more than 1,000 students are now preparing themselves for the religious and social assistance of tomorrow's immigrants.

Added to all of these efforts, Bishop Scalabrini, more than any other person, was the man who was finally successful in persuading St. Frances Cabrini to go to America, there to give courage to the Italian immigrants who had been neglected for many years. It was Bishop Scalabrini who begged Mother Cabrini to rush to the assistance of his missionaries working in New York; it was he who asked for and obtained Archbishop Corrigan's invitation to her to go to New York. Finally, it was he who begged Leo XIII to order her to go west and not east as she had wished.

But this saintly bishop was not content to send his priests and his sisters out among the immigrants. He himself followed them to America. In 1901 he sailed for the United States, where he visited all of the Italian colonies and where he was welcomed in triumph. He discussed the immigration problem with local bishops and also with the President of the United States, Theodore Roosevelt, who received him in private conference at the White House. In 1904 he again set out from Italy. This time he went to Brazil and to the Argentine. The hardships of this last trip, where he traveled for miles on horseback shortened his life.

JOURNEY'S END

On his return to Italy, he barely had the time to prepare a lengthy report of his visits to the Americas for St. Pius X who had requested it.

He had come to the end of his laborious journey. On June 1, 1905, Ascension Day, God called this servant home. The servant of God could well say that he had personally fulfilled the mandate he had given his missionaries, "wherever there be an Italian immigrant, take to him the comfort of the faith and the smile of his native land."

I have often spoken of the spiritual empire which under God's providence was carved out by the emigrants of Irish descent in the English-speaking world. With the great barrier of language as a hurdle, the Italians have carved out for themselves a similar empire of the spirit in North and South America and in distant Australia. It is well that we should pause to pay special tribute to this phase of the life of Bishop Scalabrini and to the Italian emigrants today.

The beginning years of this century saw what had been previously a relatively small trickle turn into the full tide of Italian emigration. Where before there had been thousands, there were now tens and hundreds of thousands who each year left the Italian homeland to make for themselves new careers in the lands of promise. It was at this time in 1905, a half-century ago, when the work of Bishop Scalabrini was finding its complete justification and its plans were beginning to find their ripe fruition, that God in His all-wise Providence brought him back home for eternal rest. We meet today to commemorate the 50th anniversary of his passing not in terms of the grief that must have overtaken the members of his religious family and indeed the Church universal 50 years ago. We meet rather in thanksgiving to Almighty God that Bishop Scalabrini's works have followed him so that he lives today with the souls of a myriad of Italian immigrants, who fare from their native Italy were nonetheless aided to preserve and strengthen their faith by the work of the Pious Society of St. Charles, the priestly sons of Bishop Scalabrini.

MOST PRECIOUS POSSESSION

Almost from the beginning of what we know as the history of the West, Italy has sent to the far corners of the world her most precious possession, her children. The roads which in their vast network interlaced all the lands about the Mediterranean and united them in that unity which made it possible for the Romans to think of the Mediterranean as their sea, bore upon them not alone the legionaries of Caesar's conquests. They were the means of travel, too, for hundreds of thousands of Roman citizens who took up their life and work in France, Portugal, Spain and Britain and so many other places which today have as their common bond the fact that they were members of the Roman empire and heard together the gospel preached to them by the See of Rome.

In every age Italy has parted with her children because the azure sky and the turquoise blue of the Mediterranean and the stark grandeur of the Apennines have not sufficed to make up her lack of material resources. As they left Italy, they brought to each new land from the land of their origins some precious gift. In more ancient times it was the Roman sense of the majesty of law, which was the ordered understanding of the duties of man to himself and society codified by the great Roman jurists. In later days it was, together with the law, the message and faith of Christ brought to Rome by St. Peter and St. Paul and professed by countless witnesses whose names are written in the book of life.

In this land of ours before the First World War the magnificent words of Emma Lazarus at the base of the Statue of Liberty were taken in their fullest meaning by the people of this country and we could truly say:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free
* * * * *
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door."

In these days Italy sent us in abundance her children who have enriched the life of this Nation beyond measure. They came in tremendous numbers to a land which gave them at best a grudging welcome. They came, moreover, with their thrift, their industry, and their sense of destiny which has always inspired Italian colonization throughout the centuries. In particular, they were prepared to see themselves grow rich and successful and esteemed in their children rather than in themselves. For their children they were prepared to make every sacrifice, and the warm sense of family that the Italian people brought to us constitutes a debt that we shall not soon repay.

In this emigration and with it and in planning far ahead of it stood the priests of the Pious Society of St. Charles, called affectionately from the name of their founder, the Scalabrini Fathers. To no group do the Italo-Americans, today so successful, today so completely accepted by their fellow citizens, owe more than to this dedicated band whose post is always in the forefront of emigration from Italy. They have kept the Italian people close to Almighty God and His altar, and they have kept them close to the sweet patronage of the dear Mother of God, who has been to them in time of tribulation such a source of strength and help.

EMIGRATION CRISIS

It is well for us as we commemorate this anniversary to ask ourselves whether we still make sufficiently possible that emigration from other lands to our own which would seem to be indicated by the law of God. There is a fruitful cross-pollination of culture which takes place whenever the strain of a vigorous people is added to the life of America.

I think that all too little noticed was a pastoral letter issued 2 years ago by the bishops of Australia in which they set forth that the earth had been made by God for all His children, and that if Australia were not prepared to bring in the numbers that could profit by the vacant land available, it should be thrown open without any discrimination to settlement by the teeming masses of Asia, the land-poor, the hungry and dispossessed of mankind.

This may well have seemed a radical note to strike. Yet it was the only thing that could be said that would be in keeping with the Christian Gospel. I was happy to note that shortly afterward the non-Catholic Christian leaders of Australia identified themselves with the stand of the Catholic bishops. They, too, agreed that since the earth is the Lord's and the fullness thereof, and He has made it for man's use, man cannot in any given century, for whatever reason, narrow or restrict the use of the earth's abundance to a selected few.

Even if my voice be a lone one, I feel that I must ask how in Christian conscience we shall be able to justify before the Lord of heaven and earth the self-righteousness that has led us to make of American an exclusive preserve for those whom we esteem to be the well-born. This has been called, and with more than a little reason, a people's century. The accusation of the uprooted peoples of the world will forever condemn us, if we are not prepared to extend once more what was the glory of America's past, the torch of liberty enlightening the world and the sincere handclasp of welcome to the stranger at our gates.

SCALABRINI FATHERS

You who are familiar with the work of the Scalabrini Fathers know how quickly and easily Italian people have become assimilated to the main stream of American life, while at the same time preserving all the best features of their specifically Italian culture. The same is true of all the peoples whose cultural diversity could be the greatest asset of the land we love. Bishop Scalabrini was not given by Almighty God length of years to see the fulfillment of his hopes in the establishment of the Pious Society of St. Charles and the Missionary Sisters of St. Charles, but we have seen it and rejoiced in it. Now, if we are to follow in his tradition, we must dream our dreams of what can be done to make his dreams come to greater utilization.

Today in many parts of the world the Scalabrini Fathers are carrying on the work foreseen for them by their great founder. In Latin America there is hardly a nation which has not opened the doors of its hospitality to Italian immigrants and by so do-

ing has invited the presence and the labors of these devoted men of God. In human affairs we often hear the expression that any great institution is only the lengthened shadow of one great man. This we cannot say about the work of God because in all of those who do His work He seeks only instruments for the fulfillment of His Providence.

May we not say, however, that the times and the circumstances called out for that vision which Bishop Scalabrini possessed, in which he foresaw the needs of immigrants, the most important of these being the preservation of their spiritual inheritance. "Where there is no vision the people perish." The preservation of the faith of those who came to the New World from the Old is perhaps the most important labor undertaken in this century.

There is so much of a natural tendency to concentrate on material success, that there must be voices which speak clearly and surely of the things of eternity, the values which are not measured by any yardstick of time. The greatest force in the world is an idea, and the greatest idea that the world has known is the word of God that made man for our salvation. To keep this idea always to the forefront, with soft insistence, in season and out of season, in all patience and doctrine, has been the task of apostolic souls since the day of Pentecost. It is a work that will always be needed so long as the world finds in Christ and His cross contradiction and not salvation.

BROTHERS IN CHRIST

How we could wish that there were a hundred apostles like Bishop Scalabrini. How many have come to this land from Catholic Europe and fallen into a laxness and indifference which might have been avoided if someone were at hand to say the word of truth and light. They have need to know, those who come to our shores, that there is one God here as there and that His law is universal. It is not changed or mitigated by prosperity. It does not shift with the worldly success of those who have once known God and His truth. There is but one God of all, rich to all those who call upon Him.

Those whom we welcome to America today have been tried in the crucible of suffering and persecution and want. They are the strangers to whom now God wishes us to give the best of welcomes and a share in our hearts' love. Their children and ours will walk together as those born free, but they will walk more surely and unitedly as they have the remembrance that, when their parents of this generation met, they met as friends and brothers in Christ.

It is not easy for a nation or a people to bid farewell to so many of the best of its children as perforce Italy has done and for the foreseeable future will have to do. If the farewell good wishes that they receive and the spiritual help that is theirs from the homeland is matched by our generous welcome and an invitation to union with us in prayer, we shall have built a bridge across the ocean which will be forever the sign of our unity in Christ by whom all walls of division have been broken down.

A Six-Point Plan for the Older Worker

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27, 1955

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Under Secretary of Labor Arthur Larson at the eighth annual conference on aging, University of Michigan, Michigan Union, at Ann Arbor, Mich., on June 28, 1955.

I am informed by the Public Printer that the speech is estimated to make approximately 2⅓ pages of the CONGRESSIONAL RECORD, at a cost of $187.

I ask unanimous consent that, irrespective of the cost, the speech may be inserted in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

A SIX-POINT PLAN FOR THE OLDER WORKER

(Address of Under Secretary of Labor Arthur Larson)

Three days from now we greet the opening of the new fiscal year. It will bring us in the Labor Department something we have never had before: a special departmental appropriation devoted to the older worker—enough to provide about 30 full-time jobs.

When I saw the theme of this conference, with its unmistakable deeds-not-words tone, I thought that this might be a good time to announce our designs for the year ahead, which are made possible by the understanding and insight of men like Senator POTTER and others on our Appropriations Committee who approved this request.

We have a six-point plan which we mean to carry through, and which we think will make a real dent in the stubborn problem of age barriers to employment.

I would like to sketch the outlines of this six-point plan for you briefly here tonight.

But first—as the television commercials always begin—but first, a word about how we analyze the problem itself for purposes of contriving our line of action. I shall simplify—indeed, oversimplify—the analysis for this introduction, in order to maintain a reputation for conciseness which I at least have in the mind of my son. He came around the other evening while I was working to ask me a question. I said, "Why don't you ask your mother?" He replied, "Oh, I don't want to know that much about it."

First, we divide the matter of aging into its two big parts:

1. Retirement, and the general field of geriatrics; these are the province principally of the Department of Health, Education, and Welfare;

2. Employment of older workers, which is principally the concern of the Department of Labor.

The definition of "older" is necessarily different in the two areas. In the first area, it refers to people old enough to have to retire or to want to retire. In the second area, it refers to any point at which age is an obstacle to getting a job. This may be as young as 45 for a man, or 35 for a woman.

As to this distinction, we have a simple policy. We do not attempt to tell any person whether he should work or retire; we want to leave that to his free choice. Ideally, matters should be so arranged that those who want to retire can have the necessary security to permit retirement, while those who want to work can have the necessary job chances to permit employment. No one—least of all the General Government—is wise enough to make that choice for another person.

Second, having narrowed our subject to that of employment of older workers, we in the Department of Labor divide the occasion for action into two main heads:

1. From the individual person's point of view, we believe that our American traditions dictate that every worker should have an opportunity to do work commensurate with his abilities and potentialities.

2. From the economy's point of view, we believe that the Nation needs the skills and experience of all its workers, including the older workers, more than ever before, both to support the lively growth and change of American business enterprise, and to supply the strength which is expected of us in helping to keep the world free in time of international strain or emergency.

Here again we have a clean-cut policy, which is much broader than the older worker question. We believe that every person should have employment opportunities, and that the country needs the services and talents of every person, without senseless discriminations based on age, sex, race, or irrelevant physical handicaps. What we say about impediments to employment or training or advancement based on age is the exact counterpart of what we say about the same impediments encountered in some circumstances by women, or by minority groups, or by the physically handicapped. We hold, first, that they should be hired, trained, and promoted solely according to ability; and, second, that unless this course is followed the Nation will be gravely enervated at a time when the need for skills is crucial.

To recognize the duality of our motivation is to spare us the error of supposing that what we are doing is big heartedly lifting a social burden for reasons of compassion. Such an approach is both patronizing and unsound, and it certainly will not produce results.

The only promising approach is to recognize that it is good self-interested business for the employer to hire the older worker and good self-interested statesmanship for the Nation to grasp this valuable economic resource.

Having got this far, the matter is narrowed to two more questions: Are these older workers indeed willing and able to work, and are there suitable jobs available?

Willing? Clearly yes. Only about 5 percent retire voluntarily while in good health. We should be happy that this is so. It means much for our productivity. It means more personal satisfaction to the person. And it means a lightening of the social cost of pensions, which otherwise might rise by billions of dollars.

Able? Yes. Such knowledge as we have gained from the fragmentary studies that are available teaches us that arbitrary age barriers are no longer justified by experience or by physiological fact.

Are there suitable jobs at hand? Yes. We assume, of course, a healthy, vibrant, ever-growing business life in this country. And we must be alive to the fact that a change is going on in the nature of the demands made by current employment. Technological progress, including automation through use of electronic controls and the like, is doing two things at once: It is removing the features of employment, such as the requirement of muscular strength, which formerly put age at a disadvantage; and it is creating demands which put a premium upon those qualities associated with maturity—dependability, responsibility, judgment, breadth of experience.

Perhaps you saw the delightful cartoon in the last issue of the Saturday Review of Literature. It depicts a large modern plant, bearing the sign: "Engine-Block Division, Automation Plant." Finished engine blocks are pouring out the sides of the plant, breaking down the walls, and piling up into a mountainous heap outside. An agitated employee, driving up with a friend, exclaims: "Good God, I forgot to turn the factory off over the weekend."

(A mature worker would of course had the dependability to remember to turn off the plant.)

While the nature of jobs has been changing, the nature of the older worker has also been changing. He is physically a younger man than he used to be at the same age.

Perhaps you recall Victor Borge's account of an interview with his father. His father said, "How old are you, son?" "Nine." "Shame on you," said the father, "at your age I was 12."

This is precisely what has been happening from one generation to another lately. Dr. Joseph H. Sheldon, president of the International Association of Gerontology, said at a meeting in Chicago last month, "This century's medical and social advances mean that old age begins at 75 rather than 60."

A parallel change has been going on in the educational level of the people involved. Only 15 years ago, more than three-fourths of men in this country aged 55 to 64 had not gone beyond the eighth grade in school; less than one-fourth had had as much as 1 year of high school. Among the men who will form this 55-to-64 group 15 years from now, more than half have had at least 1 year of high school, and 1 to 6 have had some college. This is a development of profound importance at a time when industry is more and more demanding general educational background to meet the needs for flexibility and adaptability that go with current technological change.

All this drives us to a conclusion: The obstacles to employment of older workers are not inherent in either the nature of the work or the nature of the workers; the obstacles are man-made, and for the most part are based on obsolete misconception.

Now for our 6-point plan, which flows naturally from this analysis of the job to be done.

I. THE WORK QUALITIES OF OLDER WORKERS

The first thing we are going to do with our new appropriation is to make an analysis of the performance, productivity, absenteeism, accident record, dependability, attitudes, and faithfulness of older workers.

Businessmen are not going to hire older workers for sentimental reasons. They want to be shown that it is good business to hire the older worker. Evidently the various studies that have been made up till now have not sufficed to convince them.

Of course, we do not want to prejudge the results of this investigation. But you are all familiar, I am sure, with what some of the surveys have shown.

The University of Illinois studied over 3,000 workers over 60 in retailing, office, managerial, and manufacturing industries. Their supervisors rated them as follows:

Overall performance:	*Percent*
Excellent	14
Very good	28
Good	38
Fair	18
Poor	2

By comparison with younger workers, they were rated as follows on the various components of performance:

	Percent
Absenteeism:	
Less	66
Same	25
More	9
Dependability:	
More	51
Same	43
Less	6
Judgment:	
Better	33
Same	57
Poorer	10
Work quality:	
Better	34
Same	59
Poorer	7
Work volume:	
Higher	24
Same	56
Lower	20
Getting along with others:	
Better	32
Same	59
Less well	9

These results are generally confirmed by studies made by the National Association of Manufacturers, by the Bureau of Employment Security, by Jeanette E. Stanton in 1951 in a large midwestern department store, by the Industrial Conference Board, by the W. E. Upjohn Institute for Community Research which did a survey in Cleveland, by the Bureau of Labor Statistics in its analysis of absenteeism and injury experience in 1948, by the Federated Employment Service affiliated with the Federation of Jewish Philanthropies, by the Cleveland Welfare Federation in its 1952 study of women clerical workers, and by various others.

What we are hoping is that we will be able to make a study of such scope and authority that, added to existing studies, it will carry real conviction. Of course, we cannot do a definitive nationwide job; and we are aware of the difficulties of trying to measure some of the things involved. Some are plainly intangible, like dependability, and must be a matter of opinion and judgment. Others, such as productivity, are almost impossible to segregate and measure person by person. But, by building upon the experience of others, and by mustering our best technical and analytical talent, we will try to produce a result which will go a long way toward settling the No. 1 question underlying this whole problem: Is the older worker a good worker?

II. ARE PENSION COSTS AN OBSTACLE?

When employers are polled on why they hesitate to hire older workers, the commonest reason is that older workers are not as good in some of the respects we have just been talking about.

Let us assume that we have got a satisfactory answer to this argument; there still remains the second and most commonly ascribed reason: The higher pension and insurance costs for older workers.

If the premium paid on each worker had to carry that worker's own pension cost, the relation between premiums under a plan would run something this:

Entry age:	*Annual premium*
30	$326
45	668
55	1,486

The real cost, then, for a 45-year-old entrant is double that of a 30-year-old, and for a 55-year-old it is 4 times as much.

Of course, I do not mean to assert that insurance companies directly assess employers at these rates on a man-for-man basis under a conventional plan; but when this much disparity in real cost exists, it would not be surprising if one way or another it had the effect of discouraging the hiring of workers in the higher age brackets.

I have listened to arguments for hours and hours on whether pension costs are a real deterrent, or whether they are a mere excuse. Question No. 1 in our investigation will be: How much of a roadblock is this really? Question No. 2 will be: If it is a roadblock, how can it be got round? Some of the things that have been mentioned include minimum service eligibility requirements, waivers of pension rights, early vesting and pooling of funds, and special fund provisions analogous to second-injury provisions in workmen's compensation.

Here, too, I hope that we will once and for all get to the bottom of a question which has plagued us for years, and which is being aggravated by the continued spread of private pension plans. It is a matter that must be disposed of; for nothing could be more paradoxically poignant than the prospect of a beneficent movement, designed to help the old, backfiring and actually hurting them by blocking their hiring opportunities.

III. COLLECTIVE-BARGAINING PROVISIONS

The next two parts of our enterprise consist of learning as much as we can from unions and employers about the success of their efforts to deal with age difficulties in employment.

First, as to unions: we are going to do two things. We will start by analyzing the provisions of about 5,000 collectively bargained contracts to see what measures have been adopted dealing with the subject of age in employment. We hope to keep this analysis up to date every year.

Then we will select a sample of companies and trade unions operating under agreements having interesting age provisions, and find out by actual visits how these provisions are working in day-to-day operations.

We know that some very direct measures have been tried. Among the best-known are the contract clauses adopted by some electrical workers, bricklayers, plasterers, plumbers, granite cutters, and carpenters in different localities, prohibiting age discrimination in various ways. For example, 1 bricklayers' contract requires that "the employer, when engaging bricklayers for work, shall employ 1 man of 55 years or over out of every 5 bricklayers hired." In electrical workers' contracts you can find ratios as high as 1 to every 3 journeymen and as low as 1 to every 8 journeymen. The age for which the ratio must be observed may be as low as 40 to 50 years, and as high as 55 or even 60 years.

There are many other kinds of clauses affecting the age question; these are merely the most straightforward. They are of particular interest because every so often someone comes forward with a suggestion for legislation which would apply this ratio principle to all employment by force of law. This may seem like a highly remote possibility; but if the problem continues to grow in acuteness, you may expect to hear it mentioned with increasing frequency, and the lessons learned from these contractual provisions will assume a central importance in the discussion.

IV. EMPLOYMENT PROBLEMS AND PRACTICES

Here we intend to look systematically into the experience of employers in a representative sample of cities and industries. This will give us the facts, which we shall probably publish, on what management really thinks and does about the hiring, retention, and laying off of older workers, and the real reasons for these practices. But, most important of all, we shall be able to compile a casebook of good hiring and utilization practices. Many employers have expended a lot of thought and ingenuity on the older worker question, and have devised a variety of successful answers. If these tried and tested plans can be brought to the attention of employers everywhere, it is quite possible that among the assorted plans there can be found one to match the needs of most of the employers who are still searching for the right solution for their particular combination of facts. We mean to go into hiring practices, training practices, job modification practices, transfer practices, reserved job practices, and so on. The materials will be distributed to employers, unions, trade associations, employment security agencies, and anyone else who can use them either directly or for general employer education.

V. INDIVIDUALIZED PLACEMENT SERVICES FOR OLDER WORKERS

This involves a stepping-up of the pace of an activity already underway.

We learned, in a study of 3,688 job applicants over 45 in New York City, that special placement services could more than double the number of workers placed in jobs. There was a control group who received conventional treatment, and an experimental group who had individual counseling and more intensive job solicitation. We have since been working constantly on improving this kind of tailor-made service, and lately have been analyzing data received from employment service offices on the characteristics of older job applicants and the services provided to

them. We also have a particularly detailed pilot study in progress in the Minneapolis-St. Paul area, following the entire hiring problem of older workers in relation to the employment service in all its stages.

For the future, we hope to improve and extend individualized placement services through the facilities of affiliated State employment services. To aid in this process, we would like to work up a job guide for older workers, addressed to older workers themselves, as well as counselors, placement interviewers, and industrial personnel workers. It would point up the occupations, industries, and kinds of work in which opportunities are most promising for older workers. It would go into advantages and disadvantages of the work, the training or retraining possibilities, and the prospects for using skills and abilities acquired in one field of work in other fields.

A much-needed guide, which we hope to provide, is an analysis of which jobs requiring less physical exertion are the most logical successors to earlier skills which were attended by heavy exertion. For example, when a telephone lineman is too old to scamper up and down poles, it would be very handy to have a guide to show the other occupations into which his skills can lead him with perhaps a little retraining, and with a minimum of downgrading.

At the same time, our Occupational Outlook handbook can be revised to give more special attention to guidance information for older people.

VI. MATURE WOMEN: MATCHING SKILLS AND SHORTAGES

To me, one of the most exciting and promising lines of endeavor is the set of projects, now getting underway, to tap the vast resources of mature women to meet some of the most pressing job shortages facing us today.

We have heard for years that there is a grave shortage of nurses in this country, and an equally acute shortage of teachers. Less well known is the fact that severe local shortages of secretarial service are appearing in different parts of the country, including Washington, D. C.

At the same time, I think each one of us could probably find among our immediate relatives and friends at least several women who were trained as professional nurses or teachers or secretaries, who got married, had a family, and lost touch with the labor market, and who now would like nothing more than to get back into the game again. I am not now talking about tearing married women away from their children at a time when they are needed at home. I am thinkthink of women whose children have grown to the point where the mother's constant presence at home is no longer necessary.

If you know such people—and I am sure you do—I think you will agree that most of them would give a lot to resume the status and prestige and personal satisfaction that go with doing a job well. At the same time, think what a splendid solution this offers for some of our most pressing needs. Far from being at a disadvantage, I should think it obvious that the woman who has raised a family has a great advantage—in knowledge of children, in acquaintanceship with human suffering, in the love for and understanding of fellow beings which a full life brings, and in the wisdom and judgment which come only with maturity.

The matching up of this demand and this supply is so brilliantly obvious that one wonders why it was not done long ago. At any rate, the Department of Labor's Women's Bureau is now vigorously at work in bringing this to reality. With the Office of Education of the Department of Health, Education, and Welfare, a Committee of New Teachers for the Nation's Classrooms has been formed, representing an impressive roster of educational and other associations. The emphasis is on community responsibility. Some communities are already in action. For example, in the Metropolitan Detroit area, Wayne University in consultation with school superintendents and the Michigan State Department of Public Instruction is offering a training course to college women 21 to 50 years of age as part of the regular curriculum. Candidates with a bachelor's degree can obtain the 20 credits, including practice teaching, needed to qualify them for a 5-year certificate to teach in elementary schools. Similar projects are also going in southern California and in Ohio, consisting of a year's supervised teaching, between semesters or summer sessions of professional training.

Even when a woman has had complete professional training, it may be desirable to have a refresher or retraining course after some years of absence from the profession in a world where everything is rapidly changing. For example, New York City offers a refresher course for registered professional nurses. Between June 1952 and September 1953 a total of 202 women participated in the 9 courses that were held. Of these, only 13 were under 35 years of age. Most were in their forties or fifties, with ages ranging up to the seventies. Over two-thirds of the graduates were placed in city hospitals. Most of the rest probably could have been placed, but were unable to return to nursing for personal reasons.

I have mentioned only a few occupations and examples to show what can be done. Within the next few weeks, there will appear a new bulletin of the Department of Labor's Women's Bureau entitled "Training Mature Women for Employment." It is an account of 23 training programs successfully carried on in different cities and in occupations as diverse as commercial sewing, institutional housekeeping, cosmetology, practical nursing, and electronics work. These projects clearly show that this kind of effort can succeed if the community wants to make it succeed and utilizes the facilities and experience that are available through the Women's Bureau and other organizations mentioned in the booklet.

These, then, are the six fronts on which we propose to advance during the coming year.

I have talked mostly about the Department of Labor's plans. But it goes without saying that this is only a fraction of the nationwide effort, public and private, that is being poured into the solution of this challenging difficulty. Other arms of the Federal Government are stepping up their activities. The Department of Health, Education, and Welfare will also receive an augmented appropriation for work in the field of the aging. We have assembled an interdepartmental task force; we are taking systematic inventory of what all the departments and agencies can do; and we are making plans that cut across the various departmental lines. State agencies are also redoubling their efforts. Private employers, unions, trade and professional associations, church groups, colleges and universities, social workers, consultant firms, and dedicated individuals are everywhere addressing themselves with renewed vigor to a problem which grows more disquieting daily.

I have outlined the specific directions which our exertions will take in the immediate future largely because I hope that those represented here before me in this powerful array of expertise will help us in these efforts with their advice, counsel, and encouragement. For our part, on behalf of Secretary of Labor James P. Mitchell and the entire Department of Labor, I pledge to each of you all our support and all our resources in our mutual journey toward that day when our country gives full and free employment opportunity to all on the basis of ability alone, and is rewarded by finding it has tapped its richest vein of talent, skill, experience, and devotion.

Berea College Centennial Award to Hon. Earl C. Clements, of Kentucky

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27, 1955

Mr. BARKLEY. Mr. President, on July 1, 1955, Berea College, one of the outstanding educational institutions of Kentucky, conferred upon my colleague [Mr. CLEMENTS] the Berea College centennial award. On that occasion, the Senator from Illinois [Mr. DOUGLAS] delivered an outstanding address, and my colleague from Kentucky made some striking remarks in accepting the award. I ask unanimous consent that both these addresses be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. PAUL H. DOUGLAS, OF ILLINOIS, AT BEREA COLLEGE, BEREA, KY., JULY 1, 1955

I feel distinctly honored at being included in the ceremonies here at Berea tonight in honor both of the college and of my good friend, Senator CLEMENTS.

This is my first trip here. But like most Americans I have long known of Berea and have always admired you. You have done remarkable work in the span of a century. This institution with its buildings and grounds, in comparison with the one room schoolroom of 1855, is tangible proof of that. But far more compelling are the tens of thousands of your graduates and former students. They have lived far better and more interesting lives because they studied and worked here. They have been better farmers, artisans, professional folk, better husbands and wives, better father and mothers, better citizens and more truly religious men and women. Through them the good seed of Berea has taken root in innumerable communities and has reproduced itself a thousandfold.

What, we may ask, has been the secret? Why has the experiment been such a success? For if we once know this, not only can the good work continue here even more successfully, but the same principles can be applied elsewhere where the conditions are substantially similar.

I suggest that in the first place, Berea, through its faculty and supporters, has always had a deep concern for people and for its students. This college has, in the best sense of the word, had a religious concern. Students have felt a warm care and affection here which has made the world seem more friendly and which has helped to draw out their best. True religion has entered their lives more fully and has stayed with them.

Secondly, the subjects in the course of study have been well and thoroughly taught. Intellectual slovenliness has not been tolerated. Study has been respectable and insisted upon. The teaching staff has been, and is, competent. Men and women who have graduated from Berea have received a good education. The training in science has been close to the top.

In the third place, Berea has successfully combined learning and labor. European education in the past has been for the leisured class and for the professions. Students were not expected to earn or help earn their living, and their training was either for the professions or for general culture. This practice has been largely copied in this

country by colleges of liberal arts. I do not criticize this theory, but I think it is important to realize that it is not the only proper type of education. Such an education would have been ill-adapted to the Appalachian region which Berea has wisely chosen to serve. Berea has seen that education is not merely a preparation for life, but is primarily life itself. It has therefore organized the business of living so that students are largely self-supporting. Farm and forest, hotel and hospital, weaving, painting, and woodwork, as well as the housekeeping jobs needed to keep a community of 2,000 running, give young men and women a chance to work. This helps to pay their bills so that they earn their education. In working they learn the skills which women need for homemaking and men for farming, and many of the crafts. Work is democratized so that all share in the brotherhood of toil. At the same time there is ample leisure for study and for the spontaneous activities which bubble up out of social life. These are great achievements, and we salute Berea for them.

There is a further point. The founders of Berea took their Christianity seriously and believed that, as the seal of the college states, "God hath made of one blood all the nations of men." They took the Declaration of Independence seriously with its statement that all men were endowed by their creator with "certain unalienable rights" and that "among these are life, liberty, and the pursuit of happiness."

And so very quietly, but with conviction, they admitted Negro as well as white students and thereby tried to build better race relations. But half a century ago, the rising tide of intolerance caused the Kentucky Legislature in 1904 to pass the Day Act, prescribing segregation in both the private and public schools of the State. Berea contested the constitutionality of the statue under the equal protection of the law provisions of the 14th amendment, and carried the case to the Supreme Court. It is regrettable that the Supreme Court stood by its earlier decision of 1895 and upheld the constitutionality of the Day law. And in passing it is worthy of note that the one dissent to both decisions came from a sturdy Kentuckian, Justice John Marshall Harlan, who reminded his colleagues that the Constitution was colorblind.

Berea obeyed the law. It had to wait a long time before it was vindicated, but finally last year, a half century after the Day law, the Supreme Court reversed itself and by a unanimous opinion held that compulsory separate education is not really equal education since it tends to give an added inferiority complex to the children and members of the race with an inferior social position and thus handicaps them in the struggle of life.

After 50 years Berea was vindicated. All honor to the brave and noble men and women who stood for these principles when they were unpopular and who endured persecution for their devotion. All honor to this college for the way it has pioneered in human brotherhood.

And now may I say that Berea College honors itself tonight in honoring my friend, Senator EARLE C. CLEMENTS. You in Kentucky know and love him. So do we in the Senate. Like Earl Warren and ALBEN BARKLEY, he is a man who has steadily grown in politics. Honest and efficient county official for two decades, competent State legislator, a good Congressman, a fine governor, and a splendid Senator, Senator CLEMENTS has risen to every new set of tasks and has carried them out, not only with ability, but also with great sympathy and human understanding.

Senator CLEMENTS is now the number two man on our side of the aisle in the Senate, and I can testify that his influence is greatly for the good. He works hard, he has a real sympathy for the underdog, he knows how to get things done, his feet are on the ground, but are never stationary. He is in fact like Berea. Rooted in reality, he is a practical idealist.

It is significant that Senator CLEMENTS as governor expanded educational opportunities for Negroes and promoted integration in the training of nurses and in some of the State's higher institutions of learning. It is reassuring that his long-time friend and associate, the present Governor of Kentucky, manfully announced after the Supreme Court decision that Kentucky would obey the law.

There is a final point upon which I should like to close. Kentucky is a border State. It was this very fact which made the war from 1861 to 1865 so bitter since it divided relatives, friends and sections against each other. The struggle between North and South tore Kentucky apart. But with time has come healing and understanding. Kentucky as a border State can do much good in helping both sections to work out a common program. She is already doing much and this is one of the great contributions of EARLE CLEMENTS and our beloved ALBEN BARKLEY. It is also one of the contributions of Berea.

Without sacrifice of principle and really in extension of the century tested practical idealism of its founders and participants, the second century of Berea should be even more successful than its first.

ADDRESS BY HON. EARLE C. CLEMENTS, OF KENTUCKY, BEREA COLLEGE, BEREA, KY., JULY 1, 1955, ACCEPTING THE BEREA COLLEGE CENTENNIAL AWARD

I accept this centennial award as a symbol, not of my achievements, but of those whose work, whose prayers, whose ideals, whose citizenship, whose learning and whose courage made it possible for Berea to celebrate this 100th birthday.

There are times in every man's life when he sees—exactly at the moment something really fine happens to him—the three dimensions of his own life.

At such times, and they are rare, he sees with an awesome, sudden clarity himself as a yonng man working to build a productive life. And he thinks that he could have worked harder and better.

Then he sees himself in the present and he looks upon what he sees with the detached, objective eyes of a stranger. And he knows he doesn't deserve the honor of the moment.

And then, having glimpsed the past and the present, the third dimension of his life comes in focus and for an instant he watches himself in the future, a man grown old, a man whose only real riches are his memories.

This is such a time for me. Even as I accept the centennial award from Berea College, I am aware that in those days to come, when I am counting memories and not making plans, I shall withdraw, over and over again, this day and this moment from my storehouse of memories.

In the last century many ideas, many purposes, yes, many ideals, were born. And many died. But the ideals of Reverend Fee, founder of Berea, live on, tested by time and found imperishable.

I believe that the tragedy of this age is that there are so many goals in life to which so many men are blind.

There are all too few men and all two few institutions that teach us the goals of life that should challenge and inspire man. But your president, Mr. Francis S. Hutchins, as his illustrious father before him, is such a man. And your Berea College is such an institution.

Today we often hear of maladjusted youth. I believe that one reason for such maladjustment is that youth's capacities for good, its abilities to produce, to contribute, are not fully utilized. Youth demands tall goals and high personal challenges. Youth wants, most of all, for us to believe in its ability to meet those challenges.

Berea provides youth with proper challenges and believes in the ability of its students to meet them.

I have known many of your graduates. As Governor, I was privileged to have in the office a young lady from your school, and from your town, Bobby Coyle Crosswhite. In my office in Washington, the first person one sees is a Berea student from Beattyville, Rosemary Porter Rorick, who, likewise, proves the value of Berea training. Because of my association with these and other students from Berea, I hold these views of this great institution.

This institution, this Berea of ours, is, I believe, an outstanding example of the equality of opportunity that was in the minds of our Founding Fathers. Here men's minds, not their money, are made welcome. Here man's ability to do good work is welcome, not his talent to get someone else to do it.

In a few minutes we will see the production Wilderness Road, and I look forward to it, because at the time you were holding your baccalaureate services, Sunday, June 5, I "commenced" a journey to the Far East. In southeast Asia and in the western Pacific, I found another kind of wilderness road.

Not the kind we know, a wilderness of forests. No; the wilderness road I saw, stretching from Korea to Japan, to Formosa, to the Philippines, to that little island called Quemoy, to Indochina, to Thailand. This wilderness road was overgrown not with the vines of nature but with the problems of man.

It is a wilderness because peace is a stranger to it; it is a wilderness because hope is a rare and priceless thing; it is a wilderness because mankind has yet to learn by heart the motto of Berea: "God hath made of one blood all nations of men."

But I believe today and standing here, that just as your ideals and the purpose of this institution, to promote the cause of Christ and to contribute to the spiritual and material welfare of the mountain region of the South, conquered the wilderness, that one day man will conquer in the Far East and elsewhere the wilderness of his mind and discover and maintain peace.

You conquered your wilderness with ideals, with prayers, with work. Men can conquer his wilderness with the same three. I have faith he will.

The Proposed Memorial to Senator Taft

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an article from the Oregon Daily Statesman of July 8, 1955. Its author is one of our State's noted editors, Charles Arthur Sprague, ex-Governor of Oregon and a former American delegate to the United Nations. He was governor from 1939 until 1943. Governor Sprague, a lifelong Republican, also has served on the board of many Presidential panels arbitrating labor disputes. Governor Sprague discusses the entire question of monuments, statues and memorials in the Nation's Capital.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

(By Charles A. Sprague)

An association dedicated to perpetuate the memory of the late Senator Robert A. Taft has proposed the erection of a memorial on Capitol Hill near the Senate Office Building. It is to be a rectangular marble tower with a carillon of 25 bells housed at the top, to chime at regular intervals through the day.

The design is, indeed, very impressive; and will commemorate one of the great Americans of our time. I can't help wondering, however, if the friends of the late Senator are not overdoing it. It is not to depreciate the merits of Mr. Taft to question whether the proposed memorial is not on the extravagant side. His contemporaries remember Taft as a stalwart statesman, well grounded in political principles, forthright in his utterance, with courage to stand up against the popular tide on many of the great issues of his time. But in the scales of history, how will Taft be weighed? He failed of his great objective of winning the Presidency, though he never seemed a victim of his ambition. The principal act of legislation with which his name is connected, the Taft-Hartley bill, did not break new ground but sought to bring better balance in labor relations than the Wagner Act provided. He erred in his judgment on foreign affairs. His fame rests largely on his leadership of conservative Republicans, who opposed the New Deal on principle. He became "Mr. Republican" in person—but his party refused three times to make him its standard bearer.

There is danger that the admiration a generation may have for one of its leaders may not be sustained with the passing of time. Cities are full of memorials honoring those whose names are almost forgotten. I think I can illustrate my point by referring to the memorial honoring Oscar S. Straus which stands in the plaza on 14th Street NW., Washington. It is quite elaborate, with a fountain in the center and on each side of the paved circle around the fountain is a large bronze figure, reclining. I am old enough to recall who Oscar Straus was; but I wonder how many do who are under 30 years old. And how large a place will his name have in the history books a century hence? He was, indeed, a very distinguished American citizen, a diplomat, Secretary of Commerce and Labor in the Theodore Roosevelt administration, and author. He was a member of the Straus family which has been prominent in the field of business and public affairs, whose contributions to philanthropy and public service have been notable. The Oscar Straus memorial in Washngton was an expression of the warm affection in which he was held. Yet, as I looked over the memorial recently I felt that it had been overdone. And it is not quite 30 years since Oscar Straus died.

I am inclined to believe that the Taft memorial, if it is built, will stand as a monument to a lost cause. For its leading donors, it will express their respect for Bob Taft, and their deep and lasting regret that he did not win the Presidency. It will stand as a monument, also, to the defeats of the party conservatives who hated the New Deal, distrusted Franklin D. Roosevelt, made the balancing of the budget their shibboleth. Bob Taft was the chief spokesman in the Senate for the old American tradition with its emphasis on individual initiative, self-reliance, economic freedom, a sturdy opponent of the conception of government as the intimate regulator of private activity and the guarantor of personal security. It was a great and valiant tradition; and we are not too sure that its loss is for the permanent gain of the American people.

If the New Deal's breach with what were considered sound principles of public finance leads to an ultimate debacle, and if the doctrine that the Government must provide cradle-to-grave security leads to the breakdown of personal responsibility and paralyzes incentive which has been the dynamic of our economic system, then Bob Taft may be hailed as the "noblest Roman of them all," to be compared with the senators of ancient Rome who resisted the Caesarism that transformed republic to empire.

But if, as seems now more probable, the United States is able to make its political and social readjustments successfully, resisting the extremes of the welfare state, preserving the essence of the competitive capitalist system, and maintaining fiscal solvency, then Taft will be remembered as a lesser figure who fought change valiantly but unsuccessfully, and his imposing memorial will stand as a monument to one who misread the signs and portents of the time in which he lived and served.

Delinquency Can Be Curbed

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

THEY PROVE TEEN CRIME CAN BE CURBED—POLICE FRIENDSHIP PLAN ENDED REIGN OF TERROR

(By George Carpozi, Jr.)

One oasis in the national sand trap of juvenile terrorism and violence is Pomona, Calif., where 3 years ago warring teen-agers almost burned down the town.

That was in the winter of 1951–52—a period as tense as any community has experienced.

Today, Pomona is a quiet city with no crime waves, no juvenile uprisings. To the city's reformed youths, a policeman now is a friend—not a bogeyman.

Credit for this change goes to a police-backed program of planned activities for young people and energetic participation of its citizens.

The method was not so unique, but it was so well applied that Pomona can be set up as an example for the entire country.

Let us look at Pomona before the reformation.

Pachuco-type gangs and other juvenile desperadoes were on the rampage, fighting one another with every weapon they could muster—from knives and guns to broken bottles and beer can openers.

When not in combat, the terrorists would wreck cars with axes or fire .22-caliber rifles at a rival gang's hot rod.

At Halloween the scrouge became unbearable as they blasted and burned palm trees on quiet, residential streets and opened so many fire hydrants that the Fire Department was virtually immobilized.

Even in New York—where a teen-ager will kill senselessly—there had never been aggression so defiant and open as Pomona's young hoodlums had dared stage.

The big crisis came in February 1952, when police were tipped that rival gangs were preparing for a "rumble." But that would have been a mild word (war would have been more like it) if the gangs had not been stopped. The arsenal of one gang included:

Nineteen shotguns, 12 small-caliber rifles, 60 sticks of dynamite, three hand grenades, and a keg of black powder.

And what was the trouble all about?

FROM THE OTHER SIDE OF THE TRACKS

A rivalry built up by wide and obvious ancestral differences, between Mexican-American youths and non-Mexican boys from "the other side of the tracks."

Police got word that the showdown was to be at a dance the Mexican-American group was to stage. The non-Mexican group was to raid the premises. That was when Police Lt. Everett Holladay, now captain, made a bold move.

He invited the leaders of both gangs to attend a "truce conference." They did, reluctantly.

Chief Ralph E. Parker, 34, who heads Pomona's force of 57 officers, "moderated" the meeting, a historic one for the city. Parker had to be a supersalesman. He had to make the leaders realize neither gang had reason to fight the other.

"Anybody can fight dirty," he told them, "but it takes skill and ability to fight clean. For that, you've got to be somebody."

There was the psychological clue to all the trouble: "You've got to be somebody."

Deprive a youth from his place in the sun, or even in his community, and he will shun worthwhile activities for those that get him in trouble.

Directions and goals were needed to bring peace to the rival gangs. And Chief Parker supplied them.

He started by making the rival gang leaders shake hands, then attended the dance together. Next, he offered the clubrooms of the Pomona Police Officers Association for meetings of the two gangs. A while later, the word "gang" was replaced by "club."

BOYS' AND GIRLS' CLUBS ALSO STARTED

Then a real chance for recognition and acceptance in worthwhile channels was advanced. The police association sponsored a junior baseball club for boys 14 to 17. Not long after, the Pomona Board of Education granted permission to the club to use a future school site in the neighborhood as a ballfield. The youths themselves leveled and cleared it, making a first-class sandlot diamond.

The team, which now wears the insignia of the Police Officers Association, came up a championship ball club last year.

Other teams for youths in various age groups from 7 to 14 were eventually organized. The community spirit began to take hold and boys who once fought it out with knives were now devoting their energies to baseball and softball.

Meanwhile, boys' and girls' clubs were started. Young people overflowed with energy and enthusiasm as they got a sense of "belonging" in their community.

Much of the credit for Pomona's success goes to Chief Parker and his enthusiastic young police force—they average just 33½ years—who give much of their own time to the community's youth.

But for all the effort of Chief Parker and his police force, the program could never have been successful without cooperation of school authorities, civic groups, other city departments, community leaders, businessmen, and churches.

Parker acknowledges this. Yet he always reminds—

"The credit belongs to the youths themselves. They respond to a program if one is provided."

However, this is only one phase of Pomona's success story. There are two others—the hotrod problem and narcotics. Pomona had its hands full with young lawbreakers who thrilled in making the city's streets dangerous raceways, and teen-agers who

brought marihuana parties at motel rooms in vogue.

"IF YOU CAN'T LICK 'EM, JOIN 'EM"

After trying various ways to stop the hot rodders, Chief Parker and his staff elected to take the same positive approach that was working with other juvenile problems. As with gangs, an old formula was applied—"If you can't lick 'em, join 'em."

Pomona and its police department showed the way for the rest of the Nation.

Police officer E. J. "Budd" Coons, who knew cars and understood racing, was assigned to get in touch with a loosely organized club of hot rodders known as the "Choppers."

It was apparent from the start that young drivers of "souped-up" autos were not delinquents—merely teenagers who had to have their enthusiasm channeled in safe, constructive ways.

"Their sport needed a modern, age-of-speed treatment, rather than a horse-and-buggy philosophy of suppression," said Chief Parker.

Coons first gained the drivers' confidence, then sold them on the importance of "safety first." This meant exacting observances of Pomona's traffic regulations.

"CHOPPERS" MEET IN POLICE CLUBROOMS

At the same time, he arranged to have the "Choppers" meet weekly in the police officers' private clubrooms. A lively schedule of activities was worked out, including hot rod tours.

The next big project was to find a permanent "drag" strip for safe hot rod racing. After much searching and considerable red tape—including a change in a county ordinance—supervised "drag" races started on an abandoned runway of old Fontana airfield.

Lloyds of London showed confidence by issuing a liability insurance policy, and that confidence has been justified. Statistics show that since 1950 in California accidents involving drivers under 20 increased about 10 percent, while in the same period in Pomona figures for the same group went down nine percent.

Today the Choppers have become the Pomona Valley Timing Association. Hot rod racing has become a respectable sport. And Budd Coons has taken a job as executive manager of the National Hot Rod Association.

Every Sunday "boys" from 16 to 60 enter races—with motorcycles as well as cars. Fans thrill watching speeders zoom from standing starts to speeds well over 100 miles per hour. One "dragster," a 425-horsepower job that won the State championship at Madera, Calif., last year did 141.73 miles per hour—using only high gear because it had lost second gear in a previous race.

The narcotics problem was solved this way:

A 23-year-old ex-convict was seized as Pomona's chief narcotics supplier. His defense:

"I was really trying to discourage the youths from taking dope and was selling them only bird seed, dried parsley, and pepper-tree leaves instead of marihuana."

But was he surprised. Pomona's police chose to be the first to test a new law that makes it equally illegal to provide minors with anything supposed to be a drug as it is to supply the real stuff. The suspect was convicted and sentenced to 10 years in prison.

That stopped the flow of narcotics of Pomona's teen-agers. Today, you "can't buy a stick in Pomona to save your soul."

Police have solved the juvenile delinquency problem so effectively that other law-enforcement agencies hire its members to start similar programs. Amazingly, the department has done its job with an average of 1.36 officers per 1,000 population, as compared with a national average of 1.6, or New York City's 2.5.

A WORD OF WARNING FOR OTHER CITIES

But here's a word of warning from Chief Parker for other communities which may want to follow Pomona's successful program:

"Don't lavish a lot of attention on the teen-agers. They've got to show the desire, and if you go into it hook, line, and sinker, they'd think you were trying to run it."

What it boils down to in Pomona is that youths are made to feel they are wanted and recognized. And that's what makes them a positive force—a force for good.

American Cultural Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, July 27, 1955

Mr. WILEY. Mr. President, I was pleased to note in this morning's Washington Post a fine writeup by drama editor, Richard L. Coe, regarding the need for continuity and adequate funds in America's cultural program.

I earnestly hope that the Senate-House conference committee, which will shortly meet to consider the funds under the supplemental appropriation bill for next year's cultural program, will abide by the Senate's decision and provide the full budget request for theatrical, ballet, musical, art, and other performances abroad, and that thereafter this program will be placed on a regular, nonemergency basis.

I send to the desk the text of Mr. Coe's article, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE ON THE AISLE—CULTURE TRAIL NEEDS TRAFFIC

(By Richard L. Coe)

With President Eisenhower—as was President Truman—in firm favor of encouraging tours of our performing artists abroad, the focus falls on the vital need for continuity.

Salute to France, which was the overall name for America's contribution to the second international theater festival in Paris, is now represented by some gallant top-flight figures in the National's The Skin of Our Teeth. These artists might have been having a far less demanding summer than they are, staking their professional reputations on a venture which has had no Government subsidy. Aware that American culture is a comparatively unknown commodity in the world, they are striking out on a trail that's long needed travelers.

Currently, with the backing of the State Department's modest fund for such matters, Porgy and Bess is revealing to South Americans, for the first time, that Italy, France, and Spain, so long South America's cultural inspiration, are not alone in these matters. Last week's O Estado de Soa Paulo called the Gershwin musical "the richest and most ingenious entertainment one could desire * * * a truly exceptional example of progress in the North American theater."

Having seen Porgy and Bess on two continents during the past 3 years, I would venture to say that its unqualified success stems from its continuity. Coproducer-Director Robert Breen has nursed it along constantly, forming an ensemble that does not depend on star names. Thanks to the International Exchange Program's astute backing, Porgy and Bess, produced with private funds (Blevins Davis), has been doing a job which has jammed State Department files with approving reports from a dozen countries.

There have been other tours, other artists, notably the Symphony of the Air's success in the Far East, a difficult area to satisfy in these matters.

But the point is, a start has been made and as "Skin's" producer, Robert Whitehead, was saying the other day, it is vital to continue. "We'd sure look awfully uncertain of ourselves if we stopped now." While it looks as though the East Germans and the Pieping Opera copped the major notices of the Paris festival, Helen Hayes was observing yesterday that so far as general popularity, crowded audience were concerned, The Skin of Our Teeth took the lead.

JOINT CONFERENCE SOON

At the moment, next year's appropriation for this supplementary State Department fund of $2½ million is scheduled for a joint Senate-House conference committee. The Senate's appropriation committee has suggested that instead of being put into the present "emergency" category as has been the case this year and last, it be made part of the regular budget.

This could be a strong step forward, for only through the assurance of continuity can one expect the theater's leaders to take the Government's interest seriously. As ANTAs Robert Dowling, Virginia Inness-Brown, and Robert Schnitzer have all stated: "Performing artists are people, not pictures or statuary which can be moved about as one wishes. Only by planning confidently over a period of time can we do the job the way it should be done."

How it's done is the best way Overseer Dowling has been able to devise. To assure that only worthwhile projects are recommended for Government aid (which consists only of transportation and guarantee against losses in countries where admission fees and salaries are lower than our own), panels on drama, music, and dance make suggestions. These are then implemented by General Manager Schnitzer for the International Exchange Program.

CHOICES NOT EASY

Even the choice of plays and artists is more difficult than one might think. The drama panel, composed of the theater's professional workers and critics, had some ideas which could not be implemented. When finally The Skin of Our Teeth, Oklahoma, and Medea were decided on for the Paris entries and first-rank artists assured, it was felt that here was fine representation of the American theater. Oklahoma was the best of our highly indigenous musical stage. Medea was chosen to reflect our interest in the classics. Mr. Wilder's play, less well-known abroad than his widely popular Our Town, seemed a natural to represent one of our greatest living playwrights.

Perhaps better choices will be made in the future. At any event, the panels can only continue to try and the artists to contribute what is asked.

For these reasons, one hopes that the Senate-House conference on the appropriation will be considering the vital factor of continuity. A tradition is aborning of which our Government, our people, and our theater may take pride and glory.

Free General Elections Seem Unlikely in Divided Vietnam

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27, 1955

Mr. SPARKMAN. Mr. President, on yesterday, the Senator from Montana [Mr. MANSFIELD] made a very interesting and informative speech regarding the Far Eastern situation. In the course of his remarks, we had some exchange of thoughts regarding elections in Vietnam.

Under the byline of John Roderick, and with a dateline of Saigon, South Vietnam, July 24, there was published an Associated Press article under the headline, "Free General Elections Seem Unlikely in Divided Vietnam." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREE GENERAL ELECTIONS SEEM UNLIKELY IN DIVIDED VIETNAM

(By John Roderick)

SAIGON, SOUTH VIETNAM, July 24.—A Canadian member of the Armistice Control Commission estimated some time ago it would take at least five divisions of neutral troops to guarantee a free election in Vietnam.

That many soldiers, he said, would be required to police the polling places alone.

General elections to reunite the two halves of Vietnam are prescribed by the Geneva Armistice Agreement. But on July 16 the South's Premier Ngo Dinh Diem declared that as long as the North is dominated by communism and resorts to terrorism and totalitarian methods he will not even talk with them about elections.

At Geneva the United States, Britain, and France agreed to advise Diem to change his mind and arrange the talks promptly.

The Communist Viet Minh Foreign Minister, Pham Van Dong, dispatched a message to Diem last Wednesday inviting him to name the date and select a city on Vietnamese territory for an election conference. Diem has not yet received the note, but his answer, if he makes one, will be "No."

Thus, a year after nine nations meeting at Geneva ended the Indochina war the uneasy peace again is menaced.

"The South can do as she pleases," said another Canadian. "She did not sign the accords. But is she prepared to face up to the consequences? The Viet Minh may decide to settle the question by war."

There is a single ray of hope which some optimists here are nourishing. Diem said he did not oppose the election principle as long as there were guaranties it would be free. Later official declarations have indicated, too, that his government wants the United Nations, and not the Indian-Polish-Canadian Armistice Commission, to supervise the voting.

Can these two conditions be fulfilled? Many observers here doubt it.

This writer spent a year in Palestine as a witness to the divisive hatred between the Arabs and the Jews. There is a growing parallel here in the bitterness of thousands who fled the northern half of the country. It erupted senselessly last Wednesday—anniversary of the armistice accords which cut the nation in two—with the sack of two Saigon hotels.

The French assert that there would be a considerable vote against the Viet Minh in the north should the elections be really free. In the south, which still does not know the peacetime aspect of communism, Ho Chi-minh probably would get a surprisingly large following.

The country's population is not known exactly. It is said, but without real proof, that there are at least a million more persons in the Red-held north than the south.

Another factor which has to be reckoned with is the growing influence and popularity of Diem, who has seized the nationalist standard at a moment when Ho Chi-minh for broader international reasons has let it drop.

While Diem attacks colonialism and communism, Ho is reduced to the anomalous position of defending the former French enemy and praising the virtues of the Chinese, Vietnam's long-time foe.

Delinquency Can Be Curbed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

IT CAN BE DONE—HOW 12 CITIES CURE TEEN CRIME

(By George Carpozi, Jr.)

Juvenile delinquency, no matter how far spread or how bad, can be brought under control.

While statistics show juvenile crime is an engulfing disease that now afflicts more than 1 million American youths, there actually are cities and towns in the United States where teen-age criminals and terrorists have been forced to retreat.

The hopeful portrait of American cities and towns winning the fight against teen-age crime is small. Nevertheless, it indicates that this widespread problem can be solved.

Methods, however, vary from one city or town to the other, thus exposing the fallacious notion that there is one standard solution to juvenile delinquency.

In the belief that other communities may want to know what methods were used in this counterattack, the Hearst newspapers have conducted an exhaustive study in a dozen communities where the battle for law and order is being won.

Here is a quick summary of some of the achievements:

Pomona, Calif.: Gang wars, vandalism, reckless driving, and other crimes of violence and terrorism practically have been eliminated in just 3 short years. Today Pomona is a peaceful community, where youths no longer spoil for trouble.

Paterson, N. J.: Third largest city in the State with a population of 150,000—and heavily industrialized—Paterson does not have a single organized teen-age gang; not a single youth has been arrested for narcotics in 5 years. Paterson keeps its youth in line despite the fact that the city is only a few minutes commuting time from New York City, where these crimes run almost unchecked.

Boone, Iowa: In this town of 12,164 there is only a 13-man police force. There is no hue and cry here over the juvenile delinquency problem. Community action has done much to keep kids out of trouble. Last year, police averaged only 6 arrests of juveniles a month, and in 3 years only 6 were taken to court.

Seattle, Wash.: During 1954, the city's youth population increased 10 percent with annexation of new territory. But juvenile delinquency decreased considerably. The city has no marauding teen gangs and no disturbances in schools. While Seattle is a seaport to the Orient, there is no narcotics problem.

At first glance, it might seem impractical to consider adopting methods which worked in a small Midwest town or in a restricted area of Pittsburgh to a city the size of New York, Chicago, or Los Angeles. But this is not necessarily so.

While the problem in New York is citywide, it must be attacked on a precinct basis just as it must in Chicago or Los Angeles. Many cities are doing it that way.

And that method, our survey shows, is winning the fight.

One thing above all else is apparent in every instance where a community has managed to solve its problem: everyone in the community has made delinquency his problem.

In fact, some of the communities went so far as to put responsibility for control of juvenile crime on the very persons who were responsible for it—the teen-agers.

The intriguing experiment of putting themselves into a position to wage the battle against juvenile crime merits immediate discussion.

A case in point is Pittsburgh, which for 16 years has had such a plan in successful operation in its Hill district, an area only a few minutes walk from the downtown business area.

Before 1939 the Hill was ruled by crime. It swarmed with racketeers, prostitutes, dope peddlers, gamblers, and criminals of every description. To some extent the problem still exists, but the Hill is a far better place today.

HILL CHILDREN HAD NO CHANCE

Children born into this environment didn't have a chance. Raised in slums and exposed to those conditions of criminal activity, they fell heir to all the vices before them. Juvenile delinquency raced out of control.

Today, as a result of putting responsibility for control of crime on the shoulders of youth, the Hill district proudly points to these happy statistics:

A 63-percent decrease in thefts from stores in the area.

An 80-percent drop in damages due to vandalism against schools and churches.

An 82-percent decline in false alarms that saves taxpayers about $30,000 a year.

By adopting a realistic crime-suppression program that operated on the community center plan, with youths at the helm, it established a city within a city, chartered according to the laws of Pennsylvania, and named Hill City Youth Municipality.

TEENAGERS RUN THEIR OWN CITY

Hill City officials rule the Hill district with a firm hand. The city's government is dedicated to the betterment of living conditions in its area and the fight against juvenile delinquency.

Mayor, councilman, alderman, judges, district attorney, police, bar association, city solicitor, clerk of courts, are all teenagers. They are friends, neighbors, and relatives of the area's juvenile delinquents.

Were it not for Hill City, some of the officials themselves would be delinquents.

Hill City's battle against delinquency is conducted in the same manner as other

cities conduct theirs, using the same tools—laws, police, courts.

If it is more effective, the difference obviously is not in the methods used. The difference is that in Hill City the fight against juvenile delinquency comes from within the group—not from above.

HOW THEY HANDLED A TYPICAL CASE

Let's see how this works with a typical case.

A Pittsburgh policeman recently walked into the government's headquarters building at 2038 Bedford Avenue, in the Hill district. He had a problem and came to take it up with Hill City officials.

His complaint: a gang of unknown juveniles was throwing stones and rolling tires down a hill onto Bigelow Boulevard, a speedway leading downtown, causing considerable damage and endangering lives of motorists.

Hill City officials listened to the policeman's complaint and set to work. Within 24 hours stones and tires stopped descending on the boulevard. Today, a month later, the incidents have not recurred.

Such quick and effective police work is the usual thing in Hill City.

After the police officer registered his complaint, this is what happened:

Bulletins went out to all schools, asking teachers to mention the incidents in classes and try to discourage such practices. "Police" squads were sent to the hill from which stones and tires were being launched, to persuade fellow teen-agers to stop.

Verbal persuasion helped in many cases, but not in all. Those youngsters who still tried to break the law were brought to court and tried. Those convicted were sentenced.

Punishment handed out by the judges ranged from fines—mostly nickels and dimes—to forced participation in Hill City activities for periods specified by the court. In many cases, offenders asked to be allowed to participate in the government after their sentences expired.

That's all there was to it.

Hill City was founded by Howard C. McKinney, who conceived the idea when he was secretary of the Center Avenue branch of the YMCA in the Hill district. He laid his plans before former safety director, George E. A. Fairley, who approved.

RECRUITED PARENTS FOR BLOCK CLUBS

McKinney was deputized a police detective, and once Hill City was rooted in the area it was made by ordinance a part of the city's Department of Public Safety. The same ordinance appointed McKinney director and superintendent of the project, a post he still holds.

Also at the head of the project is a board of directors, comprised of some of the city's most prominent civic and business leaders.

One of McKinney's first acts was to form "block" clubs." For these clubs he recruited parents of a street and got them to take an interest in their children's activities. He got them to improve their neighborhoods, paint their houses, plant gardens, and eliminate safety hazards.

Then he organized the children. The first meetings, and the first "city" elections were held in a neighborhood theater. Squads were organized, interest groups formed, and a band was started.

Although the city council had made Hill City part of its safety department, it had appropriated no funds. The organization's only public moneys came through WPA and NYA. The rest trickled in as contributions.

But McKinney struggled on. Recreation facilities were acquired—slow and painfully. Then, after a few years, Hill City moved into a building of its own. Throughout the years Hill City grew, with help by the city and county.

Officials, from mayor and district attorney down to clerk of courts, trained Hill City officials holding like positions. And Hill City spread its activities beyond crime prevention. It spurred drives for clothes for the destitute, for gardens on vacant lots and backyards.

But, above all, it strove for better citizenship on the part of fellow teen-agers.

Today, McKinney has a staff of 14 paid coworkers and 18 volunteers to supervise the project. He also has a $30,000 annual city appropriation.

The city operates like any other. Except for those appointed by the mayor, the district attorney, or the courts, officials are elected each spring to 1-year terms.

OTHER AREAS START SIMILAR PROGRAMS

Any citizen of Hill City between 7 and 18 can vote. Age limits for officeholders are the same, but the average age is usually 14 to 16. Some 2,600 youngsters vote in an election. This is about three-fifths or 60 percent of the juvenile electorate in the district—better than the national average.

Before elections, youthful citizens are lined up in parties. Campaigns are conducted fairly, although there have been many lively election "battles."

The success of the Hill City program has influenced formation of similar programs elsewhere in Pittsburgh. The Catholic Youth Council, which has been active in the fight against juvenile delinquency for many years, has begun its own parish-centered program.

Although the program is formed on the parish level—as part of a national program instituted by the National Council of Catholic Youth in Washington—it is not restricted to Catholic youth. While in operation only a year, the program already is showing tangible results.

The dream of the Catholic Youth Council is the formation of a city council or congress which will work with non-Catholic groups in battling juvenile delinquency through the exchange of ideas and methods.

From its success in Pittsburgh it might seem that other communities with pressing problems of juvenile delinquency might want to explore the idea of combating their own troublesome youth from within—rather than from above.

Perhaps it's up to "a little child to lead them."

National System of Interstate and Defense Highways Act of 1955

SPEECH

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7474) to amend and supplement the Federal Aid Road Act approved July 11, 1916 (39 Stat. 355), as amended and supplemented to authorize appropriations for continuing the construction of highways, and for other purposes.

Mr. FALLON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I might say that all during the hearings and conferences the ranking Member on the Republican side has been of very great help and a steadying influence. We do not differ in any way on this highway program except on the financial section. The gentleman from Michigan [Mr. DONDERO] and I have worked together on road programs for the past 10 years, and at no time have we ever differed on the need for road legislation that came before the House.

The reason why we shifted our attention from the Clay bill or the Dondero bill is the fact that the other body took such positive action against it. It is true that we should not always be influenced by the judgment or actions of the other body. But as a practical matter we had to take this action into consideration. If there is to be any chance of a highway bill this year, it certainly cannot be the Dondero bill, because if we were to go into conference with two different philosophies, there would be little possibility of an agreement. I think we have got to find some legislation close to the provisions of the bill from the other body. That was the main reasons why this bill was voted down by the Committee on Public Works.

Another reason was there would be $11,500,000,000 in interest, which would make this road program cost $11,500,000,000 more than it would cost under H. R. 7474. That is a fact. There is no way of dodging it. It would cost $11,500,000,000 more.

So we must decide here today whether we want to pay for these roads in 15 years in cash and no interest charges or whether we want to pay for them over a period of 30 years on credit with huge interest costs.

The fact is, at the end of 15 years, we will be able to say to the next generation. "Here is something that is paid for."

Mr. DEMPSEY. Mr. Chairman, will the gentleman yield?

Mr. FALLON. I yield to the gentleman from New Mexico.

Mr. DEMPSEY. There seems to be some confusion on the utilities question. Is it possible for any utility to get any reimbursement unless the respective State highway commission recommends it?

Mr. FALLON. Under the basic law, the Bureau of Public Roads cannot honor anything coming from anybody except the State highway commission.

Mr. DEMPSEY. And the State highway commission must recommend it before any reimbursement can be made?

Mr. FALLON. That is correct.

Mr. JONES of Alabama. Mr. Chairman, will the gentleman yield?

Mr. FALLON. I yield.

Mr. JONES of Alabama. Under the present law, if a particular utility wanted to apply for these benefits, and have the State reimburse them, is it not true that the Federal Government would participate in the relocation cost of the utility?

Mr. FALLON. At the present time, yes.

Mr. JONES of Alabama. So why is it necessary to have any section at all in here about that?

Mr. DEMPSEY. This even limits it. This is 2 percent and half of the cost.

Mr. FALLON. This limits it to 50 percent of the cost and 2 percent of the cost of the project.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. FALLON. I yield to the gentleman from Minnesota.

Mr. JUDD. Does anybody believe that a State highway commission would not recommend that the Federal Government pay the 50 percent if the law authorized the Federal Government to do so? The State would not do it if it had to use only its own money, but is not the State highway commission likely to say, 'Sure, go head, if the Federal Government will pay it, it is fine."

Mr. FALLON. The State is allowed to do it now and the Federal Government picks up the check for 100 percent. Under this amendment it can pick up the check only for 50 percent, and only when rcommended by the highway commission.

Mr. DEMPSEY. If the State recommends it, the State puts up half and the Government puts up half. It does not take it from the Federal Government.

Mr. FALLON. That is right.

The Kremlin Talks Peace But Red China Still Acts War—Let Us Not Fool Ourselves Again

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 27, 1955:

WHERE ARE WE HEADED?

President Eisenhower has proclaimed a new American policy—to work with the Soviets or the Red Chinese or anyone if they show a sincere desire of wanting peace.

No man can quarrel with such a policy so long as the words after "if" are not overlooked.

It really isn't a new policy. It always has been a fundamental of American diplomacy. It looks new today because our enemies are playing a new tune which sounds as though they temporarily would prefer peace to war.

The new look in the Kremlin led to the Geneva Conference.

Now, the United States will sit down at Geneva again with Red China, primarily to try to spring 51 Americans still held by China but also to discuss other matters. "Other matters" include a cease-fire for Formosa and anything else the Reds want to bring up.

We would be less uneasy about this move to open talks with the Red Chinese if there were more evidence Red China really wants to work for peace. The record tends to show the contrary. For example:

American civilians and prisoners of war still in Chinese hands are being used by Peking as hostages—to try to buy advantages for the Communists.

Red China has refused to do anything about a Korean settlement although the armistice is 3 years old. She continues to violate the truce terms by continuous military buildups in North Korea.

In Indochina the Communists, with Chinese conniving, never evacuated the free areas completely, continued subversion and direct aggression, as in Laos, and even obstructed the passage of refugees from north to south.

Red China has been talking less about liberating Formosa by force, but has not abandoned the idea completely and continues to build up airfields on the cost opposite Formosa.

The Red Chinese still talk about peace. But they don't act that way.

We can appreciate the President's desire to do everything possible to free the Americans who have been languishing in Chinese jails for years. But we think our principles would be in better shape in Asia if we had insisted those illegally held men be freed as our price for discussing other matters.

The present guess is that both the Soviets and the Red Chinese want a breathing spell in the cold war, and want it pretty badly. If that guess is correct, it seems to us our bargaining position is better than we think—that it is we rather than the Soviets or Chinese who should demand and get concessions.

The Small Farmer Finds the Going Gets Tougher and Tougher

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27, 1955

Mr. SPARKMAN. Mr. President, in the current issue of the Democratic Digest there appears an article entitled "The Small Farmer Finds the Going Gets Tougher and Tougher." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SMALL FARMER FINDS THE GOING GETS TOUGHER AND TOUGHER

"In America's current high-level prosperity, there is at least one fellow out in the cold. He's the little farmer who harvests an inadequate living from a few acres, tries to give his kids a decent break with no money and poor schools, and who sees scant hope for the future."

Thus the Washington Star described the current plight of the small farmer. But the Star was not alone in noting the situation confronting farmers the country over. This was graphically depicted in a map published recently in the magazine, Business Week. These were the captions that appeared on the map:

Florida: Potato crop delayed by bad weather.

Kentucky: Tobacco business profitable, but acreage cuts will mean 20 percent less income than in 1954.

Louisiana: Tung nuts had freeze trouble in March, as last year. Income again will be low.

Texas-Oklahoma: Cotton and wheat crops hit hard by drought. This, plus a 33-percent acreage cut, will drop nationwide cotton income by at least 20 percent. Wheat farmers here will make little profit.

New Mexico: Cotton farmers here will do all right if they're big and efficient enough.

California: Cotton farming rough for small operators.

Business Week summed up the situation: "For United States agriculture, 1955 is shaping up as another year of adjustment to a moderately declining income."

Noting the same trend, U. S. News & World Report caught the significance to the entire national economy of the farmers' plight:

"Farmers still are in a recession," reported U. S. News, "while other people prosper. Their plight recalls the 1902's, when agriculture slumped long before the big depression. * * * One major industry affecting many millions of people is not sharing in the Nation's business recovery."

Last year, the farmers' share of the Nation's total income was the lowest on record. Farm purchasing power—off 11 percent from 1953—was at the lowest level since 1940.

Nor is the end of the farm slump in sight. Official Agriculture Department estimates indicate that this year farm income will fall off another 5 percent.

This gradual sinking of farm income does not affect all farmers alike. Business Week magazine describes the difference in the effect on large and small farmers—and also incisively describes Agriculture Secretary Ezra Benson's attitude toward the small farmers. Said Business Week:

"The 1955 estimates, translated into the realities of farm life, mean this: Efficient operators will finish out all right—not up to 1954, but still with a good profit; for the marginal, inefficient farmers, though, the squeeze will be tighter. These may begin to see some good in Benson's idea that their best bet is to get off the land and into industrial jobs."

Top agriculture officials in the Eisenhower administration have actually expressed this philosophy in so many words. Agriculture Under Secretary True D. Morse, for example, is quoted by the United Press in April 1953, as saying "he felt it would be better if the marginal farmer got out of farming and into industry." The United Press also quoted John H. Davis, then President of the Commodity Credit Corporation as saying "that farming today can no longer be considered as a haven for those with less than average ability."

More recently, Assistant Agriculture Secretary Earl D. Butz told the National Farm and Ranch Congress: "Agriculture is now big business. Too many people are trying to stay in agriculture that would do better some place else. Farming takes capital and managerial capacity."

Humanitarian considerations aside, farm leaders and economists question the wisdom of trying to promote an "off-the-farm" movement. For one thing, as Agriculture Secretary Benson himself readily admits, our population is growing rapidly, and within the next 20 years, there will probably be 25 percent more mouths to feed than there are today. For another, no one can ever tell when a sudden emergency (such as Korea) or the wiping out of an entire crop by flood or drought will consume all of the food reserves that now seem so burdensome, and leave us with a farm shortage. All of this means that we should think twice before stripping our farms of their manpower.

Moreover, economists point out, the farm-to-city exodus is already taking place at the rate of about 150,000 per year. With factory output per man-hour undergoing a rapid increase, stimulated by automation, most industrial centers have enough unemployment problems of their own without the addition of a Government-induced farm-to-city movement.

What has worried farmers about this administration is not only its apparent desire to get small farmers out of agriculture, but the way it has gone about it. Instead of giving sympathetic recognition to the special problems of smaller farmers, instead of trying to help them become more efficient or, as an alternative, trying to ease their transition to another occupation, this administration has seemed to feel that the best way of getting the small farmer out of agriculture is to squeeze him out.

Take, for example, the matter of farm credit, one of the most serious problems facing the small farmer, who lacks the favor-

able credit rating at the local bank enjoyed by the large industrial farms. In the past, the Government tried to step in and fill the gaps that private banking sources could not fill. But in 3 successive years, the Eisenhower administration has sought to cut the funds available for these small-farmer loans, and has also sought to cut the funds for administering the loan program. Moreover, it has raised interest rates to farmers—½ percent on regular Farmers Home Administration loans and, more recently, 2 percent on loans for disaster-stricken farmers.

One writer described the situation facing a farmer in a disaster area in these words:

"You're a farmer. Corn, your main cash crop, has been 'burned out' by drought. The drought has been so terrible that the Department of Agriculture declared the county in which you live to be a 'disaster area.' You need help, you need it bad and you need it fast. You go to the nearest office of the Farmers Home Administration, to borrow funds for another crop. The FHA lends you, say, $5,000. Fine—but then they tell you that you will have to pay back 5 percent interest every year, or $250 annually. 'Blood money,' you are thinking."

Or take the matter of crop insurance. Most small farmers do not have the reserve capital to withstand the destruction of even a single crop by hail or by drought. Several years ago, the Government began experimenting with a system of crop insurance, to protect such farmers against these natural hazards. But today the present Administration is gradually cutting back the crop insurance program. Nine counties have already been cut off, and there are reports that 80 more are scheduled to be.

Another administration action against the small farmer is its attempt to kill the Government's program for making loans to farmers who want to build a new farm home or make repairs to their existing home. President Eisenhower recommended allowing the law which authorizes this program to expire in 1954. Congress disagreed with the President, and extended the program for another year. It might as well have let the program die, however, since the President failed to ask for any funds for the farm housing program in his new budget.

Out of every dollar the housewife spends for food, the farmer today receives only 42 cents—instead of the 46 cents he was receiving in the fall of 1952. This is the lowest the farmer's share has been since 1941. Meanwhlie profits of many food processors have been on the rise. For example, in 1954, dairy farmers received 21 percent less than in 1952. In the same period, the profits of one of the giant companies in dairy processing rose by 35 percent. Yet despite President Eisenhower's repeated campaign pledge that "farmers should obtain their full share of the national income," this administration has failed to make a study of the growing "middleman's spread." In fact, the Republican 83d Congress killed such a study planned by President Truman.

Perhaps most symbolic of the administration's attitude toward the farmer is its steadfast embracing of lower farm price supports, even in the face of falling farm income. The Eisenhower-Benson "sliding scale" system of supports, only half in effect this year, will be fully in effect in 1956.

The administration has tried to argue that because farm prices declined somewhat under the Democratic program of firm supports, the Democratic program is not effective in maintaining farm prices. But the facts prove otherwise. During the 2 years following October 15, 1952 (when the parity ratio slipped below 100 percent) the prices of the 7 commodities supported at the firm level advocated by the Democrats declined only 3 percent, on the average, while the prices of commodities supported on the GOP-favored "sliding scale" fell by an average of more than 18 percent. The prices of commodities enjoying no price supports whatever fell more than 25 percent. And, of course, the farmers hardest hit by these price declines are the small farmers, who have no "nest egg" to tide them over bad times.

The administration has not been lacking in words of praise and expressions of sympathy for the small farmer. Soon after it took office, a study commission was appointed to develop a new program for the "small farmer program" was finally study and delay, the Eisenhower "small farmer program" was finally unveiled in late April. Much of the proposed program had been started under the Democrats, and was already on the statute books, simply awaiting implementation by the administration. But the most striking thing about many of the recommendations was that they were directly opposed to what the administration had been doing to the small farmers during its first 2 years in office. This prompted the Montgomery (Ala.) Advertiser to comment:

"We cannot restrain a persistent question mark about the seriousness of the program. It's all very well to come forth with trumpets about a poor-man's farm program, but why is it that the administration's policies to date have been directed against the little farmer?"

Democrats, meanwhile, have been pressing for new solutions to the problems of the small farmer. Democratic Senators SPARKMAN, of Alabama, and KEFAUVER, of Tennessee (joined by Texas Representative WRIGHT PATMAN in the House) have introduced a bill authorizing the Secretary of Agriculture to designate 500 counties as low-income counties, to which the Government would devote special attention and special help, chiefly in the form of added credit sources to help the small farmers become more efficient. And Minnesota's Senator HUBERT HUMPHREY recently introduced a bill which would concentrate the benefits of price supports on the smaller and middle-sized farms, while at the same time broadening the price support program to include producers of many perishable commodities which do not now get price supports.

The Democrats are not the only ones who have recognized the way the Republicans have looked upon the farmer. In Minnesota, one Republican newspaper editor complained that "We (the Republicans) have kicked the farmer out of the Republican Party."

To this, another Republican editor responded, "While the Republican Party has not kicked the farmer out the door, the party has, in a sense, treated him like a second-rate party member—sort of poor relation—a problem."

Moving Step by Step

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. ELLIOTT. Mr. Speaker, Alabama has been fortunate this year to have ample rainfall for its crops.

However, the State cannot forget the droughts of 1951, 1952, 1953, and 1954.

Barrett Shelton, of the Decatur Daily, calls attention to the fact that this year of plenteous rainfall is the period of sunshine in which we should be making irrigation hay.

He commends the efforts of our colleague, BOB JONES, to get suitable irrigation laws passed.

His editorial follows:

MOVING STEP BY STEP

Though unexpected and abundant rainfall this spring and summer have postponed to a degree some of the interest in irrigation, such a postponement is short range. The long range and the correct viewpoint is that of the farmer who knows that irrigation is going to mean the difference between successful farming and crop failures caused by drought.

Irrigation isn't being postponed in Washington. Congressman BOB JONES, of our district, has been giving much attention to the subject and this week he writes:

"The prospects for action by the Senate on the irrigation bill look very promising right now. As you know, the House passed the bill many weeks ago and it has been pending in the Senate Interior Committee for a long time. This is the bill which authorizes $106 million for irrigation loans and makes loans available to the southeastern States for the first time.

I have been in close touch with the progress of the bill for I feel that it is of paramount importance to the future of agriculture in the Southern States. I was one of the leaders in the House fight to obtain passage and was successful in getting my amendment adopted giving the Secretary of Agriculture jurisdiction over the loan program in our part of the country.

We have put a lot of effort into the irrigation bill and it is very encouraging to know that we may have final action before this session is concluded."

Any southern State, any county, any city in the South failing to recognize the importance of irrigation to those who make a living from farming and to those who do business with farmers will indeed be missing the boat.

We are glad BOB JONES is bird-dogging this measure. We hope every Member of the Alabama delegation in both House and Senate continue as much interest for this measure should be passed. The South will either get into irrigation or get out of farming, driven out by the competition from other sections where irrigation has become common practice.

Delinquency Can Be Curbed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

THEY PROVE TEEN CRIME CAN BE CURBED—ALERT PLANNING KEEPS GANGS OUT OF BUSINESS

(By George Carpozi, Jr.)

Can you envision a city of 733,000 population without—

Marauding teenage gangsters and juvenile gang riots?

Narcotic problems, although the city is a seaport in the Orient?

Serious disturbances or vandalism in the schools?

With juvenile delinquency increasing alarmingly in the Nation, it would hardly seem possible that a city ranking as America's 20th largest could escape the curse of this trend. Yet Seattle, in the State of Washington, has.

How this west-coast metropolis has accomplished this feat is a tribute to its imaginative and forward-looking citizens and officials who have made a serious business of fighting youth crime.

How well their efforts work is reflected in these figures.

Last year Seattle's police department reported 7,909 offenses and incidents involving juveniles. In 1953 there were 8,051.

The city is one of a few in the country that can point to a decrease rather than an increase in youth crime. Importantly, half of the cases were noncriminal—such as motor violations and neglected and lost children—which many communities exclude from their juvenile-delinquency statistics.

Seattle's progress was made despite a 10-percent increase in youth population, resulting from annexation of a large developed area adjoining its northern limits, including Lake City.

Many experts have blamed slum environments and inadequate housing for delinquency. They have said time and again that tenement overcrowding forces children to the street gangs and the pathways of crime.

NO GANGS AND NO SLUMS

It should be no surprise then that Seattle—a city without gangs—is a city without slum tenements. It is a city of homes. Few families live in apartments, fewer in flats.

Inadequate recreational facilities also are blamed for upending youngsters balanced precariously between delinquency and nondelinquency.

Again, Seattle lends corroboration to this thinking. The community is rich in playgrounds, parks, salt- and fresh-water beaches. It has easily accessible forest and mountain areas. Regardless of economic status, no Seattle child need be denied camping and hiking experience.

INTERESTED IN YOUTH

But the "payoff" in the low rate of juvenile delinquency doesn't stem merely from adequate and proper housing and recreational facilities. While the evidence is reassuring that good surroundings are likely to offset influences producing delinquency, the credit for Seattle's success goes further—to an alert and efficient community and its organizations which render an intense interest in the city's youths.

Police, schools, community clubs, the park department, newspapers, service clubs, sportsmen's clubs, health and recreational agencies are all vitally interested and busy promoting activities for the city's youngsters.

Mrs. Irene Durham, captain in charge of the police department's crime prevention bureau, places "inestimable value" on the close liaison between police and groups working with youths.

FORMULATE POLICIES

One example of this cooperation is a monthly meeting by various officials to discuss juvenile delinquency and formulate policies for united and constructive action.

Among those who attend the meetings are the superintendent of schools and other school officials, the sheriff and prosecuting attorney of King County, the judge and chief probation officer of the juvenile court, the superintendent of parks, and an enforcement officer from the State liquor board.

Mrs. Durham cites the modus operandi of a typical antidelinquency program:

"We conduct daily and nightly inspection of places where young people congregate. This results in the apprehension of truants, runaways, and curfew violators.

"By this means, too, many predelinquents are discovered and through work with them and their parents, much is accomplished in the field of prevention.

"Delinquents are handled as individuals. In cases of first offenders and those committing minor offenses, the matter is usually adjusted with them, provided their attitude is good and their parents are competent and understanding.

"The importance of this first contact cannot be overestimated. Juvenile officers attempt to stimulate among parents a sense of their responsibilities for the training and behavior of their children. At the same time they try to stimulate among young people a sense of responsibility for their own action.

"Special emphasis is placed on work with children whose living conditions are injurious from neglect, abuse, or other causes. Those cases are of major importance, because the children lack opportunity for normal health development.

"A special investigation is made of all contributing factors and referrals are based upon need to juvenile court or to local agencies which offer a special service."

AID TO CHILDREN

Programs for aid to children in the Seattle area range from assistance given by a kind citizen of a neighborhood on up to State organized agencies.

An outstanding program is the one carried on by the public schools, which have an enrollment of 135,000. Of that number, only 2,370—or 1.7 percent—went to court on delinquency charges in 1954.

When tendencies toward delinquency are recognized, Seattle's schools marshal all regular and special facilities to combat and remedy those tendencies.

Here are a few examples:

Elementary schools—If the diagnosis of the department of guidance services shows regular work in school is beyond the capacity of some children, they are transferred to adjustment classes. In these classes the content and method of instruction are geared to the ability of the children, and the tasks are ones at which the youngsters may achieve success. Classes are limited in numbers so teachers may give personal help to each child—not only in studies, but also in behavior.

Secondary schools—In the junior and senior high schools efforts are redoubled to tailor what the school has to offer to the probable goals of the pupils.

The Inter-High School Council—Organized about 20 years ago, it is sponsored by the assistant superintendent of schools and consists of representatives from each high school, with faculty advisers. It meets 4 or 5 times a year.

Originally, the council was organized to deal with a communitywide problem—Halloween vandalism. For years city officials and police struggled vainly to stem the tide of these holiday depredations which ran into the thousands of dollars.

After the council was set up school authorities and city officials presented the problem to it. The young people accepted the challenge. Today police find Halloween night no different than any other night. And for each of the last Halloweens not a single offender had to be dealt with by juvenile court.

Year after year the mayor, police, fire, and park departments, juvenile court, sheriff's office, school board, parent-teachers association, and others meet regularly with the Inter-High School Council and encourage its continued leadership in all affairs.

Thus the influence—and challenge—passed down by the elders to the high school students carries along through lower grades, and youngsters have willingly accepted and followed the pattern of leadership established.

An outstanding program resulting from the council's activity is the all-city dances for Seattle high school students. Representatives of the PTA, the Seattle park system, and students get together to arrange the dances. The dances draw as many as 3,000 youngsters.

There have never been cases of gang fights, brawls, or orgies at these dances.

STUDENT PROBLEMS

The council also sponsors inter-high school conferences to focus attention on other problems concerning students, such as safe driving.

At the State level in the fight against delinquency is the Washington State Council for Children and Youth. Comprised of 21 unsalaried members, they are appointed by the governor.

Since formed four years ago the board has succeeded in improving quarters for boys in custodial schools, improving personnel and bettering their salaries, and improving methods of handling juvenile offenders.

While it has only advisory capacity, the board acts as an efficient watchdog on all State governmental agencies concerned with youth problems.

Many other programs help keep Seattle's juvenile delinquency rate in check.

BOY SCOUTS AID

The city's Boy Scout organizations are active to thie end. Membership is the largest, percentagewise, of any area in the United States.

The Seattle Post-Intelligencer, whose reporters conducted the survey for this article, has its own program of events for youngsters. The newspaper sponsors a ski school (some 800 high school boys and girls are taken by buses to a mountain ski area each Saturday of the winter season), hoop shoot, quiz down, swim classes, Golden Gloves, all-star baseball, softball, junior bowling, junior and tiny tad golf tourneys.

An alert PTA is strongly responsible for keeping many officials "on the job," and does much to arouse public support for worth-while activities.

Control of unwholesome "entertainment joints," virtual elimination of undesirable Saturday afternoon movies, better television shows, a new State law for control of crime comics, and efforts toward better health conditions, adoption, and foster home provisions are some of the PTA's contributions to a healthy juvenile situation in Seattle.

The Dreadful Dilemma of the Democrats

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD an article from the July 23, 1955 issue of the Saturday Evening Post entitled "The Dreadful Dilemma of the Democrats," by Joseph and Stewart Alsop:

THE DREADFUL DILEMMA OF THE DEMOCRATS

(By Joseph and Stewart Alsop)

One night last spring, the grand panjandrums of the Democratic Party had the riot act read to them. It was read in a ladylike way, but in no uncertain terms. The occasion was a private get-together in Washington, after a public speechmaking, $100-a-plate dinner for Speaker of the House SAM RAYBURN.

After the dinner, a glittering assemblage of big names of the Democratic Party

gathered more or less impromptu, in the small Georgetown house of Philip Stern, an official of the Democratic National Committee.

Among the great Democratic movers and shakers present were Adlai Stevenson, front runner for the 1956 Presidental nomination, and his friend and potential rival, W. Averell Harriman, Governor of New York. There were a number of prominent Senators, including JOHN SPARKMAN, of Alabama, Stevenson's 1952 running mate, and WILLIAM FULBRIGHT, of Arkansas, one of Stevenson's chief campaign advisers. And there were Democratic propagandists, brain-trusters and idea men in every nook and cranny of the Stern living room.

The Rayburn dinner had been a veritable orgy of self-congratulation. Former President Truman, to be sure, had made a rather routine "give-'em-hell" speech. But the mood had been all mutual admiration rather than attack. Adlai Stevenson had paid tribute to the Democratic Party as the party of social progress, civil freedom, and peace, without even mentioning the existence of a Republican administration. And Speaker RAYBURN, after extolling the Democratic Party as the repository of all the virtues, even paid a little tribute to the President, saying "Our hearts go out to President Eisenhower * * * as he wrestles with the problems of life and death that confront the Nation."

The mood of stately self-approbation hung on at the Stern party, when it was suddenly and rather rudely shattered. The shatterer was the attractive and formidably articulate liberal newspaper columnist, Doris Fleeson. Miss Fleeson's reading of the riot act went about as follows, according to those who still vividly recall the occasion:

"Well, I'm glad you all love each other so much, and it's certainly been a lovely, refined evening. But you're not the Democratic Party I used to know. The Democrats used to be able to work up a sweat. The Democrats used to have a coarse and vulgar desire to win. The Democrats used to like a fight. I remember Fiorello LaGuardia saying, 'There's one thing my opponents can count on in the clinches, I ain't no gentleman.' You're all very gentlemanly, I know, but do you really think you're going to beat Eisenhower with the kind of performance you put on tonight?"

By this time, a strained silence had fallen over the assembled company. Averell Harriman, sitting directly behind the embattled Miss Fleeson, was heard to mutter, "That's the stuff; pour it on, Doris." Stevenson, sitting on a coffee table opposite the columnist, listened intently, smiling a trifle thinly. Somebody echoed former President Truman's charge that the virtues of the Democrats and the failings of the administration were being concealed by the kept Republican press. Miss Fleeson snorted.

"The press has given you a better break than you deserve," she said. "The press has made all the issues you have. If you did the opposiiton's job of opposing—and that means opposing Eisenhower—the reporters would report it and the publishers would publish it. Reporters don't report what you don't dare say. There's no news in gentlemanly refinement and mutual love feasts."

There was more in the same vein. When Miss Fleeson had finished, Adlai Stevenson got up from the coffee table, made some polite, noncommittal remark and moved away, amid a certain pained tension. The tension was understandable. With unerring if perhaps somewhat ruthless accuracy, Miss Fleeson had put her finger squarely on the infinitely painful dilemma which now confronts the Democratic Party. It is a dilemma which must somehow be resolved, moreover, if Adlai Stevenson, the almost certain 1956 Democratic candidate for President, is not to be a mere sacrificial lamb again.

The nature of the dilemma was suggested by the worried question of one of Stevenson's friends in the Senate, who asked, "How in the devil to you beat a man when it's political poison to criticize him?"

The problem is just about as simple as that. Every Democrat, even the most sanguine, agrees that President Eisenhower is remarkably popular—more popular by far than any presently visible Democrat. He is so well liked that any direct criticism of him is politically dangerous to the critic—and even to the critic's party. How, then, is the President's popularity to be so reduced and eroded that the big prize—the White House—can be won back for the Democratic party in 1956?

This problem is being constantly, anxiously and sometimes angrily debated in the inner sanctums of the Democratic Party. The debate has produced two main schools of thought, with many sub-schools and sub-sub-schools. One main body of thought might be called the Johnson-Clements, or congressional, or lay-off-Ike school. The other might be called the presidential, or National Committee, or tear-into-Ike school.

Actually, of course, the opposing lines are not all that clearly drawn. There are many shades of difference within each camp. Averell Harriman, for example, as his reaction to Miss Fleeson's little lecture suggests, is by temperament more inclined to the direct attack than Adlai Stevenson. And in the congressional group, Speaker RAYBURN, despite his kind words at the dinner, is much more outspokenly critical of the President—in private—than his opposite number in the Senate, Majority Leader LYNDON JOHNSON. But by and large it is accurate to say that two basically contradictory views of how to deal with the awful Eisenhower problem have emerged in the Democratic Party.

Let one of the leading Democrats in the Senate describe the views of the lay-off-Ike school:

"Look, say a friend of yours buys himself a new car. Say you want to sell him another car. Do you tell him he's bought a lemon? Hell, no; that's an insult to his judgment. You tell him that, and he'll hang onto that car for dear life.

"It's the same way in politics. The voters bought Ike in 1952 in a big way. If we Democrats told them in so many words they bought a lemon—why, we wouldn't get away with it. It would help Ike and hurt us. Attacking Ike head on—that's the sure way to lose control of Congress in 1956, what with five out of six thinking Ike's a great guy. The voters never did buy the Republican Party, though. So what we've got to do is build up our party and take both houses in 1956."

"As for beating Ike, I don't think the problem is going to arise, because I don't think Ike will run—he's just like a schoolboy waiting for the school's-out bell. And if he does run—well, that's the candidate's problem. Our job up here is to make a good record and get ourselves elected."

It is easy to see why adherents of the lay-off-Ike school are concentrated in Congress. Very few Members of either House would dissent from the view that "our job up here is to get ourselves elected." Attacking a man who is enormously popular does not appeal to many Congressmen as a wise means to that end.

For equally understandable reasons, the second, or tear-into-Ike school finds its main expression in the Democratic National Committee. The committee is traditionally White House-oriented. It is responsive either to the President or to would-be Presidents. Paul Butler, the present chairman, for example, is universally regarded as a Stevenson man. Would-be Presidents quite naturally do not take so complacent a view of the problem of beating the existing President as do Members of Congress.

The arguments of this second school are rather obvious. It must be assumed that Eisenhower will run again. The White House, after all, is the real object of the exercise—the source of patronage and power. The President cannot be beaten as long as "5 out of 6 think Ike's a great guy." Therefore, ways must be found to persuade large numbers of voters that he is not really such a great guy after all.

But how do you go about it? It is at this point that the tear-into-Ike school breaks down into sub-schools and sub-sub-schools. For example, do you tear into the President himself or do you just attack the administration and leave it up to the voters to remember whose administration it is? And what is the tone of the attack to be—violent, or "Ike's a good guy, but," or high-level chiding, or what?

The violent approach was tried early this spring, by West Virginia's ancient Democratic Senator, MATTHEW NEELY. NEELY made a venomous personal attack on the President before the CIO, implying among other things that Eisenhower is hypocritical in his religion. It quickly became apparent that NEELY's attack had boomeranged, gaining the President's sympathy even among strong Democratic voting groups.

A more subtle approach is favored by the astute editors of the Democratic Digest, lively propaganda organ of the Democratic National Committee. For some time, the Digest gave the President the kid-glove treatment. But about the beginning of this year the gloves began to come off. Since then, the Digest has been engaged in an effort to picture the President as a kind of agreeable boob.

President Eisenhower, according to the Digest stereotype, is an amiable but weak fellow, who can never make up his mind about anything. He is pictured as putty in the hands of such powerful and sinister figures as Secretary of State Dulles, Secretary of the Treasury George Humphrey, and Attorney General Herbert Brownell.

Much emphasis is also placed in the Digest on the President's golf playing; the Presidential golf clubs are roughly equated with Nero's fiddle. This amiable but incompetent golf player, the Digest implies, should be permanently retired to the golf course, and a serious political leader should be entrusted with the Nation's affairs. (This serious fellow is, of course, a Democrat, and although the Digest is not supposed to take sides among Democrats, internal evidence strongly suggests that his first name is Adlai.)

The paid circulation of the Digest is around 100,000. This is a good par for the course for a political propaganda organ, but it is not going to change any election results in an electorate of 60 million. Yet the Digest line on Eisenhower is significant for two reasons.

In the first place, it gives a clue to the way Stevenson is likely to handle the Eisenhower problem. The Digest's treatment of Eisenhower, which is humorous and subtle, rather than angry and bombastic, bears the Stevenson imprint. At any rate, it is certainly true that Clayton Fritchey, able editor of the Digest, would not take a political line which his close friend Stevenson disapproved.

In his speech on the Formosa crisis this spring, which was a mixture of sound sense and partisan politics, Stevenson had kind words for the President and extremely harsh words for the President's Formosa policies. In a more elegant way, he came pretty close to saying: "The President deserves all our sympathy, but, my God, what a mess he's making of things." This suggests that, in trying to solve the Eisenhower dilemma, Stevenson is likely to adopt some Stevensonian variant of the Digest line.

The Digest line is also important because the magazine is read principally by Democratic politicians and party workers, and the Digest line thus tends to become the party

line. There have recently been occasional echoes of the Digest's thrusts at the President. Two Senators, ALBERT GORE, of Tennessee, and KERR SCOTT, of North Carolina, have criticized the President by name—previously an unheard-of thing, except in the special case of old NEELY. SCOTT got particularly rough with the President, charging him, among other things, with "passing the buck down instead of up."

But it is significant that both GORE and SCOTT are Southerners and freshmen, with most of their terms ahead of them. There has been no rush by less safely placed politicians to emulate the Democratic Digest. And the fact is that the amiable-boob stereotype has not really caught on, even among fervent Democrats. It simply does not square with the popular image of Dwight D. Eisenhower. On the contrary, if the polls and the politicians, including the Democrats themselves, are to be trusted, the popular image of Eisenhower as a combination great man and good friend is as firmly fixed as ever. And the Democrats are feeling a mounting sense of angry frustation as they search for some way to deal with the Eisenhower problem. It is strange that the search should be so difficult.

For, by all the rules of logic and history, there should be no Eisenhower problem. On the contrary, the odds should be very heavily against an Eisenhower victory in 1956. If Eisenhower were a faceless President X, every political pundit, examining what are known as "the objective facts," would conclude confidently that he was faced with a near-hopeless uphill fight for reelection.

Consider a few of these facts. President Eisenhower is, amazingly, the first President in our history to lose both Houses to the opposition in the first election after his own first-term election. Equally amazingly, the 1954 election gave the Democrats the biggest proportion of the popular vote since the depression year 1934. (The Democrats claim that gerrymandering by Republican State legislatures concealed the magnitude of their victory.)

Consider, moreover, what the 1954 election meant in terms of electoral votes. In States where Senators or Governors headed the ticket, 25 States, with 316 electoral votes, were won by Democrats, and only 12 States, with 112 electoral votes, went Republican. This very clearly suggests that if a faceless Mr. Democrat had run against a faceless Mr. Republican, Mr. Democrat would have won hands down.

There have been plenty of other indications of a powerful Democratic trend. Since 1952 the Democrats have won nine governorships and lost none, and they have made consistent impressive gains in municipal elections and in State legislatures. All this would ordinarily be enough to convince the wiseacres that the Democrats were a cinch for the White House. But it is only a part of the story.

For it is, of course, a lot easier for a Democrat to become President of these United States than a Republican. If you study the statistics, you are surprised that Republicans ever occupy the White House. Suppose, for example, that Stevenson runs against Eisenhower again in 1956, which is very far from improbable.

In 1952 Stevenson dropped 3 of the 10 supposedly "solid" Southern States to Eisenhower. He is now making a determined effort to woo the South solidly back into the Democratic fold. Suppose he succeeds, which seems likely. He will then start with the normal Democratic advantage of 104 electoral votes out of the 266 needed to win.

Suppose he wins the normally Democratic border States of Kentucky, West Virginia, Missouri, Oklahoma, and Texas. Suppose he takes three of the big Northern States—say, New York, Pennsylvania, and Michigan, all of which went Democratic last fall. He will then have 264 electoral votes, and of the 30 remaining States he need win only 1 of the smallest to be elected.

This is enough to suggest the enormous head start which any Democratic candidate enjoys. The Republican has to score a really big lead in the popular vote in non-Southern States if he is to win. And even in terms of the popular vote the task of the Democratic candidate in 1956 looks far from impossible.

If there are 20 typical American voters gathered together in 1 place, 11 voted for Eisenhower in 1952 and 9 for Stevenson. Next year the Democratic candidate need only persuade just 1 of those 20 voters to change his mind, and the election is a tossup, with the odds favoring the Democrat because of his southern headstart.

In moments of optimism, the more sanguine Democrats sometimes succeeded in persuading themselves that the 1 vote in 20 is already changed. There are all sorts of people, they argue, who voted for Eisenhower last time and who should, logically, have changed their minds—southerners returning to the party of their fathers, disgruntled farmers, voters in the power-hungry areas who don't like the administration's power policies, workers and small-business men who have not shared in the current prosperity, mothers unhappy about the handling of the polio vaccine, even Italo-Americans who thought that Mr. Edward J. Corsi got a rough deal from the State Department. Surely if you add up all such disillusioned voters, the Democrats say hopefully, the total comes to that needed 1 vote in 20.

But when the Democrats consult those modern oracles, the pollsters, or when they simply listen to what people are saying back home, gloom returns. Indeed, it is astonishing how many Democrats have lost what Miss Fleeson called the coarse and vulgar desire to win. Leading Democrats in Congress, especially, seem remarkably reconciled to the prospect of a second Eisenhower term. The only real hope, they say—on a strictly but-don't-quote-me basis—is that the President will succumb to the charms of his Gettysburg farm and retire. Therefore, they argue, it would be fatal for the Democrats to attack him—to do so would "get his dander up," and then he would run again.

This curious theory that the President will quietly fade away if only the Democrats don't make him mad is a symptom of a political situation which has no historical precedent at all. One reason for this amazing situation is, of course, the political phenomenon called Dwight D. Eisenhower.

Not long ago a couple of Democrats and a newspaperman were chatting idly in the small, cluttered office of the Senate Democratic Policy Committee. One of the Democrats took a pipe out of his mouth and pointed to a front-page newspaper photograph of the President. The picture showed the President grinning a small-boy grin, with his hand over his mouth in a funny, half-embarrassed gesture. It was a picture of an immensely likeable human being.

"That damn picture's worth 3 million votes for Ike," the Democrat remarked sadly.

The second Democrat pointed to still another newspaper photograph of the President. This one showed him grimly thoughtful, frowning slightly, his jaw thrust forward in determination, every inch the national leader.

"That one's worth another 3 million," said the second Democrat. "And the hell of it is they're not the same 3 million."

The Eisenhower personality makes it possible for the President to break all the established political rules and get away with it. In the 1954 campaign, for example, he intervened more actively for his party than any other President in modern history. The voters went right ahead and elected a Democratic Congress. This should have been a crushing blow to his prestige. It was nothing of the sort. Everybody agreed that the Republicans would have been far worse beaten if he had not intervened, and the election actually increased his political stature. What is even more astonishing, the election in no way dimmed the popular image of him as being somehow above party—an image which is one of his greatest political assets.

Moreover, the voters never seem to blame the President—as they have always blamed Presidents in the past—for what goes wrong. "The farmers get mad at Benson, or the mothers get mad at Mrs. Hobby," one frustrated Democrat remarked, "but nobody ever gets mad at Ike." This is not, to be sure, entirely accidental. The Republican strategists are wholly aware that the magical Eisenhower personality is the party's greatest asset, and they are determined to protect the asset, "even," as one of them remarked, "if a few of us have to be the fall guys." But the Democrats have obviously made this task of asset protection a great deal easier.

It is not only that the Democrats have been afraid to criticize the President. They have utterly failed to develop a single "gut issue"—an issue which really stirs the emotions of the voters, and which could be used as a springboard for an assault on the President's popularity.

There were plenty of gut issues in 1952—"the mess in Washington," "the Truman war," "time for a change," the so-called Communist issue, mink coats, deep freezes, and the rest of it. All these issues were tied directly into the White House in the voters' minds. They undoubtedly hurt Stevenson badly and helped Eisenhower. But what comparable issues have the Democrats to use against Eisenhower in 1956? The voters are not likely to be aroused to an anti-Eisenhower frenzy by the charge that the President spends too much time on the golf course.

The liberal Democrats like to blame the lack of issues on the southern leadership in Congress—above all on Senate Leader LYNDON JOHNSON. JOHNSON is a superb political technician, and it is true that he sometimes seem more interested in running the Senate smoothly than in making issues for his party. But the real fault lies with the liberal Democrats themselves.

They are the idea men of the Democratic Party, and they have run out of ideas. A decade and a half ago, Franklin D. Roosevelt announced that "Dr. New Deal" was dead. He has never come alive again. The Fair Deal, as a body of political doctrine, never really existed at all. It was a myth. It produced only two original political ideas—the Brannan farm plan and the Ewing health plan—and both of these proved so unpopular that they were stillborn. Otherwise, ever since the war, the Democrats have simply been living on bits and pieces of dead old Dr. New Deal's prescriptions.

The Democrats have also been living on Republican shortsightedness. Harry Truman scored his great surprise in 1948, thanks to the 80th Congress, which scared many voters into thinking that the Republicans really would "take it away." The Eisenhower administration has shown no disposition to repeat the error. Far from taking it away, more people have actually been brought under the social-security umbrella and other Government umbrellas than ever before.

Moreover, although by any rational definition the Eisenhower administration is a conservative, business-minded administration, it has not been hogtied by Republican doctrine. It is the purest milk of Republican doctrine that such matters as schools and roads are strictly the business of the States. Yet when it became clear that the condition of the schools and the roads might provide the Democrats with their sought-after gut issue, the administration quickly moved in with a road program and a school program of its own.

The Democrats can shout till they're hoarse that both programs are phony and that both are dead as mutton anyway. But the fact that the administration moved first reduces the Democrats to me-tooism. Indeed, on many issues, the Democrats can only say unhappily, "Yes, but we'd spend more money on it," just as the Republicans used to say, "Yes, but we'd do it more cheaply and efficiently."

The Democratic dilemma is further complicated by "Peace and Prosperity," the prospective Republican campaign slogan for 1956. Many people equate generals with war, and in 1952 many people had been taught by memory and 20 years of Democratic indoctrination to equate Republicans with depression. There must have been large numbers of voters who pulled the lever for Adlai Stevenson because they feared that General Eisenhower would lead the country into war or that Republican Eisenhower would lead the country into depression. As of this moment of writing, both these fears have proved wholly unfounded. This is why some astute observers believe that, in another Eisenhower-Stevenson race, that much-sought-after 1 voter in 20 may come out of Stevenson's 9, not out of Eisenhower's 11.

Yet this reasoning also suggests how the Democrats' horrible dilemma might be solved for them overnight—admittedly in a rather dreary way. There already exists a curious laboratory experiment which shows how the Democratic dilemma would be solved by a serious economic letdown.

The laboratory is economically distressed West Virginia, where unemployment in the coal mines is on a full-blown depression scale. When he was running for reelection in West Virginia last year, Senator Neely, all unnoticed by the rest of the Nation, repeatedly attacked the President, whom he called "Eisenhower," even more violently than in his CIO speech. And despite his great age and a remarkably undistinguished record, the West Virginia electorate sent NEELY back to the Senate with a handsome 58,000 majority.

In short, the President's personal popularity, so potent a political factor in every other State, was no help at all to the Republicans in West Virginia. National depression would instantly produce a whole mushroom crop of Neelys, and for the Democratic Presidential candidate it would solve at a stroke the problem of dealing with the President's popularity. The President's popularity would no longer exist.

There is one other way in which the Democrats' dilemma might be resolved. No one fears any longer that the President's military background has endowed him with warlike views. On the contrary, the obvious fact that the President is profoundly a man of peace is one key to his popularity, as both parties have become increasingly aware.

Indeed, ever since the so-called peace issue was injected into the 1954 campaign, both parties have been contending for the label of "peace party." And this has created a situation potentially exceedingly dangerous for the President. For in such a situation the power of the executive to take firm preventive measures to avoid war tends to be paralyzed.

To be sure, the failure to be firm can be very popular for a time, as Neville Chamberlain discovered in the thirties. But only for a time, as Chamberlain also discovered. And although the parallel is obviously inexact, it is a trifle disturbing to recall that in the late thirties both major British parties were also competing for the peace-party label.

But such caveats and forebodings are probably unjustified. The President is wholly aware of these dangers, and determined to avoid them. No doubt he will do so. All his life things have gone right for him in the end. "He hasn't got a lucky star," one Democrat has rather bitterly pointed out. "He has a whole galaxy of lucky stars."

That galaxy of lucky stars explains at least in part the President's remarkable personal popularity. People sense by instinct that Eisenhower is a lucky man, and they want to share in the luck. As long as the Eisenhower galaxy remains firmly fixed in the firmament, the dilemma of the Democrats is going to be extraordinarily difficult, perhaps impossible, to solve, however coarse and vulgar their desire to win may become.

Delinquency Can Be Curbed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

THEY PROVE TEEN CRIME CAN BE CURBED: COPS AND PARENTS TEAM UP TO CHECK DELINQUENCY

(By George Carpozi, Jr.)

"Everybody's criticizing teen-agers today. We try to give them a pat on the back. We'd rather have them on our side than against us."

That's Police Chief Edward L. Peterson talking. He's head man of a 13-member police force responsible for keeping law and order in Boone, Iowa, a typical Midwest town of 12,164.

A railroad division center, Boone is the birthplace of Mamie Eisenhower.

Take away its autos and television sets, and anyone visiting Boone will think it a town out of a "gentler era"—not like one of today's many communities throughout the country that are overrun with juvenile terrorists and plagued by teen-aged crime waves.

There is hardly any juvenile delinquency in Boone worth mentioning. Last year police averaged only 6 arrests a month—72 boys and 1 girl for the year—compared to 10 a month in 1953.

And in 3 years only 6 youths were taken to court. The others were straightened out by police and parents—and psychiatric help when necessary.

The town has no juvenile dope cases, no knifings, no brutal assaults. In fact, none of the spectacular crimes of the big cities. The last murder was in 1948, when a crazed father killed his wife and son, then himself.

How does Boone do it?

"We don't threaten kids when they get in trouble," explained Chief Peterson. "We don't get tough with them. You just lose them that way.

"We try to gain their confidence and let them know someone cares about them. That must be proved to them before they'll cooperate."

But Boone's treatment of juvenile delinquents can hardly be called soft. If anything, it has distinct earmarks of firmness.

"As our first contact with a juvenile will leave a lasting impression," said Peterson, "we conduct ourselves in the best possible manner. Thus we invariably tell a kid in trouble what we're going to do with his case.

"Then we make certain that we keep that promise. No police force can maintain proper respect of its juvenile population with a reputation of not keeping promises."

TYPICAL CASE

Here is a typical handling of a case:

A boy from one of the finest families in town got mixed up with a boy paroled from a reformatory. The two were accused of stealing cars. Both were brought to the stationhouse.

The boy from the fine family convinced his father police were all wet in suspecting him.

"He was laughing up his sleeve at me," said Peterson.

"I let him go home, but he knew darn well I didn't believe him. The next day I saw him on the streets and asked him to come along to the station.

PAROLED TO FATHER

"I asked him why he didn't tell the truth, and pretty soon he told me the whole story.

"I instructed him to go home and tell his dad what he'd told me.

"Was I around when he did? No, sir. That's the boy's job, not mine.

"A little later, the father came in and he was singing a different tune. We paroled the boy to his father and didn't have any more trouble.

"Usually I visit the parents after we get a case sewed up. We hash over the whole thing and try to come to some definite conclusion. I don't see any sense sending kids to court if you can straighten out the matter at home."

ABOUT TEEN DRIVERS

Operating this way, Boone's police force has earned the respect not only of the town's younger population, but its grownups as well. Chief Peterson said:

"It's been at least 15 years since a man was taken to the stationhouse and beaten. It just isn't necessary. Everyone respects us."

By far the biggest problem to both police and schools in Boone is the teen-age driver. Car ownership in Boone County is high—one car for every third person. Last year, drivers 16 to 20 accounted for three times as many accidents proportionately as the 31 to 40 age group.

Some of the youths have "souped up" their cars, and they sometimes race through the town's residential and business streets. Unlike Pomona, Calif., which solved the problem with a "drag" strip for hot rodders, Boone has yet to establish a track.

Many of the cars that teenagers have are "old chunks" that eat up gas and oil. So some boys play hookey occasionally to work and earn money to pay the upkeep.

TRUANCY LOW

Despite this, the high school averages close to 97 percent daily attendance. That's less than 1 absence in each class for all causes—sickness, excused absence, truancy.

There's one other complaint from the high school about teen-age conduct.

"Eight of our class of 80 senior girls dropped out this year to be married," said Principal Glen P. Moore. "We don't go into it, but I presume that all were pregnant."

Five other girls outside the senior class assertedly dropped out of school last year for the same reason. One was 15, another 14.

Moore explained that, as well as he could judge, most of the girls got in trouble with "steady boy friends" and were not available to all comers.

BLAMES BROKEN HOMES

The town seems to attach little scandal to the "shotgun" weddings, many of which are performed in church. The attitude of most persons is that these incidents are "mishaps" and not juvenile delinquency.

Superintendent of Schools Donald F Seaton, who supervises 2,623 children in 6 elementary, 1 junior high, 1 senior high school, and a junior college, attributes most of the

trouble to broken homes and to parents who don't care.

"That's because Boone is a railroad town. Many of the fathers are gone from home half the time. Railroad employment is so general that if you don't know the occupation of a child's father, you just assume he's a railroad man."

While Boone has a tolerant attitude toward its youth, it has taken ample precautions to protect itself against incipient outbreaks of juvenile lawlessness.

CURFEW MAINTAINED

The town's heaviest artillery in its fight to keep delinquency in check is a wartime curfew law requiring youths under 17 to be off the streets by 10:30 p. m.

"We don't enforce it to the letter," Chief Peterson confided. "If the kids have a reasonable excuse we let them go. But if they're out gallivanting and raising heck, we crack down on them and their parents."

The town's youths obviously don't have to be reminded of the regulations. Neither do their parents. There hasn't been a prosecution of either parent or child under that law in several years.

Boone is strict in other ways, too. Take, for example, this recent case in the town's "Mayor's Court," which hears all infractions of city ordinances.

Mayor Ralph L. Cooper, 72, a retired civil engineer, who also presides as judge, had 2 16-year-olds before him. They were accused of racing each other in hot rods through the town's streets. The charges were made by a citizen!

DENY RACING CHARGE

The boys denied they were racing. But after listening to all the testimony, Cooper fined each $25, then suspended all but $10 of the fine. One of the boys still protested his innocence, insisting he hadn't signaled his friends in the other car to race.

"I was just dropping a cigarette out the window," the youth pleaded.

"If that's the case," Mayor Cooper shot back, "maybe you'd like to tell us where you bought the cigarettes. That's against the law, you know."

That shut the kid up.

Town officials agree that youngsters cannot get in serious trouble in Boone because the town has none of the "wicked haunts" of the big cities.

NO NIGHT CLUBS

There are no night clubs in Boone, and the town's taverns are "mild" by comparison to the gin mills of the bigger towns and cities. Women are seldom seen in them, and the hardest drink served is beer. Iowa law prohibits sale of liquor by the drink—only State liquor stores sell the stuff to licensed purchasers.

Only gathering places for teen-agers "on a spree" are a few local restaurants and soda parlors.

One of these places, labeled by Chief Peterson as the worst teen hangout, was visited by Reporter Frederick Bird, of the Chicago American, who made the 350-mile trip to Boone for the survey.

YOUTHFUL PRANKS

The waitresses were up in arms about the teen-agers and their bad ways. Their complaints boiled down to:

(1) Teen-agers smoking, which the management firmly prohibits.

(2) Hooking the loose silverware.

(3) Putting salt in the sugar bowls.

(4) Loud and crude behavior, such as lolling in the booths.

Despite these complaints, Boone's citizens almost to a man will agree that the town's youthful population is far better behaved than that of a majority of communities around the country.

MANY PLAY FACILITIES

Boone has a large number of recreational facilities—so many, in fact, that a youth center failed recently because the kids were already too busy.

In natural recreational facilities, the town is wealthy. Across from the high school is a block-square park. At one edge of town is a heavily wooded park of several hundred acres, with deep ravines and an explored look about it.

The large park has a big municipal swimming pool and a lighted baseball diamond, which is among the best in Iowa.

Then, too, Boone is a town of avid churchgoers. There is an astounding total of 27 churches. Sunday attendance is high. Most churches have meeting halls and facilities for teenagers, such as shuffleboard, badminton, and table tennis.

TOWN GOLF-MAD

Boone is also golf-mad, and membership in the local country club is relatively unrestricted, fees low. There is also an 8-week summer recreation program for youths, supported by the Community Chest.

No wonder the youth center failed.

In Boone, it seems, the children live in a setting of a society that understands them, wants to help them, and does. Their excellent record as juveniles is a reflection of that community's sincere dedication to the welfare of its youths.

Red Threat in Indonesia

EXTENSION OF REMARKS

OF

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27, 1955

Mr. WELKER. Mr. President, in connection with a bill which I introduced today for the relief of Hasan Muhammad Tiro, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Tiro entitled "Red Threat in Indonesia," reprinted from the New Leader of April 11, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED THREAT IN INDONESIA

(By Hasan Muhammad Tiro)

The 80 million people of Indonesia—sixth largest nation on earth, third richest in natural resources after the United States and the Soviet Union—are on the verge of complete Communist domination. The Communists and fellow travelers, their sympathizers, and naive dupes already exercise virtual control over the army, police, Government administration, Parliament, and trade unions.

The present situation exists because the people of Indonesia have been denied the right to vote and elect representatives of their own choice. The present regime, headed by Premier Ali Sastroamidjojo, has been trying to avoid elections for years. The Communists and their accomplices are aware that if the people of Indonesia were given the opportunity to vote freely, they would almost certainly lose the election to the non- and anti-Communist Masjumi and Socialist Parties. While postponing Indonesia's first free election, the Sastroamidjojo forces are tightening their grip on all power levers of government.

There has been a series of purges of high-ranking anti-Communist government officials. Among the anti-Communist army officers who have been removed are General Simatupang (Armed Forces Chief of Staff), Colonel Nasution (Army Chief of Staff), Col. Gatot Subroto (commander of the Seventh Division), Lieutenant Colonel Parman (commander of the Djakarta police force), and Lieutenant Colonel Kosasih (commander of the South Sumatra Division). These and others were purged for demanding that the regime hold a speedy general election for a democratic government. The Communists maintained that these officers had interfered in political affairs and that their actions constituted insubordination. But the Communists had only praise for the pro-Communist army officers (Lieutenant Colonel Warrouw in Celebes, Lieutenant Colonel Sudirman in East Java, and Lieutenant Colonel Kretarto in South Sumatra) who deposed and arrested their anti-Communist superiors, simultaneously declaring their allegiance to President Soekarno. No charge of insubordination was raised against them. In fact, Soekarno soon recognized them as division commanders and promoted each of them to the rank of colonel.

As for the government administration, the Governor of North Sumatra, Abdul Hakim, and the mayor of Djakarta, Sjamsuridjal, were ousted after declaring their open opposition to the Communist Party. The Socialist Governor of Central Java, Milono, was also replaced by a fellow-traveler. On March 5, the regime removed Sosrodanukusumo, head of the secret police department, to make way for the new Red chief of the newly-established Indonesian GPU. Sosrodanukusumo, a Masjumi party member, was accused by the Minister of Justice of trying to help anti-Communist Chinese leaders in connection with the deportation actions taken against them.

Meanwhile, the public's clamor for a general election gained momentum. To appease the public, the regime made a gesture in the direction of preparing for a general election by establishing a central election committee in Djakarta. This body will be responsible for counting the votes if the election ever takes place. This election committee, however, is of strange composition. Represented on it are the PKI (the Communist Party), the PNI (Scekarno's Nationalist Party), the PRN (People's National Party, whose leading figure, Minister of Justice Gondokusumo, prosecuted the anti-Communist Chinese in Indonesia), the Sobsi (the Communist-controlled federation of labor), the SKI (the People's Association Party), the Murba (a proletarian party), and the Perti (a Moslem sect whose leader, Siradjudin Abas, participated in the Peking peace conference). The anti-Communist Moslem Masjumi Party (by far the largest party in the country) and the Socialist Party, were specifically excluded from representation on the committee. Thus, the chance for an honest election has been precluded from the start by Soekarno's adroit stacking of the cards in favor of the pro-Communist forces.

Since the Sastroamidjojo regime took over the government more than a year and a half ago, no open criticism against the Communist Party has been tolerated. Even the former Premier, Muhammad Natsir, chairman of the Masjumi Party, and Isa Anshary, prominent Moslem leader, were arraigned for interrogation by the prosecutor general's office because of anti-Communist speeches they delivered on September 23, 1953. The newspaper, Tindjauan, in Macassar, was put out of business because it criticized the Red defense minister. Only last month, Tan Po Goan, a member of parliament and therefore supposedly entitled to parliamentary immunity, was interrogated by the prosecutor general for speeches he delivered on the

floor of parliament. A "bamboo curtain" has thus been drawn inside Indonesia, preparatory to next week's meeting of Asian and African leaders in Bandung.

Three times in 9 years, the Communists have tried to take over Indonesia. Twice they were defeated. In 1946, a Communist coup d'etat failed. In 1948, the outright proclamation of a Communist people's republic in Madiun, Central Java, under the leadership of Amir Sjarifuddin, a former Premier and Defense Minister and Soekarno's righthand man, met with failure. Among those convicted and sentenced to jail in the Communist plot of 1946 were Iwa Kusumasumantri, a Moscow-trained Communist, and Mohamed Yamin. Soekarno not only pardoned these men, but appointed both of them to high office. Yamin is now Minister of Education, and Kusumasumantri is now Minister of Defense. It is beyond understanding how the Indonesian people can defend themselves against Soviet encroachment when their Defense Minister is a Communist party leader whose family, to this day, resides in Moscow.

Little consolation can be drawn from the backgrounds of other members of Sastroamidjojo's cabinet. Gondokusmo, the Minister of Justice participated in the Budapest Peace Conference and, as already mentioned, ousted the anti-Communist Chinese leaders from Indonesia. Minister of Labor Abidin participated in the Peking Peace Conference. Minister of Agriculture Sadjarwo represented a Communist-front organization, the Peasant Association. Foreign Minister Sunarjo helped with the Stockholm Peace Appeal drive in Indonesia. The Minister of State Welfare, Siradjudin Abas, also participated in the Peking Peace Conference.

Immediately upon assuming power in July 1953, the Sastroamidjojo regime took dastic steps to destroy all actual or potential anti-Communist forces in the country. In August 1953, the Red defense minister sent his troops to Sumatra to arrest 300 anti-Communist leaders there. The anti-Communist leaders, under the leadership of Tengku Daud Beureueh, Governor of Sumatra, resorted to armed resistance. On September 21, 1953, a united front of all anti-Communist Moslem forces was formed under the leadership of Tengku Daud Beureueh, backed by Gen. Sanusi Partawidjaja in Java, Gen. Kahar Muzakar in Celebes, and Col. Ibnu Hadjar in Borneo. The forces of these leaders are now in de facto control of north Sumatra, parts of west and central Java, south and central Celebes, and part of Borneo. Ironically, these are the same Indonesian patriots who valiantly resisted Dutch colonial forces in the period of 1945–49 when most leaders of the present Sastroamidjojo regime were either in hiding or were meekly permitting themselves to be put in detention camps.

In January 1954, after suffering the brunt of the civil war which it had created, the Sastroamidjojo regime sought to legalize its action by asking the Parliament in Djakarta to declare the anti-Communist movement under the leadership of Tengku Daud Beureueh an outlaw organization. The pro-Communists, however, had to vote by themselves, because the Masjumi Party and the Socialists refused to vote and walked out of Parliament.

The Sastroamidjojo regime had labeled the anti-Communist forces terrorists and fanatics, while in fact the Government itself employs terror as a matter of policy in order to intimidate the people. Massacres of anti-Communist peasants and burning of homes by Government troops are daily occurrences in places far from Djakarta. The regime, by means of the state-controlled radio and subsidized press, has blamed these barbaric acts on the anti-Communist forces, while the latter have no facilities to make their voice heard by the outside world. Documentation of these charges is now in the hands of the American Committee for Cultural Freedom, which is investigating the violations of cultural freedom in Indonesia.

The writer of this article was privileged to present a list of violations of human rights by the Sastroamidjojo regime to the United Nations during the last General Assembly. Then anti-Communist forces in Indonesia challenged the regime to permit an international investigation of these atrocities. Nothing has been done. The Communists and their allies have effectively dropped a bamboo curtain over Indonesia. They have assumed power in fact if not in name. But the people of Indonesia, who fought successfully for their independence, will not permit their freedom to be lost again—this time to communism—if they know that they have the free world's sympathy and support.

Delinquency Can Be Curbed

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

THEY PROVE TEEN CRIME CAN BE CURBED: TOUGH POLICY ELIMINATES GANGS

(By George Carpozi, Jr.)

Paterson, N. J., is waging a winning fight against juvenile delinquency.

A strict and tough policy by police and the courts is one reason.

Cooperation and participation by the community's citizens in the handling of the problems of youth is another.

A third and most important reason: When a child gets into trouble, his parents are in trouble, too.

Parents are held responsible for their children's acts, including truancy and vandalism.

Third largest city in the State, with a population of 150,000, Paterson does not have a single organized teen-age gang.

In the past 5 years not a single teen-ager has been caught using or peddling narcotics.

In the entire history of the city there has never been a case of a teen-ager beating up a cop.

Major credit for the success in the fight against delinquency—and all crime— goes to Police Chief James Walker, who has headed the police department for 16 years.

Under his direction Paterson has enjoyed one of the lowest delinquency and crime rates in the country. The record is even more astonishing in view of two delinquency-inducing factors:

The city is a heavy industrial center. • • • It is only a few minutes commuting time from New York City and its influences of gang warfare and narcotic problems, which have yet to creep across the Hudson River to Paterson.

USE FEAR AS WEAPON

How does Paterson do it?

"The element of fear is our most effective weapon against juvenile crime," explained Police Capt. Charles A. McGrath, head of the city's youth guidance bureau, an arm of the police department.

"We allow a youngster only one chance to make a mistake. The next time he steps out of line we lower the boom."

How well this works may be gleaned from this recent case:

About 3 weeks ago there was a sudden epidemic of fireworks explosions. Police caught several youngsters. Following procedure, police turned over the youngsters to the youth guidance bureau.

PARENTS CALLED IN

Parents were ordered to appear with the children at the bureau's headquarters. All of the youths were subsequently released in their parents' custody, after promises were made to keep the children from firecrackers in the future. But the trouble persisted.

Police then called school authorities and requested them to announce in schools that the youth guidance bureau would process no fireworks cases, but would refer them to the juvenile domestic relations court.

Judge Milton Schmach, Passaic County's only juvenile court judge, promised to cooperate and to level severe penalties against all offenders.

"Since then," Captain McGrath said, "we haven't had a single report of firecrackers being exploded in the city limits. The element of fear stopped it."

Here is how police cope with the problem of juvenile offenders:

A youth picked up for any offense—even staying out late at night (although there is no curfew law as such)—is brought to police headquarters. Parents are summoned at once.

If the child is not involved in a crime such as a robbery, burglary, or other felony, police will release him to the parent. But the parent must sign a form assuring appearance of the child—with the parent—at the youth guidance bureau for a hearing.

Juveniles arrested for serious crimes are sent at once to Hope Dell Detention Home in Wayne Township. They are not released to their parents.

The bureau holds hearings on all cases once a week, on Saturday. The cases are heard by an eight-member Youth Guidance Commission, a group appointed by Mayor Lester F. Titus.

If the offense is minor and it's the first time the youngster has been in trouble, the commission usually recommends release of the child to the parent. However, if the parents' background is not good and chances of rehabilitation are small, the case is referred to court.

A second offender, no matter how minor the offense, seldom escapes referral to court.

At the court trial, the juvenile may be represented by an attorney, who can make excuses for the suspect. But he cannot cross-examine the patrolman.

Last year the Youth Guidance Bureau handled 542 cases. The commission adjusted 321 of these. It referred 126 to the court.

Now see why the youth of Paterson is discouraged from trying to step out of line a section time. Out of the 126 cases that went before Judge Schmach, 86 offenders—or nearly 70 percent—were sent to one of three institutions for indefinite confinement.

Paterson doesn't tolerate nonsense in schools either. The city has 25,000 school kids in 26 grammar schools, 2 high schools, and 2 vocational high schools.

Truancy—authorities agree it is one of the first steps to delinquency—is a serious offense in any Paterson school. By State law, it is a misdemeanor.

DEALING WITH TRUANCY

Here is how truancy is handled by the schools:

Principals must report all truants at once to the superintendent of schools. In turn, he notifies the attendance bureau of the Board of Education, which has seven attendance officers.

One of the officers immediately investigates the truant by visiting his home and

bringing the youngster and one of his parents to the bureau's headquarters.

After a conference with Senior Clerk Tom Morris, the truant is ordered to report every day after school to the attendance bureau. This punishment may last a week or two or more, depending on the case.

If a child fails to report on any day, another week is tacked onto his punishment. Chronic offenders are referred without hesitation to the Child Welfare Bureau. With the cooperation of the superintendent of schools, the child may then be transferred to the city's "adjustment" school, operated by the Child Welfare Bureau.

If there is no improvement at this school, the truant is referred to the Juvenile and Domestic Relations Court. The court may send the truant to one of the State institutions.

And the judge may also sentence the parent to a jail term.

Vandalism—also a misdemeanor under State law—is another nuisance that Paterson has little truck with. The city handles all cases with an iron fist. The children themselves may be dealt with in the way other delinquents are processed

But, in addition, parents are held responsible for any damage against city property, and must make restitution. That may be fined up to $25 by the court.

POLICE MORALE HIGH

"The cooperation of schools, courts, and citizens is all-important in our success," said Chief Walker. "But our greatest asset is the high morale of the department."

Department strength consists of 272 members; including all ranks. In addition, there are 70 women school traffic guards who relieve patrolmen for other duties. Annual salary of the Paterson patrolman is $3,900—about average for a city its size.

National Vegetable Week

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. MILLER of Maryland. Mr. Speaker, tomorrow is the beginning of National Vegetable Week which draws attention to the developments in an important segment of our great agricultural program. We Americans are fortunate, both from the standpoint of enjoyment and health, in having access to such abundant variety and supply of fresh and processed vegetables. Under leave granted, I include herewith an editorial from the July 23 edition of the Packer:

NATIONAL VEGETABLE WEEK

Promotion on a broad scale in virtually every medium of publicity, backed by some of the country's biggest names, including that of President Eisenhower, will give the seventh annual National Vegetable Week, July 28 to August 6, and sponsored by the Vegetable Growers Association of America, the biggest support it has yet enjoyed.

In a statement issued recently at the White House, President Eisenhower told the people of the country: "Our vegetable growers make an important contribution to the maintenance of a flourishing American agriculture, essential to American prosperity.

"They decide for themselves what to grow, how much to produce, and when to harvest. In their efforts they are assisted by the Department of Agriculture, which, through research projects, fact-gathering facilities, and the issuance of acreage and marketing guides, provides them with information relevant to production and marketing problems.

"With my congratulations, I extend on the occasion of seventh annual National Vegetable Week, to the members of your association my best wishes for continued success in their endeavors to increase our Nation's agricultural abundance and advance the well-being of our people."

National Vegetable Week was originated in 1949 by the Vegetable Growers' Association of America. The object was and is, to acquaint consumers with the importance of vitamins and energy in vegetables, to emphasize nutrition, avoid waste and loss, and to give consumers fresher vegetables of better quality at lower prices when they are at peak supply.

Indicating the increasing interest on the part of public officials in the part National Vegetable Week plays in the Nation's health program, the governors of some 30 States have issued National Vegetable Week proclamations which are in line with the thought expressed by President Eisenhower.

The Packer joins in extending congratulations to VGAA and its membership and its officers on this worthwhile annual promotion, which, incidentally, seems to be doing a better job, and accomplishing more, each year. May it continue to expand.

David Crockett (Davy Crockett) Actually Served in House of Representatives During Three Congresses

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. DOYLE. Mr. Speaker, I am sure that you, as well as all other Members of this great legislative body, have recently and frequently been asked about one David Crockett, and whether or not he actually served in the House of Representatives from Tennessee. I, having been asked that question several times by adults as well as youngsters, including my own grandchildren, asked the Library of Congress to give me what the facts were, and I know their reply to me will not only be of interest but will enable every Members of this great legislative body to give the accurate information about David Crockett's service in the 20th, 21st and 22d Congresses:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., July 7, 1955.

Hon. CLYDE DOYLE,
Member of Congress,
Twenty-third District, Calif.

REFERENCE SERVICE REPORT

Inquiry: Information about the service of David Crockett in the House of Representatives as a Representative from Tennessee during the 20th, 21st, and 23d Congresses.

Report: A search in the files of the House of Representatives (Record Group 233) in the National Archives has disclosed the following original documents bearing on the service of Davy Crockett in the House of Representatives during the 20th, 21st, and 23d Congresses. The cost of making negative photostat copies of these documents is indicated.

TWENTIETH CONGRESS

1. Resolution submitted on January 17, 1828, instructing the Committee on Military Affairs "to inquire into the expediency of authorizing the Secretary of War to appoint one or more skillful engineers to examine several points on Big Shoal Creek, and Big Buffalo, in Lawrence County, in Tennessee, and to report upon the fitness of these places, respectively, as a site for a national armory, similar to the Armories of the United States at Springfield and Harper's Ferry." Two pages. Cost of photostatic copy, 80 cents.

2. Resolution submitted on February 19, 1828, instructing the Committee on Military Pensions "to inquire into the expediency of placing Andrew Derryberry, a soldier of the Revolution, on the pension roll." Two pages. Cost of photostatic copy, 80 cents.

3. Resolution submitted on February 19, 1828, instructing the Committees on Military Pensions "to inquire into the expediency of placing William Walker, a soldier of the Revolution, upon the pension roll." Two pages. Cost of photostatic copy, 80 cents.

4. Resolution submitted on April 2, 1828, instructing the Committee on Post Office and Post Roads "to inquire into the expediency of establishing a post route from Jackson to Mount Pierson; thence to Purdy's office, thence to Perryville, Perry County, State of Tennessee." Two pages. Cost of photostatic copy, 80 cents.

5. Resolution submitted on May 10, 1828, instructing the Committee on Public Lands "to inquire into the propriety of making a donation of 160 acres of land to each actual settler on the land of the United States in the State of Tennessee, south and west of the congressional reservation line, to include their improvement." Two pages. Cost of photostatic copy, 80 cents.

6. Resolution submitted on January 20, 1829, instructing the Committee on Roads and Canals "to inquire into the expediency of having reviewed and opened a road from Bolivar, in the State of Tennessee, through the Chickasaw nation of Indians, to the Cotton-gin Port, in the State of Mississippi; and, also, a road leading from Memphis, in the former State, to Jackson, in the latter, passing also through said nation of Indians." Two pages. Cost of photostatic copy, 80 cents.

7. Resolution submitted on January 29, 1829, instructing the Committee on Post Office and Post Roads "to inquire into the expediency of establishing a post route from Memphis, in the Western District of Tennessee, by Loves' Settlement and Tocklish, in the Chickasaw Nation, to Columbus, on the military road in Mississippi, to intersect the great southern mail route at that point." Two pages. Cost of photostatic copy, 80 cents.

8. Certificate of election, signed on September 18, 1827, by William Carroll, Governor of Tennessee, commissioning David Crockett to represent the Ninth Congressional District of Tennessee in the House of Representatives during the 20th Congress. Two pages. Cost of photostatic copy, 80 cents.

TWENTY-FIRST CONGRESS

9. Resolution submitted on December 15, 1829, to appoint a select committee with instructions to inquire "into the most equitable and advantageous mode of disposing of the refuse land lying south and west of the Congressional reservation line in the State of Tennessee." Two pages. Cost of photostat copy, 80 cents.

10. Resolution submitted on January 26, 1830, instructing the Committee on Post Office and Post Roads "to inquire into the expediency of establishing a post route from Dyers Burgh in Tennessee to Rutherfords Mills thence to Baerfields on the west bank of the Mississippi in Arkansas Territory—then to Rutherfords Mill then to Natchez Bluff then to the town of Eaton thence to Trenton

Gibson City." Two pages. Cost of photostat copy, 80 cents.

11. Resolution submitted on January 27, 1830, instructing the Committee on Internal Improvements to inquire "into the expediency of having a survey of a rout [sic] for a canal from the head of the Muscle Shoals on the Tennessee River State of Alabama to some proper point on the Big Natches above Bolivar in the State of Tennessee." Two pages. Cost of photostat copy, 80 cents.

12. Resolution submitted on February 1, 1830, instructing the Committee on Military Pensons [sic] to inquire into the expediency of placing George W. Stell of Tennessee a soldier of the last war on the penson [sic] role as an involede [sic] pensioner." Two pages. Cost of photostat copy: 80 cents.

13. Resolution submitted on February 9, 1830, directing the Committee on Military Pensions to inquire "into the expediency of placing Joseph Asbridge of Tennessee a sailor in the Revolutionary War on the list of military pensioners." Two pages. Cost of photostat copy: 80 cents.

14. Resolution submitted on February 25, 1830, that the West Point Academy be abolished, and "the appropriations annually made for its support be discontinued." Two pages. Cost of photostat copy: 80 cents.

15. Resolution submitted on April 6, 1830, instructing the Committee on Post Offices and Post Road to inquire "into the expediency of establishing a post rout [sic] from Duncan's post office in Hardeman county to Mitchell's store in McNairy County thence to Cypress Bridge in said county at James Smith's from that to J. C. Simpson's in Harden county thence to Esq. Lettery's to intersect the Savannah rout [sic] in said county." Two pages. Cost of photostat copy: 80 cents.

16. Resolution submitted on April 20, 1830, instructing the Committee on Military Pensions to inquire "into the expediency of placing the names of James Dougan and George Clarke both of Tennessee on the roll as Military pensioners for services rendered in the Revolutionary War." Two pages. Cost of photostat copy: 80 cents.

17. Resolution submitted on December 16, 1830, requesting the Postmaster General to communicate to the House of Representatives "the amount of money agreed to be paid by him under the late contract for carrying the mail from the City of Washington to the City of Baltimore also the amount of money heretofore paid by his predecessor for the like services." Two pages. Cost of photostat copy: 80 cents.

18. Resolution submitted on January 5, 1831, instructing the Committee on Military Pensions to inquire "into the expediency of placing the names of Andrew Derryberry of Perry County and William Gillispie of Hardeman County, Tennessee, both revolutionary soldiers—on the pension list * * *" Two pages. Cost of photostat copy: 80 cents.

19. Resolution submitted on January 20, 1831, instructing the Committee on Pensions to inquire "into the expediency of placing the name of James Crawford of Tipton County Tennessee a soldier of the Revolutionary War on the pension list. * * *" Two pages. Cost of photostat copy: 80 cents.

20. Resolution submitted by Crockett, with the date not indicated, "that 6,000 copies of the report of the Secretary of War communicated to this House on Monday last in relation to the Military Academy at West Point be printed for the information of the people of the United States." Two pages. Cost of photostat copy: 80 cents.

21. Report made by Crockett as a member of the select committee appointed "to enquire into the most equitable manner of disposing of the refuse public lands lying south and west of the Congressional Reservation line in the State of Tennessee." House Report 137, 21st Congress, 1st session (Jan. 29, 1830). Four pages. Cost of photostat copy: $1.60.

22. Bill H. R. 185, 21st Congress, reported by Crockett from the aforesaid select committee (accompanying House Report 137, 21st Congress, 1st session), titled "A bill to amend 'an act authorizing the State of Tennessee to issue grants and perfect titles to certain lands herein described and to settle the claims to the vacant and unappropriated lands within the same.'" Four pages. Cost of photostat copy: $1.60.

23. Certificate of election, signed on October 7, 1829, by William Carroll, Governor of Tennessee, commissioning "David Crockett, a citizen of the Ninth Congressional District of this State * * * to represent the said district, as a Member of the House of Representatives, in the 21st Congress of the United States." Two pages. Cost of photostat copy: 80 cents.

TWENTY-THIRD CONGRESS

24. Resolution submitted on December 17, 1833, to appoint a select committee, "consisting of seven members, whose duty it shall be to inquire into, and report the most equitable and advantageous mode of disposing of that portion of the lands belonging to the United States, situated south and west of the Congressional Reservation line, within the State of Tennessee." Two pages. Cost of photostat copy: 80 cents.

25. Resolution submitted on April 10, 1834, instructing the Committee on Post Office and Post Roads to inquire "into the expediency of establishing a post rout [sic] from Totten's Walls in Obion County by Seth Bedford's to Troy in Tennessee." Two pages. Cost of photostat copy: 80 cents.

26. Resolution submitted on December 11, 1834, instructing the Committee on Roads and Canals "to enquire and report to this House whether the improvemint [sic] of the navigation of Obion Fork, Deer, and Hatchy Rivers would be a national object and if so what would be the probable cost of removing the obstructions to the head of navigation of said rivers." Two pages. Cost of photostat copy, 80 cents.

27. Report made by Davy Crockett as chairman of the select committee "to whom was referred the subject of 'inquiring into and reporting the most equitable and advantageous mode of disposing of that portion of the lands belonging to the United States situated south and west of the Congressional reservation line, within the State of Tennessee.'" House Report 120, 23rd Congress, 2d session (January 2, 1834). Six pages. Cost of photostat copy, $2.40.

28. Bill H. R. 126, 23rd Congress, reported by Representative Crockett from the aforesaid select committee (accompanying House Report 120, 23rd Congress, 2d session), titled A Bill to amend an 'act authorizing the State of Tennessee to issue grants and perfect titles to certain lands therein described, and to settle the claims to the vacant and unappropriated lands within the same.'" Four pages. Cost of photostat copy, $1.60.

In the 22nd Congress, William Fitzgerald won election to the seat in the House of Representatives which David Crockett had occupied in the 20th and 21st Congresses, but Crockett made a contest of the election. Certain depositions taken in the contest are in the files of the House of Representatives at the National Archives, and photostat copies of these depositions, amounting to 17 pages, can be made for $6.50.

Washington, D. C.

DAVID CROCKETT

Crockett, David (August 17, 1786–March 6, 1836), frontiersman, was the son of John and Rebecca (Hawkins) Crockett, and was born near the present Rogersville, Hawkins County, Tenn. His father, a revolutionary soldier who fought at King's Mountain, was born either in Ireland or on the voyage to America, and his mother in northern Maryland. His parents moved (probably from Lincoln County, N. C.) to the Hawkins County location about 3 years before he was born, later settling on the Holston, where the father kept a tavern. Here the boy remained until about his 13th year. To escape an anticipated beating he ran away from home, making his way as far as Baltimore and wandering about for nearly 3 years. On his return he worked for 6 months for a neighbor to pay off a debt of $36 owed by his father, and another 6 months for another neighbor to cancel a similar debt of $40. At 18, to heighten his chances with the girl of his choice, he went to school for nearly 6 months, but left when he learned that he had been jilted. Some months afterward he married Polly Findlay, and on a rented tract, with a horse, his bride's dower of two cows with calves, and $15 capital borrowed from a friend, he set up a home of his own. Though a mighty hunter, he was a poor farmer, indolent and shiftless, and he did not prosper. A couple of years later, with his wife and two babies, he moved to a farm in Lincoln County, near the Alabama line. In the Creek War of 1813–14, under the command of Andrew Jackson, he served with distinction as a scout, but retired before the end of the campaign, hiring a substitute to fill out his term of enlistment.

His wife died about 1815, leaving him with three children. He acquired two more by his marriage, some months later, to the widow of a fellow soldier. He now moved to a settlement 80 miles west, where he was informally chosen a magistrate, and on the incorporation of the district into Giles County was appointed a justice of the peace. In after years he could boast that in reaching his decisions he "relied on natural-born sense instead of law learning" and that none of his judgments was ever reversed. He was elected as a colonel of a militia regiment organized in his district, and in 1821 was elected to the legislature. He was then wholly unacquainted with public affairs and did not even know the meaning of the word "judiciary." He moved again, this time to a point in the extreme western part of the State, near the junction of the Obion with the Mississippi, where his nearest neighbor was 7 miles distant. Here, among other activities, he hunted bears; and unless he woefully miscounted his victims, he succeeded in killing, during a period of 8 or 9 months, 105 of them. His new constituency elected him to the legislature in 1823. In the spring of 1826 he attempted to float a cargo of staves down the Mississippi, losing all his cargo and nearly losing his life. A jocular proposal that he run for Congress decided him to make the race in earnest, and after a campaign enlivened by his humorous stories and the ridicule of his two opponents he was elected. He served in the 20th and 21st Congresses (1827–31), was defeated for the 22d, but was elected to the 23rd (1833–35). In April 1834, he commenced his celebrated "tour of the north," visiting Baltimore, Philadelphia, New York, and Boston, and, after returning to Washington, left for home to prepare for a new campaign. From the time he entered public life he had generally opposed Jackson, having voted in the legislature against him for United States Senator, and later having voted against many of the Jackson measures in Congress. An effective rally of the Jackson sentiment in his district caused his defeat. Disheartened by this reverse, he resolved to leave Tennessee. The movement for Texan independence attracted him, and he started for the war front by way of Little Rock. He arrived at the Alamo in February 1836, took part in its heroic defense, and fell, bullet riddled, in the final assault.

Crockett was a brave soldier, an able scout,

and an expert rifleman. He was generous and openhanded, frank and upright, of a sterling independence of spirit and blessed with a bubbling good nature and an exceptional degree of self-confidence. His knowledge of public questions, meager at the start of his career, was probably not greatly enhanced by his service in Washington. He was not a student. He rather prided himself on his lack of education—correct spelling appearing to him in the main as something "contrary to nature" and grammar "nothing at all," despite "the fuss that is made about it." To what degree the autobiographical writings published in his name were his own cannot be said; but it is noteworthy that they bear little resemblance, either in substance or manner, to such of his letters as have come down to us.

Delinquency Can Be Curbed

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

DETROIT SHAKES OFF GRIP OF JUVENILE GANG TERROR

(By George Carpozi, Jr.)

Not long ago, a reign of juvenile terror had Detroit, Mich., in its grip.

It was a fearful situation. No youth was safe from the savagery of the teen-age hoodlums who—while few in number—wielded terrible power.

Here is an exact picture of the situation as it existed then:

Frequent stabbings, often after high-school football and basketball games.

Wanton destruction of school facilities when roving gangs broke into buildings and smashed furniture, desks, and lockers.

Battles at drive-in restaurants when rival groups fought over parking places.

Girl auxiliaries who would instigate fights among boy gangs, cheer them on, and even join the fights.

Bullies forcing younger children to turn over allowance money to avoid beatings.

Drinking and petting parties in public parks and homes where parents were absent.

Police seemed virtually powerless to stop the marauding youths as their outrages grew daily.

The situation might have continued to this day had it not been for Detroit's citizenry, which finally found itself no longer able to stomach that condition. They shouted for action.

POLICE ORDERED TO GET TOUGH

Police then adopted a new strategy in dealing with the troublemakers. The strategy was contained in a two-word command Police Commissioner Edward S. Piggins gave his officers:

"Get tough."

Ordering immediate action, Piggins said:

"This time we act first and get the survey reports later. A survey report won't help a policeman if a group of rowdies jump him."

Did the get-tough policy pay off in Detroit?

Let's look at the record:

There are no organized teen-age gangs in the city today; juvenile offenses since the first of the year are down 15.2 percent.

PROGRAM DEVISED TO CURB HOODLUMS

Detroit Times Reporter Ed Breslin, who conducted the survey for this article reported:

"Piggins' idea clicked at once. Scared by the knowledge they would not be coddled by police, the young hoodlums stopped causing trouble."

But Piggins sought a program that would prevent other youths from trying to flout the law.

He went to leading church, school, business, and family groups to get help in mapping a preventive program. The group drew up this six-point program:

Police Department Youth Bureau strengthened by addition of 15 officers.

Six officers assigned to work only on the gang problem.

The entire graduating class from the Police Academy placed in high delinquency areas.

The public alerted, and kept alerted, to the many needs of youth to prevent their falling into a gang.

Youth given a sense of belonging and showing them Detroit was also their city.

Cooperation between church, school, business, and family groups to provide outlets for the youths.

DETROIT'S SOLUTION A SIMPLE ONE

The show of police officers on the street held down trouble as Detroit hurried to set up educational and entertainment programs to keep its youth busy. Business sponsored athletic leagues for boys and girls, schools were opened for activities that kept children off streets, churches set up youth clubs, and family groups arranged neighborhood programs.

It was that simple to solve Detroit's problem. While there are still some loosely knit groups of boys who fancy themselves "gangs," they are actually groups who play and work together.

Another city which has juvenile delinquency under control is San Francisco.

Again, as has been the case so often with communities which have the upper hand over young lawbreakers, the entire city is interested—and doing something—about the problem.

San Francisco police won't tolerate nonsense from youths. A strict policy by the Police Juvenile Bureau keeps constant tabs on youngsters.

Police pay regular visits to saloons to check on whether minors are being served. They also visit "creameries" (soda parlors) to break up "unhealthy" gatherings of youngsters.

DELINQUENCY CUT IN SAN FRANCISCO

Juvenile delinquency reached its peak in San Francisco in 1953, when 2,204 boys were referred to the probation office of the Youth Guidance Center for action. Eighty percent of the cases were reported by police, the others by schools, parents, relatives, social agencies and even private citizens.

In that peak delinquency period, 912 youths went before Juvenile Court in actions seeking to have them declared wards of the court, because parents were unable to control them.

Not bad for a city approaching 1,000,000 population.

And last year, the number dropped to 674.

Quincy, Mass., is one of the few cities in Greater Boston where major crime seldom rises.

HOW MASSACHUSETTS TOWN LICKED PROBLEM

And juvenile delinuency is even less frequent. The rate of court-adjudged delinquency in this city of 84,000 dropped to 1.1 percent of the 7-to-17-year-old population in 1953—to less than 1 percent in 1954.

Quincy's apparently successful solution of the juvenile delinquency problem is due to these factors—a three-man Juvenile Delinquency Bureau in Police headquarters, an excellent probation officer, the cooperation of civic organizations and a broad municipal recreation program.

But the work of these groups probably never could have achieved the success it has if it were not for a single policy—prevention.

Here's how that works:

Two of the three men assigned to the juvenile delinquency bureau—established in 1953 and one of the few in the State—investigate all cases of delinquency; the other concentrates on prevention.

The latter visits every classroom in the school system—there are 13,800 school kids—from September through June. He even explains to high-school students the meaning and need for city ordinances and State statutes.

The other two juvenile experts work with schools, too, but their job is to handle children in trouble. They take each case to the child's school guidance counselor, ask for suggestions, and string along if time is sought by the counselor to help a child.

"We don't go to court unless there's nothing else left to do," they say.

But none of the three is "softheaded" about juveniles.

With prevention in mind, the word has gone out in Quincy that it's a good idea for parents to get in touch with the juvenile delinquency bureau when their children are in borderline scrapes.

To make things easier, Quincy has a 9:30 p. m. curfew.

"If all parents carried out their responsibilities," says Judge James A. Mulhall, "you wouldn't need a curfew."

Boston Record-American Reporter Harold K. Banks, who surveyed the Quincy situation for the Hearst newspapers, reported that the recreation commission also was doing a phenomenal job on a small budget and with generally fair-to-middling facilities."

While able to spend only $35,908 in 1954, the commission, nevertheless, attracted a total child attendance of 162,815 to its various activities in a 9-month season.

NO TEEN-AGE GANGS IN ALBANY

The cost per child in the program has been figured at 7 cents a year.

Albany, N. Y., also has been kept free from the delinquency plague.

In Albany, a city of 150,000, there are no organized teen-age gangs.

Last year, only 237 cases of delinquency were handled in Albany County Children's Court. The number is more remarkable when compared to the incident of youth crime in other cities the size of Albany.

Probably the most important factor in keeping delinquency down in the Empire State capital is a variety of youth-activity movements, which include two Boys Clubs, the Catholic Youth Organization, YMCA, YMHA, and a number of community chest-sponsored organizations.

All teach youngsters the benefits of good, clean play.

Another factor in keeping delinquency in check is the Albany Children's Court, which pulls no punches with young hoodlums—especially any who would form gangs.

Whenever there is a hint that a gang is being formed the leaders of these would-be gangs are brought into court at once. Supervision of the leaders is continued until there is assurance the threat has been dispelled.

In Albany—as in Quincy and in all the cities and towns where delinquency has been routed—the campaign against delinquency seems to be wrapped up in a single motto, so aply expressed by Quincy's Police Chief William Ferrazzi, "prevention is far cheaper than reformation."

Should the Natural-Gas Bill Be Considered at This Late Date in the Session?

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. WOLVERTON. Mr. Speaker, there has been considerable surprise that a bill of the importance of the natural-gas amendments should be brought before the House at this late date in the session.

This bill is important from the standpoint of producers, transmission lines, distributing utilities, and consumers. It vitally affects each of these classes, particularly the 60 million or more consumers. They are fearful if the Federal Power Commission is stripped of all its power to regulate the producers that then unrestrained increases in the price of gas will follow.

Competent authorities have stated that even a slight increase in the cost of gas at the wellhead could mean as much as a $200 million to $800 million annual increase to the consumers of the Nation. This would be over and above what they are now paying.

It is because of the danger of such a possible result under the terms of the pending bill, as presently written, that has caused a terrific storm of opposition to arise against the bill. The fundamental objection that has been most often expressed relates to the bill being a repeal of the Supreme Court decision and of the Natural Gas Act in its endeavor to provide protection to the public against unwarranted price increases.

Transmission lines, distributing companies, local utilities, National Institute of Municipal Law Officers—consisting of 900 members representing cities, towns, and municipalities—mayors of 258 cities and towns representing a population of 31,600,000, labor organizations, and many others are against the bill.

Furthermore, it is important to realize that the Committee on Interstate and Foreign Commerce, with a membership of 31, after months of hearings and consideration, was unable to come to a satisfactory solution if we are to judge by the fact that the first motion to report the bill was defeated by a vote of 14 to 14, and, finally, upon a reconsideration vote, was able to report it by only a 16-to-15 vote.

Furthermore, the Rules Committee reported a rule to consider the bill by the close vote of 6 to 5, with 1 member not voting. Had he voted against the granting of a rule, the bill would not be before the House at this time.

Under the above circumstances, is it wise or advisable to attempt to consider the bill at this late date in the session? It seems to the undersigned members of the Committee on Interstate and Foreign Commerce that the importance of the matter justifies our voting against its consideration at this time.

To do so would give the committee an opportunity to give the matter further study and investigation of the whole subject during the recess of Congress and come back to the House with recommendations that would express a greater unanimity of thought than now exists.

As part of my remarks, I include a copy of the letter that was addressed today to our colleagues in the House:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR COLLEAGUE: On July 2 Congressmen HARRIS and HINSHAW directed to their colleagues in the House a letter urging support of the Harris bill, H. R. 6645, as reported by the Committee on Interstate and Foreign Commerce. This bill would amend the Natural Gas Act so as to exempt producers of natural gas from Federal regulation.

The undersigned are strongly opposed to the enactment of H. R. 6645. We believe it is contrary to the public interest and to the interest of millions of consumers in thousands of cities, towns, and communities throughout the whole United States.

This legislation has been vigorously opposed by the mayors of New York, Philadelphia, Pittsburgh, Baltimore, Nashville, Louisville, Chicago, Denver, Detroit, Cleveland, St. Louis, Buffalo, Newark, and many others representing cities and towns, both large and small. The mayors committee, representing 258 cities with a total population of 31,600,000, is opposed to the bill; also State public utility commissions generally, by gas distributing companies, and by nearly all the pipeline transmission companies.

As an indication of the unsatisfactory solution of this highly complex and controversial problem, it is only necessary to call attention to the fact that the bill was reported to the House by a vote of 16 to 15, after it had previously failed of being reported by a vote of 14 to 14. There are no less than five minority reports.

It would be unwise, in our opinion, to pass or even consider on the floor of the House this legislation (H. R. 6645) in its present form. The matter should have closer and more careful consideration before it is brought before the House for action. To do otherwise would mean that numerous and varied amendments would be offered from the floor. This subject presents problems that require the careful, studious, and deliberate consideration that can be obtained in the first instance only in the committee room.

If there is any doubt as to this being the proper course to follow, it seems to us that the statement made by the author of the bill, Mr. HARRIS, within a few days after the bill had been reported by the committee makes plain the necessity of such. We refer to the fact that Mr. HARRIS introduced a resolution for an investigation of the natural gas transmission lines and the distributors of natural gas with respect to the cost of the commodity to the consumer. In urging the necessity for such in a release issued by him at the time of the introduction of his resolution, Congressman HARRIS said:

"It is quite obvious to me, as illustrated by the closeness of the vote by which the bill was reported, that before this situation is cleared up in the interest of the industry as well as the consumer, other factors are going to have to be considered."

We agree with this statement of Mr. Harris. However, we do feel that any such investigation should include all elements that enter into the cost to the consumer, namely, production, transportation, and distribution and not merely the last two elements mentioned. To accomplish this complete purpose we favor such an investigation either under the general jurisdiction of the Committee on Interstate and Foreign Commerce or by a special investigation committee. And, accordingly, we suggest it would be wise to withhold action on H. R. 6645 until the completion of such an investigation.

Furthermore, to have such further study or investigation would prove highly beneficial in supplying information that the committee hearings did not divulge and which, in our opinion, the House should have. For instance, notwithstanding the fact that the committee conducted long and extensive hearings, at no time did any independent producer appear and testify in person, although an attorney appeared and represented himself as speaking for them. And, at no time was any testimony given as to the cost of production of natural gas. The proper course would be to investigate the facts and then develop recommendations for any needed remedial legislation after all of the facts are in.

In conclusion, there are many technical questions, legal and otherwise, involved in the Harris bill that need clarification and careful consideration before adoption. We have not entered into a discussion of such in this letter because the minority reports cover all such in detail. We recommend that you read the minority reports. They are a full, complete, and satisfactory answer to every argument that was made by Messrs. HARRIS and HINSHAW in their letter to the Members of the House urging support of the Harris bill (H. R. 6645).

We, the undersigned members of the Committee on Interstate and Foreign Commerce, are convinced there should be further study and investigation before the House is called upon to act on H. R. 6645. We submit our views for your consideration.

Sincerely,

ISIDORE DOLLINGER, JOHN J. FLYNT, Jr., SAMUEL N. FRIEDEL, WILLIAM T. GRANAHAN, DON HAYWORTH, JOHN W. HESELTON, ARTHUR G. KLEIN, TORBERT MACDONALD, PETER F. MACK, Jr., KENNETH A. ROBERTS, PAUL F. SCHENCK, HARLEY O. STAGGERS, CHARLES A. WOLVERTON.

Philosophies of Justice Black

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. FORRESTER. Mr. Speaker, an article appearing in the Columbus Enquirer, Columbus, Ga., July 25, 1955, and credited to the Memphis Commercial Appeal, and reading as follows, should challenge the interest of every true American:

BLACK'S AMAZING RECOMMENDATION

Associate Justice Hugo L. Black, of the Supreme Court of the United States, has been widely quoted as having said in a public meeting in New York that "the world could not do better than to follow the political and social ideas" of the late Albert Einstein. In view of those same ideas, it is amazing to find Justice Black recommending them.

No one questions the lofty rank of Professor Einstein as a scientist, but almost invariably the results were unfortunate when he ventured out of his specific field. In a magazine article, for example, he once proposed to analyze "the crisis of our times," and went on to declare: "The economic an-

archy of capitalist society as it exists today is, in my opinion, the real source of the evil."

In the same article Professor Einstein scored the principle of production for profit instead of use and what he termed the worker's constant fear of losing his job. He went on: "The profit motive, in conjunction with competition among capitalists, is responsible for an instability in the accumulation and utilization of capital which leads to increasingly severe depressions."

To cure the ills he conceived in effect, he wrote: "I am convinced there is only one way to eliminate these grave ills—namely, through the establishment of a socialist economy, accompanied by an educational system that would be oriented toward socialist goals." On numerous other occasions Professor Einstein revealed his inability to understand the fallacies of socialism as a theory and its perversions by those who profess to operate under it.

There may be some excuses offered for Professor Einstein on the ground that he really dwelt in a world apart and knew too little about politics and the social order to be other than easily deluded by glib and specious partisans of socialism. What palliation can be offered for a man of Justice Black's background, experience, and lofty position when he commends such social and political notions it is impossible to imagine.

It has been an accepted rule that jurists and especially Appellate Court Judges should remain aloof from political questions. Inasmuch as so many of our United States Supreme Court Justices are continually thrusting their political opinions upon the public, I am wondering of their lack of judicial experience explains their failure to recognize the ethics, or whether many of them are so imbued with concepts foreign to our Constitution that they cannot remain silent.

According to the above article, Justice Black says that "the world could not do better than to follow the political and social ideas of the late Albert Einstein." Justice Black undoubtedly knows that Mr. Einstein advised persons working in the Government and teachers in our schools to invoke the fifth amendment, and decline to testify whether they were or were not Communists. Justice Black knows that Mr. Einstein defended the record of J. Robert Oppenheimer, which record was nothing less than amazing regarding his congeniality and friendship to known Communists, extending to even contributing money to most every well-known Communist cause. Justice Black well knows that Mr. Einstein was against "the profit motive" and against private enterprise, and, by the same token, was absolutely against the very foundations of our Government. Mr. Einstein was socialist, at least, and Justice Black evidently thinks that is the supreme way of ilfe for our country.

I am wondering if the philosophies of Justice Black and Justice Douglas, who has demonstrated his devotion to queer ideas to everyone who would listen, do not cause grave concern to every member of the United States Congress and to every true American. No wonder decisions based solely on physchology and sociology are being rendered. No wonder it is practically impossible for the Government to win any case where there is an attempt to restrain or prevent persons under suspicion from working for this Government. No wonder it has become impossible for the Government to deprive anyone of citizenship, and the Government, realizing the situation, is dismissing cases that had been brought for that object. No wonder it has become impossible to deny anyone a visa on account of the theory that every citizen of the United States is entitled to travel anywhere at any time, whether the authorities think it is in the interest of our country, or not. No wonder that our criminal jurisprudence founded on the wisdom of the ages has been virtually destroyed. No wonder that persons who would change our Government have become so bold and so arrogant.

The Federal Flammable Fabrics Act

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. CANFIELD. Mr. Speaker, I am unable to believe that the House, now driving for an early adjournment, would consider any bill which would weaken the provisions of the Federal Flammable Fabrics Act passed by the 83d Congress to protect the lives of our people from experiencing the fate of the hundreds who had been killed or maimed in yesteryear.

My interest in promoting such legislation was borne several years ago when children in my area wearing cheap cowboy suits were casualties because the suits, highly flammable, caught fire and they could not be saved. This interest was intensified after a rash of exploding sweater incidents. I became a sponsor of a bill to stop this kind of business and it was extremely difficult getting such legislation through the Congress. Efforts to amend and weaken the act began soon after the President signed the bill and there were those who predicted the act would be amended and diluted to death.

Currently, importers of Japanese scarves are extremely busy in an effort to secure the passage of H. R. 5222 before we adjourn. Among the first to protest were American textile workers speaking through their unions. Those who would weaken the act spread the story the workers had made an about-face but that is not true and the following telegram I have just received from William Gordon, vice president of the Textile Workers Union of American, emphasizes their unalterable opposition:

NEW YORK, N. Y., *July 27, 1955.*

Hon. GORDON CANFIELD,
House Office Building,
Washington, D. C.:

Rumors are being circulated that the Textile Workers Union of America has withdrawn its opposition to H. R. 5222.

The Textile Workers Union of America has been and still is violently opposed to exempting scarves from the provisions of the Flammable Fabrics Act. The exemption would grant special consideration to increase the importation of the fully printed and finished Japanese scarf. The present importation of the scarf has already caused the loss of jobs of 3,000 American textile workers. It would give preference to Japanese fabrics which are not being given to American-produced fabrics. The passage of this bill will seriously endanger the women of our country who wear scarves about the neck and head. It is highly dangerous to exempt scarves from the provisions of the Flammable Fabrics Act and thus create a serious safety hazard.

We urge you to do everything in your power to defeat H. R. 5222.

TEXTILE WORKERS UNION OF AMERICA,
WILLIAM GORDON,
Vice President.

Friends of the Flammable Fabrics Act, these including leaders of the American textile industry and unions, national women's organizations, the press, fire marshals and fire chiefs, and consumer groups should be alerted that the drive is on. The challenge must be met.

Free Europe Is on the Up—Communist Europe Is on the Down

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a summary of conditions in Europe as reported to me by a good friend who has recently returned from one of the almost annual visits he has been making to Europe for many years in connection with his own business. He is an accurate observer and trusted interpreter of events there, particularly in Central and Eastern Europe. His report is the sort of boiled-down concise information that is most helpful:

DEAR DR. JUDD: I wish to advise you of the following developments I ran into on my recent trip abroad.

1. Swedish friends advised me that the Russian satellites, especially Poland (but also Czechoslovakia and East Germany) had been buying increasing amounts of Swedish grain, and from other sources through Sweden, even since the fall of 1954. Increasing food shortages are reported prevailing behind the Iron Curtain, with hunger serious in Czechoslovakia.

2. Other internal production problems are reported from inside Russia and the satellites. Following such production declines, it is no wonder there are such continuing personnel shifts at the higher levels.

3. While the economy of Western Europe is forging ahead so impressively (and Austria this year impressed me most), it can be assumed that the grapevine is informing Russians of their own ill and declining lot, in contrast to the progress in the West.

4. The signing of the NATO treaties is a triumph for the West, as the Russians tried everything to stop it. Their pinpricks in Berlin are signs of their resentment—more are likely to follow.

5. Bitter hatreds and stronger underground activity are underway in Poland, Czechoslovakia, East Germany, Hungary, etc.

6. Russians seem cocky about their air force, its size, etc., and have sent German scientists home, telling them to tell the West what they know about Russia's air force.

7. After 2 years of better food supplies for East Germans, shortages are again showing up in East Germany.

8. Spanish recovery is beginning.

9. Italian Communist strength is declining; but this may prove temporary only.

Now I believe we have a real chance to make hay if we will pursue our objectives with a measure of intensity. I hope we can learn to move faster than heretofore and thus cope with our fast-moving enemies.

With best regards,

Sincerely,

One Good Way To Determine What America Should Not Do Is To Examine What Communists Are Urging Us To Do

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a recent summary by Jack Lotto, of INS, of the official line being plugged day and night by Communists. I hold my breath when I see us tending to move more and more in exactly the directions the Communists are urging us to take—to their advantage and our own mortal peril:

ON GUARD

(By Jack Lotto)

Communists were instructed this week to come out of their shells and actively "fraternize" with non-Communists in unions and industry. The new "friendship" approach was described by the Red politburo as a good way to win recruits for their program of eventual revolution.

Here is a summary of this important campaign and other themes stressed in Communist propaganda organs in the United States and abroad:

Labor: The latest bulletin of the national board of the American Communist Party slapped the comrades for plugging away almost exclusively in left-wing circles. "Changing times dictate that we be flexible," said the party voice. Criticizing the "imposed self-isolation," the bulletin declared:

"Having lunch with our coworkers, going out on shop-arranged theater parties, bowling, etc., visiting our shopmates, are all natural and enjoyable ways of building lasting and wonderful friendships. * * *

"If we Communists are to play our role, our ties in the labor and people's organizations must be multiplied and strengthened. Our organizational structure and work methods must be geared to speed up the process of extending our mass ties and stimulating mass struggle. * * *

"Recruiting new members is our richest reservoir of future leaders. And there is reason to believe we can increase our recruiting rate in the period ahead."

Geneva: With the Big Four summit talks opening tomorrow, the Communist press reached a high pitch in its efforts to paint President Eisenhower and Secretary of State Dulles as "reluctant dragons." From every direction the Communist publications charged that both American leaders were being literally "dragged" to the Geneva conference tables.

The leading voice in the Red outcry was National Chairman William Z. Foster. Writing in the Daily Worker, where he called for the greatest pressure to force decisions at the talks, he asserted:

"The Washington reactionaries' * * * dearest wish would be to see it (talks) end in a bitter stalemate. Of course, all this sabotage of peace they are carrying out under a thick blanket of peace demagogy, in order not to be repudiated by the peoples.

"At this time the worst and most dangerous illusion is the belief among the American masses that President Eisenhower is going to Geneva as a genuine peacemaker. The reality is that Eisenhower will take constructive peace steps at Geneva only if, under the peace pressure of the vast majority of mankind, he has no other alternative."

Slogans: The party's top official magazine, Political Affairs, told the comrades to keep hammering at these slogans as the talks get underway:

1. Negotiate in a spirit of mutual concessions.
2. Don't rearm (Western) Germany when the whole world can begin to disarm.
3. Ban the H-bomb.
4. Expand East-West trade.
5. Allocate Government expenditures for peace, not war.
6. Seat (Red) China in the U. N.
7. End the cold war.
8. Oppose all "appeasement" of "the Knowlands and McCarthys."
9. Eliminate all international barriers.
10. Negotiate until settlements are reached.

The Big Four Conference at Geneva

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. BURDICK. Mr. Speaker, you will recall that last week I gave an outline of what I thought of the Big Four Conference at Geneva, and without claiming too much for myself I can state that the result was just what I expected. Knowing the Russian communistic philosophy pretty well, I could forecast that the Russians would shy away from a united Germany and would not discuss Russian aggression. They were nice and smiled better than they have before, yet the communistic determination to spread their propaganda beyond their own borders was as insistent as ever. They did not call us names, as Vishinsky and Molotov have religiously done before, but they opposed us as solidly as ever on essential points.

President Eisenhower performed admirably and, I think, did break down the barriers of ill-feeling against the United States that the Russians in their propaganda had succeeded in building up. From the great newspaper spread of President Eisenhower's speeches, the world has been officially advised that the United States seeks nothing but world peace, and that we were sincere in our efforts at Geneva to bring about world peace. I think the position of the United States has been so admirably put before the conference by the President that even if there is nothing agreed to, we have gained by the conference.

The President did not surrender any rights of the United States and made it perfectly clear that we would agree to a reduction in armaments, provided there was a clear and complete inspection of the arms program of our potential enemies. The President played a trump card when he said we would offer for inspection of any of the big or little powers our armament blueprint if Russia would do likewise, conditioned on a free inspection of the arms buildup of those with whom we sought a limitation of armaments. The Russians did not accept this offer, and the world ought to see that the United States is acting in good faith, but reserving the power of self-defense against any nation that may not be sincere. The Russian word has been so many times repudiated that unless a thorough inspection of Russian armaments were made a part of the general curtailment of armaments, the bare agreement to disarm would be only a gesture and might, as it has in the past, be a gesture to our great damage, as was the sinking of our fleet in the Gulf of Mexico.

The President is to be congratulated for putting his statements right on the line and in doing so gave up nothing in concessions as was done at Yalta and Potsdam. The President meant just what he said, and I am sure he has the backing of 99 percent of the people of the United States. I feel that the position of the United States is much more understood by the world than it was before the conference, and that the attempt on our part to bring about world peace was not in vain.

Life Under the Capitalistic System

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. DEROUNIAN. Mr. Speaker, I think that the following editorial which appeared in the Washington Evening Star on July 26, 1955, should be read by every Member of Congress:

NOT BAD, NOT BAD

The International Brotherhood of Teamsters, with some $35 million in its treasury, is doing a nice thing for its president, Dave Beck. It is paying Mr. Beck a reported $160,000 for his Seattle home and letting him live in it rent-free. The union will also pay for all maintenance and taxes.

It cannot be said that this is doing too much for Mr. Beck. For the union, which has just moved into a handsome $5 million headquarters in Washington, did even better by his predecessor, Dan Tobin, according to the New York Times. It provided Mr. Tobin, now president emeritus, with an expensive home at Miami Beach, another house at a summer resort near Boston, a costly limousine, a combination chauffeur-handyman, a full-time maid, and incidental expenses. Mr. Beck, who, like Mr. Tobin, is paid $50,000 a year, gets along without a chauffeur or union-provided house servants.

If all of this points to the conclusion that the union is doing rather handsomely by Messrs. Beck and Tobin, it must be remem-

bered that they have done a great deal for the union. Which, in its own turn, prompts a question: What in the world has become of that iniquitous Taft-Hartley Act—the law that was going to enslave the working people, destroy their unions, and bankrupt their treasuries?

Delinquency Can Be Curbed

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article written by George Carpozi, Jr., which appeared recently in the Hearst newspapers:

THEY PROVE TEEN CRIME CAN BE CURBED: PREVENTIVE TEAMS HELP DISCOURAGE DELINQUENCY—RATE CUT IN SAN ANTONIO

(By George Carpozi, Jr.)

San Antonio's juvenile delinquency decreased in 1954 despite—

An adult crime rate which, while not abnormally high, is marked by bizarre violence springing "from a land basically untamed and a people still close to the frontier."

A narcotics problem aggravated by this Texas city's geographical position as the crossroad of travel from Mexico, which makes it "the easiest town in the Nation for a fix."

HIGH POVERTY RATE

Poverty among one-fifth of the city's more than 500,000 inhabitants that breaks down to 6 percent with incomes of less than $500, 13 percent with incomes less than $1,000 a year.

Not a single new park or recreation facility, thus continuing the city's failure to pass a bond issue for those purposes since 1929.

A lack of even a single psychiatric team to treat children showing signs of delinquency.

A school system of 60,000 students with only four partly trained social workers.

A desperate slum condition and housing shortage aggravated by a 100 percent population growth in 25 years.

DELINQUENCY DROPS

Yet, despite all these handicaps, police figures show San Antonio's juvenile delinquency rate dropped from 2,833 in 1953 to 2,702 in 1954, or about 5 percent.

Even San Antonio's gloomiest juvenile workers agree the figures are encouraging and won't say above a whisper that, with so many problems, things could have been much worse.

How San Antonio reduced its youth crime while faced with so many delinquency-producing conditions is an outstanding accomplishment, and credit belongs in several places.

For instance, police and juvenile officers. They work strongly not only for detection and appehension, but prevention, too.

ROUND OF LECTURES

During 1954 Police Capt. G. E. Matheny lectured 122 civic clubs and P-TA groups, 42 school assemblies, and conductd 45 school classes on guided tours of police headquarters.

In his lectures he uses films, weapons displays, narcotics, facts, figures, and case histories. No oratorical expert, Captain Matheny more than makes up for it with an almost unbelievable earnestness to put over his points.

His lectures to adults are aimed at the danger signs they may see in their own children; his lectures to children are aimed at discouraging predelinquent conduct which leads toward delinquency.

DISPLAY OF CONTRABAND

His weapons and narcotics displays—fearsome things—are all contraband taken from San Antonio juveniles.

Another antidelinquency program yielding high dividends is the police-organized safety patrol, which is basically designed to protect school children at street crossings.

Matheny says it is almost unheard of for a safety-patrol child to get in trouble.

Sometimes the jobs are given to potential delinquents to keep them out of trouble. One such potential delinquent who entered the safety patrol is now nearly through training for the priesthood.

JUNIOR DEPUTIES

In the same class, with similar good results, are the Bexar County Junior Deputies, administered by Sheriff Owen Kilday.

Several hundred junior deputies carry cards and badges, live by a strict code, consider themselves allied with law enforcement, and occasionally in emergencies give real aid with information.

To achieve the success they have, the programs have relied heavily on full cooperation from schools and other agencies.

In addition to various national youth organizations which have chapters in San Antonio, a variety of neighborhood, nonuniform, nonfee recreation halls are in operation.

The Mule Stall in Alamo Heights, a wealthy independent municipality surrounded by San Antonio proper, is a sort of USO for teen-agers, where they can dance, buy refreshments and lounge without encountering trouble.

The city also has about a half dozen settlement houses sponsored by churches and financed by them and the Community Chest, which operate in various neighborhoods of the city.

In addition to recreation, they offer classes in sewing, woodwork, citizenship, English and any other course in demand.

OTHER EFFORTS

While these efforts to check delinquency are exerted, other efforts are underway in San Antonio to extend the prevention field, particularly where the city is lacking.

The Community Welfare Council, allied to Community Chest and deeply interested in delinquency, is currently working on establishment of a child guidance clinic.

The council is raising $135,000 to finance the first 3 years of a $45,000-a-year clinic to handle about 450 young patients annually.

As a long-range approach, San Antonio is pushing for a minimum housing code, but will not be effective until public housing assistance is increased.

San Antonio's goal is clear—it is out to conquer delinquency.

As determination is the keystone of San Antonio's fight against juvenile delinquency, so it is in another "white spot" where the skids have been knocked out from under teen-age crime—Milwaukee, Wis.

SOLVES PROBLEM

Milwaukee likes to pride itself in thinking that it meets the juvenile delinquency problem with some degree of success. Facts and figures leave no doubt that it does.

Since establishment of the police department's Youth Aid Bureau in 1945, Milwaukee's juvenile crime rate has dropped nearly 25 percent.

The bureau is the heart of Milwaukee's antidelinquency program, and while a police function, it is essentially a predelinquency program, which catches youngsters headed for trouble before they get there. This is how it works:

In their regular course of duty, policemen may come upon youngsters in minor scrapes or in potentially troublesome situations, such as loitering around a used car lot after midnight.

AVOID ARRESTS

Rather than book them as juvenile offenders, police get the youngsters' identity and refer them to the Youth Aid Bureau.

The next step is to send a YAB patrolman or policewoman to each of the youth's homes—in plainclothes, to avoid stigmatizing the youngster or his parents in the eyes of neighbors.

Once the cause of trouble is identified, the YAB officer will suggest an activity to eliminate it—hobbies or recreational activities at a social center to replace unsupervised idleness, perhaps a job to earn pocket money and cancel urges to get it the easy way, perhaps a change in schools or curriculum to dispel truancy-producing factors.

What youngsters do with their idle time is the key to youth control, according to Captain Michael Wolke, who has headed the Youth Aid Bureau since its inception.

INTEREST DIRECTED

"Try to find out what a boy or girl is interested in and then put them to work at it," he says. "They crave activity. We try to direct that craving into channels which will be profitable, thus keeping the youngsters out of mischief."

As a further preventive measure, the YAB advises and counsels 20 Junior Safety Councils organized in Milwaukee schools. Bureau members lecture on safety, respect for law and order, citizenship, and civic responsibility.

One means the Bureau uses to direct youth into constructive channels is active promotion of the Soapbox Derby, sponsored by the Milwaukee Sentinel, another of the Hearst Newspapers contributing to the fight against delinquency.

SHARE CREDIT

Sharing credit with police for Milwaukee's antidelinquency drive are such agencies as the metropolitan youth commission, boys' club, municipal recreation department and its wide network of social center activities for winter and summer—indoors and out—an understanding children's court judge, and an efficient probation department staff.

Then, too—as it is in the Nation's cities which have teen-age crime under control—the citizens themselves are actively engaged in the fight.

For example, the Milwaukee County board recently invited suggestions in combating juvenile delinquency. It asked for ideas from organizations and groups—but it also called out to individuals to contribute recommendations.

DETENTION HOME

Most suggested first a new detention home for children, next an activities program to fit in with the new home to combat idleness while confined there.

Other programs to keep youngsters out of trouble are continually being sponsored in the city.

Not long ago a dress right guild was formed by merchants and wholesalers of haberdashery and men's clothing—not to promote the merchandise, but rather to create an awareness in youth for proper dress for various occasions.

Awards were made in schools and other places, the judging conducted without advance warning to the kids. Officials credit the program with stimulating an immediate desire in schoolchildren to look neat, well groomed. Thus, the program which continued for many weeks will be resumed in the fall.

Ike's School-Aid Program Is More Like an Obstacle Course

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1955

Mr. METCALF. Mr. Speaker, I take this means of calling your attention to the sorry record of this administration at a time of crisis in our schools.

During the 1952 campaign General Eisenhower spoke sympathetically of the classroom shortage, and I was among those who hoped that he meant to do something about it. We were disappointed when his school program in the 83d Congress consisted of more studies of the problem.

Only a year ago, the administration, speaking through Education Commissioner Brownell, said there would be no Federal aid to school construction, regardless of the need, until after another round of conferences next winter.

It was surprising then that President Eisenhower took note of the crisis in our schools early this year. In a special message to Congress, Mr. Eisenhower said the "best possible education for all our young people is a fixed objective of the American Nation."

He called attention to an emergency situation, the deficit of more than 300,000 classrooms, and said that "unless the Federal Government steps forward, to join with the States and communities, this emergency situation will continue."

Now the school-construction program put forward in that special message is completely inadequate to meet the tremendous and growing need.

How inadequate is pointed out in the following interview with the senior Senator from Alabama, Senator LISTER HILL, chairman of the Labor and Public Welfare Committee, in the May issue of the Democratic Digest:

IKE'S SCHOOL-AID PROGRAM IS MORE LIKE AN OBSTACLE COURSE

(An interview with Senator LISTER HILL)

Question. Senator, we hear a great deal about the "crisis" in our schools. I wonder if you could explain just what this crisis is and what brought it about.

Answer. To put it very simply, the number of new babies has grown much faster than the number of new schools. During World War II, for instance, we had to virtually stop building schools, but children kept on being born. And since the war we have continued to break records as to the number of children born. In fact, for 9 straight years we have broken the record of the year before. We haven't been able to build enough schools to keep even, let alone catch up.

Question. How far behind are we at this point?

Answer. The best estimate is that we are currently short some 370,000 classrooms. At current costs, it would take about $12 billion to build that many schools. Of course, there's a shortage of teachers, too, and most teachers are badly underpaid. But that's a separate question.

Question. Well, if the shortage is as severe as you say, why aren't more schools being built?

Answer. As a matter of fact, the States and localities are doing quite a job. Schools are being built at the record rate of about $2 billion worth a year. But that won't make up for the backlog of school needs. And the States and local school districts are about at the end of their rope. Many districts have reached their legal ceiling for selling school bonds, and most of them have raised the school taxes as much as the local or State law permits.

Question. Now, as I understand it, there are two major plans for Federal help to the States and cities now pending before the Congress—the Eisenhower administration plan and your own plan, which you've sponsored, along with 29 other Senators. Would you tell us about these plans?

Answer. Well, first I might tell you what happened in the last Congress. You may remember that General Eisenhower spoke very sympathetically about the school shortage during the 1952 campaign, and many of us hoped he would really try to do something about it when he got into office. I was frankly surprised and disappointed when the administration's entire school program in the last Congress consisted of two or three studies of the school situation that were supposed to be followed up by a national White House conference next November to decide what to do.

Now, for one thing, there are already plenty of facts and figures about the school shortage, although I doubt most parents need statistics to persuade them there is a crisis. For another thing, studies won't build schools, and we need more schools right away—today—not next year. As someone put it, this is a time for fact-facing, not fact-finding.

Question. What about this year?

Answer. Last November, after it became clear that the Democrats had won control of the Senate and that I would be the Chairman of the Senate Labor and Public Welfare Committee, which handles school bills, I made a pledge to do my best to get action on a bill to provide $1 billion in direct aid to help the States and localities to build schools. I and 29 of my Senate colleagues introduced such a bill on the first day of Congress.

Question. What did the administration plan consist of when it reached Congress?

Answer. Well, rather than describing it to you in my own words—because you might think I was only grinding an axe for my own bill—let me tell you what Dr. Edgar Fuller, representing the chief State school officers—the State Superintendents or Commissioners of Education—told our committee. He said that the administration bill is "39 pages of intricate, complex procedures, with more Federal controls than have been seen in any seriously considered bill in recent years, with a pittance of Federal funds and with provisions which forecast long delays."

Question. How does the administration's plan work?

Answer. It is in 3 parts, so perhaps I'd better take them up 1 by 1.

The first part is for school districts that are still legally allowed to sell school bonds to finance new schools, but which are so poor that they can't sell them except at abnormally high interest rates.

Under the administration plan, the Federal Government will buy up to 80 percent—or 60 percent on the average—of the bonds these districts can't sell.

Question. Where is the district supposed to get the other 40 percent of the money it needs?

Answer. That's a good question—and frankly, I haven't been able to get the answer to it from any administration official. This is apparently what they consider a local responsibility.

But there's another, more serious weakness in this part of the administration program—and that is the question of interest rates. You see, before a district can ask the Federal Government to buy bonds, it's got to offer them on the market at rates considerably higher than the going rates on most school bonds. Many experts believe that this will probably result in artificially jacking up the borrowing costs of these local school districts. Now this is very helpful to the banks, insurance companies and other investors who buy up these bonds, but it just means that the school districts have to take money that would otherwise go to build schools or pay teachers' salaries, and put it into these higher borrowing costs.

Question. Can any local school agency sell to the Federal Government the 60 percent share of their bonds which you mentioned?

Answer. No. Before the United States Commissioner of Education can purchase bonds under this part of the program he must be satisfied that the local agency will be able to meet its obligations as they become due. Of course this qualification means that the most desperately poor districts, those which have the greatest need for help, will not be able to get even this small amount of Federal aid.

Question. What happens to school districts which have already reached their legal bond-issuing ceilings? They can't sell their bonds to the Government, can they?

Answer. No, they have to apply for help under another and far more complicated part of the administration school program. And believe me, by the time most school districts can work themselves through that obstacle course, most of the kids who are of high-school age today may be too old for college.

Question. Can you tell us how this part of the program works?

Answer. To put it as simply as I can, the States will have to set up a special new agency that can float bonds, build schools, and then rent them to the local school districts. The Government proposes to lend the States a small amount of money to start these school-building agencies. This is not a grant, of course. The State will have to repay it.

Question. Why is all that so time-consuming?

Answer. To begin with, practically every State in the Union would have to pass a special law authorizing these school-building agencies to be set up. Most of the State legislatures—35 of them, I think—won't meet again until 1957 after they adjourn this year, unless they are called into special session. So there is a probable 2-year delay right there. Besides, in a great many States, the constitutionality of these school-building agencies is in serious doubt. In such States a further delay is inevitable while this question is settled by a legal action. If it develops that the agency is unconstitutional further delay will result while the necessary constitutional amendment is adopted. You know, for an administration that preaches about not forcing things on the States from Washington, this is a mighty funny proposal—attempting to force the States to do something that seems to run counter to a lot of State constitutions.

Question. Are there any other objections to this part of the administration program—aside from the delay involved?

Answer. Yes, I'd say there are two main objections. One is the red tape and controls from Washington that are involved. I believe I mentioned earlier that one witness before our committee said there were more Federal controls in the administration bill than in any other school-aid bill he's seen in recent years. The other objection is that the local school districts will have to rent the new schools from the State and pay a lot of service charges, besides. Now here, too, the teachers are likely to bear the main burden, since the money to pay the rent has

to come out of the same fund that's used to pay teachers' salaries. I must say, I am at a loss to understand why President Eisenhower went to such lengths to explain in his message to Congress, how important—and how underpaid—our teachers are when the administration is proposing a program that's so tough on the teachers.

Question. I'm told that many districts are too poor either to pay rent to the States, or to repay the bonds that the Government might be willing to buy. What do they do?

Answer. Now you've come to what seems to me the most impractical part of the administration bill—because instead of these neediest districts getting help the quickest, they get helped last.

Question. How do you mean?

Answer. Well, these neediest districts can get some direct-grant money from the Government—although very little. But before they can even apply for that money, they must have applied for the other kinds of Federal help I've spoken of, and prove they're too poor to repay bonds or rent schools. Then they have to go through a lot more red tape before they actually get the money.

Question. But after that they can use it to build schools right away, can't they?

Answer. No, they can't even do that. All the money is meant to do is to bring these neediest districts up to a par with the other school districts, so they can apply again for the other kinds of Federal aid. In other words, after these neediest districts have run completely through the Eisenhower obstacle course, their reward is that they get to go back to the starting line and begin all over again. And besides that, there are only small amounts of direct-grant money provided for in the Eisenhower program—only about $66 million a year to cover the whole country.

Question. Wasn't this supposed to be a $7 billion program?

Answer. That's what the administration wanted people to believe. But almost all of that $7 billion will have to be put up by the States and local school districts. The total outlay by the Federal Government amounts to $200 million in direct grants, spread over a 3-year period. This is less than 3 percent of the $7 billion figure which administration spokesmen have been talking about.

Question. But how can the States be expected to put up all of the money? I thought you said the problem was that they had largely exhausted their resources.

Answer. Exactly. And that's why I and 29 of my colleagues in the Senate—as well as a good many Congressmen in the House, are so anxious to get action on our own bill—which provides for a billion dollars in direct grants—$500 million a year for 2 years. We believe that the energy and talent that lies in our young people is a great national resource. And when that resource is wasted, it is a national tragedy. We believe that the Federal Government has a responsibility to help the States meet this crisis—not to foot the whole bill, mind you, but to lend a helping hand.

Question. What do you mean when you say the Federal Government won't foot the whole bill?

Answer. Under the bill which I and 29 of my colleagues are sponsoring—just as under a great many other Federal-aid plans already in existence—the States have to match the dollars given them by the Federal Government with a cetrtain amount of money of their own.

Question. How soon can your program get underway?

Answer. That depends on when it passes the Congress. But I want to emphasize this: My bill calls for no new agencies to be set up by the States. All the machinery is already set up. Most State educational authorities already have authority to accept Federal grants for school construction. All they have to do is match the Federal money with either State or local money and they are ready to build school houses.

Question. What have the education experts around the country had to say about the administration school program?

Answer. Well, I must say I have never seen such unanimous opposition to a program since I've been in the Senate. The chief school officers in 40 States sent letters or wires to our committee opposing one part or another of the administration program. Many of them said flatly that their States wouldn't get any help whatever from the administration program.

Question. Well, weren't the education experts consulted while this program was being developed?

Answer. No; they weren't. In fact, they weren't even told about it until just before it was announced. The main people the administration consulted in making up this program were bond experts from the New York bond houses.

Question. Is that why some people have called this a banker's bill?

Answer. I don't know if that's the reason or not. But I think it's a fact that the administration is more interested in protecting the investment bankers who may be involved in financing this program than they are in building schoolrooms. I have nothing whatever against the banks and insurance companies. But I would rather see money go to pay higher teachers' salaries than to pay higher interest rates on bonds.

Question. What is the outlook for the passage of your bill, S. 5, Senator?

Answer. I remind you of the fact that the Senate has on two previous occasions by overwhelming votes passed Federal-aid bills embodying the principles of S. 5. Since that time the school crisis has grown very much worse. I believe that the prospects are very favorable for the Congress to enact legislation of the character of S. 5.

Department of Agriculture Summarizes Utilization of Surplus Foods

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. HILL. Mr. Speaker, I wish to include in the Appendix of the RECORD a report on the excellent work now being done by our Department of Agriculture on the substantial increases they are making in the utilization of surplus foods.

This is a news release issued at Washington, July 13, 1955:

UNITED STATES DEPARTMENT OF AGRICULTURE SUMMARIZES UTILIZATION OF SURPLUS FOODS

Substantial increases in the utilization of surplus foods were reported in the past fiscal year, by United States Department of Agriculture. Total distribution in the 12 months ending June 30 was 78 percent larger than in the previous fiscal year.

The increase was primarily the result of new legislation enacted by Congress, and intensified efforts to make best possible use of these foods acquired under price-support and surplus-removal operations. Distribution of these foods is made to schools, charitable institutions, and needy persons in such a manner as not to diminish normal expenditures for foods.

Preliminary figures show that 1,073,900,000 pounds of food were distributed to users at home and abroad during the 1954–55 fiscal year, compared with total distribution of 601,700,000 pounds in the 1953–54 fiscal year.

Distribution to users in this country increased by 18 percent over the previous fiscal year. Exhaustion of the supplies of beef and gravy, which were distributed during the 1953–54 fiscal year, held down the comparative increase in domestic distribution, despite gains in donations of all other commodity groups. These included butter, cheese, dry milk, dry beans, rice, shortening, and several other items in limited amounts.

The total of 580,500,000 pounds distributed to United States welfare agencies for overseas distribution compared with 183,900,000 pounds distributed in the previous fiscal year. This increase resulted from use of new authority in Public Law 480, the Agricultural Trade Development and Assistance Act. This law liberalized previous legislation to permit greater latitude in the use of United States food stocks to aid persons in friendly countries overseas.

Although total pounds distributed to schools and institutions in this country decreased this past year due to the exhaustion of the supplies of beef and gravy, the quantities of other commodities donated to these grounds increased.

At the same time distribution to needy persons living at home increased by more than 5 times, from 37,500,000 to 198,700,000 pounds.

The foods distributed in this country went to 11 million schoolchildren, and over 1 million needy persons in charitable institutions. In addition, 2,998,600 needy persons in family units are currently certified by State agencies to receive commodities. The number of these people actually receiving commodities at any one time is always considerably below the number certified; in May, for example, eligible recipients totaled 2,961,610, but actual recipients totaled 2,476,878.

This represents the second month in a row that the total number of recipients has declined. The peak month during the year was March when 3.3 million needy persons actually received the donated commodities out of a total of about 3.5 million persons certified as eligible to receive commodities. Increased distribution in this category during the year came as more States made use of the availability of these commodities to help more needy persons, including victims of drought and hurricane and the unemployed, principally in coal mining and railroad industries.

Requests for food for distribution abroad are met after all domestic demands have been satisfied. By the end of the fiscal year, 19 United States welfare agencies were participating in this program, with commodities going to 57 countries. Commodities donated abroad included butter and butter oil, cheese, dry milk, and shortening.

The Inventor

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. CUNNINGHAM. Mr. Speaker, I recently received a letter from Talbert Dick, a registered patent attorney and lawyer, of Des Moines, Iowa, in which he stated his strong opposition to the passage of H. R. 7416. He said, in sub-

stance, that the idea of the increase in Patent Office fees might not be so bad if only the inventor was penalized, but it looked to him as if the country as a whole might well be the loser. To show the part that the inventor has played in the onward progress of civilization, he sent me a poem of his own composition.

The poem follows:

THE INVENTOR

(By Talbert Dick)

When time was Paleozoic
I had no earthly name;
The mammals roamed and sands were marked
With never thought of fame.
It was warm red meat for only the fleet
Or one with handy stone;
There was no lamp in man's first cave
And seldom toothsome bone—
For I was not yet the inventor.

Then on the clay Devonian
There gutted a log with center hole;
By hairy hand and axle stick
I found that it would roll.
The wheel was born that distant morn
To carry civilization all the way—
The chariot first and wagon next
And the trains and cars of today—
For I was the inventor.

But even when Tremadoc beds
Were sodden slimy rot
I sharpened flint to razor edge
So food and clothes would be your lot.
The arrow and bow was a step to go
And guns and rockets too;
And decades came and decades passed
With something ever new—
For I am the inventor.

Yes, the ancient dawn grew brighter
'Ere the bitter ice age passed.
I took some iron from Rodesia ridge
And found that it would cast.
Mechanical schemes and chemical dreams
Then followed the fruitful fad.
And I figured out the Arabic numerals
That even a child could add—
I am the inventor.

For all the things you have,
I've burned the midnight oil—
From pocket knives to sailing ships
And tools that till the soil.
The Micro waves are willing slaves
For pictures and for sound;
The printing press and aeroplane,
And medicines newly found—
For I am the inventor.

The crust of Earth has hardened now.
The spawn of my kin is legion—
We favor no race and we have no creed
For we come from every region.
We've tendered our gifts since Cambrian Drifts
That man may live and prosper.
But the atom's power and ships of space
Are just the start of all we'll offer—
For we are the inventors.

Low Income Families

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, the way some people figure it, there is never a "good" time or an auspicious time for improving standards for the lower income groups in our country. The time is never considered just quite ripe, it seems.

The feeling among such people appears to be that if business is on the upswing, as right now, why just let it alone and do not rock the boat and do not upset the applecart and do not meddle in and do not do anything, and things will get better and better and all problems will automatically disappear.

On the other hand, if business is on the downswing, as was happening this time a year ago, the same people were saying just let it alone and do not rock the boat and do not upset the applecart and do not meddle in and do not do anything about anything and things will automatically correct themselves and then get better and better.

As a result of that feeling holding the upper hand last year, we have gone through a whole year in which the Pittsburgh labor-market area consisting of Allegheny, Beaver, Washington and Westmoreland Counties—one of the great industrial centers of the world—has been a "distress" area of from 6 to 9 percent unemployment. Yet during much of this time, steel's operating rate has been skyrocketing and coal production has been improving. So, obviously, employment opportunities were not nearly in balance with production advances, as output per worker steadily improved.

It is my hope that the employment sampling now in process, and the evaluation studies yet to be made, will show that in July the Pittsburgh labor-market area had finally gotten off the "distress" list. But we will not know that one way or another for some weeks yet.

But this idea of not rocking the boat either when business is good or when it is bad—an attitude which often leads to the ignoring of important economic problems—still had a lot of support in the House of Representatives last week when we finally pushed through my bill to raise the minimum wage from 75 cents and hour to $1 an hour. My original bill on this, introduced last January, was for $1.25, but like all important legislation, compromise had to be practiced in order to get anything through. The $1 figure represented, then, less than many of us wanted, but more than the 90 cents, or $36 a week, which President Eisenhower said he thought was enough for our lowest income workers.

MORE PURCHASING POWER NECESSARY

Throughout the debate on the House floor, I was assailed by the arguments of opposition Members that a figure of $1 an hour in interstate commerce would put lots of businesses out of business. These people were trying to tell us that in what is now supposed to be the most prosperous era in our history, with a gross national product at a rate of $383 billion a year at the latest count, and with corporate profits and business proprietors' incomes also at record heights, that a minimum wage of $40 a week for work in interstate commerce would ruin business.

Actually, a better foundation for our lower income groups in terms of fair minimum wages does more to help business than anything else, for it puts more real purchasing power in consumers' hands. The reports I receive as a member of the Joint Congressional Economic Committee, composed of 7 Senators and 7 Congressmen, is that so much more purchasing is now being done on installment credit, while other types of credit have remained pretty stationary, that many economists are beginning to worry over the $24 billion of installment credit outstanding. Less than half of this is on automobile purchases, incidentally, and more than a fifth of it—more than $5 billion—represents personal loans, which indicates a lot of families may be in serious trouble in meeting monthly bills.

The economists point also to the continued decline in farm income as showing a need for more purchasing power in consumer hands with which to buy nourishing food. A higher minimum wage, providing wage raises for several million workers, will thus help the entire economy, and I am proud to have had a part in this as sponsor of the House bill.

Pennsylvania's Future in Atomic Industrial Power

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Sunday Independent, Sunday, July 24, 1955, which explains what the State of Pennsylvania has done and is planning to do in the field of atomic industrial power:

STATE WILL SEEK LEAD IN ATOMIC ENERGY FIELD

HARRISBURG.—State Secretary of Commerce John P. Robin wants Pennsylvania to take steps to become the leading State in the Nation in the field of atomic industrial power.

"If we act now and get in on the ground floor in the industrial development of atomic energy, in time to come we well could be to atomic industrial development what Detroit is to the automobile industry," Secretary Robins said.

"One of the first things the new State planning board will do after its 18 members are appointed will be to make a survey of possible atomic development in Pennsylvania on a large scale," the secretary explained.

BOARD NOT NAMED

Governor Leader has not yet appointed 15 members to the planning board as authorized by the general assembly under the State government reorganization program.

The secretaries of forests and waters, highways and commerce departments will automatically serve as ex-officio members of the new board which will be taken from the commerce department and report directly to the Governor.

Robin noted that Pennsylvania already has 2 atomic power development projects under way on an industrial basis, and 2 more are in the advanced planning stages.

"At present I would think that Pennsylvania either leads or comes close to leading the Nation in the number of atomic power development plants in operation or planned by private industry," the secretary said.

He explained that the board will "look deep into the matter to make sure that Pennsylvania is on its toes and gets all that it has coming in the development and manufacture of this new type power for peaceful uses."

OTHERS ARE PLANNED

The Duquesne Light Co. recently opened an atomic power production plant at Shippingport and Pennsylvania State University last month began using a nuclear reactor erected on the Centre County campus with university funds.

Westinghouse Electric Co. recently announced plans to construct an atomic reactor at Blairsville and the Curtiss-Wright Aeronautical Corp. soon will open an aircraft research and development center in north-central Pennsylvania with a Government contract of nuclear work.

"We also intend to find out exactly what effect atomic power will have on the economy of the State, based on Pennsylvania's output of other type powers," Robin said.

He outlined a plan for bringing more nuclear plants into the State, including a "solid move to provide the public facilities for the plants and capitalizing on the research and other scientific personnel so abundant in the State."

Businessmen Shape Ike's Labor Policy

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. METCALF. Mr. Speaker, previously I have called the attention of my colleagues to the new system of amending the Taft-Hartley Act by administrative fiat.

An excellent summary of these amendments, and other evidence that businessmen are shaping this administration's labor policy, appeared in the February issue of the Democratic Digest.

The article follows:

BUSINESSMEN SHAPE IKE'S LABOR POLICY

In December 1948, not long after the Taft-Hartley labor law had been put on the statute books, the conservative magazine, Business Week, commented:

"Given a few million unemployed in America, given an administration in Washington which was not prounion, the Taft-Hartley Act conceivably could wreck the labor movement."

While the past 2 years under the Republicans have not wrecked the labor movement, they have demonstrated clearly what drastic changes can be brought about by "an administration in Washington which is not prounion," and how those changes can hamper and impede the development of a healthy labor movement.

For, although the last Republican Congress did not change so much as a comma in the Taft-Hartley law itself, the National Labor Relations Board, under new Republican management, has succeeded in toughening up Taft-Hartley in practice, via a series of decisions giving new interpretations to the law.

As the conservative U. S. News & World Report put it, "Policy changes of importance • • • are taking place at the NLRB. • • • Employers generally look with favor on what is going on." And Fortune magazine added, more recently, "management is unquestionably getting a better break at the NLRB than it has had in many years."

This is entirely understandable in view of the complexion of the new Republican-controlled Labor Board. This board, established nearly 20 years ago to administer and interpret the various provisions of our basic labor laws, is supposed to be nonpartisan and semijudicial in nature, and under Democratic Administrations a consistent effort was made to choose board members who could neither be identified with labor nor management.

Under the Republicans, however, this effort was apparently abandoned. The Eisenhower administration's first three appointees—who now constitute a majority of the five-man board—are all clearly identified with management, or with management's point of view.

The new chairman, Guy Farmer, was an attorney who had represented management clients in labor-management relations. A second member, Philip Ray Rodgers, came to the board from the staff of the Senate Labor Committee, to which he had been appointed by the late Senator Taft. And the third member, Albert Beeson, labor consultant for a California corporation, raised a storm of controversy when he told a Senate Committee that he had severed all relations with his corporation when, as it was later revealed, he was still receiving a pension from the firm, and had an agreement to return to the company after his service with the NLRB. President Eisenhower would undoubtedly hesitate to "pack" a Federal court with three men of such uniform viewpoints, but he apparently saw nothing wrong in "packing" the Labor Board with three men identified with a single point of view.

The fourth vital Eisenhower labor appointment, still to be considered by the Senate, follows a similar pattern. Mr. Theophile Kammholz nominated by the President to the powerful post of NLRB General Counsel, has also represented management in labor law matters.

The Eisenhower majority of the Labor Board lost little time in making its pro-management views felt. In a long series of vital rulings, it has drastically altered the Taft-Hartley law as it affects day-to-day labor-management relations and the ability of labor unions to win new members to their ranks.

In its most important series of rulings, the board has sharply narrowed the number and type of labor cases it will handle, thus eliminating a great many companies and unions who formerly could appeal to the Board when they felt their rights were being violated. Such companies or unions are now to be left either in a legal "no man's land," with no agency to appeal to, or they must find relief under State laws which are frequently less protective of labor's rights than Federal law.

Labor Board Member Murdock, dissenting from these rulings, estimates that the Board has cut down its jurisdiction by 25 to 33 percent, and he points out the key importance of the Board's action. What it has done, he says, is to take away the protection of labor's right to organize new unions in the very areas where unions are weakest and are struggling the hardest to get a foothold, against strong employer opposition.

In a number of other rulings, the Republican majority of the Board has prevailed over the former Democratic appointees in favor of management. For example, the Board has reversed a long standing ruling and now permits employers to question workers about their union membership on the theory that, so long as no open threat is involved, such questioning does not intimidate workers. But in the very case in which the Board made this ruling, four workers with signed union cards in their pockets were sufficiently intimidated to deny to their employer that they were union members.

In another decision, the board permits employers to bring penalties, after an illegal strike, even against union members who may have been ill or on leave during the strike, and therefore took no part in it. The board has also broadened the rights of employers to assemble workers on company property and on company time, prior to union elections, and compel them to listen to company speeches (usually against the union). It has narrowed the rights of unions to answer such speeches.

This unfriendly attitude toward labor has not been confined to the Labor Board. Union leaders were prepared to face a hostile Republican Congress in early 1953 but, after the moderate tone of General Eisenhower's campaign speeches on labor, and his surprising appointment of Martin Durkin of the AFL as Secretary of Labor, most union officials adopted a wait-and-see attitude as the new administration moved into Washington.

They were soon to be disappointed. In mid-1953, Secretary Durkin's moderate proposals for amendment of Taft-Hartley received the Presidential blessing and were on the verge of being submitted to Congress when they were "leaked" to the press. After GOP congressional leaders stormed the White House in protest, President Eisenhower withdrew his approval of the proposals and Mr. Durkin resigned in protest.

Many labor spokesmen have been generally pleased with Durkin's successor, James P. Mitchell. What has disturbed them has been the fact that Mitchell has not seemed to be the dominant spokesman within the administration on labor matters. The prevailing voice appears to be that of Commerce Secretary Weeks, who seems to have the ear of the President more than Mitchell—or at least the inside track with the White House staff.

For example, the most surprising of President Eisenhower's proposed Taft-Hartley changes, which would require a Government-conducted union vote of approval of every strike, was generally said to have been inserted in the President's message to Congress at the least moment, at the behest of Mr. Weeks, and without the knowledge of Mr. Eisenhower's own Labor Secretary, Mr. Mitchell, who is said to have first read about the strike-vote proposal in the newspapers.

In early December, Mr. Mitchell received another White House rebuff. The day after Mitchell spoke out against so-called right to work laws which have been enacted by many States and which are bitterly opposed by labor unions, the White House hastily issued a statement stating that Mitchell spoke only for himself, and not for the administration in which he is the top labor official.

Commerce Secretary Weeks, whose principal duties center around the Government's relations with the business community, has not confined his interest in the administration's labor policies to Taft-Hartley changes. In an apparently unsolicited memorandum to a Justice Department Study Committee which is reviewing the entire field of antitrust legislation, Mr. Weeks recommended bringing certain activities of labor unions back under the antitrust laws. In doing so, Mr. Weeks was favoring a return to the 1920's, when antitrust actions were among the principal weapons used to harass labor unions, with workingmen being treated, legally speaking, as a "product" or "commodity," instead of as human beings. This concept was expressly repudiated by the Norris-LaGuardia Act of 1930 which, as President Eisenhower proudly pointed out during the 1952 campaign, was enacted by a Republican Congress.

Although a task force of the Justice Department Antitrust Study Committee has

recommended against bringing unions under the antitrust laws, the full Committee is still said to be considering such action, and labor unions, with not a single spokesman on the Committee, are virtually powerless to protest.

Labor's lack of representation on this Antitrust Study Committee is not unique; when Welfare Secretary Hobby first set up a Advisory Committee on Social Security, she omitted any labor union representatives until a storm of protest broke over her head; and the President's Advisory Commission on Housing was also lacking in labor representation, although builders and mortgage bankers were amply represented.

All of the administration's and the Labor Board's activities in the labor field are in for close scrutiny by the incoming 84th Congress. Alabama's Senator LISTER HILL, who will take over the chairmanship of the Senate Labor Committee, is reportedly ready to look into the rulings and operations of the National Labor Relations Board, to see if the Board has gone beyond or contrary to the intent of Congress in enacting the Taft-Hartley law.

Meanwhile, however, union growth is being stultified and the large concerns are far from unhappy over their development in industrial relations. The September 6 issue of Steel, a publication of the major steel companies, noted that "Unions are winning fewer representation elections. * * * Labor is still winning the majority of these contests, but the average has slipped."

The administration is again going through the motions of asking Congress to amend the Taft-Hartley Act, but many observers believe that the real test of the President's views on labor matters will be his reaction to the severely antilabor amendments which will be proposed by individual Republican Senators. Those who have watched the President appoint antilabor spokesmen to the Labor Board and stand silently by while labor's rights have been whittled away have little hope that Mr. Eisenhower will intervene actively on labor's behalf during the coming year.

Problems of the Satellites

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. BOSCH. Mr. Speaker, I think that all patriotic Americans, those who would fight to the last for our form of government, are earnestly interested in free elections in the satellite countries of Soviet Russia. We hope for that, but I am not optimistic about such a thing coming to pass.

Under leave to extend my remarks, I include an article by George Sokolsky which appeared in the July 26, 1955, edition of the Washington Post and Times Herald that is, in my opinion, a very good analysis of the situation.

The article follows:

PROBLEM OF THE SATELLITES

(By George Sokolsky)

What are generally termed "the satellites" are a series of countries which once were independent and now are part of the Soviet universal state. These countries first lost their independence to Germany as a result of the Nazi expansion in Europe; they were liberated from Germany in World War II and became a part of Russian imperialism. They were first delineated in the Ribbentrop-Molotov Pact (1939) which divided Europe between Nazi Germany and Soviet Russia. At Yalta, Roosevelt and Churchill permitted Stalin to regard these areas as a Russian sphere. At Potsdam, it was agreed that governments were to be established in these countries by free elections. No free elections have ever been held. They have since for all practical purposes become part of Russia.

The satellite countries are: Poland, Rumania, Bulgaria, Hungary, Czechoslovakia, Albania, and East Germany. In Asia, they include Mongolia, Tannu Tuva, North Korea. Red China might be called a satellite state, although its position is somewhat different because of its size, its history, and the importance of its leader, Mao Tze-tung, in the Marxist world. The satellites of Red China are Tibet and northern Indochina.

Prior to World War I, a German philosophic historian, Baron Heinrich von Treitschke, wrote a book in which he sought to establish the need for a number of satellite states to protect a great country, such as Germany then was. Treitschke has influenced the thinking of the Germans and Russians because his ideas fit what they wanted to be accepted as truth.

While the United States would like to see free nations in eastern Europe and while it is sound political policy to raise this issue because so many Americans are vitally interested in the homelands of their parents and grandparents, the Russians can always say that these satellites are Communist countries because the peoples of those countries have not opposed the Communist regimes in them. And where there are no free elections, how can anyone say what the people really want?

So far as we know, there have been no successful revolutions in any satellite countries. And those who have resisted have either been killed or sent to slave camps. The Communists, having achieved power by revolution, having had a century of experience with revolutionary strategy and tactics, are extraordinarily skillful in anticipating and suppressing deviations. Each satellite country has had its purges and even though some purges achieved only party purification, others must have been related to underground revolutionary action.

In the present period of good will, it is even possible that some sort of election might be worked out to satisfy President Eisenhower, but the party machinery is so well established in each one of these countries that an anti-Communist regime is not likely to be set up. It would be as difficult to upset Communist bossism there as it would be to elect a Socialist mayor of New York City.

Should Russia show real weakness, should the regime in the Kremlin totter, it is within the realm of possibility that a revolutionary movement could develop in Czechoslovakia, Hungary, or some areas of Poland. But while there is real power in the Kremlin, it is not believable that any of the satellites will risk liberation from the Communist regime. No matter what agreements the Russians might sign, they will never retreat from the satellites except by force.

Problems of the American Tuna Industry

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. WILSON of California. Mr. Speaker, the serious problems of the great American tuna fishing fleet have concerned me for some time. We are witnessing the decline of an important American industry because of unlimited importation of frozen tuna from Japan. The decimation of our tuna fleet can only result in a monopoly by foreign fishing interests, and the American consumer, who today enjoys a choice of foreign-packed or domestic-packed tuna, will be the ultimate loser.

Mr. Harold Cary, general manager of the American Tunaboat Association, is recognized as the leading spokesman of the American tuna fishing fleet. He has prepared some startling statistics on the plight of the fleet, and, under unanimous consent, I include several letters from Mr. Cary in the Appendix as a portion of my remarks:

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 25, 1955.

The Honorable BOB WILSON,
House Office Building,
Washington, D. C.

DEAR MR. WILSON: In our recent discussion you asked the following question:

How many people are adversely affected when a given quantity of frozen tuna enters this country and supplants rather than supplements a ton of domestically produced tuna?

This can be answered in graphic form by the enclosed drawing showing the component elements found in the cost of a case of tuna. This drawing can be elaborated upon as follows:

1. To enter the fishery it is necessary to build efficient vessels. This requires naval architects, carpenters, painters, welders, galvanizers, electricians, refrigeration men, pipe fitters, machinists, marine architects, foundrymen, riggers, patternmakers, radio and radar men, insurance men, bankers, accountants.

The low rate of construction and replacement by reason of imports adversely affects this group.

2. This also requires manufacturers of, as well as dealers in lumber, hardware, steel supplies, pipe and plumbing supplies, electrical equipment, fittings and fixtures, communications equipment, electronic equipment, diesel engines, gasoline engines, refrigeration machines, paint, ropes and rigging.

The low rate of construction, by reason of imports, adversely affects this group. The material supplied for repairs has declined also.

3. After the vessels are built it is necessary to man them with masters, fishing captains, navigators, engineers, radio operators, fishermen, mast men, chummers, cooks.

Decline in vessel numbers and vessel operation because of imports has affected this group.

4. When vessels are built and manned it is necessary to supply and service them by provisioners, ship chandlers, refrigerant suppliers, fuel-oil suppliers, medical suppliers, ships brokers.

Decline in vessel numbers and vessel operation because of imports has affected this group.

5. When vessels return from sea with fish catches they deliver these to a cannery employing: unloaders, fish room workers, cleaners, packing machine operators, sealers, cooker operators, engineers, foremen, warehousemen, timekeepers, office employees, supervisory personnel.

This group has been adversely affected in some areas. It will be more severely affected once the Japanese control the supply of frozen fish.

6. After vessels discharge cargo it is necessary to undergo repairs before returning to sea and to utilize the services of all or part of the following: Carpenters, painters, welders, electricians, refrigeration men, pipefitters, marine machinists, machinists, riggers, radio and radar men, marine surveyors.

The decline in numbers and operation of vessels because of imports has affected this group.

7. In a fishery engaged in by these vessels there are auxiliary activities requiring the services of the following: Fish and game inspectors, laboratory technicians, researchers, lawyers, appraisers for taxes, statisticians.

The vessel then departs and this whole cycle is carried through once more. If the venture is successful other new vessels will be built.

A United States Tariff Commission report considers that raw fish is 55.94 percent of the cost of a case of tuna. All the foregoing society of skilled people, and these businesses, contribute to the fish production and participate in its returns.

Last year the United States Government estimated production at 161,000 tons of fish by United States flag fishing vessels delivering in this country. This produced approximately 7,100,000 cases of tuna. The value of this production divided by the average hourly manufacturing earning in 1954 would provide nearly 46,000,000 man-hours of employment at that average earning.

When a ton of Japanese fish is canned in place of a ton of domestic fish, 44.06 percent of the value of a can of tuna remains in this country. This may be augmented slightly by brokerage fees and earnings of dockworkers.

Thus the need for domestic fishermen and the skilled mechanical, technical, and professional skills supplied all over the United States is totally gone. The need for cannery workers and allied activities remains.

If the 161,000 tons of fish delivered by United States flag fishing vessels were supplanted by foreign fish there would still remain enough new wealth to provide 20,000,000 man-hours of employment.

However, frozen tuna has been experimentally exported from Japan in the form of cleaned loins which would, if successful, eliminate cleaners from United States canneries. Also experimentally shipped have been a lidless can of tuna (also coming under the duty-free classification). This, if successful, would eliminate another group of cannery workers and reduce this 20,000,000 hours. This is quite apart from giving consideration to whether or not canners in this country could get an assured supply at a competitive price once control of the raw material passed almost entirely to Japan.

Returning to your question, we find specifically that when a ton of frozen imported tuna supplants a ton of domestically produced tuna it eliminates 55 percent of the value which would acrue to Americans and to the domestic economy.

Yours very truly,

AMERICAN TUNABOAT ASSOCIATION,
H. F. CARY, *General Manager.*

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 18, 1955.

(Attention Mr. A. M. Sandberg.)

ECONOMICS AND MARKETING SECTION, UNITED STATES FISH AND WILDLIFE SERVICE, DEPARTMENT OF THE INTERIOR,
Washington, D. C.

We have reviewed and updated information on the prices of yellowfin and skipjack tunas. Attached to this letter is a graph showing the price trends. Three different measures are taken, i. e.: Posted prices, average ex-vessel prices as computed by Fish and Wildlife Service, and effective prices. Usually there are few significant departures from posted prices; however, effective prices were higher than posted prices in 1947 and 1948 and can be fairly accurately calculated. Effective prices are, on an average basis, lower than posted prices in 1955, but cannot be fairly accurately calculated.

Placing these prices on an index basis shows this comparison:

Yellowfin

January–December 1948:	
Posted	100.0
Average	100.0
Effective	100.0
July 1955:	
Posted	91.2
Average	92.5
Effective	83.8

Skipjack

January–December 1948:	
Posted	100.0
Average	100.0
Effective	100.0
July 1955:	
Posted	85.8
Average	84.4
Effective	77.1

There has been a downtrend in prices apparent by any one of these means of measurement. There is now great downward pressure on the presently existing price structure.

Yours very truly,

AMERICAN TUNABOAT ASSOCIATION,
H. F. CAREY, *General Manager.*

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 12, 1955.

(Attention Mr. A. M. Sandberg.)

ECONOMICS AND MARKETING SECTION, UNITED STATES FISH AND WILDLIFE SERVICE, DEPARTMENT OF THE INTERIOR,
Washington, D. C.

During my recent trip to Washington as an adviser to the California Commission on Interstate Cooperation several requests for information were received. One of these concerned the size of the tuna fleet. Information on this subject has previously been given on several occasions. We have updated this information as it applies to the tuna clipper (bait boat) fleet as follows:

Year	Vessels	Capacity tons	Registered tonnage	
			Gross	Net
January 1948	161	29,165	37,266	18,425
January 1949	189	36,625	47,975	23,654
January 1950	193	38,370	50,613	24,738
January 1951	199	40,430	53,092	25,977
January 1952	210	44,300	57,924	28,386
January 1953	191	42,470	55,479	27,120
January 1954	180	40,535	52,800	25,788
January 1955	170	38,440	49,769	24,269
July 1955	161	36,970	47,812	23,320

Enclosed with this letter are graphs showing these trends in terms of capacity tonnage and numbers of vessels. Also enclosed is a list of vessels as of July 1, 1955. A copy of this letter together with the enclosures is being sent to Mr. V. J. Samson at the Fish and Wildlife Service office in San Pedro. Additional copies of this letter and graphs are being sent to others interested in and working on the tuna problem.

Additional studies are being made in regard to the fleet. Such information as you or others may require as necessary to studies now being made or to be made will be sent at your request.

Trends evident herein have been discussed in hearings and other meetings in the past. While a decline in production is a means of measuring injury it is apparent that a decline in production facilities is also such evidence.

Yours very truly,

AMERICAN TUNABOAT ASSOCIATION,
H. F. CARY, *General Manager.*

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 12, 1955.

Attention Mr. Philip Arnow, Associate Director.

OFFICE OF INTERNATIONAL LABOR AFFAIRS,
Department of Labor,
Department of Labor Building,
Washington, D. C.

During my recent trip to Washington as an adviser to the California Commission on Interstate Cooperation several requests for information were received. One of these concerned employment in the tuna fleet. This type of information has been reviewed and brought up to date insofar as it concerns the tuna clipper (bait boat) fleet.

First, we have computed employment on the basis of job oppoturnities on these boats based on the number of berths available:

1948	2,460
1949	2,510
1950	2,590
1951	2,730
1952	2,480
1953	2,340
1954	2,210
1955	2,090

The foregoing figures make no provision for turnover of employment or take into account whether or not vessels operate full time or part time.

Second, we have computed employment on the basis of membership in the two labor organizations with which these vessels hold contracts. These unions are the Cannery Workers' and Fishermen's Union, A. F. of L., and the Tuna Clipper Engineers of the International Association of Machinists. They have just furnished these figures:

1949	2,649
1955	2,054

The above figures do not reflect all persons employed or employable inasmuch as there are a great number of owners working in the fleet.

Third, we have computed employment on the basis of a report on covered employment in fishing in San Diego. This report includes no owners nor employment on vessels operating in the fleet reporting employment to jurisdictions other than San Diego. The use of this information is therefore limited to indicating trends.

We enclose a graph exhibiting employment on the basis of berths available. There is also enclosed a graph exhibiting employment on the basis of a comparison between berths available, union membership, and covered employment. There is also a graph showing monthly fluctuations on the report on covered employment, this latter graph being useful only in determining trends.

The trend in employment is severely downward in each case.

Yours very truly,

AMERICAN TUNABOAT ASSOCIATION,
H. F. CARY, *General Manager.*

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 14, 1955.

Attention Mr. Thomas S. Campen.

OFFICE OF ECONOMIC DEFENSE AND TRADE POLICY, DEPARTMENT OF STATE,
Washington, D. C.

GENTLEMEN: In the June meetings on the tuna problem the trend in imports was discussed. Import figures for the month of May 1955 have been received from the Bureau of the Census. These have been analyzed by us with respect to frozen tuna by means of comparing the import totals for frozen tuna for the years 1948 to 1955, inclusive.

These are the figures:

January–May:	*Pounds*
1948	687,000
1949	3,363,000
1950	10,313,000
1951	25,103,000
1952	23,510,000
1953	32,653,000
1954	48,206,000
1955	65,157,000

The figures themselves demonstrate the alarming uptrend. The first 5 months imports for 1955 are over 35 percent more than he previous record year. Stated another way, frozen tuna imports for the first 5 months of 1955 are greater than the yearly totals for 1948, 1949, 1950, and 1951, and almost as great as the total for the year 1952.

A graph is enclosed exhibiting a line for each of these 8 years, showing this progressive increase.

Yours very truly,

AMERICAN TUNABOAT ASSOCIATION,
H. F. CARY, *General Manager.*

The President Needs Some Explanations From His Assistants

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask unanimous consent to include an editorial from the Nashville Tennessean under the date of July 19, last, entitled "Must for Ike's Staff."

It is a fine editorial which carefully analyzes and evaluates the good work that is being done by the Honorable JOE EVINS as chairman of Subcommittee No. 1 of the House Small Business Committee.

The White House staff and Presidential assistants have an obligation to see that the President is not isolated from the news of operations and activities of his Bureau of the White House Budget and other aids.

The editorial follows:

MUST FOR IKE'S STAFF

Mr. Sherman Adams and others who are said to brief President Eisenhower on all important domestic happenings, including those that affect the reputation of his administration, should be prepared for overtime duty when their Chief comes back from Geneva.

They have a special obligation to see that the Chief is not isolated from news about the investigation initiated by Representative JOE EVINS, of Tennessee, as chairman of a House Small Business Subcommittee. These hearings are aimed at finding out just how much independent agencies of Government, largely responsible to Congress, have become puppets of the executive branch.

In view of the fact that Mr. Eisenhower has nominated many members of such agencies, it might be expected that he would know what kind of policies they were pursuing. This is especially true, since most of the appointees were named because of their "middle way" affiliations.

Surely the President has heard that one of his recent nominees for the Atomic Energy Commission was bipartisanly opposed in Congress as an unworthy political hack and, seeing the handwriting on the wall, withdrew his candidacy. Furthermore, he is said to be hopping made because the Burget Bureau and the SEC have put him on a bad spot over the abandoned Dixon-Yates deal.

Yet his education needs completing, and that is what Representative EVINS intends to do as he starts out by putting the Federal Trade Commission under the microscope.

Later he will deal with the SEC, the Federal Power Commission, the AEC, and what not.

From the people's standpoint, there could be no more important inquisition since their welfare largely depends on keeping regulatory and protective agencies out of the hands of grasping politicians or interests.

Just as the small business subcommittee is interested in promoting free and fair competition in an era of giant mergers, it realizes the danger of permitting the SEC from being diverted from its original role as a protector of the people from shocking conditions which brought on the great depression of 30 years ago. If it does no more than restore the original position of the AEC, now bogged down in low political activity, it will have achieved much.

Representative EVINS' recognition of the dangers are of long standing, but recent developments in the Dixon-Yates deal have given his investigation unusual timeliness.

Evidence of executive tampering, tinkering and rigging is so strong under Republican rule that Congress has a duty to clarify the situation and maintain its constitutional prerogatives against executive invasion.

Inasmuch as he contributes to this end, Representative EVINS will be entitled to public gratitude.

And as for the President, it is difficult to believe he could miss the significance of what is gong on. Assuming, however, that he knows only what he is told, his staff must now choose between keeping him fully informed or betraying the trust that has been placed in it.

Better Read the Fine Print Behind the GOP Programs

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1955

Mr. METCALF. Mr. Speaker, that there is a great difference between promise and performance—at least between first promise and third clarification—has been demonstrated to us regularly in the past 3 years.

Examples include farm parity, massive retaliation, balancing the budget, and "unleashing" Chiang Kai-shek. Administration statements about these difficult problems are "double or even triple talk, which can be taken to mean whatever the listener wants it to mean" in the words of the following article from the May issue of the Democratic Digest:

BETTER READ THE FINE PRINT BEHIND THE GOP PROGRAMS

"We've sure got us guessing," said the Milwaukee Journal of Secretary Dulles' speech on the Formosan Straits.

To prove its point, the Journal cited these conflicting headlines on reports of the speech:

"U. S. Vows To Defend China Offshore Isles."

"U. S. Might Fight for Quemoy if Reds Attack."

"Dulles Avoids Pledge To Fight for Coastal Isles."

"A reading of the speech supports any of these headlines," the Journal said. "It is now obvious, therefore, that this 'policy of ambiguity' is deliberate."

Although the Journal did not say so, the Formosan crisis does not mark the first time that the administration has met a tough political problem with double or even triple talk, which can be taken to mean whatever the listener wants it to mean.

On a number of public questions, from budget balancing through parity for farmers to so-called liberation of the satellites, the administration has tried to make political hay by out-and-out huckstering. Time and time again, they have faced a troubled public with some dreamlike solution which was no more realistic than the claims of a patent medicine manufacturer.

But in all these instances, when later events have forced a revision of policy, responsible officials have produced some careful legalistic language, some hitherto unnoticed fine print, in an effort to prove that they never said what everyone thought they said.

Knowing this, experienced newsmen looked around for the escape clause with which the administration will probably try to save its face on Formosa when the showdown comes.

After a careful reading of the Secretary's speech, Scripps-Howard staff writer, R. H. Shackford, reported: "Even a lawyer the equal of Mr. Dulles would have great difficulty proving by the exact words of his speech" that the Secretary had said what he seemed to say. "Mr. Dulles planned it that way * * * he has demonstrated again that he is first, last, and always a lawyer."

Columnist Doris Fleeson found the earlier Formosan resolution equally indefinite. For this she gave credit to Secretary Dulles who is "adept at putting something for everybody in his foreign policy moves."

Of course, once again, the administration can be vague only until there are developments which must be met with action. At that time, it will no longer be possible to satisfy both the men who want our Asian responsibilities increased and those who want them curtailed.

But until then, it will not be easy for the disappointed to complain that they have been let down. For as the Washington News said, "No words you could pin down; Dulles vaguely firm."

Are newsmen justified in this feeling that the administration has adopted a deliberate policy of vagueness? Those who believe so point to the classic use of this technique: Candidate Eisenhower's farm speech at Kasson, Minn., on September 6, 1952.

The headlines following the speech tell the story:

"Ike Favors More Farm Props and 100 Percent Parity," said the Indianapolis News.

"Eisenhower Promises Farmers He's Behind Full Parity for Them," said the Lincoln Evening Journal.

"Ike Promises To Work for 100 Percent Parity," said the Milwaukee Journal.

When a year of the President's farm policy turned up no evidence of 100 percent parity, reporters brought it up at a Presidential press conference. "During the campaign, in Minnesota," one newsman said to the President, "you said that you couldn't understand why the farmers shouldn't have full parity rather than 90 percent of parity."

"That was right," the President answered.

The reporter went on: "In other words, 100 percent of parity. Do you still feel that way?"

He "hadn't said 'price supports of 100 percent'," the President protested.

He had said the "objective" in "any decent farm program" should be to get 100 percent of parity for farmers in the market place, but that he had said "there should be rigid price support laws at 100 percent of parity, never."

The record bears out the President's contention. It was true he had not in so many words favored a law for full parity. His statement that the farmers' fair share of the economy was full parity had served its purpose: the headlines did not report the extenuation—they only told of Eisenhower's supposed support of 100 percent parity.

This episode seemed of a piece with the administration's balance-the-budget talk. During the 1952 campaign, Candidate Eisenhower created the impression that he intended to bring the Federal budget into balance. He talked about it in no less than 42 campaign speeches.

Since then the notion that a balanced budget is just around the corner has been kept alive by Treasury Secretary Humphrey. But despite much wishful thinking and talking, all three Eisenhower budgets have been billions of dollars from the goal. The only apparent result of this insistent Republican talk has been to place the President in a somewhat delicate position, since Mr. Eisenhower's performance compares unfavorably with the record he criticized so sharply. President Truman, after all, was able to balance the budget in 1947 and 1951, while in 1948 he produced a whopping $8.4 billion surplus.

There are some signs that Republicans are a little touchy about the spread between their promises and their performance on this matter. So the President was ready for newsmen at his January 19 press conference, 2 days after he had sent Congress his third unbalanced budget.

Before he was asked any questions about the deficit, the President dug deep into his pocket and produced a quotation from one of his 42 campaign speeches on the subject—this one made in Peoria, Ill., on October 2, 1952. The key sentences read: "My goal, assuming that the cold war gets no worse, is to cut Federal spending to something like $60 billion within 4 years. Such a cut would eliminate the deficit in the budget."

Reminding reporters that his new budget and his deficit both stand at $2.4 billion above the promised $60 billion figure, the President said, "I almost can claim credit for being a prophet." The President's statement implied that his position on a balanced budget was unassailable. Yet many newsmen had an uncomfortable feeling that the President was dismissing 41 other campaign speeches rather lightly.

This same resort to legalistic language was apparent last fall when Vice President Nixon toured some 30 States, smearing the Democratic candidates and their party. The intent of his remarks, as accounts in the press bear out, was to suggest that Democrats are so soft on communism that they can't be trusted with public office.

Mr. NIXON "accused the noisy leftwing of the Truman administration' of opposing legal weapons needed to combat the 'Communist fifth column which made a shambles of our domestic security,'" said the New York Herald Tribune.

In Lansing, Mich., the Vice President said: "The lax procedures of previous administrations * * * permitted espionage agents to give away to our potential enemies secret information from the State Department." And in New Bedford, Mass., he said: "We have driven the Communists, the fellow travelers, and the security risks out of Government by the thousands."

When Democrats accused him of a smear, the Republican National Committee cited one wire service dispatch which had quoted Mr. NIXON as saying, "We have driven the Communists out of Government by the thousands," and asserted it was inaccurate. But the wire service had only missed the fine print. The Vice President insisted that his exact words were "Communists, fellow travelers, and security risks," and a transcription proved he was right.

Thereupon Republican Chairman Hall said there was a "highly organized campaign" to "smear" NIXON by "falsely accusing him of smearing others." The defenses, as might be expected, were legalistic reexaminations of exact wording; they did not take account of the impression which NIXON had sought to create or the headlines his accusations earned in the press.

This was reminiscent of Attorney General Brownell's charge in November 1953 that Harry Truman had promoted a man who "was known to be a Communist spy," Harry Dexter White. The press got the implications of that immediately. Brownell obviously was trying to put over the idea that Harry Truman was a traitor. What else could he mean by the charge that the former President had "knowingly" promoted a Russian agent?

But this was not Mr. Brownell's later version when the charge began to boomerang. Though he refused to see reporters for 2½ months, he was driven into an amplifying statement 6 days after his first blast. He had "no intention of impugning the loyalty" of Harry Truman. Not at all. He only considered him guilty of "laxity."

It was true Brownell had not specifically accused Mr. Truman of treason; he had only said he promoted a known spy.

More recently Mr. Brownell faced another storm. His Justice Department had relied heavily on the evidence of several unsavory witnesses. Last winter, three anti-Communist witnesses, Harvey Matusow, Mrs. Marie Natvig, and Lowell Watson, said that they had lied under oath, and charged that Government attorneys had known of and even coached their perjured testimony. When their recantations threw doubt over the outcome of several Government trials and hearings, reporters asked the Attorney General whether his Department should not have been leary at least of Harvey Matusow. He had made obviously untrue public statements months earlier.

But the Attorney General retreated to the fine print generally that there is always a problem of risk in any criminal proceedings, when you get evidence from coconspirators.

This seemed like legalistic quibbling to Columnist Doris Fleeson. She raised the question of responsibility for using witnesses of this caliber. Perhaps no one in Government encouraged the liars to lie, as the liars charge, but they were certainly encouraged to testify.

A prominent member of this not-too-exclusive fine print club is Secretary Dulles. In January 1954, he alarmed our allies and a good many Americans by proclaiming the doctrine of massive retaliation.

This was widely taken to mean that if the Communists took one more step, we would drop atom bombs on them. The speech earned big headlines, and some praise, but the sober second-thinkers began to raise some questions: Congress wanted to know whether the President would launch world war III without a legislative by-their-leave: our allies asked if they would be consulted before the fateful decision.

In the wake of these questions and some sharp criticism, the Secretary explained in a press conference 2 months after the speech, that he had not said America was relying on massive retaliation. No, no, he insisted, we were relying on the capacity for massive retaliation.

The Secretary, at his belated press conference, was officially wide-eyed over the ominous impression created by his words. And of course, a quick check of the Secretary's original speech bore him out; the word "capacity" was in the record.

The administration has a similar history on liberation. During the campaign, liberation looked like a simple straightforward doctrine to many Americans who have relatives behind the Iron Curtain: Candidate Eisenhower apparently meant to replace "the futile and immoral policy of containment" with some bold specific action which would roll back the Iron Curtain and free relatives of Americans from tyranny.

But once in office the doctrine faded from view. Just how it would work had never been clear, though there was a vague impression that somehow the Voice of America and other Government propaganda would stir the people of the satellite nations to revolt.

This notion went by the boards after the futile East German riots the summer of 1953. That autumn, the Secretary officially gave up the liberation policy for the American Government when he said "our creed does not call for exporting revolution and inciting others to violence."

Early this year a drive for $10 million was launched by Crusade for Freedom, the private propaganda organization which operates Radio Free Europe and the Free Europe Press. The President spoke on behalf of the fund appeal, but the word "liberation" did not occur once in the speech. It did occur, however, in the speech of Gen. Walter Bedell Smith, former Under Secretary of State to Mr. Eisenhower, who said, on the some program, that "the so-called promise of liberation is a very tricky and a dangerous one."

The Des Moines Register had this explanation for those Americans whose hopes have been dashed by the collapse of the policy:

"What was abandoned about the liberation policy was the misinterpretations placed upon it by hasty analysts. Dulles never meant that he was preparing actively to liberate the unhappy peoples of the Communist dictatorship lands by military force, economic pressure, and encouragements to revolt.

"All he meant was that the United States should try to keep hope alive by not recognizing Communist conquests and Communist dictatorships as permanent, and not making any deal."

Mr. Dulles and the President could hardly have explained it better.

Investigation of Regulatory Agencies

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. PATMAN. Mr. Speaker, in connection with the hearings being held by the House Select Committee on Small Business concerning the functions and operations of the so-called independent agencies of our Government—the regulatory agencies since the Hoover Commission reorganization plans went into effect with respect to these agencies—I ask unanimous consent to have included in the RECORD two articles by Mr. Thomas L. Stokes, syndicated columnist, dealing with work of the subcommittee and other matters. Congressman EVINS is doing a wonderful and effective job as chairman of Subcommittee No. 1 of the House Committee on Small Business.

The articles by Mr. Stokes entitled "He's Out To Nail Puppets" and "The Bankers in Our Government," serve to indicate how the "direct" and "chain-of-command" system now in effect works in some of these agencies' functions—following adoption of Mr. Hoover's reorganization plan for agencies created to be arms of the Congress rather than the Executive.

The articles follow:

HE'S OUT TO NAIL POLITICAL PUPPETS—RECENT ADAMS-ARMSTRONG FIASCO SHOWED EXACTLY HOW THEY WORK

(By Thomas L. Stokes)

WASHINGTON.—Most timely is a House investigation opening next week into Federal regulatory commissions to try to find out what is happening in these supposedly independent agencies created by Congress to protect the public.

Singularly enough, Representative JOE L. EVINS, Democrat, of Tennessee, who will direct this inquiry by a House Small Business Subcommittee, turns out to be prophetic in light of recent dramatic developments in a Senate committee investigation conducted by a fellow Tennessean, Senator ESTES KEFAUVER. (EDITOR'S NOTE.—EVINS represents the fourth district, and lives at Smithville, Tenn.) Months ago, on February 23, Representative EVINS, in a statement about his plans and objectives in his investigation, said:

"If it proves to be true, as we frequently hear, that these supposedly hear, that these supposedly independent commissions have become political puppets on telephone wires leading from the White House, or from a political committee, then it is time we made the facts known."

WANTS SEC INVESTIGATION

In the same statement, in concluding, he referred to "recent actions and decisions by the Securities and Exchange Commission in its handling of the Dixon-Yates financing arrangements" and other SEC actions which, he said, require an investigation into that Commission.

That was February 23. Well, we learned last week about a White House telephone call to a commission. Lo, it happened to be the SEC. Lo, also, it happened to be about the Dixon-Yates case. The man at the White House end of the telephone was none other than Sherman Adams, assistant to the President. He was calling the SEC Chairman, J. Sinclair Armstrong. He asked Chairman Armstrong to suspend hearings, then in progress for a few days to delay testimony scheduled from Adolphe Wenzell. This was on June 11.

DAMAGING TESTIMONY

If Mr. Wenzell had appeared the following Monday, June 13, as originally scheduled, he would have testified as he did later, about how he was serving the Budget Bureau as consultant on TVA and on the Dixon-Yates contract while still an official of the First Boston Corp., leading utility underwriting house, which handled financing arrangements for the Dixon-Yates contract, now canceled.

The story would have come out in time for Members of the House of Representatives to know about it before they had to vote on funds for transmission lines for the Dixon-Yates plant which Democrats were seeking to cut off. But when the SEC postponed its hearings as Mr. Adams had asked, the House did not get that story which, Democrats claim, would have changed votes. They lost in their effort to deny funds for the transmission line.

The Sherman Adams pressure from the White House came out last week before the KEFAUVER Senate Committee investigating Dixon-Yates.

A BASIC REASON

This incident illuminates a basic reason for the Evins investigation. For, as the Tennessee House Member points out, the regulatory commissions are arms of Congress and not beholden to the Executive. One after another, beginning in 1887 with the Interstate Commerce Commission, they were created by Congress to handle administration of regulatory laws. Regulation is the function of Congress imposed by the Constitution; but, with the rapid development of our economy, Congress found itself unable to handle the endless intricacies and details of regulation, and so delegated commissions to do this detail work for it.

How the attitude of the commissions, themselves, has changed was indicated by Chairman Armstrong before the KEFAUVER committee. This was not only in his subservience to Sherman Adams at the White House but in his refusal for a whole day to say whether the White House had asked him to defer the Dixon-Yates hearings. That added suspense to the eposide. As anyone might imagine, it also ruffled Senators who were puzzled by such reluctance on the part of the chairman of a commission set up in 1934 by Congress as a result of the stock market shenanigans of the late 1920's to protect the public interest. They naturally expect the SEC in its exercise of that function, to keep Congress fully informed of all of its activities. It was an eyeopener to the Senators.

Congress is partly to blame. For it accepted Hoover Commission recommendations that made the chairmen of regulatory commissions, except the Interstate Commerce Commission, responsible to the President, designated by him and serving at his pleasure, and giving the chairman complete control over the commission staff. The effect of this change will be carefully explored by Representative EVINS in his investigation.

It always has been possible for a President to have influence on the attitude of a regulatory commission through his power to appoint members subject, of course, to approval by the Senate. Many changes have been made by the Eisenhower administration which, it is clear, have tended to incline the commissions more favorably to the interests they are supposed to regulate. The Evins committee will look into these changes in personnel and their effect on policy.

The reorganization has been of a sweeping character, for example, in the Federal Trade Commission, which is charged with preventing unfair trade practices and monopolistic tendencies. The FTC is first in line in the investigation which opens Monday. There has been a drastic shakeup also in the Federal Power Commission, which has regulatory authority over electric and gas utilities. It will be given an early going-over by the Evins committee.

THE BANKERS IN OUR GOVERNMENT—ONLY NOW IS THE PENETRATING INFLUENCE OF EX-BUDGET CHIEF DODGE FULLY REALIZED

(By Thomas L. Stokes)

How banker-big business influences penetrated into the Eisenhower administration at the outset and now have permeated Government operations is slowly being traced as one bit of evidence is added to another in current congressional investigations.

Emerging as a key figure is a Detroit banker long since retired from Government, Joseph M. Dodge, who was first Director of the Budget of the new Republican administration. In the last several years, beginning in previous Democratic administrations, the Budget Bureau has become a coordinating agency of great potential power which reaches into every area of government. Under a strong figure, such as banker Dodge, it can exercise large influence on policy. It did just that under Mr. Dodge, and has continued to do so since he left here in April, last year.

We have seen a sample recently in the KEFAUVER investigation of the Dixon-Yates contract, now canceled. That revealed how at Mr. Dodge's direction a plan was worked out in the Budget Bureau for a complete change in Government water resource conservation policy by which TVA, and eventually other giant multiple public projects presumably, were to be turned over to big private utility combines. The author of that plan, in which TVA was the first guinea pig, was Adolphe Wenzell, of the First Boston Corp., who, as we know, was brought to the Budget Bureau as a consultant by Mr. Dodge. This we also now know, was at the suggestion of George D. Woods, chairman of First Boston Corp.'s board, who told in his engagingly frank manner how he had certain ideas about changing Government policy and so he called up his old friend Joe—Joe Dodge. He went to the right place.

How Joe Dodge reached out to exercise his influence on policy in another area now has come to light. This is the Federal Trade Commission, which was created by Congress in 1914 during the first Woodrow Wilson administration to protect the public against unfair trade practices and monopoly. It was chosen as the first regulatory commission to be explored in the current investigation of regulatory commissions by a House Small Business Subcommittee of which Representative JOE L. EVINS, Democrat, of Tennessee, is chairman.

This Joe Dodge episode relates to the final budget submitted to Congress by President Truman on the eve of his retirement. It provided $5.5 million for the Federal Trade Commission. The first Eisenhower administration budget, prepared by Mr. Dodge, cut this to $4.5 million. But, beyond this slash, the Budget Bureau also specified where the cuts were to be made. It eliminated funds for an investigation of what happens to the consumer's food dollars—including what the farmer gets and how much the middlemen all along the line take out—an investigation that powerful business interests sought to prevent when proposed originally in Congress. The Budget Bureau also sharply reduced funds for antimerger prosecutions by the FTC and antimonopoly investigations.

The story of the Dodge intercession was told to the Evins subcommittee by a former Democratic member of the FTC, Stephen J. Spingarn, who was delegated to handle budget matters. When orders for the cuts came to him orally from the Budget Bureau, he said he called Director Dodge to protest and asked the Director if he would put the orders in writing. That Mr. Dodge refused to do, saying oral instructions were sufficient.

Mr. Spingarn testified he tried, but was unable to get, the new Republican Chairman of the Commission, Edward F. Howrey, to intercede with the Budget Bureau to restore funds. During the Evins inquiry, Chairman Howrey has been questioned about his administration, the changes in personnel, and the conduct of cases, and constantly it has been brought up that he was for many years a lawyer representing big business clients before the FTC.

During his own testimony, former Commissioner Spingarn told how Chairman Howrey had revealed early in his administration that he was having to resist enormous pressure for jobs in the FTC from the Republican National Committee which, he said, was trying to find places in the Government for 8,000 Republicans.

Testimony developed thus far in the FTC phase of the House investigation—the policy orders from the Budget Bureau which is an adjunct of the White House, the political pressures from the Republican National Committee—contribute to the picture of deterioration of the FTC, and of other regulatory commissions, that were created originally by Congress as arms of Congress to administer regulatory laws, and to be completely independent of the executive branch. This deterioration is blamed on a Hoover Commission reorganization order, approved by Congress in the Truman administration, that gave the President power to name the Chairman, and empowered the Chairman to appoint the staff and exercise control over it. Consequently the White House now exerts direct influence through the line of authority running from the Chairman to personnel and policy.

Repeal of the Hoover Commission order, which applies to several other regulatory commissions, was urged by Mr. Spingarn and also by Commissioner James M. Mead, another Democrat, who is retiring soon, and who was the first Chairman to serve under the enlarged powers of the Hoover Commission order.

Appendix

Tribute to Senator Saltonstall

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. PAYNE. Mr. President, last Sunday, July 24, 1955, a celebration was held in Sagamore, Mass., to pay tribute to the Massachusetts State Constitution, which was written 175 years ago. On that occasion high tributes were paid to our distinguished colleague, the senior Senator from Massachusetts [Mr. SALTONSTALL] for his 35 years of outstanding public service. I ask unanimous consent that a tribute to Senator SALTONSTALL, together with a copy of an excellent address which he delivered on that occasion, be printed together in the Appendix of the RECORD.

There being no objection, the tribute and address were ordered to be printed in the RECORD, as follows:

A TRIBUTE TO THE HONORABLE LEVERETT SALTONSTALL

Presented to the Honorable LEVERETT SALTONSTALL, United States Senator from the State of Massachusetts, on this 24th day of July in the year of our Lord 1955, in commemoration of his 35 years of service to the people of the State and of the Nation.

To commend him and demonstrate our appreciation for his admirable record as governor of this Commonwealth for 3 terms, his achievements as a member of the United States Senate Armed Services Committee, and to compliment him for the outstanding service he has rendered to the fishing industry not only of this State but of the Nation.

May he continue to serve the people for many years in the future as ably as he has in the past.

We feel confident we will one day honor him as President of these United States of America.

Tendered to him by his friends and members of the Women's Republican Club of the Upper Cape.

Mrs. Joseph R. Sorenti, President; Edith C. Deering, First Vice President; Mrs. Austin B. Walker, Second Vice President; Marguerite A. Brown, Third Vice President; Mrs. Vincent A. Mackesy, Fourth Vice President; M. Spray Richardson, Recording Secretary; Mrs. Ashley W. Rice, Corresponding Secretary; Muriel S. Torrey, Treasurer; Florence G. Snow, Auditor.

ADDRESS OF SENATOR SALTONSTALL AS GUEST OF HONOR AND PRINCIPAL SPEAKER AT PICNIC SPONSORED BY UPPER CAPE WOMEN'S REPUBLICAN CLUB, SAGAMORE, MASS., KEITH MEMORIAL FIELD, JULY 24

This is a great meeting. It shows that we Republicans like to get together in the off year, just as in election years, even though it may be hot, distances may be long, and other attractions many. We do so because we are practical idealists. We know that friendships are the backbone of politics and friends love to discuss current problems.

In 1952 when President Eisenhower was a candidate, he promised to do his utmost to end the fighting in Korea, to eliminate corruption, communism, and controls from our Government in Washington. Those things have in the main been accomplished. Now the slogan heard so often is "Peace and Prosperity."

Peace and prosperity do not just happen. It takes hard work to bring them about; the present administration has worked hard and has achieved results. Today peace and prosperity are talked about with real confidence. Peace and prosperity have come about through the policies and the program of this administration, through the confidence the people have gained in the leadership of President Eisenhower. Let's look at the record. What have these achievements been?

The ending of the fighting in Korea.

The treaties with Austria, Germany, and Japan.

The settlement in Trieste.

Mutual defense treaties with the Free Republic of China and with Korea.

The Manila Pact with Australia, France, New Zealand, Pakistan and the Philippines, Thailand, and Great Britain.

Support of NATO and Western Germany's defense.

Advancement of President Eisenhower's epochal atoms for peace plan.

Through cooperation with our allies we achieved these things:

A ceasefire in Indochina.

A settlement of the Guatemalan crisis.

Adoption of the Caracas resolution.

Full support of the United Nations in its efforts to achieve peace and to further health, education, and scientific advancement throughout the world.

The United States, under President Eisenhower's leadership, has without hesitation demonstrated its willingness to explore from a position of strength all means of obtaining a greater opportunity for peace and security in the world. The Geneva parley at the summit is the latest and best example of this. Let us hope that from this parley come ways and methods of procedure through which there will be greater mutual understanding among all peoples.

But peace is not easily come by. It takes patience, understanding, and mutual willingness to get together. These we Americans have.

Since January 1953, in spite of many forebodings and pessimistic utterances from the Democratic Party, there have been tremendous achievements for a greater prosperity, a more healthy economy in our country.

President Eisenhower, immediately after taking office, urged the elimination of strangling economic controls and wage ceilings. He stimulated maximum encouragement of full and free across-the-table collective bargaining, with a minimum of participation or interference by the Government. He urged the expansion of America's homebuilding and construction program by the enactment of the Housing Act of 1954. The present housing and construction boom is the greatest in America's history. The administration carried out its campaign promise of tax relief by approving a $7.4 billion reduction in our taxes. This represents more take-home pay for all our workers. This stimulated our industries to enlarge their plants.

The buying power of the dollar has been maintained. The discouraging increase in the cost of living has been stabilized. Small business has been helped by the creation of a thoroughly independent Small Business Administration. There has been a gradual but steady elimination of Government competition with private business.

The President has advocated an historic highway-construction proposal and additional school construction. Our social-security coverage has been expanded to include 10 million more Americans. In June of this year, for the first time in our Nation's history, employment has exceeded 64 million. It increased by 1,300,000 people in the month of June alone. The Department of Commerce reports that total production of goods and services reached a record level on an annual basis of approximately $375 billion in the first quarter of this year.

Such economic progress spells prosperity. It is helped by the courageous application of commonsense in the actions of the Federal Government. Good sense in deciding what the Federal Government ought not to do helps us to stimulate our economy as well. In both these ways, the Eisenhower administration has helped to achieve this prosperity. But how well or how long it continues depends greatly on our own commonsense and good judgment as individuals.

"Peace and prosperity." This is indeed a good slogan for it stimulates greater confidence in the future, greater peace of mind—a feeling that another war is not just around the corner—the satisfaction that comes with a good job—a peace of mind that comes with a more comfortable home and a greater opportunity for the schooling of our future generations.

But just as "peace and prosperity" has become a slogan about which we read in the papers, about which we talk on the street corner, our job now is to make peace and prosperity a cornerstone for the future, just as it is a fact today. We do not want another war. We do not want another depression. So, we look to the administration in Washington for guidance, for action designed to maintain this peace and prosperity we know today.

Our way of life here in America has been based not upon security, but upon opportunity. Our system of government has been based upon service, not bureaucracy. We want our Government to be close to the people. We want our people to take an active, vigorous part in our Government. Under recent Democratic administrations, I ask you, have these things been possible?

When President Eisenhower took over, those practices were drastically changed. He knows that the "policy of partnership" is a good one, a healthy one, an effective one at every level in human relations. He wants the Federal Government to do those things for our people that it is its clear duty to perform. He wants the Federal Government to refrain from interfering in decisions that can best be made by State governments, by local communities, and by individuals. This is his attitude and philosophy. It is the one which I like to think is mine, too.

One of my greatest privileges in Washington has been the opportunity since January of 1953 to meet with the President, our JOE MARTIN, and other administration leaders each Tuesday morning at the White House. These meetings give us an insight

into the President's personality, his friendliness, his quick understanding of problems, his frankness, his sincerity, and his desire to do what is right regardless of how it affects him personally. They reflect equally his determination that his policy of partnership shall continue and endure.

We have achieved much together under this administration in our efforts to obtain peace. But there is lots yet to be done. Geneva is only the first of many steps to be taken. We do not know what the Geneva parley may produce among the "Big Four," but we must, I am convinced, look to its outcome with hopeful realism. But there are other things to be done, too. To list a few:

The securing of an agreement for a regular and reliable international inspection of nuclear weapon development and manufacture.

The vigorous promotion of President Eisenhower's "Atoms for Peace" proposal.

The achievement of a united Germany.

The giving of an ever-greater stimulus to active international trade and commerce.

The promotion of a gradual, sensible disarmament program.

The settlement of the tension in the Strait of Formosa, a problem which stimulates our deepest consideration.

The discouragement of colonialism throughout the world, with a clear realization that modern times, the upsurge of nationalism and present-day international relations have made colonial policies and programs subjects for historians.

Here in our own country there is much to be done if the prosperity we now enjoy is to be maintained and continued. Some of the principal jobs which lie ahead are:

Continued development of a sound, flexible farm policy that will hold farm prices steady and avoid costly surpluses.

Greater ecouragement of small business participation in both Government and private contracts.

Continuance of the policy of sensible Government action in labor-management relations and carefully considered amendments to the laws.

Achievement of an adequate highway program.

Achievement of a vitally needed, adequate school construction program.

Development of power resources programs based on the partnership policy of cooperation between Government and private enterprise.

Our rapidly expanding population, soon to approach 166 million, demands more factories, schools, homes, hospitals; a comprehensive hospitalization program; a tax structure geared equally to the Nation's needs and the individual's income.

So, today, when we come to this beautiful spot where so many citizens of Massachusetts and other States find recreation and enjoyment in their vacation periods, we have good reason to think for a few moments upon our responsibilities as citizens, upon our feelings regarding this Administration's policies and practices, upon the future of our great country. We come together to give thanks for the leadership that is ours in national affairs. We are proud of our President and his conduct of the most difficult office in the World. We admire and respect him as a man. We want him to continue as our leader. That confidence in our administration must be demonstrated by our active participation, by giving him support because we believe in his policies and his conduct of the presidential office. In that spirit I come to this meeting today. It is with that feeling that I know we all join with Governor Herter, Congressmen Martin and Nicholson, in working hard to make Ike's administration continue to succeed.

Does it sound as if I believed he should run in 1956? I'll answer that question. You bet it does.

Four Dozen Miscues

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Four Dozen Miscues," which was published in the Chicago Daily Tribune of July 19.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOUR DOZEN MISCUES

The Democratic-controlled Senate Investigations Subcommittee has handed down a belated verdict that the Department of the Army was guilty of 48 mistakes in handling the case of Maj. Irving Peress, who was given an honorable discharge after invoking the fifth amendment 33 times when questioned whether he was a Communist or had engaged in Communist activity.

Peress put on this act before the same subcommittee on January 30, 1954, when a Republican majority was in control and Senator McCARTHY, of Wisconsin, was the chairman. McCARTHY immediately sent a message to the Pentagon demanding that Peress be court-martialed. Instead, though McCARTHY's demand had been received and considered, the Army tried to unload itself of a hot potato by giving Peress an honorable discharge.

Incensed, McCARTHY summoned Brig. Gen. Ralph Zwicker, commander of the camp through which the discharge was granted. Zwicker dodged all over the lot when the Senator tried to pin down responsibility. McCARTHY then asked Zwicker whether he thought that any officer recommending Peress' discharge in view of the known circumstances should be removed from the military rolls. Zwicker replied:

"I do not think he should be removed by the military."

"Then, General," retorted McCARTHY, "you should be removed from any command. Any man who has been given the honor of being promoted to general and who says, 'I will protect another general who protected Communists,' is not fit to wear that uniform, General."

This observation touched the Army on a delicate nerve. There was a chorus of shouts that the honor of the Army had been assailed. Mr. Eisenhower went out of his way to support General Zwicker. McCARTHY had already proved a headache to the Pentagon by investigating Communist infiltration of the secret Army radar laboratory at Fort Monmouth. His activity in the Peress case and his lese-majesty to a general were considered insupportable.

The result was a campaign to "get" McCARTHY, sparked by the Pentagon, the White House, and enemies in the Senate. The issue was a trivial one—the charge that undue influence had been extreed out of McCARTHY's subcommittee office to get an Army commission for an investigator, G. David Shine, who was being drafted.

Plaintiffs of record in this proceeding, which led to a marathon Senate investigation, were Secretary of the Army Stevens and John Adams, Army department counselor, both of whom have since resigned. The findings of the investigation left McCARTHY untouched, but heat had been engendered for a further step—an action to "censure" McCARTHY. One of the two original specifications supporting such a motion returned by a select committee acting as "grand jury" dealt with McCARTHY's alleged abuse of General Zwicker.

This charge fell by the wayside when the Senate as a whole considered the case, for even though it was apparent in advance that McCARTHY's enemies had the votes to report a verdict against him, the Zwicker affair was so dubious that even a jury which had prejudged the case was forced to back away, holding its nose. The final Senate action was to the effect that McCARTHY's conduct or manners stood "condemned" in matters bearing no relationship to the Zwicker affair.

Now the Democratic subcommittee sweeps all this old dirt under the rug with a report holding that in the Peress matter, which gave rise to all subsequent action against Senator McCARTHY, it was the Army, Stevens, and Adams that were at fault—not once, but 48 times. McCARTHY did not draw a breath of criticism. The Army crowd, on the contrary, was castigated for failing to act on the information supplied by the Senator.

This is vindication, but of a left-handed kind. The Democrats who now absolve Senator McCARTHY pretended during the Pentagon-McCARTHY inquiry that the Peress case had no bearing on the charges. These same Democrats voted condemnation to a man. Now they switch around and discover that culpability lay in the other direction. Senator McCARTHY deserves an apology from all 67 Senators who voted to put him in his place, but, aware as he is of the ways of politics and hypocrisy, he knows that he will not get it.

Talks With Peiping

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. SPARKMAN. Mr. President, in the Washington Post and Times Herald of July 26, 1955, there was published an editorial entitled "Talks With Peiping," dealing with the proposed Far Eastern conference which has been so ably suggested by the distinguished chairman of the Foreign Relations Committee [Mr. GEORGE]. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TALKS WITH PEIPING

Senator GEORGE again has taken the lead in proposing an international conference to ease world tensions. His suggestion Sunday that the United States meet with Communist China is as appropriate and timely as his suggestion last March for a Big Four conference. The Senator has spoken bluntly on a subject that others have hesitated to meet head on. He thus has made it easier for the administration to do what it ought to do in this respect. The announcement yesterday that direct talks between American and Chinese Communist diplomatic officials will be held at Geneva August 1 on the fate of 51 imprisoned Americans and certain other issues is a good augury.

The Prime Ministers of India and Burma also have helped pave the way for negotiations by acting as intermediaries between the United States and Red China. But they have not resolved the issue of Chiang Kai-shek's role in any future talks. Senator

GEORGE did not mention Chiang, but the White House has made it clear the United States would not meet with Peiping on the Formosa question without a representative from Chiang present. The presence of such a representative presents one of the many difficult technical questions that must be cleared up before a meeting can be held. It may be doubted, therefore, whether the conference can take place as quickly as Senator GEORGE suggested.

Nevertheless, the situation in the Far East demands that efforts be made at once toward making arrangements for the talks. Senator GEORGE is correct in arguing that that summit conference has not settled the Formosan issue and that it could be ignited again by a word or deed from Peiping. It would be most unfortunate, in view of the change of atmosphere that the Geneva meeting has brought about, if Peiping should carelessly inflame the situation anew.

Given the best will in the world on both sides, the Far Eastern situation presents certain complexities, particularly involving the rights of third parties, that were not present at Geneva. While Geneva was concerned with generalities, a conference with Peiping must be concerned with such specifics as Quemoy, Matsu, and Formosa and the future recognition of Peiping by the United States and the United Nations. Peiping has begun to take steps that should lead toward a settlement in the release of some of the Americans held in Chinese prisons. The others still held likewise must be released before direct Washington-Peiping negotiations can have much meaning. That is why the new conference to begin at Geneva August 1 is of first-rate importance. It has been called to deal with a specific issue that has been one of the roadblocks to a discussion of the broader Far Eastern questions.

The President's Suggestions at Geneva

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Results of Improvising at Geneva—Exchange of Arms Data Is Unlawful—Reds May View Plan With Contempt," written by the famous columnist, Dorothy Thompson, and published in the Washington Evening Star on yesterday, July 27.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESULTS OF IMPROVISING AT GENEVA—EXCHANGE OF ARMS DATA IS UNLAWFUL—REDS MAY VIEW PLAN WITH CONTEMPT

(By Dorothy Thompson)

Senator KNOWLAND refused to comment on the President's sensational suggestion at Geneva that the United States and the Soviet Union let each other know everything about each other's military establishments, and that Russian reconnaissance planes be permitted to fly all over the United States, with similar privileges granted Americans in Russia. The Senator said he preferred to wait until the Geneva Conference was over and the whole picture could be analyzed. That might be good advice for a columnist, if events halted long enough to permit adequate deliberation before something else required admission to consideration.

My impression of this conference, as of all others in which an American Chief of State has participated in the past 12 years, is that the President went into it inadequately prepared, and without a fundamental agreement with his partners regarding what would be proposed.

There was evidence of considerable improvisation, of which the President's call to "exchange arms blueprints" was the most startling. The general reaction here and abroad, insofar as the press and Congress reflects it, was that it was a propaganda move in the certainty that the Russians would not accept.

The President, throughout the conference, was bent on making a demonstration of almost unlimited American good will and showing the Russians that they had nothing to fear from the United States.

But one can overdo this, and always does overdo it, if for the sake of propaganda one makes a half-baked proposal that opens up more problems than the unlocking of Pandora's box.

The President's proposal is incompatible with American law. It amounts to open espionage openly arrived at. Practically speaking, aerial reconnaissance cannot reveal all military secrets, nor, indeed, the most important ones, presently secured against the curiosity of even the most patriotic American citizens.

If the object were genuinely to expose our entire Military Establishment, the Rosenbergs should be resurrected to cooperate.

To implement it would raise the bitterest controversy in American history and give rise to rumors and recriminations of suppressions by both sides. The Russians would still be in a better position to hide operations than we.

The danger is that neither the Russians nor anybody else will take it seriously, seeing in it just another of those off-the-cuff moves—that it will be viewed with contempt by the Russians and exasperation by our allies.

The lack of western unity was palpable. Mr. Faure's sponsorship of disarmament control by budgetary means was unsupported by the Americans and British.

Who can control the Soviet military budget, or, for that matter, the American? There are secret funds in all budgets, expended for such essentially military purposes as espionage and psychological warfare. Even the Congress of the United States knows little about the expenditures of our counterintelligence apparatus.

Sir Anthony Eden had French opposition to his proposal to demilitarize the German out, made specific proposals of a negotiable allied with the West. The French remember the demilitarized Rhineland. Eden, throughout, made specific proposals of a negotiable character, that were not proclamations. In all he said one saw the hand of an accomplished diplomatist—which none of the other chiefs of state were.

There is no doubt that he precisely reflected the views of his Foreign Minister, Mr. Macmillan, or that Premier Bulganin fully represented Foreign Minister Molotov. But there is doubt that the President was speaking at all points for Mr. Dulles, or Mr. Faure for his Foreign Minister, M. Pinay.

The Russian game was made clear in the two texts presented, both having to do with an all-European system of collective security which we have again postponed analyzing because of the President's later proposal.

The Russians believe that diplomatically speaking time is on their side. "The situation is not yet ripe for German unification," implies their conviction that it will ripen in a Russian sun. And every Western rift and American improvisation aids and encourages them.

Resolution of Wisconsin Department, VFW, on Publicizing America Abroad

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1955

Mr. REUSS. Mr. Speaker, I submit the following resolution adopted by the Department of Wisconsin Veterans of Foreign Wars of the United States at its 34th annual encampment at Eau Claire, Wis., June 23–25, 1955:

Whereas the everlasting friendship of the peoples of the free countries of the world, based upon mutual trust and understanding, is vitally essential to the future national security of the United States; and

Whereas this friendly relationship is extremely important to our national economy in times of peace through the preservation of foreign markets for our vast agricultural and industrial surpluses; and

Whereas this enduring friendship will increase the strength of our military alliances with those free countries that are equally willing to fight for their freedom against Communist subversion and aggression; and

Whereas American journalists, publicists, and experts in international human relations are unanimously agreed that the peoples of all foreign countries must know the truth about America before we can rightfully expect their unswerving allegiance in any cold or hot wars with Soviet Russia; and

Whereas a majority of the peoples in foreign countries suffer from a deplorable lack of knowledge as to how freedom operates in America, and the individual rights and liberties that we enjoy under our form of government; and

Whereas this ignorance of the truth about America is due primarily to a constant stream of vicious anti-American Communist propaganda emanating from Moscow and designed to portray the average American as a slave of his alleged economic bosses, and as an enemy who seeks to exploit the military strength and economic markets of all foreign countries, free or enslaved; and

Whereas many of the people of the free world labor under the impression that the typical American citizen is accurately reflected in certain motion-picture films that are produced in Hollywood, particularly those films that glorify murder, rackets, sex, and immorality; and

Whereas the ordinary citizen in foreign countries truly believes conditions in the United States are honestly described in newspapers that are either edited by Communists or published by persons whose personal distrust of the United States is reflected in their news columns; and

Whereas some people in foreign countries are hostile and suspicious toward America because they do not know that we prize our rights of religious freedom, our rights of free speech and a free press, and our many cultural blessings above the value of our telephones, automobiles, TV sets, washing machines, and bathtubs; and

Whereas certain animosity toward the American people persists despite the millions of dollars that have been spent for the dissemination of pro-America information via Radio Free Europe, the Voice of America, and the United States Information Agency; and

Whereas the Veterans of Foreign Wars of the United States has entered into a program to further extend the effectiveness of its loyalty day, observed annually on May 1, with its true meaning and purport made clear

to the peoples of other lands in order to strengthen mutual understanding and thereby our Nation: Therefore, be it

Resolved, That the Veterans of Foreign Wars of the United States should foster and promote an aggressive, nationwide campaign dedicated to the objective of conveying the truth about the United States to the peoples of other countries through the transmittal of personal letters, books, magazines, catalogs, and other literature direct to individual friends and relatives, and others, in other countries; and be it further

Resolved, That we direct our appeal for cooperation particularly to those of our citizens who are of foreign extraction themselves and who possess the means of communicating direct with relatives and friends in their native countries; and be it further

Resolved, That each VFW post and its ladies auxiliary be urged to help implement this effort on the community level by enlisting the support of newspaper, radio, and television facilities as a means of acquainting the general public with the desperate need for this campaign and the opportunity it offers the individual citizen to do his bit in the fight against communism, and the threat of universal devastation if humanity is confronted with the terrifying possibilities of atomic destruction in a third world war—a war that is certain to come if the free nations of the world allow themselves to be divided by distrust, evil suspicions, and groundless fears spawned by the Communist dictators in the Kremlin; and be it further

Resolved, That copies of this resolution be sent to all Members of the United States House of Representatives and the United States Senate from this State so that they may understand our feelings, and our desire to stop the spread of anti-Americanism, and its corollary the spread of communism; and be it further

Resolved, That Congress be urged to make adequate appropriations for a thorough, complete, and truly American, United States Overseas Information Service to the end that those in Europe, Africa, the Near East, and the Far East may understand the blessings of liberty, the peaceful goals of "Life, liberty, and the pursuit of happiness" as advocated by the United States, and the terrors, loss of liberty, war and regimentation, and slavery to be the true goal of communism.

A Bill To Authorize Additional War Damage Payments in the Philippines

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. MILLER of California. Mr. Speaker, in introducing this bill today, I am only concerned with what I believe to be the best interest of the United States. I believe that a strong Philippines is of vital importance to the United States in the Far East. Incontrovertibly this legislation will help greatly to strengthen Philippine economy.

Having been a member of the Insular Affairs Committee since the 79th Congress, it has always been my honor and privilege to have taken an active part on all legislation concerning the Philippines. I participated in the preparation and passage of the Philippine Rehabilitation Act of 1946. Indeed, in 1950, I introduced H. R. 7600 to implement the Philippine Rehabilitation Act of 1946. Hence my continued deep interest in legislation affecting the relationship of the United States and the Philippines. And I may add that it is my earnest belief, which I am sure will be shared by my colleagues who participated in that legislation, that the Philippine Rehabilitation Act and the Bell Trade Act constituted a compact between the United States and the Philippines as soon as the latter accepted the conditions therein required. So that when the Philippine Rehabilitation Act provided that the claims approved in excess of $500 should be paid up to a maximum of 75 percent, it is my best judgment that this is a commitment to the Philippine people which they took into account when they approved the amendment to their constitution and therefore the same must be met by us now.

Many have asked "why should the United States continue to assist the Philippines?" The Philippine Rehabilitation Act was enacted by Congress to fulfill promises made to the Philippine people during the dark days of the occupation. It represented a generous gesture by the people of the United States to assist their ally in the rehabilitation of their war-torn economy. Over and above all these it represented the recognition by the United States of the aid and assistance it had rendered us in the allied cause. Again, we must not forget the special and peculiar relations between our two countries during the last half century. We have labored with the Philippine people to assist in their education and self-government so that they might realize one day their own self-democratic government. Our prestige in the Far East is inescapably bound to the success of the Philippine experiment. Equally important and significant is the fact that the cause of democracy in southeast Asia is directly involved in the Philippine success, for southeast Asia today, in a fluid state, has its attention focused on the Philippines and how democracy functions there. Needless to say that with the recent development in China, militarily speaking, the Philippines has assumed an increased strategic importance. Moreover, the Philippines has been a significant factor in the foreign trade of the United States. We have there a major market for American products and a source of essential commodities, sugar, copra, Manila hemp and hardwoods. For all these reasons, in my opinion, the United States must keep its commitments to the Philippine people.

HISTORICAL BACKGROUND

The Philippine Republic is one of our most dependable allies in that area of the world where the international situation is presently so very delicate. She has made wonderful progress in combating communism, principally by demonstrating that the democratic system can provide a higher standard of living to the working class than any totalitarian method. This she has been able to do notwithstanding the still unsatisfactory condition of her economy resulting from her loyalty to the cause of freedom in the last war.

The Philippines are, indeed, the showcase of democracy in Asia. If the Filipinos succeed in proving to the great masses of the people of Asia that under democratic practices they are able to establish, and maintain, a higher standard of living than the people of the Communist and neutralist countries, the free world will have won a battle that will be more effective than the gains effected by divisions of soldiers or billions in handouts.

PRESIDENT'S MESSAGE

In this connection, I should like to recall that on April 11 the President of the United States in a message to Congress stressed the need for intensifying our cooperation with the free nations of southeast Asia in their efforts to achieve economic development and a rising standard of living. I quote from his message:

> The motivation behind this cooperation is twofold: Our fixed belief in the worth and dignity of the human individual whatever his race or flag may be, and our dedication to the principle that the fruits of national growth must be widely shared in every society.
>
> As a people we insist that the dignity of the individual and his manifold rights require for their preservation a constantly expanding economic base. We are convinced that our continued economic, cultural, and spiritual progress are furthered by similar progress everywhere. * * *
>
> We seek to evolve a consistent and stable economic policy which will assist free nations in their efforts to achieve a sound growth for their economies.

General Eisenhower stated, upon first seeing postwar Manila, that it was the worst war torn city that he had seen, with the possible exception of Warsaw. The damage was not limited to Manila, but extended as devastatingly throughout the Archipelago.

PHILIPPINE ECONOMY: IT IS STILL FAR FROM COMPLETE RECOVERY

The Philippine Islands, which always had a favorable balance of trade with us and with the world before the war, have piled up a tremendous trade deficit during the years of reconstruction and rehabilitation. It is significant to note in this connection that, in the 8-year period before the war, 1934–41, the Philippines had a total favorable trade balance with the United States of $257 million—imports, $621 million; exports, $878 million—in the 8-year period after the war, 1946–53, the Philippines had a total negative trade balance with the United States of $1,268 million—imports, $2,861 million; exports, $1,593 million.

The country is still plagued by inflation and unemployment, and has had to adopt strict currency and import controls. These conditions prevail, even though there have been pronounced strides toward full recovery.

It is indeed fortunate that there is one nation in Asia bound to us by strong ties on which we can depend. The Republic of the Philippines has been tested in war. The blood of her heroes has mingled freely with that of our own sons on many a battlefield of World War II and in Korea.

We must preserve and protect that friendship.

Mr. Speaker, what happens to this champion of democracy in the Orient is of the greatest interest to us.

We must keep the Republic of the Philippines strong morally, militarily, and economically so she can stand side by side with us in the world conflict against communism.

The election and acceptance of President Magsaysay to lead the Republic of the Philippines is evidence of the direction in which that country lays its course.

This bill which I have introduced in the House today would authorize the appropriation of $100 million for additional war-damage payments in the Philippines. In this connection, I deem it expedient at this time to briefly relate the facts and thus refresh our memory with regard to war damage and the Philippines.

Throughout the half-century when the Philippines was a possession of the United States, there were frequent declarations by our policymakers that the Philippines would be created a free and independent nation at such time as its people were able to govern themselves—the only Christian nation in that part of the world. The Philippines had been under foreign rule for several centuries. Chinese, Dutch, British, and Spanish were among those who conquered parts or all of the 7,000-island archipelago from time to time, despite the resistance of the Filipinos and their desire for independence. In the 50 years of American control, there was no lessening of the wish for freedom which was promised at such time as the people demonstrated their ability to sustain it. Meanwhile, American teachers sought to improve the education of the youth; agricultural experts endeavored to demonstrate improved methods of crop production; technicians introduced new procedures for industries and business; and efforts were made to instruct in the sound administration of public and private enterprises.

World War II interrupted the preparation for independence by the Philippines. History records the grim events that occurred in what was then the Commonwealth between December 7, 1941, and the time of liberation in 1945. Despite the propaganda of the Japanese, the vast majority of the Philippine people remained loyal to the United States because of the bonds of friendship that had been developed in the years of American jurisdiction. They fought side by side with the forces of the United States and, during the Japanese occupation, gave aid and comfort to those nationals of the United States who were imprisoned or who waged guerrilla warfare against the invaders. Their loyalty and assistance continued, notwithstanding the havoc that was wreaked on their homes, farms, industries, and businesses, or the torture and even death to which many were subjected. When the military forces of the United States returned to the Philippines, the people again fought to overcome the Japanese.

With the conclusion of the war, the United States made ready to grant the long-awaited independence to the Philippine people. The ravages of the conflict, including the destruction caused in the battle of liberation and the tragic events of the occupation, however, had seriously disrupted the life and economy of the Philippines. Its financial condition prevented the people from embarking on a career as a free nation without assistance. The relationship between the United States and the Philippines had been unique and, during the occupation, the highest American officials had given assurances that the damage of war would be repaired and the people repaid. With the granting of independence, the time for the fulfillment of these assurances had come.

In the Senate and the House of Representatives there was overwhelming sentiment to restore damaged and destroyed public and private property in the Philippines. One of the difficulties, however, was the question of cost. Various surveys had been made, but it was a practical impossibility to obtain a detailed accounting of all destruction. On the basis of the statistics then available, it was agreed in April 1946 that the United States Government would authorize the appropriation of $400 million for the payment of claims for damage to private property. In addition, the Congress authorized the appropriation of $120 million for the restoration and improvement of public property and essential public services.

The legislation which contained these authorizations was entitled the Philippine Rehabilitation Act of 1946, and provided for the creation of the United States Philippine War Damage Commission to expend the $400 million for private claim payments. In addition, the Commission was allotted $57 million of the $120 million authorized for the restoration of public property. The balance of the latter fund was allocated as follows:

Public Roads Administration, for rehabilitation of roads and bridges, $40 million; Corps of Engineers, for restoration of ports and harbors, $18 million; and the Public Health Service, for the restoration and improvement of health services, $5 million.

THE PHILIPPINE REHABILITATION ACT OF 1946

The Philippine Rehabilitation Act of 1946 was an early implementation of the expressed purposes of Members of our Congress to take care of immediate Philippine rehabilitation problems in rough outline as quickly as possible. It was obviously not intended as blanket legislation to cover all of the vexatious challenges implicit in these problems.

The act was administered by the Honorable Frank A. Waring, of California; the Honorable John A. O'Donnell, of Pennsylvania; and the then judge, now senator, Francisco A. Delgado, of Bulacan, Philippine Islands. Senator Delgado is now chairman of the committee on foreign affairs of the Filipino Senate. In this connection, he is not unknown to the older Members of this body, who remember him as a former Resident Commissioner from the Philippines in the House of Representatives during the 74th Congress.

The Commission was to receive, investigate, approve, or disapprove, claims covering damage to property during and as a consequence of World War II in the Philippines.

Claims up to $500 were to be paid in full as quickly as allowed. Further, the successful claimants were to be paid on the basis of 1941 market prices, less depreciation of amount per year from the date of acquisition of the lost or damaged properties.

Payments made by the Philippine War Damage Commission, prorated according to law among all claimants, totaled 52.5 percent of the amount allowed on each claim in excess of $500. In contemplation of exorbitant postwar cost, of substantial disallowances on the claim as filed, and the partial payment of slightly more than half of the amount approved, it is estimated by the War Damage Commission that successful claimants probably received no more than 20 percent of the cost of the reproduction of their homes, businesses, and other property.

Finally, when all the claims had been adjudicated and it was adjudged that with the funds available the combined total would be 52.5 percent of the approved balance of any claim adjudicated for more than $500, or 22.5 percent less than the statutory maximum of 75 percent fixed by the act.

The War Damage Act aforesaid was reported by the old Committee on Insular Affairs. I had the honor to serve on this committee under the chairmanship of Judge Jasper Bell, of Missouri, affectionately known to all who were here through the 79th Congress. The committee had no precedent to guide it. In its wisdom, however, the committee wrote the following language into Report No. 1921, page 32, Committee on Insular Affairs, House of Representatives, 79th Congress, 2d session:

> While the committee feels it is urgently necessary to provide through this legislation (S. 1610) for the rebuilding and restoration of the physical plant of the Philippines, it is generally realized that additional legislation will probably be necessary in the future to augment and supplement the benefits which will be accomplished through S. 1610. * * * It is expected that proposals for additional legislation will be made from time to time by the agencies of the United States Government, by the Government of the Philippines, and the Filipino Rehabilitation Commission to meet needs for legislation as they arise.

It is fair to state that the foregoing paragraph of the report certainly was not placed in there by accident and cannot be discarded. The Philippine War Damage Commission, as the record will attest, did a most efficient and exemplary job. It not only concluded its work a month ahead of the statutory deadline, but it returned a substantial part of the money authorized for its administrative expenses to the United States Treasury.

We have a moral responsibility to the people of the Philippines. They were our wards and we their tutors in democracy for nearly half a century. We encouraged them to fight, and they responded to our request. They paid in blood and sweat and the raw red wounds and, yes, in the lives of their people for their resistance to an enemy drunk with

power intent on establishing the doctrine "coprosperity sphere of Asia," another way of saying "Asia for the Asians."

The valiant resistance of our then political ward shortened the war in the Pacific by many months, if not by many years.

The Philippines are the anchor of our defense in the Pacific.

Then, too, the Philippine Republic will consume both our soft and durable goods. They have a great capacity to absorb them. Our nationally known brand names are familiar to them. Our trade with the Philippines is not a one-way street. They produce much that is essential in our economy. We use their hemp, their sugar, their hardwoods, and their pineapple. Any money we spend in the Philippines encourages the solid type of trade we so badly need.

I repeat that the Philippines present the showcase of democracy in that area, and that other countries of that region are closely watching the Philippines and everything that happens there.

Let me mention just a few more items in the structure of our connecting bridge with the Philippines:

Under our mutual defense pact with the Philippines, we have established important military, naval, and aerial bases in their country.

Under our trade agreement with them our investments are guaranteed the same protection and privileges as those of their own nationals.

Under the dynamic leadership of President Magsaysay, the Philippines is undergoing a program of development and strengthening their economy, so that they may better cope with the threat of communism.

New Dollar-a-Year Men

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. SPARKMAN. Mr. President, in the Washington Post and Times Herald of July 26 appeared an editorial entitled "New Dollar-a-Year Men." It is a very interesting discussion of the so-called dollar-a-year men, or w. o. c.'s, as they are now referred to. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW DOLLAR-A-YEAR MEN

The Senate took a step backward last week when it weakened the provision in the defense production bill against the employment of w. o. c. officials—persons who serve without compensation from the Government but are paid by their companies, the successors to the dollar-a-year men. The Banking and Currency Committee, on the recommendation of the Comptroller General, had proposed that in peacetime w. o. c.'s be employed only as consultants and advisers. Whether even that goes far enough in abiding by the spirit of the conflict of interest statutes is a serious question. But it is much better than the amendment the Senate adopted by a vote of 46–45 which says that w. o. c. men may hold administrative positions but not make policy decisions.

The conflict of interest statutes are made up of at least six separate statutes, and it is not easy to generalize concerning them. One is a prohibition against dual compensation. It makes it a crime for any Government employee to accept any salary from any private source "in connection with his services" as an official. Another prohibits Government employees from transacting business with any firm or corporation in which he is directly or indirectly interested. These are sound expressions of policy.

The argument for exempting w. o. c.'s is that in time of national emergency the Government requires the services of highly paid industrialists who cannot live on a Government salary or who will not risk criminal prosecution if, in dealing with the area of business with which they are most useful, they have to be concerned about how some future Attorney General may construe the prohibition against an official doing business with his own company. However much this sort of exemption may be necessary to get businessmen to work for the Government in time of crisis, it is distasteful business at any time.

In 1942, the Truman committee argued against the use of dollar-a-year men even in wartime. It pointed out that John Lord O'Brian, general counsel of the Office of Production Management, required lawyers on his staff to sever their connections with private law firms. "If such action was desirable with respect to lawyers whose firms were not obtaining any defense contracts," the Truman committee said, "it is all the more proper and desirable with respect to those dollar-a-year and without-compensation men whose companies are directly obtaining the great bulk of the defense contracts." The Truman committee's advice, however, was not taken because of the pressure to obtain qualified industrialists to assist in the war production program.

Representative CELLER's investigation into the employment of w. o. c.'s is most timely. Congress particularly owes it to the country to scrutinize the operation in practice of any exemptions it may authorize. It also owes it to the country to see that not only the letter but the spirit of the conflict-of-interest laws is lived up to in those situations where it has not authorized exemptions. The case of Secretary Talbott, for example, raises the issue of whether the dual compensation statute has been complied with. Mr. CELLER should find out how many other Defense or Commerce Department officials are similarly drawing double compensation.

The House Banking Committee, like the Senate committee, voted for tighter restrictions on w. o. c.'s. The committees are on sounder ground than the Senate. As the Comptroller General argued, w. o. c.'s should not be given policymaking or administrative positions over full-fledged Government employees. They should be used, if at all, only as consultants and advisers.

Slow and Cautious

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, overlong the Benton Harbor-St. Joseph turning basin has needed improvement, but action has been slower than slow.

Millions—and all too often billions—are quickly appropriated and turned over to those administering foreign aid. Many a local improvement in a foreign country has been quickly made while here at home caution and deliberation in the spending of the taxpayers' dollars seems to be the program. Overlong the St. Joseph-Benton Harbor turning basin has needed and occasionally been promised improvement.

H. R. 6766 became Public Law 163 on July 15 last. It carried $4,500,000 for small navigation projects. Included in that total was $105,000 earmarked by the Army engineers for the harbor improvement.

Army engineers now advise that they do not know just when the work will start, but the job is scheduled for completion during the present fiscal year, which ends June 30, 1956.

If Michigan is to take full advantage of the facilities of the St. Lawrence seaway, many a harbor will need improvement, but harbor improvement will bring neither prosperity to lake ports nor friendship from foreign lands, where so many of our billions have gone, if racketeers posing as labor leaders are permitted, as recently they did in Sheboygan and Milwaukee, Wis., to prevent, because of a labor dispute between a union and an employer, the docking and unloading of ships bringing cargoes to America from other lands.

Local authorities at Sheboygan and Milwaukee—and, yes, the Governor of Wisconsin—have brought shame to that great State because of their failure to enforce the law—to protect the rights of employees and employers, as well as of citizens generally.

To date, Berrien County authorities have protected the civil rights of citizens by refusing to permit violence to interfere with normal activities. With the harbor improved and the right of citizens to work and carry on a business protected by local authorities, the St. Joseph-Benton Harbor port may get some business that otherwise would go to other ports where lawlessness rules.

It not only pays to be honest, but it pays to abide by the law.

Golden Agers of Cleveland's Karamu House Have Memorable Visit to Washington

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, a group of some 40 members of the Golden Age Club of Cleveland's famous Karamu House visited me last month as part of a tour of Washington they arranged. It was a thrilling ex-

perience for these fine people in spite of the intense heat of that day.

Although most of them had never been to Washington before, one of them had, and this trip was especially memorable. Mr. W. W. Curtis, of 2296 East 93d Street, Cleveland—at 86 years of age, the oldest of this group—had gone to school here. In a delightful letter to me recently he went on to add a bit of personal history about the Civil War that I would like to quote:

When the first gun was fired at the first battle of Bull Run, my father was at the breakfast table. He rushed out from his cabin that was close to the road leading from Manassas and there the road was lined with the men rushing out from Manassas to the battlefield. He and some other men went upon Mount Pone Hill and watched the battle until the Confederates made the Union men retreat to Washington. He lived there through the war and I, the baby boy of 15 brothers, was born there over 86 years ago. My father spent his slave days in the counties of Prince William and Loudoun.

The Golden Agers' warm friendship and interest which they brought with them to the Nation's Capital is a great inspiration to all of here.

Salute To a Marine

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. RODINO. Mr. Speaker, you will agree with me that the following letter from former Marine Lieutenant Coombe, of Kearny, N. J., is in the highest tradition. It bespeaks a devotion to America that is in the spirit which has made America great. It is, therefore, a privilege for me, Mr. Speaker, to be able to insert Lieutenant Coombe's letter in the CONGRESSIONAL RECORD:

The Honorable PETER W. RODINO, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: Undoubtedly this letter will prove to be a waste of time on your part in helping me in my problem. I realize that as I write this yet I feel I must cover every path open to me before I admit final defeat in this matter.

I would like to go on active duty again with the United States Marine Corps. The facts briefly are these: I was a member of the USMCR, volunteered for Korean duty, wounded in action in July of 1953, and temporarily retired by the Marine Corps in June of 1954. I was recommended to transfer to the regular ranks after finishing basic school at Quantico in February of 1953. I had several opportunities to do this before I was wounded but neglected to transfer until after my Korean duty. My leg was amputated below the knee and I received other wounds amounting to 80 percent disabled by Marine standards and 100 percent disabled by the VA scale.

In October of 1953 I was asked by my doctor if I would like to stay on active duty. At that time I was a bed patient, had not been fitted for a new leg, and was looking forward, somewhat dubiously, to 4 or 5 more operations. Naturally I said "No," considering the somewhat hopeless situation I was in at the time. By June of 1954 I was before a medical board which found me unfit to perform the duties of my rank and temporarily retired me at 70 percent which was boosted to 80 percent by the review board in Washington.

I was paid $166.73 per month by the Corps as retired disability pay. In January of 1955 my VA claim was complete and I am now receiving $249 a month from that agency. Since being released I have served in an associate (nonpay) status with the Pittsburgh, Pa., Reserve Battalion while attending graduate school in that city. I have tried to keep myself abreast of the current orders of the Marine Corps by reading and studying. Also I have mastered the use of my leg and have tried to put it to as many tests as possible from playing baseball to walking over rough ground for the distance of 4 miles.

My inquiries of just where I stand with the corps have been confined to asking questions of superior officers and a letter written to Leatherneck magazine as to my chances of going back. The information I have received has been a jumble of existing orders and answers to the effect, "I never heard of anyone on duty with one leg but I don't know." Others tell me to wait until I receive my next physical from the corps. Frankly, I'm afraid that will be too late judging by my last encounter with a medical board. My medical board was headed by a senior naval officer who was a baby doctor.

When I told him I was a teacher in civilian life he seemed to think I might have a chance at making a living there. Although the board gave me every break in the book as far as rating my case I don't believe they quite understood the amount of handicap with an artificial leg.

My service record was not brilliant. I received the Purple Heart and the Bronze Star with "V." Yet I'm sure it must be at least a little above average. One year from the date I entered active service I was a casualty. Seems to me somebody lost a lot of money on my training. I have no idea what it costs to train a marine officer in the Infantry field but I do know $249 a month for life, hospital care, and other benefits are a lot to pay out to anyone for the limited service performed by me.

I found a challenge and a purpose in the Marine Corps and I'm not ashamed to admit that I enjoyed my service tour and also profited by it in many ways. I am certain I can hold down many billets. Certainly not as a rifle platoon leader again but there are many other jobs. The country is cost and tax conscious today or to put in crudely everyone wants to save a buck whether in private life or in government. And here the Government pays me for merely living. You might say I'm being paid for my sacrifice but it is no more than many men gave and a lot less than others gave who will never come back. In a breakdown of a first lieutenant's pay, should I hold such a billet, the Government would be paying me about $120 for my services. I would not get my retired pay, but the hospitalization and health benefits would remain the same. So would other things such as buying in the PX, etc. In other words the Marine Corps would be paying me $120 for doing a job and the Government would be paying me $249 for doing nothing. Of course I realize with an up in rank the margin would be greater.

You now have the facts as I know them. I would appreciate some information to the following questions. Would the Marine Corps consider taking a disabled man of my rank back? Or should I forget this mad idea, take my money from the VA and attend the Marine Corps ball every November 11?

In closing I would like to say if the rest of the services take care of their men half as well as the corps does then there should be no complaint. I would also like to say that the naval medical system is superb and especially the amputee center Oakland, Calif., headed up by Capt. Thomas Canty, MC/USN, whom I can't praise enough. The VA, too, has helped me no end and although they get caught in the fine network of redtape they do all they can to help you. Thank you for your consideration of this letter.

Yours truly,

PHILIP W. COOMBE,
Second Lieutenant, USMCR, (retired).

Highway Construction Program

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. JENKINS. Mr. Speaker, the proposed highway legislation that has been so widely discussed all over the country for so long was disposed of yesterday by a much agitated House of Representatives.

I think that never in my somewhat lengthy service as a Member of Congress have I seen so much confusion and parliamentary maneuvering in connection with any piece of legislation. The Committee on Public Works of the House consists of 34 members, a majority of whom are Democrats, and among the membership of the committee are many very competent Members from both political parties. This great committee started out to write a highway bill and spent much time trying to accomplish their assumed task. They changed their position many times and broke up into a number of groups. And when they finally voted out a bill a large number of them did not approve of the bill, and there were several different reports put out by different members of this committee.

President Eisenhower, through his administrative assistants, recommended a course of action as to what the program should be and as to how it should be financed. He wanted to finance it by the issuance of Government road bonds. This would cost about $30 billion.

The other group, under the leadership of Speaker RAYBURN, was set on the adoption of a program costing more than $25 billion to be paid by the levying of taxes on gasoline, tires, tubes, and other commodities.

In other words, both groups were loud in their protestations of their desire to get good roads for the whole country, and to do this as soon as possible with the full knowledge that the cost was going to be many, many billions of dollars.

The bill that was finally recommended for passage by a majority of the committee was the bill that met the approval of Speaker RAYBURN and the other leaders of the Democratic Party and that would cost many billions of dollars to be paid by a heavy increase of taxes that the people would be compelled to pay for

diesel oil, gasoline, tires, tubes, and other sundry products.

This bill was opposed by the other half of the committee headed by Congressman DONDERO. He and his Republican cohorts were in favor of the President's plan, which was to issue bonds in payment of this road program.

After 2 days of active debate in which many Members participated, when the matter came on for a vote Mr. DONDERO and his followers sought to substitute their program for the program of the Democrats, but lost by a vote of 184 nays, 178 yeas. This was a very close vote—I voted with Mr. DONDERO.

Then, immediately, the final vote was taken—it looked as if the Rayburn forces would win easily. But something very unusual happened. It happened that while the membership was quite equally divided between the Dondero plan and the Rayburn plan, there was a strong sentiment against both plans, partly because the membership was against the terrific cost and were against the manner in which the Public Works Committee had conducted its hearings and deliberations. Its usurpation of the functions of the Ways and Means Committee, which, from the foundation of the Republic, has been given the responsibility of preparing and presenting the tax bills to the Congress, was resented by the public, generally, and by a number of the members of the Public Works Committee, itself. The House voted against the Rayburn plan by a vote of 292 nays, 123 yeas. I voted with those who were opposed to the levying of the gasoline and other taxes to pay for all these billions of dollars that this program would cost.

When the Committee on Public Works had fully realized that they had made serious mistakes they proceeded to try to work their way out. They divided themselves into groups, as appeared from the different kinds of reports they made, but when they had a chance they realized that the best thing to do was to join the many Congressmen who had become disappointed at the failure of this great committee to do what it should have done from the beginning. So when the final vote came the membership discarded both the Dondero plan and the Rayburn plan and voted the whole project down by a terrific majority of 292 to 123. I voted with the majority and was glad to help to bring the matter to a sensible conclusion.

I am for good roads and have always been. But I am also against the levying of these terrific taxes that will be necessary for the construction of these roads now. The thing to do is to take the road building program out of politics and plan it carefully and properly from an engineering standpoint, and sensibly from a taxpaying standpoint. This taxpaying part of the program should be written by the Ways and Means Committee of the House, which committee from the very beginning of the Government, had had this responsibility.

I repeat, I am for good roads, but I am also for economy and against exorbitant and crushing new taxes. We are taxed heavily enough now.

Tribute to the Fraternal Order of Eagles

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. WILEY. Mr. President, today and this weekend Milwaukee, the capital of Eagledom, is host to the 57th annual convention of the Fraternal Order of Eagles.

We of Wisconsin have the warmest and longest ties with this great organization. As a member of the order I convey my warmest personal greetings to all the Eagles who are assembled in Milwaukee, and to all other Eagles, wherever their aeries, working for liberty, trust, justice, and equality—the Eagle creed.

I send to the desk the text of a fine article from the Wilwaukee Journal describing the outstanding role of the Eagles in fighting for social welfare and other worthy causes. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MILWAUKEE INFLUENCE HELPED MAKE EAGLES A FRATERNITY DEDICATED TO WIPING OUT POVERTY

Milwaukee, the capital of Eagledom, will be swarming with some 30,000 of the friendly fellows Thursday at the start of the 57th annual convention of the Fraternal Order of Eagles.

The official international headquarters of the organization (since October 1953) have been in the Eagles' million-dollar clubhouse at West Wisconsin Avenue and North 24th Street, the finest structure in Eagledom and a mecca for admiring Eagle tourists. Milwaukee also is the home of Eagles' publications.

Milwaukee looms large in Eagle affairs in another respect, too. The late Con (The Dutchman) Mann, a Milwaukeean in his youth, guided the affairs of the order for more than 30 years as managing organizer and his bass voice and robust waist were known in aeries from coast to coast.

One of his proteges was a fledgling with a knack for oratory and an inborn liking for rubbing elbows with fellow Eagles. He is Robert W. Hansen, a district judge in Milwaukee who has twice been elected grand worthy president of the organization.

FOUNDED IN SEATTLE

The Eagles organization began 57 years ago on February 6, 1898, when six lonely theatrical men sauntered over to the tideflats at Seattle and sat down on a lumber pile to form a friendship society called "The Seattle Order of Good Things." A few weeks later it was renamed the Fraternal Order of Eagles.

Little did they realize that their chummy group was the progenitor of what is now one of the world's great fraternities with aeries in more than 1,600 communities in the United States, Canada, Alaska, and Hawaii.

The creed of the fraternity was "liberty, truth, justice, and equality." John Cort, one of the founders who became the first grand worthy president, enunciated the purpose of the organization: "To make human life desirable by lessening its ills and promoting peace, prosperity, gladness, and hope." It was a lofty concept, and the Eagles, with a record of civic, community, and humanitarian service over the years, believe they have not let down their idealistic first president.

Onc asked to define the Eagles, a spokesman answered: "You want to know who the Eagles are—I'll tell you. We're the crowd, the one everybody else gets lost in."

It was a way of saying that the Eagles are "the common man's" fraternity, but it was a statement only partially accurate. There are many Eagles who have never been lost in the crowd: Franklin D. Roosevelt, Harry Truman, Theodore Roosevelt, Warren G. Harding, J. Edgar Hoover, Stan Musial, Father Flanagan, William Green, Phil Murray, and James J. Jeffries, to mention only a few.

MILWAUKEE INFLUENCE

The Eagles call their organization "the fighting fraternity," too, because it plunged into red-hot battles for social legislative measures. The order conducted the pioneering campaign for State old-age pensions and the Social Security Act in the early twenties. The Milwaukee influence was mainly responsible. Con Mann, in his early days here, hobnobbed with liberal leaders, and absorbed much of their political philosophy. There is little doubt that this climate inspired him to lead the Eagles on a crusade to rid America of its poorhouses. The fraternity spent more than a million dollars on printed material to drum up support for a National Social Security Act.

The fraternity sponsored the New York State old-age pension act which Roosevelt signed as Governor, and the President presented the pen to the Eagles. It now lodges in their archives, with the signature pens of State old-age pension laws given to the fraternity by the Governors who signed Eagle supported pension legislation.

There are several other firsts, besides social security, in the fraternity's legislative annals. The country's first State old-age pension law was enacted in Montana, sponsored by an Eagle legislator, Lester H. Loble, with the backing of his fraternity. When Gov. Joseph M. Dixon, of Missouri, signed the first State mothers' pension act, in Missouri, in 1923, he said: "You Eagles have planted the seed."

Another "first" in the Eagle lexicon is the national observance of Mothers' Day, although this subject occasions a lifting of eyebrows by the Anna Mae Jarvis devotees. Eagles give full credit to Miss Jarvis for popularizing the idea, but they point to their own role in no shy manner. It is a matter of record that Frank Hering, a onetime Notre Dame professor and football coach, who later became a prominent national Eagle leader, made the first public plea for a Mothers' Day at an Indianapolis aerie meeting, on February 7, 1904. The proposal was received warmly by the Eagles who conducted Mothers' Day programs long before they were national events.

Eagles point with pride to the fact that the American War Mothers in 1929 dedicated a plaque in honor of Hering at the Indianapolis speech site, citing his as "The Father of Mothers' Day."

YOUTH ACTIVITIES

Eagles have long backed wholesome youth activities in a war on juvenile delinquency. Aeries sponsor junior sports, teen-age dances, and recreation centers. In 1941, the Eagles built a $160,000 dormitory for Boys Town. In the youth guidance sphere, the Eagles have spread their wings to West Berlin, where they established Eaglehaus, a vocational training project for German youth to make friends for democracy, a project worked out between Judge Hansen and Ernst Reuter, the late mayor of West Berlin.

A pet undertaking is the Eagles Memorial Foundation, a unique "living memorial" to the Eagles who serves their country in the

armed services. Through donations of the aeries and auxiliaries, a $3 million fund was established to provide physical welfare services and college educations for the children of Eagle dads who lost their lives in military service. More than 1,300 children benefit from the foundation.

The Eagles have their ardent champions, but none has quite expressed himself as appreciatively as Tony Galento, the ex-boxer and wrestler, who is a member of Newark, N. J., aerie.

"This America must be a wonderful country," explained Tony, "and the Eagles a wonderful organization to take in a bum like me."

The Seamy Side of TVA

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. GOLDWATER. Mr. President, during this session much has been said on the Senate floor about Dixon-Yates and about the TVA. I think it proper that we keep both in their proper perspective.

Mr. President, there is much about TVA that is dishonest. I ask unanimous consent to have this approach to the TVA problem, as covered in an article entitled, "The Seamy Side of TVA," written by Henry Hazlitt, and published in this week's edition of Newsweek, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SEAMY SIDE OF TVA
(By Henry Hazlitt)

One wonders whether the hue and cry that Democrats have raised over an alleged Dixon-Yates scandal is intended to divert public attention away from the failure of TVA and from the deceptions practiced to put over and extend that and many other socialized power projects.

In the 218-page report of the Hoover Commission, and in the 1,783-page report of the task force under Admiral Moreell on which the final Commission report was in large part based, we now have a mine of material exposing some of the misleading estimates and unkept promises by which Congress and the taxpayers were induced to undertake many public-power projects. There is not space enough here to cite more than a few random examples from the Hoover Commission report.

Among these are the persistent underestimates of Government engineers concerning the real cost of these projects. "In the field of reclamation the original estimated cost of the 90 projects (outside the Missouri Basin) was $1,580 million, and in 1952, the estimated cost at completion was $3,317 million. The cost of the reclamation portion of the Missouri River Basin project was estimated in 1944 at $850 million. In 1953, the same work was estimated at $3,717 million, an increase of about 343 percent." Only a small percentage of these increases was owing to soaring prices.

"A report to the House Committee on Public Works, rendered by its subcommittee to study civil works, in December 1952, states that the TVA reports its costs had exceeded its estimates by only 3.1 percent. But an examination of a 1936 report of the Authority showed that later estimates for Kentucky Dam exceeded the original by 93.6 percent; for Fort Loudoun Dam, by 74.7 percent; and for Fontana Dam, by 137.7 percent."

In a group of Bureau of Reclamation proposed projects the construction costs of irrigated land averaged $509 per acre for land that had an average market value of less than $150 per acre even with the full water supply.

Under the Constitution, Congress has authority to control navigable streams and floods, but no discoverable right to build hydroelectric powerplants. This has led to the development of the shrewd doctrine that hydroelectric power may be developed and sold by the Federal Government to the extent that it is incidental to flood control and navigation. It has also led, as the Hoover Commission report points out, to a bookkeeping allocation of all the costs possible to flood control and irrigation rather than power.

The Hoover task group laid down certain criteria for determining the real success or failure of Federal power projects: They ought to earn 3 percent interest annually to insure return of Federal borrowing costs. The investment should be properly amortized. The projects should pay local taxes equal to those of private utilities. Earnings of Federal projects should include an amount equal to the Federal tax exemptions, based on the tax payments of private utilities. With such an honest yardstick, the TVA would show a deficit of $30 million in the fiscal year 1953 and an accumulated deficit up to that time of $100 million. The principal groups of Federal projects would show a cumulative deficit of $332 million.

The Hoover Commission points out that the Federal taxpayer is subsidizing these projects. Less than 10 percent of the total population will be directly benefited even when the programs are completed. This means that 90 percent of citizens are forced to subsidize an arbitrarily favored 10 percent. The task group estimates that the Federal projects are selling power on the average at about 50 percent below its real cost.

Finally, while hydroelectric powerplants were built under the pretense that they were merely incidental to navigation and flood control, the TVA has now embarked upon an expansion of its power-generating capacity beyond hydroelectric plants by the building of steam plants.

The moral indignation of the zealots for socialized power at the Dixon-Yates contract seems misplaced.

Tall Corn and Tall Tales

EXTENSION OF REMARKS
OF
HON. KARL C. KING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. KING of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Philadelphia Inquirer of July 28, 1955, entitled "Tall Corn and Tall Tales":

TALL CORN AND TALL TALES

An effort was made to explain our farm price support program to the Russians now touring Iowa's corn country. No success.

If the Russians are mystified by price supports, so are most Americans. But let our visitors be patient. The U. S. S. R. may yet be a beneficiary of our price-support plan.

Because United States consumers are taxed so the Government can buy agricultural surpluses, to keep consumer prices high, Uncle Sam has vast hoards of bought-in wheat, butter, and other products. It has been a problem to get rid of those surpluses. Some $1,200,000,000 worth has been disposed of, mostly abroad, in the past 10 months. But much remains.

Up to now Iron Curtain countries have been barred from receiving United States farm surpluses. No such bar exists, however, in Canada, which has a farm-price program like ours, and also surpluses like ours. Quite a ruckus started recently when Canada negotiated deals to sell butter and wheat behind the Iron Curtain—at prices far below those in Canada. Czechoslovakia, for example, will get Canadian butter for 42½ cents a pound, which is 15½ cents per pound less than it cost the Canadian Government to buy it in.

So if the era of good feeling continues, before long the Russians now touring Iowa may find Iowa's products arriving in the U. S. S. R.—and at prices far below those which Iowans would pay in Iowa.

When our visitors get back to the U. S. S. R. there may be skeptical shrugs when they tell of the tall corn in I-oway. But we're betting caviar to a corncob nobody will believe their tall tales of United States price supports.

Protest by Members of New York Democratic Delegation Re Ban on Remanufacture of Watch Movements

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I insert herewith a letter which the New York Democratic delegation sent to the chairman of the House Ways and Means Committee, the Honorable JERE COOPER, on July 27, 1955:

JULY 27, 1955.

Hon. JERE COOPER,
Chairman, House Ways and Means Committee,
House Office Building,
Washington, D. C.

DEAR MR. CHAIRMAN: We, the undersigned, of the New York Democratic delegation strenuously oppose H. R. 7466 and H. R. 7467, upon which legislation your committee will initiate hearings on Wednesday.

The proposed indiscriminate ban on the remanufacture of all watch movements will have a serious effect on scores of American importer-assembler companies, most of whom are located in New York and who employ thousands of skilled workmen. Its effect will be equally serious to the retail jewelers of the United States whose sales of imported watches amount to half a billion dollars a year.

Since the proposed legislation departs drastically from established customs procedures and introduces new concepts in regulation governing the imports, we believe that much more thorough study should be given by this committee and the executive branch of the Government than time permits during the closing days of this session of Congress. It is our conviction that

this is more than a mere technical change in the statute.

Because of the complicated nature of this whole upjeweling problem, and because the importers and retailers in the New York area have not had the opportunity to analyze with more precision the effect on their business, we urge your committee to defer action on these bills until the next session.

Sincerely yours,

EMANUEL CELLER: On Behalf of VICTOR L. ANFUSO, CHARLES A. BUCKLEY, IRWIN D. DAVIDSON, JAMES J. DELANEY, ISIDORE DOLLINGER, JAMES G. DONOVAN, SIDNEY A. FINE, LESTER HOLTZMAN, EDNA F. KELLY, EUGENE J. KEOGH, ARTHUR G. KLEIN, ABRAHAM J. MULTER, ADAM C. POWELL, Jr., JOHN J. ROONEY, HERBERT ZELENKO.

P. S.—The New York State Department of Commerce has just informed me that they are in agreement with the above staetment.

Leadership of President Eisenhower—Article From the Democratic Digest

EXTENSION OF REMARKS
OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Is It Explanation Enough That The President Didn't Know?", which appears in the August number of the Democratic Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS IT EXPLANATION ENOUGH THAT THE PRESIDENT DIDN'T KNOW?

May Day was rainy in Moscow this year, so rainy that the Russians had to cancel the "fly-by" scheduled for their annual military parade.

But the weather was not permitted to interfere with Russian plans to let the free world know that Soviet aircraft production was far greater than the West had realized. Foreign newsmen and diplomats were treated to pre-May Day rehearsals and a series of flights after the big Communist holiday. These displays made it all too plain that Russia had made dangerous progress in the output of supersonic fighters and long-range jet bombers.

The revelation dramatized questions about the wisdom of cutting American defense expenditures which had been raised earlier by Democratic Senators. It also raised the possibility that spending should be stepped up.

Since the President had put his own personal stamp on the defense budget, reporters seized their first opportunity to ask Mr. Eisenhower whether this new intelligence would prompt an increase in air defense expenditures.

"I haven't had any such recommendations yet," said the President.

Would it affect other programs such as civil defense, the reporters wanted to know.

"I don't know," said the Chief Executive. "It hasn't been brought up to me in those terms." Reporters were surprised by this image of the President postponing action on a vital matter until someone brought him some recommendations.

Yet this same predisposition to wait for others to suggest what he should do has been apparent before, for example, in the President's discussions of Formosa. Here again Mr. Eisenhower has definitely told the American people that he is personally responsible. He has given his assurance that he and he alone will decide whether to send American military forces into action in that area; yet there is a remote quality about his knowledge and thinking on Formosa which raises the question as to how easily he could reach an independent decision should an emergency arise. For example:

On the eve of the Formosa resolution last January, the President was asked whether there were plans to withdraw an American detachment from the Tachen Islands (which have since been abandoned to the Communists). "I will have to ask the commander on the spot what orders these individuals are under," said the President.

Did the President think Formosa could be held without committing American ground forces? The President passed, saying that he had received "no recommendation" on committing ground troops to Formosa.

Reporters returned to this important question in May. Were we going to set up a military base on Formosa? The President didn't seem to know; he said he had received "no suggestion" to do so.

This vagueness was not lost on the Raleigh (N. C.) News and Observer. "Never before has the explanation 'He didn't know' been made for any President with anything approaching the frequency it has been made for President Eisenhower," said this newspaper.

The editors were concerned because the White House explained away release of the Yalta papers by saying the President hadn't known about it, but they might also have cited the fact that Mr. Eisenhower—

Had never heard that the Cutter Laboratories had been in trouble with the Food and Drug Administration before they were licensed to manufacture Salk polio vaccine.

Had never heard of Defense Secretary Wilson's controversial ruling that the Defense Department would only release information which made a constructive contribution.

Had never heard of the Republican National Committee's May press release calling Gov. Averell Harriman the "architect of the Yalta Agreement."

Had never heard that Government officials are urging small farmers to sell out to big dealers. "Frankly, I don't believe it," said the President. Yet his Assistant Agriculture Secretary Earl D. Butz had said in March that "agriculture is now big business. Too many people are trying to stay in agriculture."

In addition, the President was not sure last year whether the Secretary of Agriculture had consulted him before he lowered dairy price supports to 75 percent of parity; had forgotten whether he wants Congress to extend unemployment benefits beyond the customary 6 months' period; did not know last August whether his administration was in favor of a then proposed $250 million emergency school building program; couldn't be expected to recall whether the TVA, the agency most affected by the Dixon-Yates disputes, was consulted in the initial steps leading to the Dixon-Yates contract.

Surely one of the most surprising things to escape the President's notice—in view of his twice-stated opinion that communism should not be made a campaign issue—has been the persistent Republican accusation that Democrats are soft on communism. During the Lincoln Day orating season in 1954, House Speaker MARTIN charged Democrats with Communist coddling. Senator JENNER (Republican, Indiana) claimed he had found "heaps of evidence of * * * treason." When he was asked about these charges, the President said that he had seen no statements suggesting that Democrats are "tinged with treason."

During the 1954 campaign, Vice President NIXON went into more than 30 States on a speaking tour, making headlines with his heavy emphasis on the Communist issue. Yet when he was asked about this, the President said he had never heard of Mr. NIXON making "any sweeping condemnation of any party." Was the reporter's question "based upon an actual reading of Mr. NIXON's speeches or what you had learned from what the critics said about his speeches?" the President wanted to know. The reporter said he had read the speeches, while the New York Post commented that Mr. Eisenhower's question "led everybody in the room to wonder when the President will read them.' '

Mr. Eisenhower's defenders attribute his haziness on all these matters to the fact that he came to the Presidency without any previous experience in civilian government. His lack of background, they point out, plus the Army custom of reliance on a staff, has tended to preserve the President's aloofness from many of the daily developments in public affairs.

Probably the role of the staff in this picture cannot be overemphasized. The New York Times has said that "staff has achieved a measure of responsibility under Mr. Eisenhower which it has never enjoyed before."

This dependence on staff, which was so apparent in the President's approach to the Formosan problem, has also showed up in many of his other press conference answers. Last December, for instance, when he was asked whether there would be a Marshall plan for Asia, the President said, "the proposal had not been brought far enough along that it had been argued" in front of him.

Again, when he was asked whether he thought the atomic energy law should be revised to give the commission chairman more authority, he said he had received "no recommendations * * * on the subject * * *."

On another occasion he was asked whether he approved Treasury Secretary Humphrey's stated desire to lift the limits on income earned by social security pensioners.

"Well," the President said, he really didn't know since "that particular point hadn't been suggested" to him.

Another indication of the President's dependence on staff work is his tendency to refer reporters to "the people who are responsible, the people who make the decisions," as though the President himself is not responsible under the Constitution for the conduct of the Government's executive branch.

Will the Navy continue to let our vessels visit ports where the crew must submit to segregation, the President was asked during a recent press conference. "* * * go and ask the Secretary of Defense or the Secretary of the Navy," said Mr. Eisenhower. He himself "didn't know anything about it."

The President had washed his hands in the same public way last January when the Agriculture Department and the Foreign Operations Administration were at dagger points over whether our leading land reform expert, Wolf Ladejinsky, was or was not a security risk. When reporters pressed the President to clear this matter up, he advised them to "go to the people responsible for the decisions directly and ask them the questions."

During the later hassle over Edward Corsi, immigration expediter, the President answered reporters' queries with the explanation that Mr. Corsi "had been put in that position actually, of course, by the Secretary of State." He was sure the answers they wanted 'could be looked up if [the reporters] went to the Secretary of State."

There have been other indications that the President leans heavily on his staff when there are vacancies to be filled. For example, the press corps was surprised when the President turned the administration of the foreign-aid program over to John Hollister, a former Member of Congress, and

long-time associate of the late Senator Robert Taft, since Mr. Hollister had been identified as a foe of foreign aid.

So they asked the President whether he had had assurances from Mr. Hollister that he believed in foreign aid. The President seemed surprised that the question should be raised.

"Did I have what?" he asked.

"Assurances that Hollister favors foreign aid," the reported repeated.

"No," said the President, "that is, personally, no."

The President seemed to have no duobt over whether a program could be effectively administered by a man who might not believe in it. Mr. Hollister had been recommended by his staff, and that seemed to be that, so far as Mr. Eisenhower was concerned.

The almost total dependence on subordinates might not be a serious matter if those close to Mr. Eisenhower were urged to direct his attention to all matters on which they feel Presidential guidance is needed. Apparently, however, the opposite is true. According to columnist Marquis Childs, Cabinet officers and others high in the administration, have been told that if they expect Mr. Eisenhower to serve a second term, "you cannot come running in here every other day with your troubles. Decisions must be taken by those who should take them."

New York Times correspondent Cabell Phillips has written at considerable length about this tendency to delegate so much responsibility.

"The danger of too much staff," he has said, "is that it tends, in time, to do the Chief's thinking for him; that it may heduce him to a mere ratifier of decisions that have been worked out below. There is also something to be said * * * for the brilliant inspiration, as a source of policy. Such an idea is likely to be dejuiced, however, by the time it works its way up through staff levels. Complaints such as these have been heard about the staff system as it exists in the White House today."

But of all the doubts expressed over Mr. Eisenhower's lack of leadership, perhaps the most telling was historian Gerald W. Johnson's observation that "You can elect a man to the White House, but you can't make him President. He must do that for himself."

Wisconsin Is Proud of Lester Johnson

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. REUSS. Mr. Speaker, the people of Wisconsin are understandably proud of our colleague, LESTER JOHNSON, from the Ninth Congressional District. LESTER JOHNSON represents a primarily rural part of the State, but he has shown a remarkably understanding attitude for the needs of city people.

LESTER JOHNSON understands that city and farm folk must work together for the common good of all Americans. He has always recognized that a prosperous industry and a prosperous agriculture are mutually interdependent.

The election of LESTER JOHNSON has brought to this House a man who appreciates the needs of an expanding economy benefiting both city people and farmers alike. LESTER JOHNSON'S fine support for city and farm legislation has exemplified for me how to act in the public interest.

It is gratifying that LESTER JOHNSON'S colleagues in the House appreciate the outstanding job he is doing here, not only for the people of his district, but for all America.

Statement of Dr. Joseph Lifshitz, Vice President of the Schlome Mendelsohn Branch of the Workmen's Circle

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I wish to include the statement of Dr. Joseph Lifshitz, vice president of the Schlome Mendelsohn Branch of the Workmen's Circle, a Jewish labor-fraternal organization with some 70,000 members throughout the United States.

The statement was made at a reception in the Washington office of Senator HERBERT H. LEHMAN, of New York, on July 23, 1955. The occasion for the presentation of these remarks was a pilgrimage to the Nation's Capitol of this group which is composed of former inmates of Nazi and concentration camps. They are all newly naturalized citizens of the United States, and the purpose of their visit was to express their gratitude not only to this great country of ours for befriending them but to express to Senator LEHMAN their deep and grateful appreciation for the role he has played in fighting intolerance and tyranny in the world and for his efforts to bring about a liberalized immigration policy in this country.

The statement follows:

REMARKS OF DR. JOSEPH LIFSHITZ AT RECEPTION IN WASHINGTON OFFICE OF SENATOR HERBERT H. LEHMAN, JULY 23, 1955

It is my privilege to have been assigned the honor of speaking for our group of the Schlome Mendelsohn Branch of the Workmen's Circle.

First, we would like to express our thanks to you for your warm and gracious reception.

When we first discussed with the general secretary of the Workmen's Circle, Mr. Nathan Chanin, the matter of being received by a representative personality in American political life, our unhesitating choice was Senator LEHMAN. But this was not because you are the Senator of our home State, New York, but rather because more than anyone else we could think of, you personify the forces of democracy which contend against intolerance and tyranny and stand for a liberalized American immigration policy. It is through such a policy that it is possible for us and others like us to leave the places where we have been victimized and oppressed and find an open door to this great free country of America.

Having found the door open we eagerly entered through it and now in a very genuine sense we feel ourselves to be new-born souls, knowing for the first time what it really means to be free. Our gratitude for this, to you and to America, is beyond words to describe.

For who more than we can appreciate and understand what it means to be able to live, to breathe, and to work as free citizens, as free human beings? We, the oppressed and hunted, we who were the objects of derision, we who were stepped upon, and who through miracles somehow survived the crematoria readied for us by the Nazis, crematoria, and gas chambers and firing lines, which had already destroyed 6 million of our fathers, our mothers, our brothers, our sisters, and our children? And the same miracles which enabled us to survive the Nazis also enabled us to escape the police state, and the prison camps, and the brutal totalitarianism of Communist Russia.

With how much deep feeling, therefore, do we stand before you attempting to give words to our thanks and to the great esteem we have toward you, Senator LEHMAN, for the outstanding role you have played in our emancipation and toward the democratic community which you represent in this country?

It was you and the American people who opened the gates to us, received us so warmly, and gave us the opportunity to rebuild our lives, to become productive citizens of this country, and to begin to give of ourselves, our talents, and our devotion and our energies, to the ever-increasing greatness of these United States in the same way as have so many immigrants before us.

We here are members of a branch of the Workmen's Circle, a fraternal organization of 70,000 members throughout the country, which was formed and built by earlier immigrants. For the 55 years of the organization's existence it has made considerable contributions to the economic, social, and cultural life of this country. We know that you are acquainted with the Workmen's Circle and we need not tell you about it.

You also know about the role the Workmen's Circle has played in molding the countenance of Jewish life in America and in being helpful to Jewish life all over the world.

Our own branch carries the name of Schlome Mendelsohn, one of the noblest figures of our old home life in Poland. He was our revered teacher and cultural leader and a builder of the modern, progressive Jewish school movement in Poland. He was able to emerge from the hell of nazism together with us, and came here to America only to pass from our midst in 1948. Our own branch was formed in 1950, and as new Americans, as survivors of the Nazi tyranny, as escapees from communism, as fighters of the underground, of the partisan movements, and of the ghetto uprisings against the Nazis, we deemed it appropriate to name ourselves after one of our most beloved comrades, Schlome Mendelsohn.

We want to state that we feel ourselves very much at home in the Workmen's Circle where we have joined those who were immigrants of earlier decades. Having entered such an organization we feel ourselves already integrated into the American community, and even in the short number of years that we are in this country we have all become citizens of America and feel in this citizenship a pride, and a triumph which we joyously proclaim.

Thus far I have only spoken of our gratitude, but we also want to express our assurance to you and to our fellow citizens of this country that America will find in us the loyalty and trustworthiness it has a right to expect from every citizen, and we shall give ourselves wholeheartedly to the defense of this country and the enrichment of its traditions and institutions.

We earnestly hope that the priceless opportunity given to us to enter this country and become citizens will also be given to those who are still refugees from tyranny, who, wherever they may find themselves, have little hope in life except to be received in a

land of freedom and to breathe as freemen as we now do in this country. They, as well as we, look principally to America as a haven of refuge for the oppressed and as a homeland for those who not only believe in freedom but wish to live in freedom. What greater tribute than this can be paid any country?

Again, Senator LEHMAN, with the greatest respect we thank you wholeheartedly for receiving us and adding so richly to this visit we are making to the Capital City of our country. Having come here to learn more about our institutions and our form of government, this visit with you has also made it possible for us to come face to face with one of the greatest exponents of American democracy. This occasion will always be one of our happiest memories.

Ted Granik

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting article from the August 1955 issue of Reader's Digest entitled "Champion of Plain Talk," by Lois Mattox Miller:

CHAMPION OF PLAIN TALK

(By Lois Mattox Miller)

Three years ago, Theodore Granik, founder and moderator of the popular radio-TV programs American Forum of the Air and Youth Wants to Know was stricken by a heart attack. He was then 45 and still had a lot of things he wanted to do in life.

After a spell in the hospital, he went to Florida. His law partners and broadcast associates were sure he was in the first stages of retirement. But he fooled them. The next thing they knew, he had teamed up with local businessmen and started a television station in West Palm Beach. Then the memos and phone calls began to pour into Washington and New York, and Ted was on the way back.

Today he is going stronger than ever. In addition to his two weekly forums and his TV station in Florida he has started three new programs. He is a successful Washington attorney and the friend and confidant of Government leaders.

"When I was flat on my back," says Granik, "I found wisdom in the doctor's bromide that a coronary is the greatest lifesaver of middle-aged men. I've learned to conserve energy and make it produce more than ever before."

Theodore Granik is a sturdy man with thinning sandy hair, an engaging smile and a mission in life that won't let him sit still. He got into radio on the ground floor in 1925, and for the past 30 years he has been the champion of plain talk on the air.

While still in law school, he was hired as secretary to Lee Adam Gimbel of the famous New York department store. To lure customers to bargain sales, Gimbel's had just set up a new radio station, WGBS. Granik was given the chore of keeping the station on the air between commercials with poetry readings and newscasts. Broadcasting fascinated him. He sensed its enormous educational possibilities. "There were so many things people ought to know," he says, "and no one was telling them."

He set out to remedy that by arranging a program called Law for the Layman. With himself as interrogator, he lured his professors from St. John's Law School to the microphone to inform the public about wills, leases, contracts, debts, alimony.

When WGBS was sold in 1928, Granik was invited to bring Law for the Layman to station WOR. Prohibition was then a controversial issue, and Congressman EMANUEL CELLER, of New York, was scheduled to speak against the 18th amendment. The Woman's Christian Temperature Union demanded equal time for its representative to defend the amendment.

"Let's put them both on my show at the same time," Ted suggested. "Then we can present both sides of the issue."

That broadcast made radio history. Facing her angry opponent at the microphone, the temperance lady let loose the charge that, in Washington, underground passages connected Government buildings with nearby speakeasies. The press took it from there, and next morning the Nation was aware of a new type of broadcasting.

Granik convinced the broadcasters that there was place for controversy on the air so long as the proceedings were kept under control by an impartial moderator. The program became the American Forum of the Air; its shelf of transcripts represents a lively history of the past 27 years.

Arranging and moderating the weekly forum could have been a full-time job; Granik managed it in his spare moments—with the help of his wife, Hannah. Then, with a sheaf of glowing letters from members of the bar, he applied for the post of assistant district attorney of New York County and got the job.

In 1937, when he was appointed counsel of the United States Housing Authority, he took the forum with him to Washington, where it became a network feature. With the New Deal controversies raging and a war brewing in Europe, Granik was able to bring to the microphone an increasing number of Congressmen and Cabinet officers who were willing to speak out on everything from social security and farm policy to neutrality and armed intervention. The CONGRESSIONAL RECORD reprinted the proceedings, and the program became known as the Unofficial Congress of the United States.

Sometimes the debates taxed Granik's adroitness as moderator. Once the late Gen. Hugh S. Johnson, an irascible ex-New Dealer, tried to beat Senator Claude Pepper over the head with a table microphone. During the bitter wrangles between the isolationists and interventionists in 1940–41, the American Forum was also the scene of some dramatic conversions. Clarence Streit, founder of Union Now, converted an isolationist Senator in the course of the broadcast. On another forum, Mrs. Irving Berlin, an ardent interventionist, persuaded her opponent to resign publicly from the America First Committee.

Granik retired from the United States Housing Authority in 1941 to enter private practice. But his impulse to give friends in Government a hand with their problems left little time for his clients. He helped Maj. Gen. Lewis B. Hershey launch the selective-service program. When Mario Giannini, president of the Bank of America, told him of the problems small-business men of California were having getting war contracts, Granik went to California and organized scores of little firms into subcontractors' pools that became models for the entire Nation. This job so impressed the Senate Committee on Banking and Currency that he was retained to help draft the Smaller War Plants Corporation Act. Meanwhile, the American Forum served a vital purpose in wartime information and morale.

After the war Granik's friends tried to persuade him to forget public service and concentrate on his law practice. Nearly 20 years of broadcasting had been carried on at a personal financial loss; his out-of-pocket expenses represent a fabulous sum. Ted rejoined, "Can't a man have a hobby?"

For a few years he concentrated on the law and the American Forum. Then in 1951 he had another broadcasting idea. When lining up speakers for the forum, he was frequently accompanied by his teen-age son Bill. Often he was amazed by the clarity and directness of Bill's questions and the respect with which they were answered.

The result was Youth Wants To Know, which made its debut on the NBC radio and TV networks in 1951. On the first broadcast Senator Robert A. Taft faced an audience of Washington teen-agers who asked searching questions about the coming Presidential campaign, General MacArthur's recall from the Far East, and the liberal-conservative struggle within the Republican Party. After the broadcast, switchboards were swamped with calls from enthusiastic listeners. Senator Taft remained in the studio with the kids for 2 hours. Later, the Senator told Granik, "I've never been questioned so intelligently in my entire public life."

The youth program gives Granik more satisfaction than anything else in his career. The youngsters' questions go directly—sometimes ruthlessly—to the crux of the matter. They are quick to spot evasions. One lad stopped a famous public-relations expert, "Please, sir, quit filibustering."

This year Youth Wants To Know attracted a sponsor, the General Dynamics Corp., which is considering sending it on a nationwide tour, enabling youngsters in many cities to participate.

With State Department blessing, Granik is planning a TV program which will take the public to a party in a different Washington Embassy each week. He has another program planned with the Overseas Press Club, in which leading journalists will talk things over with foreign statesmen.

Last year Granik logged 100,000 miles of air travel, and 15,000 more by sea. Yet he seems calm and never in a hurry. The doctors say that he never has been in better shape.

Natural Gas Giveaway

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. MACDONALD. Mr. Speaker, under permission to extend my remarks, I wish to include in the RECORD an excellent and very penetrating article dealing with the natural gas legislation that is now before the House for consideration. This article was written on June 20, 1955 by my constituent and good friend Alexander J. Cella. Mr. Cella is a teaching fellow in government at Harvard. I feel that this article is an analysis worthy of thought and consideration by all Members of Congress:

NATURAL GAS GIVEAWAY

Behind the closed doors of executive sessions of the House Committee on Interstate and Foreign Commerce, Congressional battle lines have been drawn for what may become the bitterest struggle of the present legislative session. The controversy centers around a bill to exempt the so-called independent producer of natural gas from Federal regulation under the Natural Gas Act of 1938. The outcome of this battle concerns the more than 60 million Americans who cur-

rently use natural gas, since it will substantially affect the prices they pay for their gas in the future.

Since the end of World War II, the natural gas industry has almost tripled its sales. In 1940, natural gas furnished slightly more than a tenth of the Nation's energy requirements; today, it meets almost one-fourth of the Nation's needs. Approximately 9 trillion cubic feet are now sold annually.

It has been variously estimated that, if the present legislation is enacted, American consumers of natural gas will pay from $200 million to $800 million more each year than at the present time. Recently, Mayor Joseph S. Clark, Jr., of Philadelphia, declared that, for every penny increase per thousand cubic feet in the field price of natural gas, approximately $2 billion would be added to the value of the present reserves owned by producers.

By definition, an independent producer neither owns its own pipelines nor transports its own gas for ultimate resale and public consumption. Of all the natural gas produced in the United States in 1953, about 81 percent was produced by the independents.

The natural-gas industry's struggle to prevent Federal regulation of the independents was initiated in the wake of the Supreme Court's unanimous decision in the interstate case in 1947. The nub of the legal controversy which has raged ever since hinges on the proper interpretation of section 1 (B) of the Natural Gas Act of 1938. Industry spokesmen have contended that the latter part of this section specifically excludes the independents from Federal regulation. Moreover, they assert, this view was clearly intended by the proponents and framers of the legislation in 1938 and, until 1947, was manifestly recognized as correct by the Federal Power Commission, which consistently refused to regulate their operations. But unresolved doubt as to the continued legality of the FPC's inaction, combined with uneasy suspicions as to the future intentions of some FPC members, spurred the industry's efforts to secure explicit exemption legislation. Finally, after several unsuccessful legislative bids, the Kerr-Harris bill was narrowly pushed through Congress in 1950, only to meet with a stinging veto from President Truman.

The industry was further incensed by the Supreme Court's conclusively adverse ruling in the 1954 test case of the Phillips' Petroleum Co., largest of the independents. The Court ruled that the FPC does, indeed, possess regulatory authority over the independents under the existing terms of the Natural Gas Act.

Now the industry and its strategically positioned congressional spokesmen have launched a frontal assault on the whole concept of Federal regulation. The industry's Natural Gas and Oil Resources Committee has embarked upon what it calls, "a king-sized publicity campaign" which, according to the Wall Street Journal, is expected to cost upward of $1,500,000. Large advertisements decrying the "new interpretation" and outlining the industry's arguments have periodically appeared in newspapers and magazines throughout the Nation, and local "monitoring teams" have been established to correct and counterbalance any unfavorable information.

Basically, the industry contends that regulation heralds the abandonment of free enterprise and "vigorous competition" among the more than 4,000 independent producers; that the Federal Government, by "clamping bureaucratic controls" over production dampens the incentive for further risk-taking in the exploration and development of new wells; that Federal regulation will not bring lower consumer rates, since less than 10 percent of the consumer gas bill reflects the prices charged by independent producers and gatherers; that regulation will, in fact, lessen the supply of available gas; that regulation at the source will create a precedent for regulation of other commodities at the source, especially coal, copper and other minerals; and, finally, that all of these evils are to be unleashed because of a strained interpretation of the Natural Gas Act of 1938 directly contrary to the legislative intent of those who wrote the act.

Industry spokesmen make much of the charge of a "new interpretation" Yet since 1938 the Supreme Court has never held that the FPC has no jurisdiction over the independents. In fact, the Court has been gradually progressively inching its way toward the sweeping pronouncement in the Phillips case last June that the FPC has authority over "all wholesales of natural gas in interstate commerce whether by a pipeline company or not and whether occurring before, during, or after transmission by an interstate pipeline company."

The new interpretation contention applies with greater cognecy to the FPC, which at various times has been on all sides of this issue. But even here the charge is not fully justified. This is true even in the first case involving an independent to come before the FPC, the celebrated 1940 Columbian Fuel Corp. case which industry spokesmen cite as antiregulation. The Commission decision in that case contained a significant paragraph warning that further administration of the Natural Gas Act might eventually show that through affiliation, field agreement, or dominant position in a field, a situation had been created where an unreasonable price prevailed. Under such circumstances, the FPC observed, it would have to decide whether it can assume jurisdiction over arbitrary field prices under the present act or should report the facts to Congress with appropriate recommendations.

Obviously, the FPC was not enunciating a rigid rule in the Columbian case. Instead, it was quite explicitly keeping an open mind on the question of the extent of its powers, reserving the right to reexamine the issue at a later date. In any event, as the Court of Appeals for the District of Columbia once remarked of this line of argumentation, "We cannot destroy the plain language of the statute because the Commission, at one time, interpreted it narrowly."

The production and gathering phase of the natural-gas industry is characterized today, as it was at the time of the Truman veto, by limited and restricted competition and by a large measure of concentrated ownership of the provable reserves. The inherent physical characteristics of the industry minimize effective competition. The pipeline company must invest large sums in the construction of immobile pipeline systems; the consumer is unable to choose between buying or refusing to buy from the one distributing company which services his area. And, while it is true that more than 4,000 independents are affected, it is also worth noting that less than 100 companies produce 85 percent of the gas produced by the independents, with 7 companies providing 35 percent of this total.

As for industry concern that Federal regulation will hamper further exploration and development, there is no inherent reason why regulation cannot proceed on the basis of a rate formula and rate schedule which gives the fullest sympathetic consideration to the peculiar risk-taking hazards legitimately involved. Moreover, the courts are always open to appeal on the grounds that regulation is confiscatory.

Finally, industry declares that the field price of natural gas has risen much less rapidly than the general cost of living, and that it comprises only a small percentage of the total cost of gas to the consumer. But industry spokesmen are unwilling to talk about the steadily increasing field prices since the end of the war and the even more rapid price increases which will take place in the future under provisions of long-term contracts between the independents and the pipeline companies. Most of these contracts contain escalator clauses providing for automatic price increases, many to 3 or 4 times their original starting rates. Consequently, their full impact on consumer prices, while it has yet to be felt, can readily be evaluated. It is disingenuous to boast, as the Natural Gas and Oil Resources Committee did in a recent advertisement, that natural-gas prices had remained reasonable during the past 16 years "under free competition without Federal regulation," without mentioning the impending disastrous effects on consumer rates of such automatic price-increasing devices as escalator and most-favored-nation clauses.

The present natural gas controversy readily invites comparison with the tidelands oil giveaway in 1953. Owing to the geological fact that natural gas is frequently found commingled with oil, and historically was largely discovered as a by-product of the quest for oil, many of the largest oil companies today own the known reserves of natural gas. Accordingly, the same economic interests behind the offshore oil grab (whose political and financial power has been enhanced by beneficial oil depletion allowance provisions in our tax structure) are now actively embroiled in the natural gas struggle.

Politically, the issue is a sectional one which cuts across party lines. The only ones who stand to benefit from exemption legislation are independent producers in the seven Southern States (Arkansas, Kansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas), who produce 95 percent of the gas produced by United States independents.

Until this spring, industry prospects in the controversy appeared extremely bright. late in February a top-level Cabinet Committee on Fuel and Energy Resources, headed by Defense Mobilizer Arthur Fleming, reported to President Eisenhower and urged that "the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line." Industry hopes received another boost when 4 of the 5 members of the FPC endorsed the antiregulation viewpoint in a statement delivered before the House Commerce Committee by Jerome K. Kuykendall, the Eisenhower-appointed Chairman of the FPC.

But, as the opposition began to testify, the balance turned the other way. Mayors of more than 50 gas-consuming cities, representing a combined population of 30 million people, organized under the joint leadership of Mayors Robert F. Wagner, of New York; Clark, of Philadelphia; and David Lawrence, of Pittsburgh, began to publicize the consumers' side of the controversy. Today, many industry spokesmen believe that time is working against them.

True, the House Commerce Committee, by a 16–15 vote, finally has reported out a modified antiregulation bill. But, in the Senate, the chairman of the Interstate and Foreign Commerce Committee is Senator WARREN MAGNUSON, Democrat, Washington, who voted against the Kerr bill in 1950. In open hearings last month on the exemption of the independents, MAGNUSON argued that an overall appraisal of the Natural Gas Act was now necessary. He declared that his committee would also concern itself with a series of technical proposals for amending the act which had been advanced by the FPC in its last report. Industry spokesmen regard MAGNUSON's action as an unofficial filibuster, designed to prevent an exemption bill from reaching the Senate floor in time for debate and a vote.

If and when regulation is debated on the floor of Congress, the influence of President Eisenhower is likely to be the decisive factor, especially in the Senate. Thus far, the President has still to enunciate a position. A few months ago, Senator ALEXANDER WILEY, Republican, Wisconsin, was still optimistic that, despite the Fleming committee report, Mr. Eisenhower was still keeping his mind open.

Nevertheless, the President thus far has not been one to stand in the path of give-away government, especially when the give-away is to be accomplished in the name of free enterprise, private initiative, and States rights. When the chips are down, Mr. Eisenhower will very likely be found in the ranks of the industry behind the Fleming Committee and the FPC. If this proves so, whatever else future historians may say about this administration, at least they can say that its natural-resources policies were thoroughly consistent.

GI Conservation

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. SIKES. Mr. Speaker, I am glad to have the privilege of submitting for reprinting in the CONGRESSIONAL RECORD an interesting and informative article entitled "GI Conservation," by Cleveland Van Dresser, one of the Nation's better-known conservationists and sports authorities. His article touches on H. R. 5442, which I introduced, but the article is primarily aimed at hunting and fishing that could be made available for military personnel on military reservations:

GI CONSERVATION

(By Cleveland Van Dresser)

Recently a bill was introduced in Washington aimed at activating one of the greatest hunting, fishing, and wildlife conservation programs, ever instigated in this country.

As of now there are literally millions of acres of publicly owned land scattered in every State in the Union, much of it fully capable of supporting good hunting and fishing. This land is composed of military installations, and every branch of the armed services is represented. If the combined areas administered by the Navy, Army, Marine Corps, veterans' hospitals, and Air Force were all joined together, they would easily make a good-sized State.

Some of these military installations are immense. Eglin Air Force Base in Florida is over half a million acres in extent, and some areas in the Western States are even larger than that.

With but few exceptions, hunting, fishing, and wildlife conservation is being ignored on these huge areas.

The bill, introduced by Congressman BOB SIKES, of Florida, seeks to develop the sportsman-potential of these great tracts of lands. The measure would affect millions of fishermen and hunters in every State in the Union. In area for Florida alone, 64,000 acres would be affected, not counting Eglin Field.

Servicemen are not the only persons by any means who would enjoy improved hunting and fishing as a result of SIKES' bill. Every Nimrod and Izaac Walton in the land would feel its beneficial effects.

During the past several months I made a study of military installations in regard to their hunting and fishing possibilities. I found that throughout the land there are only two such areas that have any official status as wildlife areas. One is the large Naval Ammunition Depot at McAlester, Okla., and the other is Eglin Air Force Base, in Florida.

By a special act, McAlester has been declared a wildlife refuge with a full-fledged conservation program in force there. The program is conducted jointly by the civilian personnel at the depot, the Oklahoma Game and Fish Department and the United States Fish and Wildlife Service.

Eglin Air Force Base has a wildlife restoration plan plus a public-hunting program administered by base personnel. It is the only setup of its size on any military installation in the United States.

What I learned during my extensive tour was both discouraging and encouraging. The discouraging part was observing such huge areas virtually going to waste, so to speak. The encouraging part was the local programs in effect on some of the military bases, plus the obvious deduction that wildlife programs were feasible on most military areas that don't have them.

One of the principal ills connected with any concentration of men is the drain upon hunting and fishing resources of adjacent areas. I encountered repeated complaints from civilians on this score. In my opinion, such complaints are justifiable and understandable.

As every sportsman knows, public hunting and fishing areas are becoming increasingly scarce. Just because a man dons a uniform doesn't mean he's given up hunting and fishing. And when you have several thousand men practically living under one roof, you're going to have heavy use, indeed, of any fishing and hunting facilities available. Private citizens howl lustily, indeed, when their fishing and hunting grounds are invaded by hordes of the military.

In some sections of the country, it has reached the point where outdoor editors don't dare print anything about a good catch of fish being landed in any particular lake or stream for fear the water will be overrun by men in uniform.

The GI can't be blamed for this unhappy state of affairs. It's not his fault he's stuck in a camp with several thousand other guys who like to hunt and fish and can't get away long enough to indulge in his favorite sport any distance from camp. He does the best he can, fishing and hunting whenever opportunity affords with the result that the areas available get worn pretty thin.

Hunting and fishing on military installations throughout the country today is carried on in a desultory fashion. It's pretty much up to the commanding officer of any given area. If he likes to fish and hunt, he can readily instigate and carry on a program in his own bailiwick. If he's not interested, these sports are virtually neglected.

Even though "military hunting"—so to speak, is on a strictly local basis, some programs in effect are truly remarkable. This is due in great measure to unstinted cooperation and assistance of the United States Fish and Wildlife Service and the various State game and fish commissions. Both of these organizations offer unqualified help to any request from the military to start and maintain sportsmen's programs.

The exact number of military installations in the United States and their aggregate total in acreage is classified information. However, the Fish and Wildlife Service, the sparkplug in most cooperative deals between the military and the conservation agencies, estimate there are 80 Air Force bases alone that are large enough to support effective hunting and fishing programs. Add to that total the Army, Navy, Marine, and VA hospitals, and you have a total acreage that is something to reckon with, a fact which has been pointed out before in this article.

The hit-or-miss arrangement now practiced in military installations has both good and bad points, from the sportsman's angle. Commanding officers are shifted fairly often, and it is not unprecedented to have an officer who has fostered hunting and fishing at one military base start another such program on another base when he is transferred. On the other hand, many a good conservation program has died from lack of attention due to the shifting of a disinterested officer from one base to another.

To get an idea of the potential involved for Florida in case the military ever does decide to adopt fishing and hunting, let's take a quick look at what is going on in other parts of the country.

The McAlester, Okla., setup is absolutely unique. It is a wildlife refuge, not a hunting area. Which means no hunting is allowed.

That's not as dismal as it sounds, for fishing, and plenty of it, is permitted. Furthermore, there is a natural overflow of surplus game birds and animals outside the refuge, and private citizens as well as GI's are getting the benefit of it.

The entire wildlife conservation program at McAlester is in charge of a civilian, Dewey Johnson, chief of the maintenance division of the naval depot. His crews plant huge cover crops, build numerous ponds and lakes, and engage in extensive soil erosion work. Practically everything they do in the way of upkeep of the immense ammunition depot is done with an eye toward wildlife restoration.

McAlester depot was originally a hunk of beat-up, eroded farmland interspersed with a few sorry swamps. Now it is rapidly becoming a wildlife paradise with quail, wild turkey, deer, waterfowl, and other game roaming all over the place. To think of a wildlife refuge existing on an ammunition depot is fantastic, but it does, I assure you. I made a thorough inspection of the place with the express permission of the United States Navy.

Reason for the extensive water conservation is the fire hazard. No one has to be told what could happen if a fire ever broke out on an ammunition depot. Water, and lots of it, must be handy at all times. Thus the ponds and lakes. Needless to say, the lakes are full of fish—Johnson sees to that—and waterfowl use them (the lakes) extensively during migration flights. Johnson has even started a nesting population of Canada geese.

Another conservation project I found intensely interesting is located at the Quantico Marine Base, 40 miles down the Potomac River from Washington, D. C. The setup here is quite different from that at McAlester.

The marines really go in for active hunting and fishing at Quantico, and have a program that could readily be used as a model for any sportsmen's area. They have their own Rod and Gun Club with dues at $2 per year. All moneys thus collected are spent on improving hunting and fishing.

The marines engaged in a lot of food-plot planting for game birds, have cleared out streams and lakes, and have improved waterfowl habitat along the Potomac to such an extent that hunting and fishing within the confines of Quantico is in some respects better than it is on the outside.

The United States Fish and Wildlife Service started a nucleus of a wild turkey flock which has grown to sizable proportions. The deer herd has also grown considerably, and both the Federal Bureau and the Virginia Department of Fish and Game are actively engaged in stocking both bass and trout in suitable waters within the area.

Any one stationed at or connected with the Quantico base can fish and hunt therein, subject to Virginia game laws.

It is the purpose of Congressman SIKES' bill to have hunting and fishing become part of the regular military program. The thing makes sense and think what an enlistment inducement it could be. In addition, imagine what a boon it would be to servicemen and civilians alike. No sportsman today is confronted with more territory than he can hunt and fish, and any additions thereto, especially those the size of military reservations, will be enthusiastically welcomed.

What if the civilian can't hunt on a military area? The GI's can and every man in uniform who can hunt and fish on his own area means less crowded conditions on public areas, many of which are busting at the seams as it is.

SIKES' bill makes provisions for State and Federal cooperation in developing the hunting and fishing potential of all military areas. To my way of thinking, this is definitely as it should be. Wildlife restoration is a highly specialized job these days, and it takes trained men with plenty of know-how to get the desired results.

Taking everything into consideration, a bill to foster and promote fishing and hunting on military reservations is one of the best conservation ideas to find its way into the legislative hopper on Capitol Hill in a long time.

Here's hoping it goes over.

Suitable Airports From an Airline Pilot's Viewpoint

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, July 25, 1955

Mr. SPARKMAN. Mr. President, recently Capt. Barton Hewitt, one of the TWA pilots, spoke on the subject of suitable airports from an airline pilot's viewpoint, and made some very interesting comments during the course of his remarks. I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

Mr. SPARKMAN subsequently said: Mr. President, a few days ago I asked unanimous consent to have printed in the Appendix of the RECORD an address which had been delivered by Capt. Barton Hewitt, one of the outstanding pilots of a leading airline. The address dealt with the subject of suitable airports from an airline pilot's viewpoint. I think this address is of particular interest to Members of Congress, as well as to the people of Washington and the surrounding area, because of the vexatious problem of expanding airport facilities in this general area.

I am advised by the Public Printer that the address exceeds by one-half a page the amount allowed to be printed without an estimate. The Public Printer estimates the cost of printing the article at $200.

I ask unanimous consent that, notwithstanding the extra cost, this address be printed in the Appendix of the RECORD, because I believe it is well worthwhile.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SUITABLE AIRPORTS FROM AN AIRLINE PILOT'S VIEWPOINT

(By Capt. Barton Hewett)

AIRLINE AIRPORTS

The ideal airline airport is one which adequately provides for the safe takeoff and landing of the type of aircraft which serve the community where it is located, and which has facilities which permit efficient handling of the passengers, baggage and cargo to be carried plus catering to all the needs and desires of the traveling and the visiting public. It is located as close to the traffic generating center of the community as possible without interfering with the community pattern, becoming an undesirable neighbor, or enforcing flight paths which snarl air traffic. Transportation to the ideal airport is direct and speedy from all segments of the community and these routes are so located that they do not interfere or conflict with industrial traffic which will cause delays. The airport is so designed and financed and operated that it does not become an economic burden either on the community or the carriers.

It will, in all but exceptional cases, have at least two runways or parallel pairs of runways which can be expanded to accommodate forecast aircraft and which are not partially useless because of obstructions; it will have a terminal which is flexible, functional and economically practical. It may have underground fueling or other special built-in services if the provision of these services results in a lowering of the cost of operations.

Airport location is playing an increasingly important role in the operation of airline aircraft. Of course, everyone traveling by air would like the airports to be located right downtown like MKC but this idea is becoming less and less practical. It becomes less practical for reasons of obstructions, room for expansion and from the noise-control standpoint. The best locations from operational viewpoint are perhaps more remote from the cities but ideally, within easy travel time and distance from the community centers. The remote locations are best from many points; safety, less obstruction, fewer residential squawks about all the noise and room for overrun areas and expansion. We are having a terrific amount of trouble over this noise problem with the New York area as the prime example, though New York is not the only area raising a commotion by any means. Capt. Joe Hull, of Capital Airlines, wrote a very interesting article in the February issue of the Air Line Pilot, ALPA's monthly publication, which sums up the noise problem perhaps in the best manner yet conceived.

Captain Hull suggests that the right of eminent domain be extended to incorporate airports as equally important to the general need and well-being of the country as are the railroads or powerlines or sewage disposal plants. This would realize the fact that residence near airports might be just as undesirable as that near any of the facilities of these other outfits which are recognized under the right of eminent domain legislation, eliminating expensive litigation involving complainants and airport operators, airlines, and pilots.

Remote location of proposed airports will enable the restriction of surrounding areas in such a manner as to preclude the creeping type of paralysis which is now occurring around LaGuardia and Newark. I understand a new hospital is under construction near LaGuardia. It seems rather hard to understand the planning of a hospital, which traditionally requires quiet for the good of the patients, in an area which already is squawking its head off because of the aircraft noise. This area, like Newark, has built up tremendously in the immediate vicinity of the airport during recent years because of the cost of property and through lack of any kind of building restrictions. It is recommended, therefore, that wherever possible around existing airports restrictions are placed in effect to prevent this problem from arising in the future. The Doolittle Committee report emphasizes this.

Moving airport locations farther out from the cities in proposed construction projects might present something of a transportation problem at the present time but let us not overlook the eventual helicopter-shuttle services. We already have three such services in operation around New York, Los Angeles, and Miami. They are still in the embryonic stages but with new equipment such as the Piasecki YP-16 already flying it should not be too long before these services are in position to provide really valuable transportation from remote major terminals to cities' downtown terminals.

In planning new airport construction there are many other advantages in moving farther away from cities. The first major advantage lies in the ability to preplan larger areas for the airports, acquiring more land for expansion purposes. Runway lengths can be planned to accommodate present aircraft with foresight of ability to expand for later types which may require even greater lengths. Sufficient area should be planned for utilization of multiple and parallel runways at major terminals. Areas immediately surrounding the active airport area can be made into lovely park areas with the help of the State game and forest preservation services, serving multiple purposes. This idea will help to make clear approaches to the airports in compliance with the recommendations of the Doolittle Committee. It will also provide safe areas in which overshoot or undershoot procedures will not be damaging or fatal. We actually have some airports where concrete abutments have been erected in order to keep aircraft from winding up in residential or business districts in event of overshoot or brake failure on landings. This is a bit tough on equipment and provides something of a psychological hazard to the gentlemen seated in the front end of the planes. Let's not put up any more concrete barriers. This same additional area around airports will provide another safety factor to the pilots in event of aborted takeoffs wherein engine failure during the takeoff roll occurs at a time when the aircraft might not be stopped in the normal runway length. This overrun area idea is becoming increasingly important with present high wing-loading aircraft and will be even more important with the advent of the pure-jet transport. At present, leading aircraft manufacturers are designing the United States of America's first jet transport, notable among which is Boeing's No. 707, a direct descendant of the B-47 and B-52. Boeing has the 707 well along toward production and should fly the first prototype model late this year or early in 1955. Remember the overrun area when thinking of designing airports to handle jet transports. High performance jet aircraft which may not have reverse thrust provisions will require long runways and good overrun areas in order to operate safely without payload restrictions.

General airport layout

A little over 10 years ago, in January 1944, a gentleman whose name many of you will recall, did a bit of prognosticating, and I will quote some of the ideas which he came up with. The man to whom I refer is the late David L. Behncke, founder and longtime president of the Air Line Pilots Association. Dave, like most of you gentlemen present at this convention today, was a man of great foresight and expressed this tremendous foresight in many ways. Over 10 years ago he said:

"1. That there be parallel runways in all the cardinal directions of the compass.

"2. That these parallel runways have a minimum length of 10,000 feet or the possibility of being extended to same.

"3. That airport peripheries be obstruction-free and that there be no obstacles in such peripheries of greater height than a ratio of 1 foot in 40.

"4. That all runways shall be light-colored, rough-surface concrete, capable of supporting aircraft weighing a minimum of 250,000 pounds gross under all conditions of speed and load.

"5. That all runways be of uniform width—minimum or 250 feet.

"6. That the distance between parallel runways, inner edge to inner edge, measure a minimum of 800 feet.

"7. That each runway shall have suitable lighting so arranged and operated to effect positive identification of each individual runway in all kinds of weather conditions, and that the lighting control of the runways be arranged to make it possible to light one or more runways and related lights without lighting the entire field.

"8. That vehicular traffic not be permitted to cross runways and, where airports have a central terminal area, underground traffic-ways be utilized.

"9. That the central control tower be so located as to furnish a clear and unobstructed view for 360°; namely, a complete and unobstructed view of the entire airport area, including all of its runway approaches.

"10. That suitable rescue equipment be continuously available and operative for any kind of an emergency rescue.

"11. That the between-runway surface of the airport be graded and improved to a condition to insure against damage to aircraft that are for any reason unable to remain on the runways or taxiways."

All of these observations certainly are logical today and offer us something in the way of criteria at which to shoot in the future. There have been some revisions in the thinking along the line of the number of runways necessary since the costs have skyrocketed so tremendously in construction and since the preferential-runway system has been placed in effect at many major terminals. The use of this preferential-runway idea has been accepted by ALPA after careful study at specific locations with reservations on the degree and velocity of crosswind component acceptable in line with safe operating practice. However, this acceptance has proven to be of great help in eliminating noise complaints in some areas and also in the expeditious flow of traffic at airports which are not laid out with parallel runways. This is made possible by increased utilization of the runways in different directions during conditions of light and variable winds. This business of higher runway utilization during light wind conditions should not be misconstrued to mean that landing and taking off into the wind is no longer a most desirable manner in which to fly airplanes because if sufficient runways are not provided flight operations will of necessity cease altogether during conditions of high winds.

There are some single runway airport ideas floating around, but they are subject to many limitations and relatively impractical. I had the pleasure of talking with Maj. Alexander P. de Seversky on one of my flights last year. He showed me some plans which he has drawn up for a single-runway airport which include a principle of utilizing wind shutters along the sides of the runway to deflect winds onto the parallel to the runway. The idea has some merit but needs practical-service testing of a full-scale unit.

There have also been developments in the so-called crosswind landing gear field and some real progress has been made. This progress has been confined, however, to relatively small aircraft and is presently not deemed practical for large transport-type aircraft.

An airline pilot still likes to have a choice of runways and it is strongly recommended that all major terminals be planned to include multiple-parallel runways. This is a must for the future and should be incorporated at all airports which have been laid out and surveyed for parallel runways. Baltimore's Friendship Airport is a good example of this. Friendship was originally laid out for parallel runways but the financial problems precluded laying the extra runways during initial construction. The city fathers' idea was that the additional runways would be laid when the traffic as an international airport demanded them. At first thought, that seems a logical explanation but what the city fathers failed to take into consideration was that Friendship will never become an international airport so long as those parallel runways do not exist and the traffic will never demand their laying. Idlewild is the international airport now because of its facilities just as much as because of its location. We know what some of the financial problems are and do appreciate them, but the fact remains that progress must be made and progress is going to cost a lot of money. The problem is not so much how to cut corners and save money, but rather how to raise sufficient funds to do the job properly and prevent the wastage of public funds on construction which will ultimately prove unsatisfactory through lack of foresight or salesmanship on the part of the planners. This point cannot be emphasized too strongly.

To give an example of just how important parallel runways are in major terminal operation; there have been numerous instances where I have had to hold at the end of the runway at Washington National for 45 minutes before I could get takeoff clearance to make the 13-minute run to Baltimore Friendship. This was due to landing traffic arriving at Washington every 2 minutes at certain times of the day during which the departing flights have to be sandwiched in between arrivals. Parallel runways would have eliminated that. Increased frequency of flights each year makes this more imperative with heavier traffic having saturated many of our major terminals already.

As mentioned earlier in Mr. Behncke's forecast new runway design should be sufficient for aircraft weighing up to about 250,000 pounds, but we now must consider that weight spread out over many tandem and dual wheels. The CAA's technical standard order No. N6a offers a pretty good set of figures on runway lengths, widths, and weight loads for different type of airline airports. Aircraft manufacturers are taking the weight distribution into consideration in planning more supporting points in the form of wheels as the aircraft becomes larger and heavier, so the pavement loading figures advanced in TSO–N6a should be effective for some time.

When speaking of runway construction I cannot help but think from the ground up, such thoughts always reverting to a couple of glaring examples of what not to do when preparing subsoil for runway construction. I have to refer once again to my own hometown, Baltimore, and the old Harbor Airport. Like LaGuardia Airport, the old Harbord Airport was built on fill along the river bank. In both instances improper type of fill was used with the settling effect literally wrecking the runways and buildings constructed on the fill. Washington National Airport is one example of a fill airport reclaiming river space which seems to be holding up reasonably well. Grave fill was used exclusively there and worked pretty well, the big limitation at Washington National now being the lack of possible room for expansion or for parallel runways.

Now we get into the surface construction and materials used for runway surfacing. The first thing which we will consider here is the safety angle and the coefficients of friction of different types of surfaces:

	Free rolling	Incipient skid		Skidding	
		Dry	Wet	Dry	Wet
Rough concrete	0.05	0.8	0.7	0.6	0.35
Turf	.05	.5	.1	.1	.04
Macadam	.05	.7	.5	.5	.3
Ice	.05	.05	.05	.05	.03

Airline pilots are almost unanimous in their selection of rough surface concrete as the most desirable runway surface. Their reasons for this thinking are primarily due to its better braking coefficient and its light color. The lightness is enhanced by the reflective characteristics of the aggregate and cement making the concrete runway much easier to see and judge height on a dark and stormy night. There really is nothing more difficult in the physical manipulation of a plane than a night landing during precipitation on a black surface runway. It is sort of like trying to land in the bottom of a well, and these present-day transports have had a lot of the "feel" designed out of them. The brushed concrete surface is much more easily seen and judged during the same conditions.

From the maintenance angle concrete seems to hold up longer and with less actual work than any other surface. All reports seem to indicate that properly poured concrete runway and apron surfaces have held up for extended periods during the past and are now proving to be more impervious to the new fuels being used in different types of aircraft. The fuel-spillage problem will not be so acute on the actual runways as it will be on taxiways and around ramp aprons.

While discussing runway maintenance it should be brought out that, if scheduled flights are to have a high degree of scheduled operation, runways should be cleared rapidly during conditions of snow or ice. We all know what ice does to braking action and packed snow will effect just about the same loss of braking. At the same time there is a considerable effect on the lift characteristics of a wing during a take-off roll when the aircraft is bouncing over rough runway surface. Ice ruts and runways which have suffered deterioration to a point of having large holes or waves in them will cause a considerable loss of lift due to the landing gear transmitting shocks through the airframe to the wings causing a vibration or shudder effect which causes a considerable amount of lift spillage. With aircraft wing loadings on a seemingly consistent increase this problem becomes increasingly important and is one which the airport operators must consider seriously. Flying a DC–3 out of old Baltimore Harbor Field I used to count three humps in the runway on takeoff and haul back on the yoke to get it into the air because that next bump was a rascal. We cannot do that with modern transport aircraft. There are no longer DC–3 design ideas being built into transport and the new ships do not behave like the old "3." Therefore, improved paving and maintenance of that paving are essential to good, safe operating practice.

Runway borders and end frequently prove to be just as important to a pilot as the center of the runway, especially with the use of higher crosswind components and the preferential runway system. These ends and borders of runways should be graded up and given a surface which will support aircraft which might of necessity be forced off the main runway surface. Many aircraft have been damaged some with resulting fatalities from fire which might have been prevented if borders and between runway areas had been properly graded. We realize that the cost of making the whole airport surface capable of withstanding the weight loads of modern aircraft is an impossibility, but it

certainly is not beyond the realm of possibility to expect that a large portion of the airport be graded in such a manner as to prevent unnecessary damage to aircraft forced off paved surfaces. These new flying machines cost too much money to have them damaged beyond repair should they run off paved surfaces, and the chief pilots take a mighty dim view of lads who scuttle one that might have been saved with a little more runway or a little wider runway. All this ties in with the overrun area mentioned earlier when discussing airport area and expansion.

While we are on the subject of runways, their lighting seems to be a logical subject. Many types and varieties of runway lights have been developed and many are approved. The airline pilot likes the kind of light which can be readily seen from 360 degrees when approaching the airport; the light which is not rendered ineffective by snow and ice; which is strong and distinctive enough so as not to be confused with other lights and reflections; which is rheostatically controlled and adequate for daytime use during conditions of poor visibility; and which has equal to or more beam spread than the AGA type runway light. The normal recommended distance between these lights is 200 feet, paralleling the runway and the width governing the spread across the runway. Great widths of runways are not particularly desirable, due to having the lights so widely separated that they lose their effectiveness to the pilot in judging his altitude during landing.

Taxiway patterns

Taxiways are a frequently overlooked item in the construction of many feeder and trunkline airports usually due to financial problems. This lack of a proper taxiway pattern will begin to pose a more serious problem at smaller terminals as the traffic continues its inevitable increase. Taxiing of aircraft on active runways is a poor procedure at best particularly during conditions of poor visibility. Every effort should be made to plan taxiways in such a manner as to keep taxiing planes off active runways for all operation except while actually taking position for takeoff. The safest and most expeditious manner of pretakeoff taxiing is to be able to continue a roll from the engine runup position directly into the takeoff roll. Turnoff taxi strips along the runway should be located at 500-foot intervals starting at a point one-third of the distance from the leading end of the runway. Rounded turnoff strips or so-called high-speed turnoffs are desirable.

In the design of taxiways it should be remembered that strips too close to active runways are within the realm of danger. All taxi strips should be at least 300 feet from runways except at turnoffs and at the runway ends. The warmup blocks at runway ends should be adequate for handling at least 4 aircraft at major terminals and 3 at trunkline terminals. In addition to the necessary room for these aircraft to runup, there should be room for them to be able to pass should the last man be the first read to go, or in case traffic clearances necessitate departures not in the order of aircraft sequence at the runup position.

The British used to use an interesting form of taxiway. They called it a perimeter strip arrangement and that's just what it amounted to. A taxiway strip was built around the complete perimeter of the airport, enabling any aircraft to taxi to any runway for takeoff or to the terminal after landing on any runway without ever crossing the active runway. That is a very safe method, but it is costly to build and requires excessively long periods of taxiing sometimes.

Terminals and ramp areas

A modern airline airport terminal is something which will present many problems if it is to remain modern for any length of time. There must be great foresight used in the design of any new terminal in the consideration of providing adequate room for the expansion of ramp area, gate space, and the terminal facility itself. It must be functional in design, enabling rapid and expeditious handling of passengers, spectators, baggage, cargo, and aircraft. The new terminals at Baltimore Friendship and at Greater Pittsburgh are good examples of functional terminals. The trend in design is toward this end and should remain that way.

At the largest terminals gate space seems to present one of the largest problems. It is difficult to design sufficient gate space for peak-load periods and still have functional action during relatively slack periods, but that is just about what is needed. It is both costly and mighty inconvenient for passengers to have to sit on a plane waiting for extended periods for gate space. This incurs costly delays, misses connections, and many other similar inconveniences which should be ironed out if we are to have a good smooth operation.

Location of hangars and other buildings around an airport are very important both in their accessibility and in relation to any plans for expansion. If buildings are jammed up against the terminal, it is impossible to enlarge that terminal. If hangars are too close to active runways there is restriction to how much you can do to lengthen or expand overrun areas to keep up with aircraft designs. The Washington National and LaGuardia Field are examples of the V-type terminal and hanger layout with the terminal at the point of the V. A better scheme may be found in the Idlewild and Greater Pitt layout, in that both have more widely separated buildings which give complete room for flexibility. It is felt that the flexibility is more important than the easy access of the V-type. Above all, it is imperative that no duplication of the it is imperative that no duplication of the Chicago Midway madhouse be considered. The square layout at Midway with buildings around the complete perimeter is not good operationally, safetywise, or in any other respect except compactness. Midway is the busiest, but it is not without effort and close coordination of all agencies involved in its operation that it got to be the busiest. It is the firm conviction of many people that Midway has reached its saturation point, trafficwise, but we may yet have more schedules operating in and out of Midway before a coterminal at O'Hare Field starts into operation this year. A single air terminal is insufficient a the largest cities. The New York Port authority has the right idea for the service best suited to the needs of the area. The Los Angeles area has enough airports, but there is not the proper amount of coordination between them. Chicago needs at least 2 airports for its commercial traffic and probably 3 in the very near future if it is to handle its growing traffic safely and expeditiously.

Locate the airport control towers in central positions with complete observation of all runways and their approaches. For some reason there never seems to be enough room to move around in a tower. It would appear to be worthwhile making the towers a little larger so the operators can move around, but not so as to hinder their visibility.

Surface transportation on airports is a very hazardous operation at best and should be limited to only absolutely necessary vehicles. Where surface transportation around airports is necessary it should be so routed through tunnels and underpasses or around perimeter strips as not to provide any hazards to taxiing aircraft.

The complete lighting problem for airports and their approaches is such a complicated one that I feel it only necessary to mention at this time that ALPA has approved the center line approach lighting system and has all the information which might be of interest to this convention for ready reference and advice concerning runway and taxiway lighting criteria. Along the advisory line it might be apropos to advise that there are ALP safety committeemen available to help in advisory capacities with airport problems, noise problems or nearly any other problem except financial troubles and we have our own to worry about just like everyone else.

Monopoly

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an incisive and important article entitled "Monopoly Is On The March Again." This article was published in the August issue of the Democratic Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONOPOLY IS ON THE MARCH AGAIN

When the Chase National Bank and the Bank of Manhattan recently combined to form the second largest bank in the country, they celebrated the event like a wedding. Full page newspaper advertisements showed a happy couple driving off on their honeymoon, a banner on their car reading "Just merged."

Of course, it was hardly the typical marriage, since it isn't often that the husband is worth $6 billion and the wife $1½ billion. But the Chase-Manhattan merger was typical of the growing tendency of big businesses to swallow up smaller ones—a trend which a Senate Judiciary Subcommittee has called "monopoly run wild."

Headlines throughout 1954 told the story. Wave of Mergers Seeking Sanction, said the New York Times. Merger Trend Grows in Textile Companies, headlined the Union Labor Record of Springfield, Mo. Financial columnist Sylvia Porter wrote: "The greatest wave of corporate mergers in 30 years is now surging over our land. Even today—with 4 months of the year still to go—it is a certainty that 1954 will go down in the books as 'the year of the mergers.' • • • Not since the late twenties has our country seen anything approaching this wave of corporate consolidations."

Last year, there were a third more mergers than in 1953 and three times as many as in 1949. Hundreds of banks have been swallowed up, until today less than 1 percent of the banks in the United States hold nearly half of all banking assets. Countless firms in the food, dairy, textile, and chemical industries have also been absorbed. These figures show a concentrating of economic power which threatens not only small-business men, but also consumers, who depend upon competition to hold down the prices of what they buy.

The Federal Trade Commission, which was set up to enforce competition in the economy, has issued a report calling this "alarming increase" in monopoly a "disturbing fact of life of our economy." This expression of concern could be taken more seriously if it came from an FTC which had done more than sit idly by while the merger

trend quickened. Since the Republicans took office, the FTC has not completed a single antimerger action in 2½ years. It has begun only two new cases of its own, and in one of these, there was some heavy foot-dragging. This case dealt with the acquisition of a competitor by the Crown-Zellerbach Paper Co., giving Zellerbach control over 70 percent of the West Coast coarse-paper market. In September 1953, the FTC staff recommended the merger be prosecuted. For reasons still unexplained, the FTC allowed the case to hang in mid-air for 5 months before taking any action. Meanwhile, the properties of the two companies became so "scrambled" that it became almost impossible to unscramble them.

In mid-1954, Business Week magazine observed the difference in atmosphere at the FTC under the Republicans. "As compared with the way the Democrats did things," Business Week reported, "the Republicans are making it easier for the businessman who is up on the FTC carpet, harder for the FTC lawyers handling the cases." In the words of New York's Congressman EMANUEL CELLER, coauthor of the most recent antimerger law, the administration of the law under the Republicans has been "somnolent"—that is, the FTC has been asleep at the switch.

This siesta in enforcement of the laws against monopoly could have been predicted when President Eisenhower placed at the head of the FTC one Edward Howrey, who had previously earned much of his livelihood defending corporations against monopoly charges by the FTC.

Typical of the FTC's new solicitude for big business was the way it condoned the attempt of the General Foods Corp. to stamp out competition on the West Coast. While keeping its prices up in other regions, General Foods gave big discounts to western customers, thus putting the "squeeze" on its western competitors. The Robinson-Patman Act prohibits this practice, provided that the smaller competitors can show they have been injured. The FTC made General Foods' competitors show more financial scars than even the Supreme Court had required. General Foods won. Dissenting in the case, Commissioner James M. Mead, one of the Democratic minority on the Commission said:

"It is admitted that the Government did not offer in evidence in this case the scalps or the hides of the small-business competitors of General Foods. We do not have in evidence pounds of flesh or buckets of blood * * * but we do have substantially all (General Foods') competitors on the West Coast testifying that they have been victimized."

Commissioner Mead's appointment has not been renewed.

One would think that an administration which professes to be "disturbed" about the growth of monopoly would not only put some steam behind the enforcement of the laws, but would also try to strengthen the laws themselves. Yet shortly before the FTC issued its report bemoaning the merger trend, the Attorney General's Committee to Study the Antitrust Laws was recommending that the most effective laws in the field be weakened.

Once again, the result can be explained by a glance at the Committee's membership, for while small business, labor, and agricultural cooperatives had almost no representation, big business was there in force.

When Attorney General Brownell selected the Committee, he pledged its members "would be guided by the broadest viewpoint of what is best for the American economy." Apparently what Brownell considers a broad viewpoint can best be developed looking out the window of a Wall Street law firm. For as a careful analysis of the Committee's makeup by Texas' Congressman WRIGHT PATMAN (of Robinson-Patman Act fame) revealed, of the 62 members on the Committee, 42 were lawyers. Twenty-one of them were from firms which at that very time were defending businesses that had been charged with violations of the antitrust laws. Another 15 had defended such corporations in the past. Yet none disqualified themselves from making recommendations on the very points they had urged against the Government in court. As Tennessee's Senator KEFAUVER, a long-time foe of monopoly, pointed out. "These men came not to praise competition, but to bury it."

Much of the committee's work is shrouded in mystery. Its cochairman, S. Chesterfield Oppenheim, has refused to tell Congressman CELLER's Antitrust Subcommittee who worked on the task forces which did much of the research for the Attorney General's committee. The administration, moreover, tried to give the impression that there was far more agreement within the committee than actually existed. This was done very simply. In the final report, dissenting opinions were sliced up and condensed, portions of them omitted entirely. One member had to publish his dissent at his own expense.

Typical of what the committee proposed is its recommendation to dilute the Robinson-Patman Act. This act, called "the Magna Carta of small business," was passed in 1936 to prevent large firms from chopping prices for selected customers in order to get rid of competition. As the Grafton (W. Va.) Sentinel put it: "The big fellows use price cuts to drive competition out of business and then raise prices as far as the traffic will bear. Any advantage the consumer gets from the price cut is short-lived and he suffers in the long run." But the committee's proposals, according to the United States Wholesale Grocers' Association, would "rip out the vitals of the act, leaving it a feeble imitation of what it once was."

Among the committee members was FTC Chairman Howrey. His presence might explain why the committee recommended repeal of that part of the Robinson-Patman Act which limits the quantity of goods which can be sold at a discount to big purchasers. A few years ago Howrey represented the Firestone Tire & Rubber Co. when it was called before the FTC for violation of that very clause. It might be noted that the administration kept judges off the committee for fear they might be making recommendations on issues they would later have to judge. But there was no objection to Howrey's participation, even though, as Chairman of the FTC, he judges more antitrust cases than any court.

But the most sweeping of the Committee's recommendations is one that would change the ground rules for proving an antitrust law violation and would, in the opinion of many experts, virtually paralyze the Government's efforts to prevent monopolies. A good illustration of how this proposed rule of reason would work is the Pillsbury flour case. In 1952, the Government issued a complaint against the Pillsbury company for buying out one of its major competitors and nearly doubling its share of the ready-mix flour market. Under ordinary antitrust rules, such an action might be judged a violation of the law in and of itself, and the Pillsbury case would probably be decided by now. But the new Republican Federal Trade Commission decided to apply to the case the rule of reason endorsed by the Study Committee. The result: Three years and 8,600 pages of testimony after the complaint was filed, the case is still being tried, and probably won't be decided for at least another year. Meanwhile, Pillsbury's domination of the ready-mix flour market continues unchecked.

The same big business-mindedness that has held up enforcement of the antitrust laws and rigged the report of the Attorney General's Committee shows up in other highlights of the Republican record on small business. In recent months, the administration has—

Failed to use the Government's authority to block a single bank merger in 2½ years, even though mergers have greatly lessened bank competition.

Released 150,000 pounds of stockpiled aluminum to the big three aluminum producers, Alcoa, Reynolds, and Kaiser, without making them distribute a fair share of the metal to small aluminum fabricators and extruders.

Tried to transfer the Small Business Administration, presently an independent Government agency which makes loans to small businesses, to the Department of Commerce where, as one small business journal put it, "it could die quietly."

For the small businessman, the lesson to be learned from the Republican record is that if he wants to find his friends, he had better look to Congress, not the Administration. In the present Congress, Democratic members have introduced a number of bills to strengthen the antimonopoly laws. One would raise the fine for violation of the Sherman Act from $5,000 to $50,000, to make it more difficult for giant corporations to charge their fines off to petty cash.

Another would let the Government itself sue corporations for damages if the price at which it must buy goods for defense and other purposes is held artificially high by monopolistic agreements.

A third would require any companies that wanted to merge to notify the Government beforehand, so that the effects of the merger upon competition and prices could be more carefully weighed and the merger blocked before the "eggs become scrambled" if the facts warrant.

In addition, Democrats, spearheaded by Representative PATMAN and by Representative CELLER and his Antitrust Subcommittee are, in PATMAN'S words, "stripping the Attorney General's committee of the pretense that its recommendations are really intended to strengthen the antitrust laws," making it unlikely that any of the Committee's proposals will get by the Democratic Congress.

Before President Eisenhower took office, he pledged that "our laws against * * * practices leading to monopoly must be energetically enforced." The record shows, instead, that many of them are being sabotaged. Because of this record, the magazine Meat and Food Merchandising has concluded that "President Eisenhower, who as a Republican has enjoyed almost unanimous support from small business, stands in grave danger of losing its respect and favor."

The New South Looks Ahead

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. ANDERSON. Mr. President, at 10:45 this morning Mr. Earl L. Butz, Assistant Secretary of Agriculture, United States Department of Agriculture, delivered an address entitled "The New South Looks Ahead." He delivered the address at the Farm and Home Week, Mississippi State College, State College, Miss. In his speech he made a very fine statement on the cotton situation. I ask unanimous consent that the

text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEW SOUTH LOOKS AHEAD

In less than a couple of decades, the South has staged one of the most remarkable economic recoveries in the history of our Nation. Fundamental adjustments have occurred quietly and without farfare. A solid foundation is now laid for continuing growth and prosperity in the days ahead. Wise leadership, combined with imagination and courage, can assure continued growth and opportunity for all of us.

Less than 20 years ago, the South was greatly concerned about its basic economy. Many who studied the situation carefully and sympathetically concluded that the South presented "the Nation's No. 1 economic problem." Town and country people alike were having great difficulties. Job opportunities were few and far between. Both wages and incomes were low. There was relatively little industry in the South to provide the many jobs that were so badly needed.

The main source of employment was agriculture. The typical Southern farmer was chained by circumstances to a 1-mule-and-scooter operation producing row crops on a few acres of land. Cotton had long been the one big crop over most of the South. But cotton no longer could carry all the people who depended on it. Thus the fatal weakness of a 1-crop agriculture revealed itself.

Since those relatively recent hardship years, some great and significant changes have taken place in the South. During this interval, the people of this vast region of our country have been turning their resourcefulness into an effectively functioning resource. Today the new South presents a first-class economic opportunity. In many respects, the South is the Nation's modern frontier in agriculture. The people who live and work here are now looking forward to an ever-brightening future. While many of the difficult problems of the old South still remain to be solved, former patterns of economic activity and outmoded ways of living are being broken up by a tremendous upsurge in industry and the application of a new technology in agriculture.

The big industrial expansion in the South has created new employment opportunities for workers and has greatly broadened market outlets for all kinds of products. Industries which now tower in importance in the South include chemicals, petroleum, metals, textiles, synthetic fibers, pulp and paper, furniture, and many others. The gains in most of these have been more rapid in the South than in the rest of the country. In a true sense, the South is fast developing a well diversified industrial empire, and at the same time improving its economic balance. As this industrial expansion progresses, more and more jobs become available and fewer people need to depend on the land for their livelihood. In this way those who choose to remain on the land are afforded greater opportunities for fuller employment in farming.

NEW LOOK IN SOUTHERN AGRICULTURE

Rising industrial employment in the South in the last 10 years has contributed much to the new look now prevailing in southern agriculture. This factor coupled with the development of machinery more suitable to the needs of the South and the reduced demand for its major crop—cotton—brought southern agriculture face to face with some difficult problems of readjustment. What has happened so far in this readjustment process is a tribute to the initiative, courage, and vision of the people of the South. Let's look at what has taken place in southern agriculture.

As all of us know so well, cotton has been hard hit by the piling up of surpluses and the change demand situation. Since 1930 the acreage of cotton harvested in the United States has declined from 42.4 million acres to a low of 17 million acres in 1945. In 1954 it was 19.2 million acres. The 1955 cotton acreage in cultivation is now indicated at only a little more than 17 million acres. This drop represents a reduction in harvested acreage of three-fifths in 25 years. The relative drop in the Southeastern States has been even greater than this, because cotton acreage has been shifting westward within the United States.

With the expansion of industry in the South, many farm workers and small farmers obtained employment in new factories and businesses. There has been a reduction in the number of farms, and many small farms have increased in size to more nearly economic operating units.

Southern agriculture has become much more diversified and also more productive in the last generation. The larger farmers have added other enterprises such as livestock and small grains. Many of them have even given up cotton production for other types of farming.

One of the remarkable aspects of southern agriculture has been the rising importance of poultry and livestock production since World War II. The area from Mississippi through North Carolina has increased its production of eggs, broilers, and turkeys at faster rates than has the rest of the country. Among these States, Mississippi has shown the greatest increase since 1945 in broiler output, rising from a little over 2 million to over 40 million birds.

Pasture improvement and increased feed production have made possible a substantial increase in production of livestock and livestock products. Last year, for example, beef production in the Southern States east of Texas and Oklahoma was about three times as high as in 1930. The national increase was two times. During this same period there was a 40-percent increase in butterfat production in this area. The national increase was 10 percent.

RAPID MECHANIZATION

Mechanization of southern agriculture is proceeding at a rapid rate, although it was slower getting started than in some other sections of the country. The small row tractor and the small combine adapted to conditions on small farms have increased in use throughout the South, as more and more farmers became able to finance the investment. The number of tractors on farms in the 11 Southern States east of Texas and Oklahoma is now 7 times the 110,000 in 1940 and 3.5 times the 235,000 in 1945. This compares with an increase of 2.5 times since 1940 for the entire United States. The number of combines on farms in the South is now 4 times the 29,000 in 1945. This compares with an increase of 2.5 times since 1945 for the entire United States.

Mechanical harvesting of cotton is also making some progress, but more improvements are apparently needed in this equipment. Last year 16 percent of the United States cotton production was harvested with mechanical pickers and 6 percent with mechanical strippers. The use of this equipment was largely, although not entirely, limited to the Delta area of the Mississippi River and the States farther west. With additional improvements and some lowering of the initial high investment now required, mechanical cotton pickers will be used much more widely than they are at present.

Aside from cotton harvesting, mechanization of agriculture in the South is widespread, although the adoption of machinery has not been uniform over the whole area. In the Delta area tractor power has replaced mule power on practically all the plantations. And 4-row tractor equipment is rapidly replacing 2-row equipment. In the Southern Piedmont area of South Carolina and Georgia, where small farms are more numerous, only about one-half of the farms are operated with tractor power. Large farms in the Southern Piedmont area are operated mostly with tractor power. This is even more so in Mississippi.

All of these developments have been associated with a rise in the wage level and a rapid movement of labor off the farms. The reduction in farm labor has been especially heavy among croppers, where the curtailment was 37 percent from 1940 to 1950.

Farm wage rates are now roughly four times the wage rates of 1940, whereas the price of machinery is only twice the pre-war level. Employment opportunities at higher wages in industry both in the South and elsewhere have, of course, played an important part in the movement of people off farms and in the rise of farm wage rates. As you may recall, it was once feared that mechanization, particularly the cotton picker, would leave farm labor in the South without employment. What actually has happened is that the living standard of both farmers and farm workers has risen, as mechanization has helped to make possible a rise in output per worker.

Herein lies an important lesson for all of us. Real levels of income must always be associated with production per worker. We should support programs and policies which will raise per worker output and we should discourage programs and policies which do not.

Tightening up of the farm labor supply has put a premium on more efficient farm operations in the South. Increasing pressure against inefficiency in farming continues to force changes in production patterns and techniques that contribute to higher farm income. One bit of evidence that efficiency is increasing may be seen from the fact that the acreage of cropland farmed per worker in the South is now 20 percent higher than in 1940. This increase is still too small. It compares with an increase nationally of 33 percent. There are still too many families in the South depending on the land for their support. The inevitable result is low per worker productivity and resultant low incomes.

As important as mechanization has been in the improvement of southern agriculture, we should not overlook the effect of measures that have been taken to increase per acre yields. Here in the South the use of more fertilizer, improved seed, hybrid corn, more effective insect and disease control, and in some cases better land selection have resulted in much higher yields. Overall crop production per acre for the past 5 years was about 25 percent above the 1935–39 average. Since 1940, the use of commercial fertilizer has just about doubled. In the Delta the use of anhydrous ammonia has reduced the cost of applying nitrogen on larger farms by as much as one-fourth. Expenditures for sprays and dusts to control insects and plant diseases have increased greatly in most areas of the South.

CAPITAL REQUIREMENTS ARE UP

These changes have required substantial expenditures by farmers and increased their investment in the farm. In 1954 the total investment on commercial family operated farms averaged about $14,000 in the southern Piedmont area of South Carolina and Georgia, $27,000 in the Black Prairie area of Texas, and $35,000 for nonirrigated cotton farms in the high plains of Texas. In each case total investment is about three times the investment in 1940. The investment in machinery and equipment alone is 4 or 5 times that in 1940. All of this means that the average farm worker in the South now has more to help him in his farm-production job. It has raised the efficiency of production and helped increase total farm output. It has raised real inoome per worker on southern farms. It has meant better homes,

better food, better clothes, better education, and a brighter outlook for everyone.

While in many respects economic growth and development in this part of the country has been at a more rapid rate in recent years than that for the Nation, we need to remember that before all this happened the South was very much at a disadvantage. It had much farther to climb simply to catch up with other sections. And even though a great deal of progress has been made in both industry and agriculture, the total economy of the South is still below par and it has not yet caught up with the rest of the country.

RURAL-DEVELOPMENT PROGRAM

Many of our economic and social difficulties still remain concentrated in southern rural areas where employment is limited and incomes are relatively low. The people in these areas need more opportunities for fuller employment and greater earnings.

One approach to the problems of the small farmer and low incomes of rural people is being taken through our recently announced rural-development program. This is a cooperative program to help small farmers in problem areas help themselves to find a better life. The program includes more credit from all sources, more educational work, and more research to help improve the farms. It includes efforts to bring industry into these rural areas, and to provide vocational training so that the people will be better qualified for part- or full-time nonfarm jobs. It includes the promotion of better health, and greater social security protection.

This rural-development program is just getting organized. The responsibility for carrying it out rests with the State and local people. Last month a meeting on this program was held in Memphis, Tenn. Representatives of 28 States attended this meeting and it was indeed gratifying to see the enthusiasm and cooperative attitude shown by this group. Your own Mississippi State College will play a leading role in this program in your State.

I believe you will agree that the ultimate goal of the South should be to provide incomes to southern farmers and other workers comparable with those of people in other areas and with those in other occupations. To attain this goal means further industrial expansion and further significant adjustments in southern agriculture. This calls for a continuation on an even broader scale of the very substantial progress that has already been made.

LET'S LOOK AT COTTON

Cotton will unquestionably continue to play a very important role in the economy of the South. Right now, however, cotton is in a tight spot. In saying this I do not mean that the outlook for cotton's future is dark—cotton prices have been fairly good and the industry has greatly increased its efficiency in growing and handling this important fiber. Our present uncomfortable cotton situation grows out of a series of dynamic changes which result in the surplus of cotton we now have on hand. The supply of cotton in the United States for this current—1954–55—marketing season is estimated at about 23.5 million bales, the second largest since 1939–40 when we had a total supply of 24.6 million bales.

Our current cotton supply situation is in part due to the increasing efficiency of production through improved cultural practices, higher yielding varieties, and more effective use of both labor and land. Our current surplus situation is also due in part to our persistence in following a pattern of price supports which was more political than economic.

While farmers have been reducing their cotton acreage in an effort to bring production more nearly in line with demand, some of this curtailment has been offset by the higher yields resulting from growing cotton more efficiently. For example, the total acres of cotton harvested in 1954–55 was 21 percent below the previous year's acreage. The 1954 crop, however, was only about 17 percent smaller than that of 1953. Last year's average yield per acre set a new record of 341 pounds, or 17 pounds of cotton per acre above the previous record set in 1953. The yield of cotton has been increasing steadily since the mid-1920's, and recently the rate of increase has become greater.

The way the cotton situation now stacks up, our stocks at the start of the 1955–56 marketing season beginning August 1, 1955, will also be large—around 11 million bales. Such a carryover would be almost 30 percent more than our domestic mills consumed during the entire 1954–55 marketing season. Moreover, these stocks would be only about 1.3 million bales less than our domestic mill consumption of cotton plus exports. The national marketing quota for the 1955 crop has been set at 10 million bales. Thus if production equals this quota and if we receive our normal cotton imports, our supply of cotton in 1955–56 will be close to 21.5 million bales, or about 75 percent larger than the 1954–55 disappearance.

The one thing that stands out today in our cotton picture is the demonstrated ability of our efficient growers to provide us with more than enough cotton to meet domestic and foreign demand at current prices. If the efficiency of cotton production continues to improve, the market demand—as we have known it in recent years—can be met from fewer and still fewer acres. But if farmers are to sell their output of cotton from increasingly efficient production operations, then it is obvious that larger markets for United States cotton will have to be developed. The question is what can be done to expand the market for our cotton.

There are two main segments to the market for our cotton—domestic mill consumption and exports. Our domestic mill consumption of cotton has expanded from an annual average of 6.9 million bales during the 1935–39 period to an average of about 9.3 million bales in 1950–54. Most of this increase resulted from the growth in United States population. During the last 5 years domestic mill consumption of cotton per person averaged about 28.8 pounds per year, or only about 3.3 pounds per person more than in the 1935–39 period.

Cotton has encountered stiff competition from synthetic fibers, the consumption of which has been increasing markedly. At the same time, cotton prices have been increasing. This combination of rising synthetic fiber consumption and higher cotton prices has kept the gain in United States cotton consumption per person considerably below the level which probably would have otherwise prevailed because of larger consumer incomes. In other words, high price supports for cotton have discouraged added domestic consumption. They have channeled cotton into the Commodity Credit Corporation, which this fall will have about 8 million bales. This constitutes a serious cloud over the cotton situation, and necessitates the severe acreage curtailments you are experiencing today.

Exports of cotton have been following a downward trend for some time. From an annual average of 5.3 million bales in 1935–39, United States cotton exports dropped to an average of about 4 million bales in the 1950–54 period. This is a striking decrease, particularly when we consider that foreign population increased about 340 million people from 1938 to 1954 and that consumption of cotton, wool, and rayon and acetate, all taken together, increased by about 1 pound per person over the same period. Most of the gain in fiber consumption per person was taken up by synthetic fibers, since cotton consumption per person abroad was only about 0.3 pound higher in 1954 than in 1938, and wool consumption remained about the same.

Even though cotton consumption per person did not show much gain, total foreign cotton consumption rose by about 23 percent from 1938 to 1954, primarily because of the increase in population abroad. The increase in overall foreign consumption, however, has been more than taken up by increases in world cotton production.

UNITED STATES PRICES STIMULATE PRODUCTION ABROAD

Over the years there has been a tendency for the acreage planted to cotton in foreign countries to increase by about 1 percent a year regardless of cotton prices. Our studies show, however, that on top of this general tendency, a rise of 1 percent in cotton prices tends to bring about a further increase in foreign cotton acreage by about 0.2 percent in the following year. This important fact indicates the extent to which larger cotton production abroad has been stimulated by United States cotton prices which, expressed in constant dollars, increased about 40 percent between 1935–39 and 1950–54.

By this time it has become abundantly clear that for both our cotton exports and domestic consumption, recent United States price support levels have worked to hinder the expansion of markets for the cotton we produce. It is true, of course, that our industry promotion, smart styling, and improvements in the quality of our cotton textiles have helped cotton hold and even gain in some end uses. The fact remains, however, that competitive prices for cotton are still highly important in obtaining larger domestic and foreign markets for the output of our efficient cotton farms.

Because of the competition we face from synthetic fibers at home and abroad and from expanding foreign cotton production in export markets, we urgently need to make our cotton competitive both from the standpoint of price and quality. Being competitive in the market does not mean that we have to be aggressive in pushing down world prices or using fire-sale methods. We cannot afford to follow such a course because, in the final analysis, it would hurt both producers and processors in our cotton industry.

To meet the situation that confronts us, we need to place greater emphasis on improving our selling and on supplying better quality cotton at fair prices. In order that we may be sure of being able to continue marketing our cotton on a fully competitive basis in both domestic and foreign outlets, we will need to find ways of lowering the cost of our cotton still more by further increasing production and marketing efficiency. More research and related work will be required to keep our cotton industry ahead of its competitors at all times. After all is said and done, it is the buyer who must be satisfied. To do so, we always must be able to supply the kind and quality of cotton when it is desired and at a competitive price that is fair both to buyer and seller. We must sell our cotton to people—not to Government. In the final analysis it is people—not Government—that constitute a lasting and permanently profitable market for our product.

The cotton problem that confronts us at this time presents a challenge to the common sense and ingenuity of all who are genuinely interested in the long-term welfare of this great industry. The position of cotton in the South can be strengthened very materially for the future if we are willing to face the bold facts and deal realistically with the problem.

Helpful in this connection is the fact that the South is no longer wholly dependent on a one-crop system of farming. There is now greater diversity in southern agriculture, and

a vast industrial expansion has taken place. These developments must be further stimulated and encouraged since they will afford more employment opportunities and lead to better living conditions for the people. It is in such a setting that cotton is finding its permanent place in a diversified southern agriculture so that it may contribute even more to the strength of the overall economy.

The people of the South have taken on the job of transforming their problems into opportunities. The progress they have made to date foreshadows the gains that lie ahead.

Dedication of Museum of the Presidents of the United States

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which was delivered in my State of Illinois on May 29, 1955, at Lincoln College, Lincoln, Ill., by Mr. John Hilldring, president of the General Aniline & Film Corp., and a major general, retired, in dedicating the Museum of the Presidents of the United States, the first museum of its kind in the country. The museum has been established in the only college or university named after the 16th President of the Nation which was built during his lifetime. This latest national shrine contains a rare collection of memorabilia relating to the 33 chief executives of our Nation from President Washington to, and including, President Eisenhower. Illinois is proud and the Nation should be proud of this latest citadel of democracy and symbol of freedom which maintains such spiritual influence within its walls, as pointed out in the following address by General Hilldring:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Stratton, President Dooley, honored guests, students and faculty of Lincoln College, ladies, and gentlemen, I am highly honored that you have asked me to come here today to dedicate the Presidential room in University Hall—a museum devoted to the highest office and honor that our Nation can bestow upon any one of its native sons.

I can think of a no more fitting and appropriate location for the site of this memorial to our Presidents than right here in the heart of America in a college named for one of the greatest—Abraham Lincoln, the 16th President of the United States.

The contents of this museum—and that is what it is—are a symbol of our glorious American heritage. The history of our Presidents is, in fact, a history of the United States itself.

Ever since George Washington, each and every President of our country in his time has been identified throughout the entire world in a greater or lesser degree as a leader of democracy, a champion of freedom. This, of course, follows naturally because the United States, itself, has been a recognized citadel of freedom since the founding of our Republic.

And perhaps the most representative of all these Presidential leaders of freedom was the Great Emancipator.

Lincoln won his place in history, more than for any other reason, as the champion of the oppressed and so he has been held by students of history throughout the world as a symbol of the fight against all injustice.

This Museum of the Presidents which we are dedicating here today, upon the 90th anniversary of the founding of Lincoln College in 1865, contains momentos of 33 men—33 great and distinguished Americans.

The Presidential room has in it a most impressive collection of autographs, manuscripts, and other memorabilia relating to the Chief Executives of our country and their terms of office. Through the courtesy of your President Dooley here at Lincoln I have had the pleasure of a preview of the museum. Each President from the Father of our Country, George Washington, to President Eisenhower is represented.

The rare documents have been collected over a period of years of research. Their collection has been under the supervision of one of the ablest rare book and manuscript collectors in the country, Mr. Ralph Newman, of the famed Abraham Lincoln Book Shop. I am sure you are very proud to say that he is a trustee of Lincoln College.

Through the hard work and kindness of friends of Lincoln College, this museum, or memorial, has become a reality of which the college, the State of Illinois, and all of America should be justly proud on this day.

I am told by President Dooley that collectors throughout the Nation have pledged additional material. So as the years go by the value and importance of this museum will steadily increase.

I predict that before long increasing numbers of Americans, and even foreign visitors to our shores, will visit Lincoln, Ill., and the campus and University Hall to see this symbol of democracy.

I hope that this museum will stand as a symbol of the philosophy of all of our American Presidents for freedom and justice, as particularly dramatized by the life of Abraham Lincoln, for whom this college and city of Lincoln, Ill., were named during his lifetime.

If sufficient thought is given today to this philosophy—to the Lincoln story—the world might well reach an understanding for a lasting peace based on the Lincolnian principles that all men are created equal under God, and that life, liberty, and the pursuit of happiness are birthrights of every man.

In considering Lincoln in the light of world affairs today, it might be suggested that today's conflicts are just a continuance of those that so threatened the unity of this Republic in Lincoln's time—the enslavery, the oppression of man for one reason or another. The Lincoln story also makes abundantly clear that the solution of these conflicts is not an easy task. Neither is there a quick overnight remedy.

These unfortunate human failures may yet take years and years to correct and resolve.

Let us pray that in its small way this Museum of the Presidents of the United States will be a reminder of the fact that freedom and liberty are not the exclusive properties of any single man—even as the great spirit of Lincoln is about us here.

The characteristics of leaders of liberty and freedom are many and as varied as have been those of the Presidents of the United States whom we so highly honor today. This is true whether the leader be Washington, Jefferson, Lincoln, or Eisenhower.

Let us reflect upon the eloquent historical fact that freedom and liberty are the ideological philosophies brought to our shores by the Founding Fathers. These philosophies can be advanced by leaders of all nations for the common brotherhood of man. They are American philosophies proclaimed by Washington and defended by every American President since. The freedom we enjoy today is the envy of every man, woman, and child the world over. The enjoyments that go with this freedom constitute the highest of ambitions. The way of freedom is the way of America and with this thought I hereby dedicate this Museum of the Presidents to all Americans on behalf of Lincoln College. May it long remain a citadel of democracy and a symbol of freedom by the spiritual influence within its walls.

The Proposed Highway Program

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. CRAMER. Mr. Speaker, I have again gone to the people for counsel and advice in another Cramer citizens' poll before voting on a measure that would vitally affect their homes and lives. By telephone I made a poll sampling opinion of the entire First District of Florida in an effort to determine the wishes of my constituents on the subject now before us and asked that they express their opinion to me as to the method they preferred of financing the proposed highway program.

In my telephone poll both methods of proposed financing—the President's pay-as-you-use bond-issue program and the committee tax measure that would provide pay-as-you-go financing—were stated.

The question asked was: "As you know, there is a proposal before Congress to authorize a Federal road-building program at a cost of $36 billion. It is generally agreed this program is needed. The construction period of the program extends over 10 to 15 years. How would you suggest paying for this program? First, pay-as-you-use, as suggested by President Eisenhower, involving no additional taxes and a bond issue with interest of $11 billion over a 30-year period; or, second, pay-as-you-go plan, with additional taxes now of $12 billion extending over a 15-year period, principally being an additional 1-cent-per-gallon increased gasoline tax, 2 cents additional on diesel fuel, added taxes on trucks and busses and large tires, exempting off-the-road users?"

The result of that poll was 77.72 percent in favor of the committee bill tax-payment plan.

This poll was taken through telephone poll captains disbursed throughout the district, who called indiscriminately people in the area. In a period of a few short hours over 2,000 people had been personally contacted and asked the question involved, and, as the figures show, the result was decisive. It is important to note that the poll was taken on the morning of the day the House voted on the measure and after full publicity had been given the matter and my office was

advised of the results in the early afternoon.

It appears that the poll clearly indicates that the people of the First District of Florida do not look kindly upon, nor are they willing to accept additional taxes at this time, even for such a worthy project as this highway bill.

I supported the Eisenhower proposal in the Dondero bill, which would have provided an adequate road system without additional taxes only after due and deliberate consideration which, of course, I had an opportunity to make after some 11 weeks of the hearings before the Public Works Committee of which I am a member. I supported this plan in committee, feeling all along that the temperament of this Congress was not one to accept additional taxes at this time and that this reflected the feeling of the people all over the country. It was my sincere effort to work for a bill that had a reasonable chance of passage and that would accomplish the much-needed highway construction purpose.

I believe that such a poll as has been taken in this instance reflects a good cross section of opinion in my district, and after lengthy consideration of all aspects of the question, I voted consistent therewith.

The Ethics of the Talbott Affair

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, which appeared in last evening's Washington Star, entitled "The Ethics of the Talbott Affair."

It seems to me that the article contains information pertinent to a situation which has become quite prominent in the last few weeks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ETHICS OF THE TALBOTT AFFAIR—LONG LINE OF PRECEDENTS DEMONSTRATES PERSISTENCE AND COMPLEXITY OF ISSUE

Just what is "ethical" or "unethical" in the day-by-day conduct of persons who enter the Government service from business and the professions?

The case of Harold Talbott, Secretary of the Air Force, sharpens the issue. He told the Senate committee, when he was confirmed for his present post in 1953, that he was giving up all his connections except one, his special partnership in Paul B. Mulligan & Co., a management engineering firm. He said in recent testimony that he had not in any way promoted business for the Mulligan company in connection with Air Force contracts.

Was it ethical for Mr. Talbott to continue this partnership after his confirmation, and should the Senate committee have told him that it was unethical when he was confirmed? Should any official engage in a sideline of a money-making nature while drawing a salary from the Government as a full-time employe?

The late President Franklin D. Roosevelt didn't see anything improper in allowing his private secretary, Louis Howe, to receive more than $1,000 a week from a public utility company for a broadcast over a national radio network. Nor did Mr. Roosevelt see anything improper in intervening from the White House with businessmen to help his sons in their commercial endeavors.

But all this was under a Democratic administration. Officials of the Eisenhower Republican administration are supposed to be above such things.

It develops, however, that Mr. Talbott, while Secretary of the Air Force, wrote letters to friends of long standing and told them about the services of the engineering company, which it appears saved a lot of money for its clients because of the introduction of efficient methods.

If Mr. Talbott's action is considered now to be unethical, what was the responsibility of the Senate committee which confirmed him and failed to look into it?

What is the responsibility also of the House and Senate today with respect to those Members who continue to receive regular income from their law firms back home whose clients do business with the Government of the United States.

Many Members of Congress act as attorneys in local and State courts for labor unions as well as corporations, and receive fees while they are serving in the House of Representatives or the Senate. Is it ethical for this practice to be continued?

Many Members of Congress make speeches and receive large sums as "honorariums." Some of these fees come from labor unions and from trade associations, many of which are interested in legislation pending before Congress. Is it ethical for Members of Congress to accept such fees?

Averell Harriman was Secretary of Commerce in President Truman's Cabinet, but was not requested to give up his huge holdings in the Union Pacific Railroad.

Martin Durkin was Secretary of Labor in President Eisenhower's Cabinet, and the Senate voted confirmation without requesting him to sever his relations with the plumbers' union with which he still had a contract, though he was given leave of absence and his pension rights were continued while he was on duty in the Government.

Edward F. Howrey was formerly the attorney for the Firestone Co., and is now Chairman of the Federal Trade Commission. When the Firestone case came up before the Commission, he took no part in it. When the Commission voted three to none to file an appeal from the court decision which was in favor of the Firestone Co., Mr. Howrey urged the Department of Justice to appeal the case to a higher court, which is exactly the opposite from the position he had once taken on that issue as a private lawyer. He thinks he should be commended for this action, but Representative JOE L. EVINS, Democrat, of Tennessee member of the House Small Business Committee, said Mr. Howrey's action had raised a "grave ethical question."

Perhaps the Talbott case will focus attention on the entire issue of ethics in the Government, but the biggest single phase will probably not be touched. It is that substantial contributions to campaign funds of members of Congress are made by individual connected with companies or labor unions which have a continuing interest in legislation before Congress. Until and unless Congress passes a law prohibiting campaign contributions in excess of a nominal sum—$10 or $25—Members of Congress will still be beholden, theoretically at least, to the large campaign contributors, and the question of ethics will never really be removed from the realm of public criticism.

This correspondent many years ago suggested that campaign contributions be limited by law to very small sums, but the argument has always been made in rebuttal that the cost of soliciting small contributions is prohibitive and consumes virtually all the receipts. The fact is that it has never had a trial, and that's about the only way to resolve the issue.

TVA and Dixon-Yates

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. ANDERSON. Mr. President, the voice of organized labor has joined the chorus which is commending the President for his action in canceling the Dixon-Yates contract. Thus labor joins those of us who have opposed the contract, not only as a poor business deal, but as an example of executive interference with the internal functions of the Tennessee Valley Authority, the Atomic Energy Commission, and the city of Memphis.

I call particular attention to an editorial by Mr. George Meany, president of the American Federation of Labor, in the August issue of the American Federationist.

I ask unanimous consent that the editorial, which appears on pages 18 and 19 of the magazine, be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA AND DIXON-YATES
(By George Meany)

Cancellation of the Dixon-Yates power contract with the Federal Government provides a happy outcome for a heated controversy, but it does not settle the big issues involved in this widely criticized deal. The crux of the whole problem is the administration's power policy, especially in relation to the future of the Tennessee Valley Authority and other public power projects.

The TVA is one of the great wonders of America. To the foreign visitors who flock to see it, as well as to most Americans, it represents a triumph over the obstacles that nature sometimes interposes in the path of humanity's progress.

Before TVA the Tennessee River Valley was a wasted, impoverished area, subjected to periodic floods and devastation. Farmers struggled to eke out a living from their depleted land, workers were handicapped by low working and living standards, businessmen were afflicted with the economic anemia of low purchasing power.

Then came the TVA, and with it a complete transformation. Dams were built to control the floods and provide a constant source of waterpower for the generation of low-cost electric power. The river itself became a broad highway of commerce. The farms, replenished with cheap fertilizer and electrified, began to flourish beyond all expectations. Many thousands of workers were given employment at good wages. Business began breaking records.

It should be remembered also that, before TVA, monopolistic practices and lack of enterprise by the private utility interests had resulted in maintaining high power prices and thereby preventing wider use of electricity to lighten the lives and the burdens of people of this country. The TVA provided

a much-needed yardstick for the production and distribution of cheap power. As a result, even the private utilities soon discovered they could make greater profits by wider consumption at lower rates.

Even the sharpest critics of public power development concede these inescapable facts. But, they insist, why use the tax revenues collected by the Federal Government from citizens all over the Nation for the special benefit of a comparatively few in a local area?

The answer to that argument is simple. Without the TVA, America would not have been able to win the last world war as soon as we did. TVA power made possible the vast expansion of aluminum production needed for building the planes which were the key to allied victory.

Despite TVA's wonderful record, supporters of TVA began to fear for its future when the Eisenhower administration came into office and proclaimed a policy of favoring local initiative in power development. These fears were crystalized when the Atomic Energy Commission, at the direction of the White House, entered into a contract with the Dixon-Yates private utility syndicate.

The AEC had decided to use large amounts of TVA power for the operation of a new atomic-energy establishment. This would deprive the city of Memphis of its power source. The Government, instead of authorizing the TVA to augment its power production through building new steam plants, entered into a contract with the Dixon-Yates syndicate to build a power plant in West Memphis, Ark., to supply the needeed power to Memphis.

These bare facts, of course, do not tell the whole story. There were many dubious aspects to the Dixon-Yates deal, especially the lack of competitive bidding. There were also justifiable suspicions of an attempt to crowd the TVA out of its natural field and gradually dispose of its power facilities on a piecemeal basis to private utility interests.

However, the city of Memphis, which had vigorously opposed the Dixon-Yates contract, found the solution by deciding to build its own municipal power plant. This made the Administration's position completely untenable and forced it to cancel its contract with Dixon-Yates.

The American Federation of Labor, as a firm believer in the free enterprise system, supports the private ownership and management of public utilities, including electric power. We do not believe in the nationalization of the power industry. However, we are convinced that the TVA has performed a highly useful function for the area affected and the Nation as a whole. No private company or combination of companies could have undertaken such a tremendous job on such a broad scale. Likewise the development of other major river valleys exceeds the scope of private capital and should be undertaken by the Federal Government.

So, as we look ahead to the future, it would be nothing short of suicidal for our Government to stifle the TVA or fail to build other TVA's in areas where the national welfare would be enhanced by sound investment of public funds in building a better America.

Plight of the Dairy Farmers

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. METCALF. Mr. Speaker, I join in commending the gentleman from Wisconsin [Mr. JOHNSON] for his thorough analysis of the plight of our dairy farmers and his untiring efforts on their behalf.

The dairy farmers of this Nation do not have a better friend in Congress than LESTER JOHNSON. As he has said today, our dairy farmers are being ruined by this administration's price-support program being administered by food processors and others who "farm the farmer." It was fitting that the administration, which has made so many of them, recently announced a program for the relief of the low-income farmer. It was unfortunate, however, that the man picked to head this program was the man who early in 1953 said it would be better if the marginal farmer got out of farming and into industry and his land were turned over to grass or trees or other soil-conserving practices.

If the Committee on Agriculture reports Congressman JOHNSON's H. R. 4360, I will support it.

Armenian Revolutionary Federation Holds 62d Annual Convention

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. FEIGHAN. Mr. Speaker, the Armenian Revolutionary Federation held its 62d annual convention in Washington during the period July 2 to July 9. The delegates attending that convention from 17 States passed a series of very significant resolutions having to do with the preservation of our American way of life and the extension of freedom and independence to all those nations now enslaved by communism. Among those resolutions was an endorsement of H. R. 183 which is now before the House Rules Committee.

At the closing banquet of the convention, Mr. Beglar Navassardian, executive secretary of the American Committee for the Independence of Armenia, and Dr. Ruben Darbinean, former Minister of Justice of Armenia, delivered very thoughtful addresses. Because their remarks reflect a hopeful light on the most urgent problems of our times, I feel they will be of interest to all the Members of Congress. Under leave granted, I insert in the RECORD these two addresses together with one of the resolutions passed by the Armenian Revolutionary Federation:

Whereas the Armenian Revolutionary Federation meeting in 62d annual convention in Washington, D. C., from July 2 to July 9, did consider the perilous days in which we live because of the aggressive threat of Russian imperial communism;

Whereas the national independence of the United States of America and all other free and sovereign nations is threatened by the Communist conspiratorial plan for world conquest;

Whereas the many non-Russian nations and people enslaved by the Red colonial policy of the Kremlin look to the United States for hope, inspiration, and enlightened leadership: Therefore be it

Resolved—

That the Armenian Revolutionary Federation pledges itself to a continuation of unqualified support in the fight against Red colonialism and expresses its warm appreciation to Congress for the passage of House Resolution 149, which puts us clearly on record as against colonialism and for self-government and national independence.

That the Armenian Revolutionary Federation pledges itself to continue and to increase its efforts to better acquaint the American people with the true nature of communism, the subversive methods used by that conspiracy and the sufferings of the many nations and people now enslaved by that tyranny.

That the Armenian Revolutionary Federation puts itself on record as favoring House Resolution 183, a resolution which requests the United States delegation to the United Nations to submit a resolution to the General Assembly of the United Nations naming the U. S. S. R. as an aggressor, and urges the House Rules Committee to report that resolution to the floor of the House so that it may be put to the test of public debate and vote by Members of Congress.

That the Armenian Revolutionary Federation expresses to President Eisenhower and his associates who will attend the conference at the summit their full support for all those actions which will bring to an anxious world true peace with freedom and dawn of a new and golden era of national independence and self-government for all the nations of the world.

SPEECH DELIVERED BY MR. BEGLAR NAVASSARDIAN AT THE 62D ANNUAL CONVENTION BANQUET OF THE ARMENIAN REVOLUTIONARY FEDERATION ON JULY 8, 1955, WASHINGTON, D. C.

This is the first time that the Armenian Revolutionary Federation, which has held 62 annual conventions in the United States, meets in the capital of this great Republic.

However, its junior organization, the Armenian Youth Federation, did hold an annual convention in Washington during the last week of June 5 years ago.

I mention this, because at the time of the Armenian Youth Federation convention an event of international import took place. While the Armenian Youth Federation convention was in session, thousands of miles away from here in a remote part of the East, without justification, provocation, or forewarning, Communist armies attacked a peaceful democracy and began their invasion of the country.

I am, obviously, referring to the Korean war. Yet when I said that this even was of utmost international significance I was not referrring to aggression—for that was nothing new. Neither was I referring to the cowardly manner in which the Soviet struck—for that, also, is not novel. And war itself is one of the oldest constants of our history.

I was referring to the reaction, the reaction of the free world, led by the United States, since every family, every group, every nation, and group of nations must in the final analysis have a leader. And in this case the leader was and remains the United States.

This was the first time that free nations were pooling together their military strength under one unified command to fight an aggressor—that is, to punish a power which, though it might be convinced in the justice of its case, had resorted to brute, military might in order to enforce that cause.

This was then the basic principle. And history—history in its profoundest sense—was made on that day in June of 1950 when free free men of free nations came together and together faced the aggressor with the determination to push him back.

And yet, though the phenomenon of physical resistence was new, the underlying fabric

of morality could not be overlooked. The morality was this, that no matter what nation, how small or insignificant, the principle that in the loss of freedom for that nation there is loss for all was an irrefutable one.

Therefore, when Armenia was attacked by the Soviets in 1921, the free world should have had the same reaction.

Here was a nation 4,000 years old. The first Christian nation of mankind. A nation that through its culture, its language, its centuries-old seacrifice for freedom, its political maturity and political restraint, its alliance with the western democracies throughout the First World War had every right to be an independent, soveriegn state. And this right and the execution of this right was internationally recognized. The United States recognized the Independent Republic of Armenia on April 23, 1920. The Treaty of Sevres gave it international recognition.

But when the Soviet attack, which was perpetrated through an infernal instigation and exploitation of Turkish military forces also, was effected, the collective defense of that right—the principle which prompted the free world's help to Korea—was not yet in being.

We have traveled quite a bit since Armenia was sovietized. Country after country, nation after nation has fallen to the brute force of the Soviet. Many have fallen victim to the cunning methods of the communist world conspiracy.

Now, we are gradually approaching a realization of this danger which is not merely a threat to Laos, or East Germany or Guatemala or Madagascar, but is an overall danger, menacing us at every geographic point and which reaches out within each and every nation.

We need weapons, we need wealth, material and otherwise, we need industry and we need military preparedness to counter this world conspiracy and this international threat.

Yet none of these, indeed, nor all of these combined, are as potent in fighting world communism as our arsenal of ideals. There it is that the deciding weapons shall be found. There it is that our fate, and with ours the fate of the world, will be decided.

Today, has not the time come at last where we should cease to fall into the Soviet trap of delineating the victims of communist aggression according to their chronology of conquest. In other words—in the case of the most recent attack, that against Korea, we stood up together and repelled the aggressor, for we accepted beyond discussion Korea's right to its independence.

In the case of the east European states, we have been hoodwinked into this strange term of a "satellite" and somehow we are much less reluctant to bring up their right to independence, although it is the selfsame right for which we sent our boys to die in Korea.

And beyond that, in the case of the Baltic countries and further on, the Ukraine, Turkestan, Georgia, and Armenia—the first valiant victims of Communist expansionism—we have put them in a special case and refer to them only for the sake of eloquent, political speeches.

Whereas, once again, the right of Armenia to independence and sovereignty was in every way and at each point the exact same right for which we stood up under the flag of the United Nations in the Republic of Korea.

There was no difference of essence. The difference was set by Moscow and we—unknowingly perhaps—accepted Moscow's definition.

But what is worse, we still tend to continue this tacit acceptance.

After all is said and done, one incontrovertible fact of history remains unchanged, gleaming before us, bright as the sun and just as guiding in its light.

The fact that morality is the basis of lasting political action; those of expediency may give results and may seem more effective, and they may be justified, but only when the fundamental underlying base is one of morality.

In our foreign policy, it is important, it is essential, I would say it is a matter of triumph or defeat, for us to make the matter crystal clear.

To make it clear that this great country, our own United States, where the most noble of all revolutions gave birth to the most democratic of all republics, that this great leader recognizes the God-given right of a nation to be a sovereign member of the family of nations. And having recognized this principle—which it does by the very instrument of its own freedom: the Declaration of Independence—that it shall not fall into the fallacies which are woven by the agents of Moscow.

If the term satellite is to imply a nation now under Communist domination, whose independence must be reestablished, then not only are Poland, Rumania, and East Germany "satellites," but so are North Korea and the Baltic countries and the Ukraine and Georgia and Turkestan and Armenia.

It is our firm conviction that we weaken our position, especially our moral position, especially at these crucial times, by evading an open, indisputable foreign policy which has as its ultimate aim the reestablishment or the establishment of the sovereignty of nations, great or small, based on the principle of self-determination.

We know that there are strategic, tactical and other considerations. We understand that in this infinitely complex world it might be easy to oversimplify.

But the greatest things are often the simplest. Love—the secret of Christianity—is simple. Faith—the most profound phenomenon in man—is essentially simple. The determination to stand up for what you believe is right—this one characteristic which brings man nearer to his God—is basically simple.

And similarly, the importance of a moral foundation to our foreign policy is simple. That moral foundation must, by its very nature, establish the purpose, the goal, the aim, the ultimate objective of our foreign policy.

And if it is true that we believe in freedom, in justice, in the dignity of man and his God-given right to have his nation an equal of the family of nations, then we must accept that our foreign policy must aim at the realization of the freedom, national independence and complete sovereignty of the countries not only outside the Soviet geographic periphery, but also the nations within the frontiers of the Soviet Empire, the countries of the earliest Communist conquest—the Ukraine, Byelorussia, Turkestan, Azerbaijan, Georgia, North Caucasia, and Armenia.

Remarks of Mr. Ruben Darbinian, Former Minister of Justice of Armenia

Freedom-loving mankind, under the leadership of the United States, is waging today a life and death struggle against Soviet imperialism which under the mask of Communist revolution is bent on dominating the world through force, deceit, and conspiracy.

The Armenian Revolutionary Federation on whose 62d annual convention this banquet is being held is one of those modest forces which is allied with the free world. And yet the ARF occupies a distinctive position by virtue of the fact that it started this fight not recently but as early as November of 1917 when the Bolsheviks seized the power in Russia which had scarcely 8 months before been liberated from the Czarist regime, by trampling over the free democratic government which have been established after the downfall of that regime.

Unfortunately, both the errors committed by the Russian and non-Russian democratic leaders and the disastrous polices pursued by the western governments with regard to Russia enabled the Bolsheviks not only to consolidate their power in Russia but to extend their rule over a number of neighboring countries. As a result, this new tyranny, much more oppressive than Czarist tyranny, has become a menance to the peace, the freedom, and the very existence of all the nations.

The Armenian people, unfortunately, is one of those nations whose parental homeland has come under Soviet rule. This happened on December 2, 1920. It is an irrefutable historical fact that when the Bolsheviks suppressed all opposition in Russia by armed force and deceit and started to subjugate one after another all the non-Russian provinces on the periphery of the Czarist empire, the Red army also conquered Armenia which had been an independent country since May 28, 1918, but before setting foot on Armenian soil they came to an agreement with Kemalist Turkey, armed the Turks, supported them, and incited them to attack Armenia from the south. Thus, they readied the stage for their invasion of Armenia as the liberators or the saviors of the Armenian people from the north.

This procedure was very similar to the Soviet action in 1939 when they concluded their friendship pact with Hitlerite Germany and encouraged the latter to attack Poland from the west in order to justify their invasion from the east as liberators of the Polish people.

Thanks to a series of tragic errors committed during and after World War II, having emerged as a greatly expanded and stronger power as a result of successive conquests of defenseless nations, the Soviet today threatens to play the same role of liberator and savior in regard to all other nations which to date have escaped her domination.

The Armenian people which was one of the first non-Russian victims of Soviet tyranny, chastened by its bitter experience of 35 years under Soviet rule, today has taken its stand in the frontline among those nations which are waging the fight against Soviet imperialism, led by the Armenian Revolutionary Federation which, by virtue of 38 years of persistent anti-Communist activity, has become one of those organizations most hated and feared by the Bolsheviks. For 38 years the Soviet has left no stone unturned to discredit and destroy the Armenian Revolutionary Federation both in the Soviet Union and abroad.

To the great misfortune of the Armenian people, their sacred institution of holy etchmiadzin, the centuries-old national center of the Armenian Church and seat of the Catholicos of all Armenians is controlled by the Soviet Government which has been abusing that circumstance to the detriment of the Armenian Church and the Armenian people at home and abroad.

Under threat of death, having converted the Armenian Catholicos—the supreme head of the Armenian Church—into its obedient and servile tool, the Soviet does everything possible in Armenian communities of the free world to place as diocesan heads such Armenian prelates who are acceptable to itself. It has contrived to suspend, unfrock or neutralize those ecclesiasticals who do not enjoy its confidence. In this manner it tries to prevent the Armenian clergy from doing anything which might hinder in the slightest Communist policies abroad, forcing them to subserve the Soviet objectives either directly or indirectly.

And when we consider the fact that the Soviet Government spares no effort to infiltrate not only the Armenian churches but

also other organizations of the Armenian communities in the dispersion through its agents, we can readily understand the present division of the Armenians and why a part of the Armenian churches and other organizations have become inveterate foes of the only anti-Communist Armenian political organization—The Armenian Revolutionary Federation.

We are confident that all freedom-loving Armenians who under the leadership of the Armenian Revolutionary Federation, during the trying days of 1918 succeeded in building the independent Republic of Armenia and who directed the destinies of the Republic for 2½ years, will once again surmount all present and future obstacles on its path in freedom's fight and will help the free world shatter the Soviet tyranny, and will replant our lost freedom in our historic fatherland.

New Marketing Possibilities for Wheat

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. NEUBERGER. Mr. President, the Oregon Wheat Growers League and the Oregon Wheat Commission are setting a fine example for all similar agricultural organizations in their constructive efforts to develop new uses and new markets for their product.

This is strikingly portrayed in a letter which I have received from Mr. Marion T. Weatherford, chairman of the Oregon Wheat Commission, citing new marketing possibilities for wheat.

Mr. President, I ask unanimous consent that this thoughtful letter may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the Appendix of the RECORD, as follows:

OREGON WHEAT COMMISSION,
Pendleton, Oreg., July 15, 1955.

Senator RICHARD NEUBERGER,
United States Senate, Washington, D. C.

DEAR SIR: I am sure you know that the Oregon Wheat Commission was created with its principal function to be work on marketing and marketing problems of wheat in the State of Oregon. Finding new uses and new markets for wheat is not easy; and when we meet with a measure of success, we like to tell our friends about it. Knowing of your great interest in the problems of wheat producers and the commodity of wheat nationally as well as in the Pacific Northwest, I feel sure you will be interested in a brief report on one of the projects the wheat commission has been working on for some time and which now has reached the stage of first introduction to the people of the Far East as well as to the consuming public in the United States.

Shortly after our commission was formed, in 1947, some commission member or employee remembered eating a processed wheat in the famous restaurant operated by George Mardikiam in San Francisco, which is known as Omar Khayyam's. This processed wheat appears on his menu as "pilaff." The dish is so tasty that it was thought to be deserving of further investigation. We found that "pilaff" is an old Armenian dish that has been used for generations by those people. It was processed by hand in a very crude way and the processing knowledge handed down from generation to generation. We found that currently, Mr. Mardikiam's restaurant was being supplied by a very small plant in Fresno, Calif., owned and operated by a Mr. George Perch. This plant is very small and most of the work is done by hand and the capacity is very limited.

It was realized that before the product could become available commercially in large quantities, that considerable research would have to be done on such matters as speeding up cooking time, what vitamins or other nutrients were lost in the processing, the keeping qualities in humid climates, consumer acceptance in the Far Eastern countries and a host of such related problems. Through the cooperation of various agencies of the United States Department of Agriculture, the State Colleges of Oregon and Washington, the Woman's Christian College in Madras, India, and the Miller's National Federation and the Oregon Wheat Commission, such research work was carried out over a period of several years and the necessary answers were obtained.

The next problem was to find some commercial milling firm who was willing to make the substantial investment necessary to process and package and market this new wheat food. The Oregon wheat commission had about decided it would have to build a plant and process the wheat in some foreign country such as India when Mr. John Locke, president of Fisher Flouring Mills in Seattle, Wash., showed an interest in the product and a willingeness to make the investment.

After a more thorough investigation, Mr. Locke found the investment required, in terms of the risks involved, were a little more than a modern processing plant could conveniently assume independently. The Oregon wheat commission was happy to have been able to work out a cooperative agreement between the Commodity Credit Corporation and the Fisher Flouring Mills Co. which made it possible for Mr. Locke to undertake the development of this new wheat food.

We believe the cooperative arrangement is that the Fisher Flouring Mills provides the investment of equpment, building, and management for processing the wheat, which is substantially in excess of half a million dollars, while the Commodity Credit Corporation advances a substantial quantity of wheat to be processed. The processed wheat is then to be marketed in the Far East, in the countries having the most likelihood of accepting the food, and whatever net profits are realized will accrue to the Commodity Credit Corporation as payment for the wheat they have advanced.

After Mr. Locke got his plant into operation and the processed wheat on the way to Far Eastern countries, he was able to arrange his plant capacity to accommodate a relatively small amount of wheat which the mill bought outright for processing and distribution in the United States and currently with the foreign operation. This new product, which is to be sold under the trade name of "ALA" has been introduced in the Pacific Northwest markets within the past month and is now available in an attractive package on all grocery shelves in Oregon, Washington, and northern Idaho.

I am very pleased to send you herewith, 2 cases of "ALA" containing 12 individual packages each, which I hope you will use personally in your own home and will invite your friends also to try. There are recipes on the outside of the package and a more extensive recipe folder inside the package.

It is a matter of extreme satisfaction to the members of the Wheat Commission to have had an opportunity to participate in the development of this new wheat food. While the Commission has not invested a large sum of money, it has acted rather as a catalytic agency to bring together the individuals and agencies who were willing to put up substantial amounts of equity capital necessary to get this product on the market. To me, it has been quite thrilling to have participated in a venture which is now offering to the public a new wheat food. New because it has been adapted to modern cooking methods and meets the quick cooking, minimum fuel requirements of Far Eastern nations that have little fuel, is nutritious and healthful, and at the same time is perhaps the most economical food buy before the American housewife today.

In talking about the sale and distribution of "ALA" in foreign countries, we like to emphasize that we do not expect this product will be a substitute for rice but rather that it will be a supplement in rice deficit areas of the Far East and we hope it will go far to meet the minimum food requirements of those impoverished people.

Finally, it is my feeling that the development of this new wheat product is of more significance than the end product itself. To me, it is indicative of the sort of things farmers can do when they join together to help themselves. To be sure, the accomplishment of this project has required the close cooperation of private industry and the Federal Government as well as certain State agencies. Those groups have invested large amounts of money and given generously of their time in making this development possible.

In terms of money, the Wheat Commission has not invested heavily, but because of the small investment made by the Wheat Commission in money, plus the long hours of conferences and planning, were quite essential to the development of this project. Without an interested group of farmers who were willing to do something for themselves, such a development would not have occurred. Personally, it has been very gratifying to be a member of such an organization. Knowing of your great interest in wheat and wheat problems, I felt you would be interested in this baridged report of the development of a new food product.

Yours very truly,
MARION T. WEATHERFORD,
Chairman.

Sixtieth Anniversary of the Tidings

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. McDONOUGH. Mr. Speaker, the Los Angeles Tidings recently commemorated its 60th anniversary as a newspaper devoted to spiritual rather than material values, and to the service of the community.

From a small publication which began modestly with just eight pages under the guidance of its first editor, Patrick W. Croake, of Los Angeles, the Tidings has grown with the city of Los Angeles, and today it is one of the outstanding members of the Nation's Catholic press.

The following editorial by Msgr. W. E. North, present editor of the Tidings, which appeared in the jubilee edition, is a moving tribute to the growth and progress of this great publication:

THE TIDINGS RECORDS A SAGA

Sixty years is a span of time venerable with pride of place as man measures the days of our years. On the feast of Sts. Peter and Paul in 1895 the first copies of an

8-page tabloid called the Catholic Tidings came off the press. The type was hand-set in a dingy office somewhere on the fringe of what is now the Civic Center. There was little attempt at makeup. There were no pictures. There was little advertising. There were just 20 columns of news, some scattered world items, a few national pieces, many local tidbits, with heroic essays into the realms of apologetics and dogma.

Soon the word "Catholic" was dropped from the masthead to insure delivery in days of APA wrath, for they were troubled times. Those who were here from the beginning then found themselves a minority as the little pueblo began to stretch its limbs unto greatness. Something of the ingenuity and pluck bordering on heroism that went into the making of the paper is still evident today in the indomitable will of its first editor, Patrick W. Croake, blessedly with us yet, hale and hearty and happy in the middle nineties.

There is contrast aplenty between the first and current issues, a contrast that mirrors the marvels that have touched church and southland across the years. Los Angeles has become a mecca of the world, leaping to towering pinnacles of renown, while the church has gone serenely on from strength to strength, a princely shepherd dotting the landscape with shrines and monuments of the spirit, the fruit of his untroubled vision and of the faith and sacrifice of a flock that mounts now to a million souls.

It has been the role of the Tidings to record this march of heroism. The chapters of a saga as glorious as any in the history of the church are to be found in its Friday morning issues of the last 60 years. The apostolate of the press has been a slow but sacred cause in the archdiocese. Only the vigorous tilling of the past has made possible the promise of the present. God has given the increase, and if the circulation of the paper now nears 80,000 and if it has won increasingly wide renown, this is due not alone to the enthusiastic efforts of a dedicated staff but principally to the leadership of our priests, the zeal of our Sisters, the work of our children crusaders, and the interest of our people, not to forget the support of our advertisers. It is this cumulative concern that has brought the Tidings to the very forefront of the Catholic press in the United States.

The Tidings is more than ever conscious of its call as it moves into its new and adequate and relatively permanent offices. Our anniversary witnessed the hallowing of our new quarters after the penitential ablution. There will forever echo within these walls the admonitions of pope and bishop on the importance of the Catholic press. We have been told that in vain will be build churches and institutions of faith if these are not bolstered by the apostolate of the pen. More than ever is the work needed for we have come on strange days when men fumble around in confusion of thought before the last of the enemies that threatens the splendor of our ancient patrimony. Otherwise reasonable men scorn the ways of reason in assessing the universal threat. It is though judgment has fled to brutish beasts.

The Catholic press must not only chronicle the absorbing events in the tumult of Catholic trials and triumphs. It must increasingly sift and weigh in the light of the heritage and in the lessons of time the panorama of our proud and perplexed days. It must with the assessment of ancient truth purify the waters in the sullied stream of time. It must be bolder and more forceful in riddling the pretensions of those who would build our society on the sands of secularism. It must trumpet the return to the roots of our greatness as a free people, for it is forever true that the city is a prey to the foe unless the Lord walks the ramparts.

Resolution Providing Certain Benefits to Veterans Who Served in the Armed Forces of the United States in Mexico or on Its Borders During the Period Beginning May 9, 1916, and Ending April 6, 1917, and for Other Purposes

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at the national convention of the veterans of the Mexican border campaign on June 11 and 12, 1955:

Whereas there was almost continuous bloodshed costing the lives of many Americans and destruction of untold millions of dollars in property; and

Whereas Woodrow Wilson, then President of the United States, on June 2, 1915, stated, "There is no proper protection either for her noncitizens or for citizens of other nations resident at work within her territory;" and

Whereas the historical raid by Villa forces on Columbus, N. Mex., in which 7 American soldiers were killed and 5 others wounded was one of many; and

Whereas General Pershing being ordered to command an expedition into Mexico to capture and destroy Villa's army had entered into Mexico 400 miles to accomplish his objective; and

Whereas Gen. Hugh Scott, Chief of Staff of the United States Army, and Gen. Frederick Funston in command of the Southern Department, United States Army, held conferences with General Obregon, the War Minister of Mexico, in April and May 1916 at El Juarez, Mexico, and El Paso, United States of America, and a tentative agreement was entered into by the generals which the President of Mexico refused to sign, showing the hostile attitude of the Mexican Government; and

Whereas our Army intelligence had definite information that the Mexican generals had plans to put a large force between General Pershing's command and the border with objective of cutting communication and supplies and of destroying Pershing's entire force; and

Whereas General Funston had information that an invasion across the border with the destruction of San Antonio, Tex., as the objective; and

Whereas General Scott and General Funston reported to Washington: "We expect many attacks along the whole border. Our line is thin and weak everywhere and inadequate to protect the border anywhere if attacked in force. There are no adequate reserves. We think the border should at once be supported by at least 150,000 additional troops"; and

Whereas a call of the President was made, following a meeting of his Cabinet, for all the Organized Militia and National Guard of the United States; and

Whereas the telegraphic orders to each of the governors of the several States were worded: "Having in view the possibility of further aggression upon the territory of the United States from Mexico and the necessity of protecting the frontier, the President has thought proper to exercise the authority vested in him by the Constitution and laws to call out the organized Militia and National Guard"; and

Whereas the call was telegraphed on June 18, 1916, and by midnight of July 31, 108,661 Federalized National Guard in the Army of the United States were camped on the Mexican border with 40,000 National Guard mobilized at their home stations, and 44,154 of the Regular Army were in the southern department; and

Whereas the sudden call without previous warning did not give this National Guard any opportunity or time to plan their business or personal affairs and the interruption of civilian pursuits caused great hardships and sacrifices by the officers and enlisted men; and

Whereas no prepared cantonments or camps awaited the troops upon their arrival on the border and all camp sites had to be prepared by the soldiers, even to clearing the ground and use of irrigation ditches for water supply, and use of pup tents many weeks for sleeping quarters by many units; and

Whereas these Federalized National Guard in the Army of the United States responded to the President's call when the pay of the enlisted man was only 50 cents per day, with no war-risk insurance, no vocational training, no dependent allowances, or other benefits provided at any time; and

Whereas no provisions have been made by Congress for hospitalization, burial allowance, or even a flag to cover the casket when their dead bodies are borne to their last resting place, or other benefits commensurate with the service rendered to the country; and

Whereas the fundamental purpose of all benefit legislation for veterans is to render justice to citizen soldiers who give sacrificial service in emergencies that require actual armed defense of the Nation; and

Whereas the number of the Mexican-border veterans who did not go into World War I are few and all are approaching old age with many in need of financial assistance: Therefore be it

Resolved by the national convention of the United Mexican Border Veterans in convention assembled June 11 and 12, 1955, in South Bend, Ind., That we earnestly request the enactment into law of H. R. 2453 which will grant to Mexican-border veterans the same benefits as are granted by law to World War I veterans; be it further

Resolved, That copies of this resolution be mailed to Hon. OLIN E. TEAGUE, chairman of the Committee on Veterans' Affairs, to all members of the committee, and to Congressman GARDNER R. WITHROW, address, House Office Building, Washington, D. C.

Unanimously adopted by United Mexican Border Veterans in national convention assembled in South Bend, Ind., June 12, 1955.

LOUIS H. WUNSCHEL,
National Commander.
ALFRED L. MOUDY,
National Adjutant.

Memorandum on the Geneva Conference: No Economic Concessions to the Communists Without Political Concessions From Them—Part I

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. JUDD. Mr. Speaker, it is alarming to see the number of Americans who seem to have accepted a few smiles and

reasonably civil speech by the Communist dictators as meaning a change in heart or even an abandonment of the Communist program of world conquest. The only prudent explanation of this change whereby they press their unvarying demands with smiles instead of snarls is that they are seeking a breathing spell in which to overcome their own difficulties, and get us to reduce our efforts. It is our economic and political pressures which have brought the Kremlin to its change of posture. Naturally it would give almost anything to get us to relieve those pressures and resume trade, reduce our embargo on strategic materials, without any real Soviet concession, such as unification of Germany, in return.

A penetrating memorandum on the Geneva Conference has been written by Mr. Christopher Emmet, a writer on foreign policy long a student of Communist behavior. Under leave to extend my remarks I include herewith the first section, in which he develops one aspect of a thesis I have been advocating for more than a decade—namely, that the only way to end a war with communism anywhere, whether cold or hot, is to win it. The article follows:

THE ECONOMIC MOTIVE IN THE SOVIET DRIVE FOR NEUTRALITY AND RELAXATION OF TENSIONS

INTRODUCTION

The concensus of most expert opinion is that the main, although not the only, motive for the recent Soviet drive to relax tensions is due to economic pressures. The free world has proved itself capable of producing arms for itself and for its allise, including the immense amount of electric power needed for nuclear weapons, while at the same time it has increased the production of consumer goods, not only for itself but for underdeveloped and neutral nations. The Soviet Government has been unable to compete on all these fronts, particularly in view of the need to partly industrialize and equip her Chinese ally for modern war. In the effort to increase industrial production in both China and Russia, agricultural production has been dangerously neglected, apart from the peasant resistance to collectivization.

This does not necessarily mean that the Soviet economy is weakening, still less that it is in danger of immediate collapse, but it does mean that the economy of the whole Soviet bloc is relatively weaker than that of the free world and that the effects of this relative weakness will be cumulative if the present situation continues—hence the Soviet desire for a truce in the cold war.

This explains why the recent Soviet propaganda before Geneva tried to sell the idea of relaxing tensions as an end in itself, regardless of whether or not it involved a solution of the German unification problem, etc. Some influential authorities like Walter Lippmann have even supported this Soviet thesis. But fortunately the German Government has recognized that it might be fatal for us to grant the Soviet wish for the relaxation of tensions before we attain German unification. This is made clear in despatches to the New York Times from its Bonn correspondent, M. S. Handler, on July 14 and July 19.

Every act which reduces the Soviet strain in the present armament and production race reduces our bargaining power to achieve German unification in freedom to join the West, or any of the free world's other political objectives. An article by the famous British economist, Barbara Ward, in the New York Times magazine of July 18, recognizes this basic fact, at least by implication. The London Economist in its issue of July 23 puts it specifically: "The free nations have no interest in granting the Communist powers a breathing space and enabling them to gather strength again for fresh adventures in military or political pressure, which might well be the outcome of a temporary reduction of armaments under inadequate guarantees."

The economics of neutralism

All this throws a new light on the Soviet agreement to neutralize Austria and on its effort to neutralize Germany. Aside from the obvious political and military dangers of weakening the NATO defense by German neutrality, the Communists undoubtedly hope to exploit the economy of Austria and, if possible, of Germany as they already have exploited that of Finland and Sweden. As in the case of Austria and Finland, they would hope first to exact some German reparation agreement in return for unification, perhaps under the guise of buying out Soviet "owned" properties in Eastern Germany, as was done in Austria. Second, they would maintain political threats and pressures to attain economic concessions after reparations were paid, as was the case in Finland.

The original postwar Soviet trade agreement with Sweden, which was highly beneficial to Russia, is another case in point. This was dictated by fear of a total Soviet occupation of Finland as a prelude to further encircling Sweden and Norway. Sweden would have been compelled to continue similar unfavorable agreements if it had not been for the building of NATO strength. However, if Germany is excluded from NATO the present precarious balance of power would again be weakened, not only for Sweden but for Germany and all Europe. Competition to appease Russia would arise.

No embargo against exports of strategic goods to Communist countries could be carried out by a neutral country and unless rigid precautions were taken by the West in their trade with such neutral countries, the Communists could siphon off strategic goods, which came originally from the West, from the neutrals.

Even an atmosphere of friendly coexistence, without actual neutralization of Germany, would make it difficult if not impossible for European countries to resist political pressures for increased trade, on credit backed by the democratic governments, with the Communist world. Western businessmen with political influence within their countries, who would benefit from Communist orders would press for such trade.

Every business concern which has an order or hopes to get a Communist order, or which is owed money by a Communist power, automatically becomes a propagandist, an apologist, or a special pleader for soft treatment for that Communist power. There are many historical parallels to illustrate this. The fact that four-fifths of the money debts owed by southern interests to northern creditors at the outbreak of the American Civil War was owed to New Yorkers, made New York the most stubborn center of appeasement sentiment toward the South, and of disloyalty in the North, throughout 4 years of bitter civil war. Similarly, the great American corporations with investments in captivity in Hitler's Germany and Mussolini's Italy were the inevitable collaborators and pressure groups within the United States in favor of appeasing Nazi Germany in the period before and after Munich.

Without a militantly anti-Communist public opinion, which is incompatible with a neutral position between East and West, the democratic governments would not be able to impose restrictions even on trade in strategic goods. Moreover, since Communist trade is centrally controlled, every Communist order or refusal to give an order to a western country can be used as part of the overall bargaining pressure. The Communists have built-in trade restrictions on all foreign trade because all imports and exports are centrally controlled.

Therefore, the trade itself would not be on a wholly equal economic basis. However, even if the trade were equal in an economic sense, it would still strengthen the Soviet political structure and military potential because their economic shortages are relatively greater than ours. They are suffering from the lack of East-West trade more than we; therefore, they benefit most from its restoration. Also, by permitting an increase of trade between the satellite states and the West the Soviets will, in the long run, be able to siphon off more from those states for the benefit of the Soviet Union than is now the case. Their former policy of isolating the satellite economies from the West proved a blunder.

Moreover, it is impossible nowadays to clearly distinguish between strategic and nonstrategic goods. The greatest Communist shortage is in food production. This makes it all the more regrettable that Canada has already agreed to a large delivery of wheat to Poland, of which 85 percent—$15 million worth—will be paid for by a loan from a Canadian bank to the Polish satellite government, guaranteed by the Canadian Government.

The next step will be the demand of American farmers to be allowed to sell American food surpluses behind the Iron Curtain, either at reduced prices or through credit arrangements similar to that of Canada. These surpluses weigh down the price of agricultural products and represent an acute political issue in the United States as well as Canada. So far, American anti-Communists have been able to prevent any surplus deal, but that would become impossible in an atmosphere of friendly coexistence.

The price of friendly coexistence

All this means that from the Western point of view any relaxation of restrictions on East-West trade in strategic goods, and credit on other trade, should only be conceded in return for political concessions from the Soviets. Since we have proved that we can sustain the economic cold war better than they can, it is folly to abandon this advantage until they make political concessions in connection with the unification of Germany and in eastern Europe, Formosa, Vietnam, etc. Aside from fully inspected disarmament, which would relieve the Soviet economic strain but would be worth it to us for the sake of peace, the West has no other bargaining assets with which to bring about Soviet political retreats.

Our greatest economic bargaining asset of all is the offer by President Eisenhower in his famous speech of April 16, 1953, to use a great part of the present cost of armament and the cold war for aid to backward and Iron Curtain countries, in return for fundamental Soviet concessions on disarmament and German unification, etc. But the bargaining power of this offer, as well as of disarmament itself, will be whittled away if we grant premature, piecemeal economic concessions in East-West trade in the name of "relaxing tensions," without removing the real political causes of tension. In short, the guiding principle of Western policy, in accordance with the facts, must be economic concessions by us only in return for political and military concessions by them. Since economic necessities have driven the Communist leaders to desire relaxation of tensions the West will betray its own security interests and the interests of peace itself, if we give one economic concession without a political or military quid pro quo from the Communists in return.

If we maintain the embargo on strategic goods plus the present credit and other re-

strictions on East-West trade, our production advantage will be cumulative. That is why any concessions now will be premature, because the Communists' crisis has probably not yet reached a point where they are willing to pay an adequate price in political terms to relieve their economic crisis. If we continue the pressure, the Communist governments will probably experience increasing political strains, discontent, and demoralization, first in the vast satellite domain, and then in the Soviet Union itself.

Moreover, this internal resistance is the greatest possible deterrent to war, in view of the immense Soviet and Chinese lines of communications. For that reason it is highly dangerous for the West to let the Soviets relieve these economic tensions before either sweeping and foolproof disarmament, or drastic concessions in Germany and Eastern Europe, or the collapse of the Communist regimes, has been achieved.

As President Eisenhower has said, the way to prevent world war III is to win the cold war. We are winning it but we have not yet achieved our objectives. To quit now would be once more to win a war and lose the peace.

Memorandum on the Geneva Conference: It Is Folly To Assume That Lifting the Iron Curtain Would Weaken the Communist Dictatorship—Western Tourists Greatly Helped Hitler and Mussolini Maintain Their Tyranny—Part II

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the second portion of a memorandum on the Geneva Conference by Mr. Christopher Emmet:

The fallacy of the Iron Curtain

Such novel Soviet gestures as relaxing the Iron and Bamboo Curtains are deceptive. They are not real concessions any more than the neutralization of Austria. Aside from the fact that they are designed to increase East-West trade, they give the Soviets a propaganda advantage. The Soviet Union had hundreds of thousands of subsidized tourists in the thirties, but that did not weaken its regime. Hitler and Mussolini never had any iron curtains toward the West. Totalitarian countries do not need outside iron curtains to retain their tyrannies, because they have built-in iron curtains within their own countries.

Obviously the Iron Curtain was a convenience to the Soviets during the period after World War II, when they were fearful of the effect of millions of Soviet troops having seen the higher standard of living in occupied Europe. But there is no reason to suppose that it was really essential. Rather it was the expression of the increasing tyrannical and fearful mood of Stalin's last years and it was probably one of his greatest blunders, similar to his refusal of Marshall-plan aid for the satellite countries. It was only because Stalin cut Russia and the satellites off completely from the West that we were able to organize our separate systems of military and economic defense, which Russia is now trying to break down.

One of the most effective forms of propaganda used by the Nazi and Fascist regimes in the thirties, and to a lesser extent by the Soviets, was their propaganda to foreign tourists. Since these tourists were not politically prepared they could not do any effective propagandizing themselves and, in any case, the people they were allowed to meet were not free to act, even if the democratic visitors convinced them of the evils of totalitarian regimes. The recent rave reports from German newspapermen about finding Soviet conditions so much better than they expected, is a case in point.

When it comes to visitors which the Communists send to the West, they only select people who are such disciplined and privileged members of the Communist system that they are not tempted to become penniless refugees, and this includes not only officials but scientists, artists, and technicians. As an added safeguard, they keep a hold on the visitors by holding their families as hostages. Every Communist visitor to the West, therefore, is a trained propagandist. Moreover, these Communist visitors are free to talk to anyone in the free countries once they are admitted, so it is a wholly unequal exchange. This is in addition to the language difficulty, for there are many more Russian Communists trained by the government to speak adequate English than Americans or Europeans who speak fluent Russian.

The Iron Curtain was of immense use in dramatizing the Soviet danger to the West, while the less visible iron curtains which remain within the Communist world today are equally impenetrable, but far less provocative. The partial lifting of the curtain, far from being a concession to the West, merely acts to repair a Communist mistake.

The West cannot, of course, prevent or appear to regret even the partial lifting of the Iron Curtain. But it can expose the fact that foreigners cannot really investigate conditions in key areas of Russia freely, as Communists can in the West, as well as the fact that the Russian people are afraid to speak to them freely. The fact that Russians who come to the West are not really free must also be constantly emphasized by the press of the free world as well as by government officials and civic leaders.

Memorandum on the Geneva Conference: The Fallacy of Assuming That Communist Aggressivenes Is Due to Fear or Misunderstanding of the West and Can Be Overcome by Making Sweeping Concessions or Offering a Security Pact—Part III

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the third section of a memorandum on the Geneva Conference by Mr. Christopher Emmet:

Pros and cons of a European security pact

The Western theory in concluding the Teheran and Yalta agreements was that Soviet aggressiveness and secretiveness toward the West was due to profound suspicion and fear, based on ignorance—not on motives of aggression, imperialism, or revolutionary fanaticism. President Roosevelt (and his advisers such as Harry Hopkins) believed that this Soviet suspicion and fear could be overcome by sweeping Western concessions and persistent Western generosity, including even the withdrawal and demobilization of America's Armed Forces, which proved Soviet suspicions to be groundless.

This policy failed. The policy of NATO and other steps toward Western defense was based on the contrary theory, that the Communist world represents a dynamic and aggressive complex of power which will expand wherever opportunity offers.

(1) The proposed offer of a security pact to the Soviet Union in Eastern Europe represents a return to the Yalta theory. Unless the Soviets really fear a military attack from the West, a security pact will be meaningless to them and its offer will not enhance our bargaining power to obtain German unification, in freedom to join the West.

(2) If this is true (as I believe it is) the only utility of offering such a pact is its propaganda value in convincing neutral-minded people in Germany, Europe, and Asia of America's peaceful intent.

(3) However, the propaganda value of this offer within the free world may be more than counterbalanced by the discouraging effect it would have on the satellite peoples, and on such disaffected Soviet elements as the Ukrainian national movement.

This is true because any such security pact would mean that the West was pledged not to send any military aid if revolution broke out behind the Iron Curtain, such as that of June 17 in East Germany on an even greater scale. In view of the East German experience the possibility of such a revolt on a greater scale in other satellites as well should not be discounted, especially if the food crisis in the Communist world should be aggravated by a bad crop year. Such a revolt might start with food riots and spread like wildfire from country to country as it did from city to city in East Germany. It might involve the revolt not only of satellite armies but of Russian Army units as well.

(4) The assurance which a security pact would give the Communists against any active allied aid or intervention if such a revolt occurred, would be worth many military divisions to the Soviets in eastern Europe.

(5) Moreover, the fear of such a revolt is now one of the greatest deterrents against any Soviet attack on the West, because of the long and vulnerable lines of communication into Western Europe. These lines are vulnerable not only to air attack but also to widespread sabotage and to western paratroopers.

(6) A pledge to guarantee the eastern frontiers of the Iron Curtain against any military attack from the west would appear to anti-Communists within the satellite countries as a guarantee of the status quo, a recognition of the permanence of their enslavement. Even now, after the experience of East Germany, only desperation would lead them to revolt as they have little hope of aid from the west. But if the security pact were signed these faint hopes would disappear, apathy would increase, and the deterrent danger of a potential revolt if the Soviet attacked the west, would be diminished. For the satellite peoples know that the west will keep its agreements, just as they know that the Communists Governments will not.

(7) It is painful to imagine the nightmare for the west, especially for the Germans, if such a revolt as that of June 17 broke out throughout Eastern Europe. We would have to stand by and see millions of our friends reenslaved and their leaders slaughtered, while western soldiers twiddled their thumbs.

(8) To sum up, a security pact would impose for the first time a counter-revolutionary position on the west, since it is the traditional right of free peoples to help friendly peoples to win their freedom. Probably, we should be willing to pay even this price if we could really insure peace in the

age of nuclear war. But we must be certain that we can get real assurance in exchange, and a security pact would not give such assurance because, since we could not trust the Soviets not to break it, it would bind us and not them.

(9) The least we must do is to insist on sweeping Soviet concessions as part of any such "security" arrangement. Also, if any such pact is agreed to, the least we can do is to solemnly declare that it does not imply any recognition of the justice of either the regimes or the frontiers of Eastern Europe, and that the west pledges itself to try to change those regimes and frontiers by every means short of war, according to the principles of the Atlantic Charter, signed by the Soviets.

Comparative Transportation Standards for American and Mexican Migratory Workers

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, July 28, 1955

Mr. DOUGLAS. Mr. President, it has been said that happy nations have no history and that great literature and other arts are distilled from man's divine discontent inspired by the injustices of oppression, exploitation and discrimination that harm both the exploiter and the exploited.

Last week on July 22 with little notice or debate we passed a bill—and yesterday adopted the conference report—extending the Mexican contract labor program assuring the Mexican national entering this country to do agricultural work certain standards and protections on the job and in being transported to and from the job which are not guaranteed to and, clearly, are not enjoyed by United States citizens doing the same type of work.

Today there came to my desk a clipping from the Denver Post of July 15, 1955, containing a brief article by the distinguished reporter and commentator, Roscoe Fleming, which, in its stark economy of words, challenges the conscience of everyone of us and, it seems to me, puts an obligation upon the Senate Labor and Public Welfare Committee, of which I am a member, and upon Secretary of Labor Mitchell to investigate and to act to end such offenses against the dignity, health, and the very lives of people who, in Mr. Fleming's words, "had the bad luck to be migrant workers; and the apparent further misfortune to be American citizens."

I ask my colleagues to take the few minutes necessary to read Mr. Fleming's description, written with intelligence, feeling, and the directness of true art, stating the meager protection given Mexican migratory workers while being transported within the United States, and the utter lack of standards for United States citizens being transported to do migratory labor and his description of how the buck has been passed by the State of Colorado, the Interstate Commerce Commission and the United States Labor Department.

Finally, Mr. President, I quote verbatim the icy irony of Mr. Fleming's final paragraph:

So it looks like these poor Americans just have to go on taking their chances, save for one possibility: They can go to Mexico and take out first citizenship papers. Then when they came back, they might be able to get the minimum protection and decent treatment here, which the United States seems unable to afford her own citizens.

Mr. President, I suggest that this challenge had best be answered, and I ask unanimous consent that Mr. Fleming's article be printed in the Appendix of the RECORD.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. ALLOTT. The Senator says that the State of Colorado ducked responsibility. Of whom is he speaking?

Mr. DOUGLAS. I think that is made clear in the article from the Denver Post.

Mr. ALLOTT. I may wish to reply to it later.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY NOT EMIGRATE?—CASE OF THE MIGRANT WORKERS

(By Roscoe Fleming)

Remember the open truck jam-packed with 55 standing human beings that turned over on a curve east of Denver, killing 1 baby and injuring 20 other persons? These people had the bad luck to be migrant workers; and the apparent further misfortune to be American citizens.

Recently the House extended the law which Mexico demands to protect her nationals who come into the United States to work.

Representative BYRON ROGERS, of Denver, made a valiant try to include protection for American citizens, but his amendment was gaveled out of order as not germane, since the subject was the protection of Mexican, not United States, citizens.

But read in the debate were the Labor Department regulations to protect Mexican migratory workers in the United States, and you might like to see how we take care of those people—at the demand of their Government. Summarized:

Where trucks are used, Mexican migrants can't be driven more than 14 hours in any 1 day, with 15-minute rest stops every 2 hours. Overnight rest stops must be adequate for the climatic conditions (whatever that means).

Vehicles must have adequate seats firmly fastened to the floor, with back rests, and with a minimum spacing of 18 inches. There must be protection against the weather. Tarpaulins must be not less than 6 feet above the floor, and along the sides * * * where necessary.

"All vehicles must be equipped with fire extingishers, drinking water in containers equipped with spigots, signaling devices between driver and passengers. All vehicles shall be clean, and reasonably comfortable. All workers shall be given 50 cents per meal, or its equivalent in food.

"Before the start of each trip the representative of the Department of Labor shall be shown proof of ownership of vehicle, proof of adequate insurance coverage; itinerary of route showing rest stops, food stops, and overnight stops; driver's license, State inspection certificate where available (or Department of Labor inspection report will be executed). After arrival * * * driver and passengers shall be questioned as to adherence to these requirements."

Still pretty rugged, you'd say? American citizens would never stand for such minimum standards of safety and comfort? Well, remember that American citizens in the fatal Colorado truck accident had been packed upright, so close together they had no room to move. They had traveled hour after hour that way, uncovered against blazing sun or pelting rain alike. Finally the truck skidded on a rain-wet curve, went out of control because its center of gravity was too high because the people were standing, and finally dumped them in a screaming bloody windrow in the borrow-pit.

Remember that all concerned have since passed the buck of responsibility, with the speed and skill of the Denver Bears whipping the ball around the infield?

The State said right off that it had no power to regulate interstate trucks, save only against unsafe crowding. Governor Johnson wrote the Interstate Commerce Commission demanding that it enforce minimum safety and comfort regulations, but the ICC wrote back that it had never been given any power in this regard. A United States Labor Department welfare worker came out, looked around, and left saying it was too bad, but up to Colorado. The sugar companies, for whom these migrant workers are imported by contract as "stoop" labor in the beet fields, have shrunk like violets from public notice in this connection, although vocal enough about their other benefits to the public.

So it looks like these poor Americans just have to go on taking their chances, save for one possibility: They could go to Mexico, and take out first citizenship papers. Then when they came back, they might be able to get the minimum protection and decent treatment here, which the United States seems unable to afford her own citizens.

Rabbi Milton Matz' Testimony on Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the testimony of Rabbi Milton Matz, assistant rabbi of K. A. M. Temple of Chicago, at the Senate subcommittee hearing on juvenile delinquency in the city of Chicago on July 14, 1955, as follows:

WHAT CAN THE CHURCH AND SYNAGOGUE DO IN THE PREVENTION OF DELINQUENT BEHAVIOR?

Senator KEFAUVER, Senator WILEY, members of the subcommittee, I regret that Rabbi Jacob Weinstein, whose place I am taking this morning, canont be with you, as he is presently out of the city. Though it is difficult to substitute for a man with the wisdom and depth of experience of Rabbi Weinstein, I do hope that some of the insights gained in my work as a chaplain in the Air Force, and as director of synagogue and center youth programs may prove of some pertinence to the mission of this group.

First I shall read a brief statement from Rabbi Weinstein:

"The church which constantly emphasizes stereotyped warnings against theological sins and offers salvation in terms foreign to the experience of youth is not aiding, and may very well be hindering, the forces combatting juvenile delinquency. But the church which extends the warmth of family ties to the larger community of the faithful and makes explicit in meaningful terms the dignity and sacredness of the individual may very well help to give youth that sense of identification and that feeling of purposeful belonging, the lack of which often leads urban youth to gang up to do their desperate and criminal deeds. These acts of violence represent only in part a revolt against a world they never made. They are also in part a pathetic outreaching for significance in a massively impersonal society. If the church can effectively realize the content of its work and spell out in dynamic terms its doctrines of personal worth and its techniques for character growth in the image of God, it could become a mighty force in stemming the tide of juvenile delinquency."

And now, on my own behalf, I shall address myself to the question, "What can the cuhrch and synagogue do in the prevention of delinquent behavior?"

Delinquency is not a superficial, localized disease, but is symptomatic of a generalized breakdown in the proper functioning of the total community or society in which it occurs. There is no single remedy or sure-fire miracle drug which can combat the virus of delinquency. Many experts would agree that the only effective means of minimizing delinquent behavior would be through a total community approach. This would imply firstly, that the community recognize that it is responsible for delinquency to the extent that it does not maintain the facilities and institutions necessary for providing outlets and guidance for adolescents. Secondly, that the community, recognizing its limitations, earnestly endeavor to correct them through combined community action. It is my belief that only a program of this comprehensive nature can be meaningfully effective.

It is with this background in mind that I turn to the church and synagog. Religious institutions occupy a unique place in society. They exert far-reaching influence on the lives and thoughts of those who are associated with them. Unlike most other social institutions, they deal with individuals as family units. The membership unit is the family, not the individual. Finally, and most important, religious institutions are the spiritual and moral cornerstones of our society. To a large extent, they determine the ethical and spiritual morale, and consequently the behavior, of the communities where they operate. For these reasons, churches and synagogs can perform vital services in combating delinquency.

They can function effectively in three key areas. By providing maximum facilities for their own congregants, by motivating their membership to become influential in stimulating the community as a whole to united action, and by arranging to make available to the community at large their know-how in group work and adult education, and even at times their physical premises.

What activities can a religious institution provide for its own constituents which would aid in the prevention of delinquency? I would like to outline such a program. My list is not at all comprehensive. I am certain that there are many ideas to be added, many of them already functioning successfully in church and synagogue programs.

(A) The first, and by far most important, element in a successful program is that of getting the religious message across to the adolescent. This is not a simple task but it is a necessary one and cannot be evaded. Adolescents require, as do all other human beings, basic beliefs upon which to develop their personalities. The adolescent is largely plagued by his lack of decision in the area of values and beliefs. He isn't convinced that he knows what's right or wrong, what's proper and improper. He is puzzled by the "blooming, buzzing confusion" which life appears to be. He doesn't understand how he can win at the game of life, and so he rebels at the rules of the game. He is looking for an answer. He can find his answer in the street or through the agencies of religion. Religious belief, if presented in an appealing fashion in an appropriate social setting, and if geared to his intellectual and psychological needs, can go a long way in helping the adolescent youngster find his direction in life. Religious organizations, employing all the ingenuity at their disposal, must continue to underscore this vital function as a major goal of their program.

(B) Religious institutions can be and are of great service through their educational and guidance work with parents. Religion recognizes that the family is the key psychological institution in the development of the individual. The behavior of the adolescent mirrors either the harmonies or the conflicts and tensions of his home. Religious institutions can perform a vital service by helping parents and prospective parents obtain the information and guidance which can help minimize some of the tensions of family life. This can be done in a number of ways:

1. Many ministers are competent in the area of premarital and marital counseling. Their services have undoubtedly proven of great help to many. Some religious institutions may think in terms of expanding these services either through the utilization of members of their congregation who are professionally equipped to do counseling or even through the hiring of such personnel.

2. Religious institutions can perform an important service by informing their members of the guidance facilities of the community at large and by at times serving as a referral agency.

3. They can develop adult education classes and lectures dealing with the problems of family life. These programs, if maintained on a serious and competent level, may provide invaluable direction to those in the community who previously may have felt that they had nowhere to turn for guidance.

4. One of the critical problems in our culture is the disintegration of the family. Too many families are described as regarding the home as merely a place to eat and sleep in and not as a source of companionship and guidance. Too often the juniors of our country search elsewhere in vain for the guidance which they should find in their home. By sponsoring activities which involve families as units, religious institutions can take a significant forward step in cementing intrafamilial relations. Family religious services geared to children, family picnics, family sporting events, family discussion techniques can, if started early enough in the lives of the children, prove of vast help in this sensitive area.

(C) Religious institutions perform a major service through their youth programs. There are many fine programs presently in operation throughout the country. They meet one of the strongest needs of adolescents. It should be emphasized that the adolescent is most dependent on the group or gang with which he associates. He needs it for the companionship which he craves. He needs it to supply the values and orientations which he lacks. The group assumes unusual significance in his life for it can determine his future development. It is vital that the group identify itself with an institution that fosters a positive philosophy, for through this association the group will begin to accept the values and orientation of the larger institution. It is important that they be regarded and respected as an important arm of the institution, with an important function to perform. By gaining the respect of their elders they will achieve part of the self-respect which they need. Through athletic events which attract the admiring attention of adults and peers they enhance their own self-esteem. Through charitable and improvement projects, no matter how small, they take the first step toward social responsibility. Religious institutions perform a significant task in this area. They must receive all the encouragement necessary for the continuation and expansion of this work.

1. Sheriff Lohman has made the suggestion that religious institutions make their pastoral and group work facilities available to youngsters referred to them by the police. I believe that church and synagogue may be capable of very effective work in this area.

2. Disturbed adolescent behavior is often motivated by the insecurity which a youngster feels as a result of his inability to make adequate vocational plans. Assistance in the area of vocational guidance and information on vocational guidance facilities in the community would be a helpful service to adolescents. Successful guidance in this area may mean the difference between the disoriented rebelliousness of the adolescent and the purposive orientation of the mature individual.

The above program, though a partial one, illustrates the service which religious institutions can perform in the lives of their congregants. But this is only the first step. Churches and synagogues can and should play an important role in educating the community at large to its responsibilities and potentialities. They should strive to make their membership, and ultimately the community at large, aware that all socio-economic ills, whether it be poverty and inadequate facilities for the treatment of medical and mental illness, or poor street lighting and inadequate playground facilities, or overcrowded schools, all are breeders of delinquency. Religious institutions should be prepared to join with the other religious (regardless of faith) and secular institutions in their communities for the purpose of preparing that defense in depth which is so vital for the prevention of delinquency. They have the know-how and the experience to help fill some of the gaps which exist in their communities, and they have the prestige to indicate in an effective manner the potentialities for community action. And most important, they can and must provide the spiritual environment which will aid our youth in developing those positive values which shall guide them through their adolescent maze of confusion.

The Communist Calculus for World Conquest

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to include the text of an address by Dr. Lev E. Dobriansky, professor of economics at Georgetown University, and chairman of the Ukrainian Congress Committee of America, which was delivered before the Greater

Buffalo Advertising Club, of Buffalo, N. Y. The title of the address is the Communist Calculus for World Conquest:

THE COMMUNIST CALCULUS FOR WORLD CONQUEST

I am deeply grateful for this wonderful opportunity to address the august membership of the Greater Buffalo Advertising Club. Although some highly abstract-minded economists and social scientists view the vocation of advertising as negatively productive, let me assure you that I, along with numerous others in the profession, have not been swept into the swirling stratosphere of such economic theory. In fact, I experience a double sense of affinity in being with you here today. In the spirit of the advertising vocation, my activities regarding American-Soviet relations have been thoroughly motivated by the desire to impart proper and accurate information, to sell profitable ideas, so that we might not find ourselves at the losing end of these relations. Also, in the course of this political advertising campaign it has been my privilege to know and to work with many farsighted, intellectually vigorous products of your well represented city, as, for example, the former D. P. Commissioner and lately the staff director of the Select House Committee on Communist Aggression, Dr. Edward M. O'Connor.

Last summer and fall it was my pleasure to lecture before our military government units and G–2, or military intelligence, at Fort Meade, Md. Part of these lectures experimented with certain ideas that would give us a more or less total and guiding understanding of the day-to-day, short-run fluctuations and changes in our relations with the Soviet Union. The experiment proved to be most successful, as measured by the discussion and the thought provocation that ensued. That perhaps is the way of a professor, in contrast to a politician, to ruffle his audience into sober thinking on issues that might have to be decided on the dreadful scale of life or death. These ideas I should like to develop here, in the simplest manner possible, on a subject that I have titled, "The Communist Calculus for World Conquest."

THE NEED OF SOUND PERSPECTIVES

There is a fundamental need for sound perspectives and clear thinking on the nature of communism and its designs, on its functional ratio of strength to the free world's, on the crucial element of time, and also on the limitations and current concepts of American foreign policy. To satisfy this need, it is necessary to achieve a balance of thought on the basic determinants and paramount variables shaping the contemporary situation. Off-hand utterances related to some one or more aspects abstracted from the total picture are easy and appear to be the rule today, as, for example, to trade or no with the Communist world, to maintain diplomatic relations with it or no, to ship surplus wheat to the U. S. S. R. or not, to coexist or else. Rationally, and I presume that is our mode of being, each of these questions represents only a part of the total picture and derives its full and significant meaning only in the light of a complete and comprehensive outlook.

It is clearly my purpose to present such a picture, one that could function as a workable pattern of thought, woven by significant, selective facts and reasoned interpretations attuned to the values of our tradition and political and moral principles. Without this picture framed in our minds, we are only given to drift from day to day, wishfully hoping for some miracle, mistakenly accepting a lull in aggression as the beginning of genuine peace, and fearfully abstaining from necessary actions in a growing self-paralysis promoted by such basically ridiculous slogans as "coexistence or codestruction." Without it, we expose ourselves to all sorts of naive and hastily concocted proposals, ranging from an invitation to Marshal Zhukov to supplying the Soviet war economy with surplus American foodstuffs.

ESSENTIALS OF THE OBJECTIVE PICTURE

In painting this picture you can view the factually supported essentials as simply propositions of thought. However, if accepted in toto, they lead to certain inevitable logical conclusions regarding the Communist calculus for world conquest and the relative soundness of American foreign policy, not to exclude the wisdom of individual concepts and proposals pertaining to different aspects of the total global situation. What, then, are these essentials which you may regard as propositions founding our pattern of reasoned thought?

First, in the current international complex the two ultimate power centers are the United States and the Soviet Union. If either is reduced, through one means or another, the decisive effect will be either the expansion of freedom or tyrannical totalitarianism. The freedom of the non-Communist world hinges on the sustained freedom of our Nation. Second, taking the power center of the United States, on the basis of accessible facts it is reasonable to estimate its current superiority in the output of nuclear weapons and a greater economic capacity for the production of essential war materials over the Russian Communist empire. This is still greater when supplemented by the capacities of other major free nations.

However, it is being generally recognized now that in our time our superiority in nuclear weapons will be substantially reduced, if not eliminated, by concentrated Soviet progress. Also, concerning war production, we should bear in mind that relative capacities belong more to a potential picture than to an actual one. For in its present utilization and distribution of resources, the Soviet Union is superior in armed personnel and in several lines of military preparedness. Frequent comparisons on standards of living between the United States and the Soviet Union are grossly misleading when the prime objectives and the nature of Red totalitarianism are borne in mind. Their standard of living is much inferior to ours, but their standard of war preparedness, by virture of resource distribution, exceeds ours.

Moreover, with the modern phenomenon of undeclared wars and the devastating scope of present weapons, the element of time necessary for wholesale productive conversion for war becomes exceedingly important. The realization of statistical capacity might fall far below par. The catastrophic effect of present weapons and the geographic relations between the two prime sources of global power render it more probable than possible that in the event of a global outbreak, we will not be fortunate to enjoy the time period for full conversion as in the two previous wars.

The third essential is the unique capacity of the United States for moral and political leadership as concerns the dependent and Communist-enslaved nations in the world. In this respect, we show in striking contrast to some of our major allies. Yet here, too, it is only a capacity that still has to be maximally realized. Except for a few, we were led to believe that the war in Indochina was merely another Communist aggression, but it remained for the French general to inform us that the issue was not so much communism as a national struggle for independence. The force of enlightened nationalism was at work, and we, the natural exponents of this patriotic force, were found wanting. It took the Communists to exploit it. Also, despite our great traditions built on principles of independence, self-government, civil and political liberties, and economic opportunity, despite the millions of dollars we pour into our information services and the Voice of America, it is an open secret that in too many quarters of the free world itself, we are a resented and even hated people. It may startle some of you, but in the Voice of America broadcasts beamed to Ukraine, the word "independence" may not be used in any circumstances, even for honest reporting of history and news.

Here, too, the time factor is of crucial importance. Our Government today has no concretely defined policy toward the Soviet Union. In a sense this is the political concomitant of the military in the time lag of conversion. Despite our almost insular stress on protective material power, the truth is that political and moral elements stand logically prior and are essentially more important than the military as efficient means to reduce the possibility of a global military outbreak. If we fail to win the minds and hearts of peoples not only in the free world but also in the Communist slave world, then no amount of dubious material superiority can save us. We have a tremendous capacity for such spiritual and psychological victory, but we have little time to translate it into actuality.

The fourth essential is a realistic view of the power center of the Soviet Union, with an unprecedented empire in vast extension from the Danube to the Pacific, embracing some 800 million people. Tragically, what many of our public leaders, educators, journalists and commentators fail to understand is that the Soviet Union, which they foolishly equate with Russia, is in itself an empire, bound by force, fear and fraud. The Soviet Union is not a nation but a forced complex of nations. It is made up of about 100 million Russians and over 115 million non-Russians constituting the non-Russian nations of Ukraine with its 45 million, Turkestan with 30 million, Byelorussia with 10 million, the Baltic countries with 6 million and others. The areas of friction, tension and centrifugal force are not only, as we are given to believe, in the so-called "satellite countries" but, perhaps more important so because of their proximity to the imperial Moscow base of the Communist empire, in the broad non-Russian periphery of the Soviet Union.

Moscow is well aware of this powder keg in its front yard, and attempts to appease the patriotic, nationalistic urges of its captive non-Russian nations. All of last year, in the celebration of the 300th anniversary of the Pereyaslav Treaty between Russia and Ukraine, it devoted itself to the task of impressing on the Ukrainian people the fiction of their national independence and cultural freedom. It propagates such myths in the free world with amazing results. Intellectuals sent by our State Department to India and elsewhere return to report that the prevailing opinion there holds the United States as "an aggressive, imperialist nation" while, ironically enough, the Soviet Union, established and sustained by aggressive imperialism, is viewed as a monolith of happy "Soviet peoples." This should not be surprising when our highest officials indiscriminately confuse the Soviet Union with Russia, when their statements unjustly limit the goals of freedom and independence to an enumeration of only the poorly defined "satellite countries," when the radio medium of the land of the Declaration of Independence forbids the use of the term in relation to Ukraine and the other non-Russian nations in the U. S. S. R.

The fifth essential to recognize is that the Soviet Union and its added empire is a totalitarian entity without the remotest relation to the idealistic implications or connotations of Marxist theory. The fatherland of supposed world communism is a terrifying, totalitarian projection of the Russian Empire of the past. It represents a technologically bolstered and reinforced totalitarianism with almost every institutional

facet an outgrowth of autocratic Tsarism. The MVD, terrorism, labor camps, iron curtains, conspiracy, Russification, genocide, collectivist serfdom, distortion and falsification of history, religious persecution, anti-Semitism and so forth have their able precedents in the totalitarian history of Russia. By all western socioeconomic standards, Russian communism is bankrupt in practice. As an ideology, it serves as a stamp of hollow doctrine within the empire and a verbal tool of deception in the free world. And this chasm between word and deed is enshrouded by the Iron Curtain, an institutional necessity to Russian Communist existence.

The frequent mention of competition between our social system and the Communist, as indicated today by the growing concept of "competitive coexistence," also crops from an insufficient or naive understanding of the chronic war economy in the totalitarian framework of the Soviet Union and its extended empire. Also, the recent play by Secretary Dulles to Russian patriots to forswear international communism may appear promising, but it runs up against all the evidence on the institutional blend of communism and traditional Russian imperialism.

Another essential is that Moscow is the source and focal point of Communist conspiracy, infiltration, and potential sabotage throughout the world. Its fixed and unalterable aim is to destroy free institutions, which is a plain corollary of the predatory bent of totalitarian politics. This also is not new. Friedrich Engels observed this bent in the Russian crusade of Pan-Slavism in the last century. But the striking contrast now to the previous crusades of Orthodoxy and Pan-Slavism is that the general and vague theories of communism afford a global scope of operations. Yet, in concrete practice, Moscow invariably exploits national and local issues for its undermining and disruptive activities. Patterned after its earliest techniques in the destruction of the independent non-Russian Republics of Ukraine, Georgia, Armenia, etc. in 1920–22, its apparatus exploits nationalism, colonialism, segregationism, and other goods and bads to implement the design of world domination. As in the case of nationalism, Moscow exploits it for evil ends, whereas we should be advancing it for the good.

The final essential to note is that Moscow is the fundamental power of influence, decision, determination, and dictation in the slave world, despite the nominal political differences between the so-called satellite areas and the Republics of the Soviet Union. Functionally, the satellite countries are no different in captive status from the nations in the U. S. S. R. As an alleged counterpart to NATO, recent Soviet action toward military integration in the empire was really a puppet show. The outlines of such integrated control have long been in existence, and if anything, this action may portend the nominal political incorporation of the satellite countries into the Soviet Union. The division that is observed by the National Committee for a Free Europe and the American Committee for Liberation From Bolshevism, between the captive non-Russian nations in the satellite area and those in the U. S. S. R., is patently unrealistic and unsupported by historical fact. Yet millions of American dollars are spent on the premise of an unreality.

THE COMMUNIST CALCULUS IN THE GLOBAL PICTURE

If these are the basic essentials of the global picture, then we are confronted by some necessary, rational conclusions of long-run portent. As in many fields of thought, it is necessary to distinguished between short-run occurrences, like the Korean war or the Indochina affair, and determinative long-run influences measured in terms of even relatively few years. These long-run influences are shaped by the basic essentials and form the mechanical causation of the present period. In them we can discern the Communist calculus for world conquest.

If you look closely at this picture, there are really three essential and fundamental variables in this calculus. The first and primary one is the genocidal consolidation of the present Communist empire. As the remarkable findings and reports of the House Select Committee on Communist Aggression show, this involves the liquidation of all nationalist and patriotic sources in the submerged nations. It means the uprooting of millions of lives, narrow indoctrination, false learning, economic, political, and military integration with Moscow at the controls. This is the springboard of Communist conquest. Given the chance to construct it, with millions of practical robots at its disposal, Moscow will have achieved its psychological basis for a reasonable expectation of success. This is its chief preoccupation today. The formation of this variable requires time which Moscow is buying with its well-planned ruse of peaceful coexistence and all varieties of diplomatic maneuver for endless talks.

The second essential variable in the calculus is a quantitative superiority in arms. Given the initial advantage of attack plus a worldwide conspiratorial network, fitted out for subversion and even atomic sabotage, Moscow does not even have to regard this variable as a necessary requisite in its expectation of success. The placement of all our hopes and confidence in the single variable of mass material power for deterrent value and retaliation might well become the illusion of the century. It would be illusory to believe that with its acutely controlled distribution of resources, Moscow could not in time achieve definite superiority. With respect to both thermonuclear and standard weapons, the U. S. S. R. can in short time achieve a close approximation to our levels of actual output. Its concentration on technologic specialization and training of engineers and technicians in the ratio of about 2.5:1 in relation to us indicate the emergence of a "Homo Technicus" rather than a "Homo Sovieticus" in the U. S. S. R. Basically, this is ominous regardless of the necessary allowances that must be made for their inferior training.

The certain development of intercontinental missiles is receiving particular stress by Moscow. Against these no airtight defense protection is possible. Such developments serve only to establish the point that a striking adequacy of arms, rather than a clear-cut quantitative superiority, is necessary to bolster further Moscow's expectation of success. But before this variable of adequacy or superiority in arms can function, that of internal empire consolidation must be assured.

The final basic variable is Moscow's fear of free world retaliation. Many regard this from our viewpoint as the cardinal deterrent to further Communist aggression, based, of course, on our relative material superiority. But it should be evident to you that if the first two variables develop progressively, then this third variable of Soviet fear of retaliation will inevitably prove to be a steadily declining one. This fear may become inversely related to their estimated ability to create regional Pearl Harbors. It should be evident, too, that the essential factor of time enormously favors Moscow, not the free world.

This calculus, if permitted to form entirely, poses the real possibility of war and defeat for us and thus the free world. This possibility will surely grow if we continue with our present policy of wait and see and passive and piecemeal responses to global Communist strategy. The present form of containment policy definitely allows Moscow to consolidate its empire. It gambles with the variable of armed superiority. It contributes to their lessened fear of mass retaliation which may well turn out to be considerably less massive than we at present anticipate. In short, in the light of this calculus, it invites war and even the possibility of defeat.

THE HOPE OF FREEDOM IS AMERICA

This rational calculus is a nightmare to many an informed legislator and executive expert. But the lot of Americans has never been pessimism and despair. There are alternative courses of action, short of war and more deterrent to further Communist aggressions on the fringes of the Red empire; aggressions that would only embroil us in sideshows prepared by Moscow for the further disssipation of our resources. Under the label of a policy of liberation these alternative courses have in part been spelled out in the specific recommendations of the Select House Committee on Communist Aggression (Summary Report, pp. 6–8). This unique committee has based its recommendations on stubborn facts. Its extraordinary report should be read by you and every concerned American who is swayed by evidence and not by romantic phrases and catchwords as "peaceful coexistence," "coexistence or codestruction," and similar excuses for unreasoned thought. For the first time by any governmental body, here or abroad, this committee has delved into the facts surrounding the captive non-Russian nations in the U. S. S. R., and shows the great weaknesses of international character that exist in this empire within an empire. It calls for the exploitation of these weaknesses in the inner fortress of the Communist empire.

The true hope of freedom is America. This hope must be extended by word and deed to all nations and peoples, including the over 115 million non-Russians in the U. S. S. R. The fire of national independence burns in their hearts as much as in those of the people of Korea, Indochina, Poland, Slovakia, and other Communist-dominated and dependent countries. To break the Communist calculus for world conquest, we must impede and prevent the consolidation of the Communist empire. To do this, we must carry a strong political warfare to the terrain of the empire. With growing insecurity within, Moscow could scarcely feel secure to aggress without. This is by far the lesser risk than that engendered by the calculus. This, in action, is the true hope of freedom for all peoples in the Communist empire. It is the rope of our own sustained freedom.

We are entering the most dangerous period in the cold war. A greatly magnified Stockholm peace plan is in the making. All evidence points to a gigantic peace offensive on the part of Moscow that reminds the careful observer of the classic observation made back in 1930 by the Russian Communist official, D. Z. Manuilski: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concession. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

As in other phases of Communist strategy, this global peace offensive by Moscow will be thoroughly calculated and staged with all varieties of political and cultural exhibition-

ism. Its twofold aim is to gain necessary time for the practical formation of the conquest calculus and, as far as possible, to induce by the opiate of peaceful coexistence the "capitalist countries * * * to cooperate in their own destruction." You can anticipate all sorts of manifestations and overtures—planned tours of the Soviet Union, moderated cultural exchanges, ballets in foreign capitals, trade fair participations, and above all interminable, but largely indeterminate, diplomatic conferences advertised in the appealing terms of "a search for peace." While the search continues with no substantial or definite results that would alter the contemporary impasse, Moscow will capitalize on the afforded time to consolidate its vast empire and attain to that relative adequacy of arms which the calculus necessitates for a reasonable expectation of success in its fixed objective of world domination.

The immediate measures of Moscow's success in waging this peace offensive will be many. One such measure will be the spread of the illusion of lessened tensions in the free world. The misleading phenomenon of the absence of any armed conflict in the world will naturally contribute to the spread of this illusion, despite the continuous nature of Communist aggression in other forms against both the currently enslaved nations and numerous areas of the free world. Another measure will be the increasing willingness of many free world representatives to enter into long-run security pacts that would guarantee the status quo—here again, despite the long broken record of Russian Communist promises and our supposed dedication to the liberation of all the captive nations in the Red colonial empire. Still another measure will be the growth of many illusory speculations on the situation in the Soviet Union, notably its increasing economic weakness, this despite the utter inapplicability of our standards of economic life to the average individual in this slave empire. Such speculation will in turn open the door to many quick moneymaking schemes to be executed in expanded East-West trade dedicated, naturally, to the noble interests of peace.

When placed against the hard, logical formula of the Communist calculus for world conquest, these anticipated developments form the illusions and thus the grave dangers of the present period in the cold war. They in no way resolve the basic problems that stand to lead to a third world war. Indeed, in the light of this rationally founded calculus, their very existence and growth conduce to the ironic outcome of a third global conflict. The growth of such illusions that make up the present opiate for the free nations, can only serve to blunt our powerful ideological weapons of independence and national self-determination against Russian Communist imperialism and colonialism. In time, verbal expressions of these powerful principles against the worst form of imperialism and colonialism that the world has seen, will offer little real hope to the enslaved peoples, including the Russian, in their struggle for independence. In time, the unimpeded application of the Communist calculus will favor Moscow and its objectives rather than contribute to what many will mistakenly believe to be a search for peace. Only an imaginative policy of liberation, one beyond the scope of mere utterance, one that can really be implemented, can stave off the coming masquerade for peace and a third world war. The Select House Committee on Communist Aggression, on the basis of evidence and careful thought, has shown the way to preserve the peace and to advance freedom. It is for you to judge whether, according to present directions, we can avoid the horrible consequences of the Communist calculus for world conquest.

The Plight of the Dairy Farmer

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. ZABLOCKI. Mr. Speaker, I want to commend my distinguished colleague from Wisconsin [Mr. JOHNSON] for his interest in the well-being of the dairy farmer and for his eloquent presentation on this important subject.

The dairy industry is one of the mainstays of the economy of our State. For this reason, the economic well-being of our dairy industry is of considerable importance to our entire State, and to the people of our metropolitan areas.

There are many people living in my district and in other industrial centers of the State of Wisconsin who are greatly affected by what transpires within the agricultural segment of our economy. When farm income drops, and when our dairy farmers are suffering from conditions approximating the conditions of depression, their plight is felt within our cities. Our production of agricultural implements declines, and our market for home appliances, automobiles, and other manufacturing products begins to grow smaller and smaller. Before you know it our factories begin to operate at reduced levels, employment begins to shrink, and the economic well-being of our people is jeopardized.

For these reasons, even though I do not represent a dairy or an agricultural district, I am keenly interested in the proper functioning, and economic soundness, of the agricultural segment of our economy. Similarly, I am interested in the efforts of those Members who, like my colleague from Wisconsin [Mr. JOHNSON], are earnestly searching for ways whereby our dairy industry can be restored to its former healthy state.

Now from a standpoint of a city resident, there are two chief objectives in which we are interested: In the first place, as consumers of agricultural products, we would like to see the price of farm commodities maintained at a low level, compatible with large consumption of such goods.

Secondly, we would like to see our neighbors in the agricultural areas receive an adequate income, so that they may continue to purchase our industrial and manufacturing products.

At the present time, these objectives are not being attained. Farm income has been dropping, while the price of agricultural commodities to the city consumer has been increasing. This trend must be stopped, and I believe that it can be stopped. In other words, the problem is not insoluble.

I believe that partial solution to the problem may be found through a careful study of processor and distributor costs and profits. We know, for instance, that while farm income has been dropping, the profits of food processors have jumped some 17 percent. This means that somebody in the middle is getting the gravy, and that our city consumers must pay for it. This trend is not healthy, and I have repeatedly urged that Congress look into this situation. I shall continue to press for a full-scale study of the consumer dollar—how it is spent, and who benefits most from it.

It is not my intention to enter into a lengthy discussion of other phases of this problem. I believe that some of them have been presented very ably and very sincerely by my distinguished colleagues on this floor. I would merely like to conclude my remarks by again commending my colleague LESTER JOHNSON for his interesting and informative presentation.

Hon. Lester Johnson's Efforts on Behalf of the Nation's Dairy Farmers

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. MARSHALL. Mr. Speaker, I want to commend our distinguished colleague from Wisconsin, LESTER R. JOHNSON, for the industry he has displayed in the past 2 years in seeking a lasting solution to the problems facing the Nation's dairy farmers.

He has diligently served the farmers of his district and in so doing has done a real service to the dairy farmers of the entire country. By keeping their plight constantly before the Committee on Agriculture and the Congress, he has helped to alert others to the problems of dairying.

Both in committee and on the floor of this House, Congressman JOHNSON has consistently urged equality for dairy farmers and a dairy program that will bring a fair return for their labor and give consumers a quality product at a fair price.

His votes and his actions have demonstrated his genuine concern for a healthy and prosperous agriculture as the foundation of a dynamic and prosperous economy. He has represented the interests of his constituents with unfailing vigor.

In our personal associations, all of us know that he does not let pass an opportunity to promote the products of Wisconsin dairy farmers. Since my own district includes the world's largest butter-producing county, there is some friendly rivalry about the merits of the products of the Minnesota cow and the Wisconsin cow but we are surely in agreement about the merits of the American dairy farm.

While the fight for equality for dairy farmers has met with reverses in the past few years, I am confident that they have no stronger friend in Congress than LESTER JOHNSON.

The Kremlin Talks Peace While Its Satellites Scorn Their Truce Agreements in Korea and Prepare for War

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 28, 1955:

OUR FORGOTTEN ALLIES

Basking in the new spirit, new climate, or new atmosphere generated by the Geneva Conference, we almost forgot an important anniversary.

Two years ago yesterday the Korean armistice was signed. It was to have been the first step toward real peace in Korea. It was said then to be the first fruits of the Kremlin's new look after Stalin's death.

Two years later there is no prospect of real peace in Korea.

On the Communist side there isn't even compliance with the armistice. The United Nations members of the Military Armistice Commission recently denounced the Communists for resorting to "every possible subterfuge" to violate the agreement. Red China has continuously built up the size of military forces in North Korea—from 900,000 men at the time of the armistice to 1,200,000 now.

On this anniversary of the Korean armistice, and on the eve of high-level American negotiations with Red China, it seems appropriate to ask: "Are we in the process of forgetting Korea and the crimes committed there by the Communists?"

The United States once declared a Korean settlement to be an indispensable precondition for lessening tensions in Asia. Even before the armistice was signed on July 27, 1953, President Eisenhower warned that it must be only a first step to prompt initiation of political discussions leading to the holding of free elections in a united Korea. The only political discussions—at Geneva a year ago—ended in dismal failure.

The President also warned that any armistice in Korea that merely released aggressive armies to attack elsewhere would be a fraud. It was a fraud. It was after the Korean armistice that the Communists stepped up their attack on Indochina and also their belligerence in the Formosa Straits.

Ten years after the end of the war Korea, like Germany, remains divided—half slave and half free. At Geneva the Soviet leaders bluntly admitted they had no intention of permitting reunification of Germany for a long time. There is no sign that either Moscow or Peiping are the least interested in unification of Korea. On the contrary.

We will be more enthusiastically inclined to add to the cheering about the new climate of international relations when the Communists in Moscow and Peiping show some interest in fulfilling the wartime pledges to restore free, united, and independent Germany and Korea.

We regret that the present desire not to rock the boat precluded any official American recognition of yesterday's anniversary. It would have been appropriate and timely to remind the Communists that peaceful deeds in Korea would do more to relax the tensions they claim they want than all the words that could be spoken in Geneva in a century.

President Eisenhower has expressed willingness to deal with anyone—Soviet or Red Chinese—who shows a sincere desire for peace. At the Red China-United States conference in Geneva next week it would be appropriate and timely to ask the question: "What about Korea?"

Sponsoring of Polish Refugees in Germany, Austria, and France

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. PATTERSON. Mr. Speaker, it is with the greatest honor and pleasure that I present for publication in the RECORD a description of the operation of the Medway Plan Foundation, a charitable organization with its principal office in Woodbury, Conn., which is currently engaged in securing sponsors for assistance to Polish refugees in Germany, Austria, and France.

This very splendid foundation works in cooperation with the Polish Immigration Committee of New York. It has a long and enviable record of achievement in the field of human rehabilitation and world peace, and I commend cooperation with its most worthy work to all persons who may be interested in aiding these people who need our help so desperately.

Each year this charitable foundation, with head office in Woodbury, Conn., concerns itself with a different ethnic group abroad. Its particular interest is with the hard-core refugees—meaning those who are ineligible to enter the United States because of age, illness, and permanent disability, the most deplorable of all war victims.

Last year it was the Rumanian escapees and refugees; this year it is Polish refugees tied down in Germany and Austria and France. Medway works in association with the Polish Refugee Committee of New York, the International Rescue Committee and the Polish Refugee Union overseas. There are over 3,000 such hard-core cases who need food, clothing, or medicine. The Medway Foundation undertakes to secure individual American sponsors for each of these cases: will you, who read this, help?

The action has already started. Under the Medway plan, a sponsor sends no money to the foundation; every cent of each dollar he gives for relieving his sponsored refugee is spent by himself for such needed supplies as personal correspondence with the victim develops. Medway is a no-overhead organization—there is nothing just like it. Thousands of compassionate Americans use it. The foundation makes large shipments of supplies direct to refugee groups as a stop-gap pending placement of individual cases with American sponsors on a person to person basis.

During a 5-year existence, Medway secured the adoption of over 300 war-torn communities abroad by American cities, schools, and groups. Food, tools, clothing, hospital supplies—even motortrucks—to the value of more than $3 million was sent to the adopted towns.

During 1952–54 Medway provided special assistance to refugees from Russia and other satellite countries who reached Vienna, giving food, clothing, shelter, and hiding them from the Russian police, thus saving many lives.

In 1954 alone Medway secured individual sponsors for 3,934 hard-core cases located in Germany, Austria, and France, of which over 600 were escaped Poles in the hard-core category.

Reading the above lines, one might think that the Medway Plan Foundation is possessed of ample means, luxurious offices, and numerous personnel. In reality the foundation offices are located in the home of the president. Mr. William Montgomery Bennett, at Woodbury, Conn. Mr. Bennett, a retired industrialist and economist, donates his entire time to the foundation and is also connected with other humanitarian organizations.

Who's Worrying About the Consumer?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1955

Mr. RABAUT. Mr. Speaker, it seems to me that somewhere along the line we have somehow lost sight of John Q. Consumer, the person who pays the bill despite what type of compromise is made here legislatively.

Much has been said about the plight of the oil and gas producer. The tremendous amount of money he must invest in order to realize a productive source of this fuel commodity which is now the major source of cooking and heating means of some 25 million consumers. The arguments of those who testified before the committee, if taken as a whole, are contradictory to say the least. Some say that a healty state of competition exists in the industry and that Federal control at the wellhead would jeopardize this competitive situation by driving the small producers out of business. While others contend that only a mere handfull of the large gas and oil companies market 90 percent of all the gas that was used in 1953. Possibly the entire question does hinge about the fact of competition. Does it or does it not exist at the producing end? If it does not, then we have a situation where a few companies are free to exploit a captive market. And if that is the case I am sure that I need not remind my able colleagues that this would not only violate the intent and spirit of the Natural Gas Act of 1936.

I do not believe in unduly controlling the activities of any form of economic enterprise where the ultimate consumer is not being victimized because of his total dependence upon that industry. This is not a question of manacling the

producer; but, instead, protecting the hapless consumer who's interest we should have primarily at heart.

I feel that the question of competition and reasonable price should be thoroughly investigated by this body with a view to affording the captive consumer the protection that he would not enjoy, but which he is entitled to, under conditions which preclude an open market.

Good-Neighbor Works of John Creighton Murray

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. BOSCH. Mr. Speaker, I have recently had called to my attention a great artist, John Creighton Murray, of Forest Hills, Long Island, N. Y.

Mr. Murray made his debut as a violinist in New York in 1940 and was enthusiastically received. His career was interrupted by 4 years of service in the United States Army during which he gave more than 1,500 recitals for nearly 2 million men in uniform and was awarded the Army Commendation Ribbon.

Following his military service, he toured Western Europe and Latin America, and everywhere he has been received as a truly great artist of our day.

Under leave to extend my remarks, I include a translation of a letter received by me from Fernando Diez de Urdanivia, editorial offices, Excelsior, one of the well-known newspapers of Mexico City, dated July 10, 1955, in which he tells me of the good-neighbor works of Mr. Murray.

The letter is as follows:

MEXICO CITY, *July 10, 1955.*

Representative ALBERT BOSCH.

DEAR SIR: Assuming that you will be interested in the contents of this letter, it seemed to me that it was my duty as a Mexican to call to your attention a fact so interesting that it is apt to teach a profitable lesson.

The outstanding United States violinist, John Creighton Murray, has performed an impressive feat of friendship and better understanding between our two countries by way of a noble mission in the field of the arts. He has not yet given concerts in the large cultural centers nor in our more important cities; rather, he has, in a spirit of true generosity, traveled all over our Republic, visiting even rather unimportant villages. As he is an artist of extraordinary talent he aroused great enthusiasm wherever he went. Thousands of persons of all social levels applauded him fervently, and in many of the places which he visited, almost always without seeking financial gain, he left behind a deep impression and an atmosphere of friendship.

I think that missions of this nature are more beneficial as concerns international friendship than many others, because they show the interest which exists in valuable men from the United States, such as Mr. Murray, coming to our people and bringing them a message of beauty.

I beg to remain,
Very sincerely yours,
FERNANDO DIEZ DE URDANIVIA,
Excelsior, Editorial Offices, Mexico City, Mexico.

(Translated by Elizabeth Hanunian, July 27, 1955.)

Mulligan Stew

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. QUIGLEY. Mr. Speaker, when this administration was huckstering itself into office in 1952 we heard a great deal of reference to an alleged "mess in Washington."

Despite all the campaign piety it now appears the administration has cooked up a few messes of its own. While the Dixon-Yates pot was boiling over on the front burner, no one seemed to notice the "Mulligan stew" on the back of the stove.

As a part of my remarks, I include three editorial viewpoints as expressed by the Carlisle (Pa.) Sentinel, an independent paper published in the 19th District of Pennsylvania; the Washington (D. C.) Post and Times Herald, an independent paper which supported President Eisenhower; and Labor's Daily, another politically independent paper which did not support Mr. Eisenhower.

The editorials follow:

[From the Carlisle Sentinel of July 25, 1955]

TALBOTT'S FOLLY

Harold E. Talbott, Secretary of the Air Force, has retained partnership in a New York engineering firm and has been receiving $50,000 a year, documents in the hands of the Kefauver subcommittee revealed.

Although Mr. Talbott takes the view that the matter is serious but is reconcilable, his view is highly questionable. During testimony before the subcommittee he admitted that he has been actively engaged in work for the firm while at his desk in the Pentagon, that he used Air Force stationery in his private business, that the concern is a survey type which does work for the Defense Department, etc., but that he does not consider that there is any impropriety in what he has been doing.

Federal regulation forbids anyone in the Cabinet from holding stock in, or working for any private firm. The Secretary told the subcommittee that if it does conclude his action an impropriety he will resign from the firm as of August 1 and "give" all his holdings to his partner. Although Mr. Talbott probably is not the first person of Cabinet rank to violate the Federal regulation and probably has company at the present time, he can offer no excuse for violating the law any more than can anyone else in or out of the Government.

If the subcommittee should decide to permit the Secretary to give his holdings to his partner and continue as a member of the Cabinet, the subcommittee would be condoning violations of law. No matter how good Mr. Talbott is in his position, he has proved that he is not trustworthy and should be requested to resign.

This also would be a good time for the subcommittee to investigate all the members of the Cabinet, starting with Secretary of Defense Wilson. If any of the others are found guilty of improper conduct in relations with private industry—or anything else—they also should be pressured to resign.

As mentioned, this is not the only Cabinet in which some members have and are ignoring the rules on relations with private industry, but it is too late to do anything about improprieties of former Cabinets. But there is more reason to believe that the present Cabinet is not obeying the regulation because the President has surrounded himself with men who in private life were industrial magnates and millionaires. Mr. Eisenhower has used his office to favor the big interests.

[From Labor's Daily of July 26, 1955]

(By Willard Shelton)

GIVE HIM TO MULLIGAN

The infuriating thing about the well-heeled gentlemen running our Government is the bland arrogance of their assumption that the things they do are proper and decent merely because they are the ones doing them.

Here we have Air Force Secretary Harold Talbott drumming up business for a private concern in which he shares as a partner, Paul B. Mulligan & Co.

Talbott writes letters to his partner Mulligan, encouraging him to see certain corporation executives to try to get some more business.

Talbott writes a west coast lawyer explaining that the only business the Mulligan Co. has out West is the Richfield Oil Co., and he hopes the lawyer will talk to Mulligan for an hour or so.

It is seriously suggested that people approached in this manner would have been unaware of the fact that Harold Talbott was a high administration official. Is it to be supposed that Talbott didn't realize that the approaches to the west coast lawyer, and the solicitations his partner Mulligan made to corporation executive, could not be separated—in the minds of the prospective clients—from Talbott's job as Air Force Secretary?

Talbott denies any intent of wrongdoing. He denies that he did anything wrong—although he was finally willing to "give" his partnership to Mulligan if the "gentlemen" of the Senate Investigating Subcommittee thought that would "help" the Air Force and the administration.

This is reminiscent of the wonderful statement of another well-heeled gentleman, Senator BRICKER, of Ohio, when he acknowledged that even though chairman of the Senate Commerce Committee he continued to share in the legal fees paid his private law firm by the Pennsylvania Railroad. "Everybody," announced the silver-thatched JOHN BRICKER, "knows I am honest."

Mr. Eisenhower's Director of the Bureau of the Budget, Rowland Hughes, has misrepresented and concealed facts about the Dixon-Yates contract. Sherman Adams, exalted assistant president, had the gall to intervene with a judicial hearing of a Securities and Exchange Commission examiner. Yet none of them seems to think he has done anything wrong.

What would have been the uproar if General Vaughan, Harry S. Truman's military aide, had written letters on White House letterhead drumming up business for a private partnership he held on the side?

What if a Truman Air Force secretary had spent his time drumming up private business among corporations with vast stakes in the economic and political decisions of the administration?

They would have been denounced as moral lepers, bringing into the White House and

subcabinet levels the corruption of the old Pendergast machine.

Should there be a different standard of public morality for Harold Talbott, just because he is a rich man and likes to think of himself, self-righteously, as a successful one?

Talbott belatedly remembered what he had previously denied—that the Radio Corp. of America questioned the propriety of his conduct regarding solicitations of business for the Mulligan Co. He belatedly remembered that he had got the Air Force counsel to intervene and argue with RCA officials about the propriety of his actions.

It would be a fine idea if the Senate Investigating Subcommittee, which has acted as if it wanted to sweep the controversy under the rug, would belatedly remember its own responsibilities—and send Secretary Talbott back to Mulligan.

[From the Washington Post and Times Herald of July 27, 1955]

THE HIGH AND THE MIGHTY

Secretary Talbott's position seems less and less admirable as the details of it are disclosed to the Senate Investigating Subcommittee. It appears that he not only drew $132,000 as his share of profits from a management engineering firm which did business with defense contractors but that he baldly pressured some of these contractors into using his firm's services. Whether or not this course successfully skirted the prohibitions of the conflict of interest statutes, as the Air Force Secretary and the Air Force General Counsel insist, they seem altogether unbecoming to a high Government official.

The Radio Corporation of America case pretty well tells the whole story. According to testimony before the subcommittee by Samuel Ewing, attorney for RCA, Mr. Talbott continued to press for a contract for his management engineering concern with RCA despite the strong doubts which the RCA attorney expressed as to the legality and propriety of such a contract. Mr. Ewing asserted that Mr. Talbott cited to him a list of other defense contractors doing business with the engineering concern and wanted to know "why RCA was acting so high and mighty."

Mr. Ewing and RCA deserve warm commendation, we think, for their part in this affair. Mr. Ewing's misgivings did great credit to his acumen as a lawyer and to his integrity as a citizen. No doubt, RCA, like other major bidders for defense contracts, must have felt some temptation to cajole or propitiate the Secretary of the Air Force by throwing a bit of business in the way of a firm in which the Secretary was interested. Its resistance of that temptation set an example which other defense contractors would have done well to follow.

Report on Foreign Aid to Reclamation and Power Projects in 22 Foreign Countries

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. MILLER of Nebraska. Mr. Speaker, in the past weeks, the CONGRESSIONAL RECORD has carried a number of articles under the catch line, "Bananas on Pikes Peak." The newspapers, magazines, and other advertising media have also brought to our attention the belief of certain organizations, and even Members of this Congress, that it is sheer folly to appropriate tax money to build the upper Colorado storage project.

We must assume that some of these Members recognize the benefits that follow from the irrigation and reclamation of arid land, and from using the water resources to produce power, because many of them have consistently voted for large appropriations to build such projects in foreign lands. During the life of the Marshall plan, the Foreign Operations Administration, and their successor, the International Cooperation Administration, the Congress has given more than $277 million to countries in Europe, the Far East, Near East, and Africa for irrigation, reclamation, and hydroelectric power projects. Some of the countries to receive these gifts are: Denmark, France, Greece, Iceland, Italy, the Netherlands, Portugal, Spain, Turkey, Austro-Germany, French Morocco, Korea, Formosa, Indochina, the Philippines, Thailand, Iran, Iraq, Israel, Jordan, Lebanon, Saudi Arabia, Egypt, Ethiopia, Liberia, Afghanistan, India, Nepal, and Pakistan.

We have given Italy more than $62 million to install steam plants and turbo generators.

We have given Formosa $24,474,000 for irrigation and hydro-power generators.

We have given Thailand more than $5.5 million for irrigation and reclamation, thermal power generation, rural power and surveys.

We have given Iran $3.4 million for dams, tunnels, wells, power, irrigation, and surveys.

We have given Lebanon $1,486,000 for water investigation in the Litani River Basin, wherever that is.

We have given Pakistan nearly $8.5 million for ground-water exploration and wells.

We have given India, who has both hands out, more than $57 million to build irrigation and power dams, and to conduct water surveys.

We have given Egypt over $2.5 million to investigate its underground water and to develop a desert range program.

There are, in all, 122 projects in foreign countries which owe their existence to appropriations from our Treasury. A complete table outlining these projects appears at pages A5151 and A5152 of the CONGRESSIONAL RECORD, under extension of remarks of the Honorable WINFIELD K. DENTON, of Indiana.

We have given these countries, and many more, a blank check on the United States Treasury, with instructions to build what they need and write a check for it, assuring them that the United States Treasury will make it good. This single phase of the foreign giveaway program has cost the people of the State of New York over $25 million, the people of Pennsylvania have been clipped to the tune of $19.5 million, and Californians have added about $20 million to the pile. It is only a small part of the $55 billion foreign-aid program we have been asked to support for the last 10 years.

Now when Egypt wishes to build a dam or install a generating plant, the Congress simply opens the Treasury and makes the funds available. No extensive survey is necessary, no plan report is required, and no congressional review is needed. We do not even demand a repayment contract, because repayment is not asked; and very little opposition is heard.

But, when a project that will develop the land and conserve the resources of America is brought to the Congress, the cry begins; and we have difficulty in getting even small appropriations for investigating and developing our own ground water supply, power facilities, and underground water wealth. As a result, our domestic stability is often sacrificed on the foreign altar.

There are certain facts about reclamation that are unassailable.

Domestic reclamation project costs are repaid to the Treasury; foreign project costs are not.

Domestic reclamation projects increase Treasury income; foreign projects do not.

Domestic reclamation projects create new United States wealth; foreign projects do not.

But, in spite of these facts, the Government has spent and given away more money to build irrigation, reclamation, power, and related projects in the far-off countries within the foreign-aid sphere than it has invested in reclamation projects within our own continental boundaries. And many Members of Congress continue to vote for these foreign projects and then vote against the projects in our own United States. It is nearly impossible to reconcile these two votes.

You might as well try to grow corn on the Sphinx.

A Plea for Water

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the most pressing problems facing this Congress and the Nation as a whole has been the problem of the conservation and utilization of our water resources. It is also one of the most controversial issues we, as legislators, are likely to meet because its solution undoubtedly depends to a large degree on interstate cooperation. This, all too often, has been greatly lacking. That this cooperation is a prime need, however, is more and more clearly recognized. As Gov. Robert B. Meyner said in a recent address before the National Rivers and Harbors Congress:

> Where an industrial region overlaps State boundaries, I believe the States involved should pool their resources in a combined effort to assure the full development of that region. There are city, county, and State lines. But we know that some problems overlap traditional political boundaries.

Because this speech is a real contribution to a sound approach to the problem of water conservation, I should like to include it, in full, as a part of my remarks. The speech follows:

REMARKS BY GOV. ROBERT B. MEYNER, 42D NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAYFLOWER HOTEL, WASHINGTON, D. C., MAY 31, 1955

Mr. Chairman and friends, I would like to express my thanks to your president, Congressman BROOKS, for inviting me to address this luncheon of the National Rivers and Harbors Congress. You have an imposing agenda to cover within the 2 days allotted for your convention, and I am gratified to know that you are again giving much of your attention to the question of whether local contributions should be required to help finance the cost of deepening the Delaware River Channel from Philadelphia to Trenton.

New Jersey's position on this question is quite clear. I have informed two subcommittees of the 84th Congress that we are unalterably opposed to the theory of local interests sharing the cost of such projects. Traditionally, the Federal Government has always borne the full cost of improving our navigable waterways. I conceive this to be sound national policy, and I know of no exception to it.

It is our conviction that the benefits from a deepened channel will be general in character and will pave the way for striking new advances in the already dynamic growth of the entire Delaware Valley. In addition to producing new wealth for the valley, a greater port for ocean traffic will also yield rich dividends for the rest of the country.

Yesterday I gave to your national projects committee a brief résumé of the reasons why we believe the 40-foot channel should be treated as a public-works project, to be financed solely by the Federal Government. Rather than bore you with a repetition of these arguments—I am sure most of you are familiar with them anyway—I would prefer to discuss with you today another problem which is also of great interest to this convention. I refer to the problem of water supply. Specifically I would like you to consider the possibilities of an integrated approach, on the part of all levels of Government, to the conservation and development of our water resources.

Since the earliest days of our history we Americans have been uniquely concerned with community growth and population figures. We are interested in new homes, new buildings, new industries. We invest heavily in the agents of expansion—in roads, bridges, railways, and port facilities. Rarely do we find a town so small that it does not have an active chamber of commerce or board of trade.

This traditional accent on growth, of course, has yielded handsome dividends in terms of our development as a nation. Without it we would never have advanced so far in realizing the potentialities of the American continent.

But it has also been a sad part of our history that, as our communities become overpopulated, our available resources are strained beyond their capacity. And we have done too little to maintain and conserve them. It is time for us to learn that we cannot survive as a nation if we continue to use up our natural resources faster than nature, with scientific aids, can replace them.

I am reminded of an analogy often used by a great conservationist with the interesting name of "Ding" Darling. He would ask his audiences if they ever played going to Jerusalem, a game also known as musical chairs. In this game the guests at a party march to music around a double row of chairs. The gimmick is that there are fewer chairs than guests. When the music stops everyone tries to sit down. But, of course, somebody generally sprawls on the floor or is left standing without a chair. Then another chair is removed, the music and marching starts again, and so on until there is only one chair left.

One hundred and fifty million people in this country have been playing the same game, except that, instead of chairs, we have been using land and water. In Europe the game has been going on for a long time, and millions of people are still looking for a chair to sit on.

Finding enough chairs to sit on calls for imagination, planning, and the adoption of good conservation practices. But often the application of these practices is difficult in a big, complex, impersonal society such as ours. Today we are members of groups so large that sometimes we don't understand all the relationships in which we are involved.

I trust you will forgive me if I draw upon our own experience in New Jersey to illustrate some aspects of this problem, particularly in the realm of interstate cooperation.

The development of adequate and new water supplies in New Jersey is traditionally a function of municipal government and private enterprise. But the State also has a vested interest. The State department of health, for example, is concerned with the public health aspects of water distributed to consumers by local purveyors. And the State public utility commission requires that the purveyors deliver the water in a satisfactory quality and quantity.

The State department of conservation and economic development also has a regulatory function, inasmuch as it controls the diversion of water for the protection of all interests concerned.

But because of periodic threats of serious water shortages, coupled with our increase in population and industrial expansion, the question arose as to whether municipalities can continue to handle the problem of an adequate water supply, or whether the State should develop sources of supply to meet the needs of local agencies.

An answer to that question has been proposed in the form of legislation authorizing the construction of 2 major water-supply projects, 1 for north Jersey at Round Valley, in Hunterdon County, and the other for south Jersey, on the Wharton tract.

Part of the Wharton tract has been purchased, but acquisition of Round Valley has been delayed by the State legislature, which set up a study commission to study the need for it.

Meanwhile, there has been some agitation for direct action on the part of several north Jersey municipalities directly affected by the water shortage. Just last weekend the State water policy and supply council was informed that six municipalities would undertake to pay for the development of Round Valley if the State legislature failed to provide the necessary funds.

I am convinced that the current confused status of our water supply is, in part, a reflection of our failures in interstate cooperation. This may appear to be an unnecessarily harsh judgment, especially to those who are opposed to Federal activity in the field of water. But the record, I believe, will support my statement. Permit me to cite, as an example, the history of Incodel—the Interstate Commission on the Delaware River Basin.

In 1936 representatives of the States of New Jersey, New York, Pennsylvania and Delaware decided that a federally controlled river basin patterned along the lines of the Tennessee Valley Authority was less desirable than an interstate commission which would be supposedly responsible to the States immediately concerned.

The plan advanced by Incodel would have established a four-State authority to utilize the waters of the Delaware River. The plan would have taken 15 years to complete, and its cost was estimated in 1952 at some $550 million. The prohibitive cost was one of the factors that blocked adoption of the plan.

When it became apparent that Pennsylvania was not going to approve the program, New York City decided to act. With the support of New York State, the city in 1952 asked the Supreme Court for permission to take 360 million gallons a day from the Delaware River. This was in addition to 440 million gallons which the Supreme Court had authorized back in 1931.

The neighboring States of New Jersey and Pennsylvania protested. But last year the Supreme Court granted New York City's request, with the proviso that the city must release sufficient water from its reservoirs during periods of dry weather to maintain certain minimum flows in the lower Delaware.

The Supreme Court decision also gave New Jersey the right to divert 100 million gallons of water a day out of the Delaware, provided that Pennsylvania enacted certain legislation and Congress approves the building of dams along the Delaware.

The decision gave Pennsylvania the right to build a dam in the Delaware River between Pennsylvania and New Jersey near Wallpeck Bend, and a diversion dam in the Delaware near Yardley, Pa. If and when Pennsylvania builds the Wallpack Bend Reservoir, New Jersey would have the right to utilize 30 percent of the developed water supply, provided that we pay 30 percent of the cost of the project.

The practical effect of the order was to persuade the State and city of New York that they could get along without the aid of Incodel. And the decision has left some unhappiness among its original sponsors.

With the cooperation of Governor Leader of Pennsylvania and Governor Harriman of new York, we in New Jersey will certainly give every consideration to the possibility of revising the original Incodel proposal.

Where an industrial region overlaps State boundaries, I believe the States involved should pool their resources in a combined effort to assure the full development of that region. There are city, county, and State lines. But we know that some problems overlap traditional political boundaries.

In an area where the interests of many communities are interrelated, it is only commonsense to think in terms of a broad interstate framework within which we can work out our own plans of development.

I am aware that a discussion of so broad a topic is likely to raise more questions than it does answers. But I am sure this convention will produce an exchange of provocative ideas and information which will lead to new approaches for coping with the problem.

Commemorative Stamp in Honor of Chief John Ross

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. FRAZIER. Mr. Speaker, I am today introducing legislation which would authorize and direct the Postmaster General to issue a special postage stamp in honor of Chief John Ross.

Chief John Ross was the leader of the Cherokee Indian Tribe from 1826 to 1866. The activities of Chief Ross and his family have made an indelible imprint on a number of States of the Union. My home city of Chattanooga is founded on the site of what was known for many years as Ross' Landing. This landing was the site of Ross' store and Ross' warehouse. The store was established before 1810.

Because of the close association of Chief John Ross and the Cherokee Indians with the establishment of Chattanooga there has been a great deal of interest developed to find some means of properly recognizing his contributions to American history.

Miss Zella Armstrong and a group of interested Chattanooga citizens have purchased a statue of John Ross and plan to dedicate it this fall. Present scheduling indicates that it will be dedicated on October 3, 1955. Accordingly, my bill will provide that the first day of issue of the Chief John Ross stamp will be October 3, 1955, at Chattanooga, Tenn.

Mr. Speaker, under permission to revise my remarks, I include a statement covering the activities and life of Chief John Ross taken from a printed history of Hamilton County, Tenn.:

CHIEF JOHN ROSS

John Ross, principal chief of the Cherokee Nation for 40 years, is one of the most interesting characters in American history. He served his people in public life for 57 years; from the time he was 19 years of age until his death. The history of the Cherokee Nation during this period is synonymous with his history, and the continued confidence which the Cherokee people displayed toward him, even when he was humiliatted and discredited by the white men, was a tribute to his character.

His nephew, Joshua Ross, wrote the following letter which gives many details of his life and character:

"John Ross was born October 3, 1790. He died in Washington, D. C., August 1, 1866, while representing the Cherokee Nation.

"He was a grandson of John McDonald, an Indian trader who was a member of Clan MacDonald Inverness, Scotland. His grandmother was Anna Shorey, of the Cherokee Bird Clan.

"The good influence of John McDonald saved many American lives during the Revolution, and after the War, from the hands of the Spanish and English and the Indian warriors in the valleys and mountains of Tennessee.

"It is said that he saved the life of Daniel Ross, of Sutherlandshire, Scotland, who crossed the ocean when he was a boy. His mother died on the water and was buried at sea. The orphan boy landed at Baltimore, Md. When he wass a little older he joined Mayberry's Trading Expedition and set out for the Tennessee country.

"John McDonald made young Ross a clerk in the trading house which he had established, and in time gave him his daughter, Mollie McDonald, for a bride.

"Daniel Ross became a merchant and trader like his father-in-law and when his children were of school age he employed a teacher and conducted a private school for his children, the third of whom was the afterward famous chief, John Ross.

"At the age of 19 (1809) John Ross was intrusted with an important mission. He was sent by Col. Return Jonathan Meigs—United States Agent to the Cherokees—to the Western Cherokees, who were then located at the Dardenelle Rock on the Arkansas River.

"From that period to the close of his life, excepting 2 or 3 years, he was in the constant service of his people, furnishing an instance of confidence on their part and fidelity on his which has never been surpassed in the annals of history.

"In 1813 and 1814 he was adjutant of the Cherokee Regiment under General Andrew Jackson against the hostile Creeks. He was present at the battle of Te-ho-pe-ka, where the Cherokee Regiment under Col. Gideon Morgan rendered distinguished aid.

"In 1817 he was elected senator to the National Council of the Cherokee Nation. His first duty was to prepare a reply to the United States Commissioners who were present for the purpose of negotiating with the Cherokees for their land east of the Mississippi River.

"On the 26th day of October 1818, the name of John Ross appears as president of the Cherokee Senate attached to an ordinance which looked to the improvement of the Cherokee people, providing as it did for the introduction into the nation of schoolteachers, blacksmiths, merchants, and others. John Ross continued to act as president of the Cherokee Senate from that time until 1826.

"In 1827 he was assistant chief and president of the convention which adopted the constitution for the Cherokee Nation. This was the first constitution for regular government ever carried into effect by any Indians of North America.

"From 1828 to the removal of the Nation he was the principal chief of the Eastern Cherokees, and from 1839 to the time of his death he was principal chief of the United Cherokee Nation.

"William P. Ross, his nephew, said of him: 'Blessed with a fine constitution and a vigorous mind, John Ross had the physical ability to follow the path of duty wherever it led. No danger appalled him. He never faltered in supporting what he believed to be right, but clung to it with a steadiness of purpose which could have sprung only from the clearest conviction of rectitude. He never sacrificed the interest of the Nation to expediency. He never lost sight of the welfare of his people. For them he labored daily during a long life and upon them he bestowed his last expressed thoughts. A friend of law, he obeyed it; a friend of education, he faithfully encouraged schools throughout his country and spent liberally of his means in conferring it upon others; given to hospitality, none ever hungered around his door; a professor of the Christian religion, he practiced its precepts. His works are inseparable from the history of the Cherokee people for nearly half a century, while his example in the daily walks of life will linger in the future and whisper words of hope, temperance, and charity to generations yet to come.'"

Draft of a Statement Issued by the Committee for Aiding the Defense of the Bern Young Anti-Communists

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of a statement issued by the Committee for Aiding the Defense of the Bern Young Anti-Communists which was furnished me by Mr. Mihail Farcasanu, president of the League of Free Rumanians. The Members will recall that these are the four Rumanians who for a short time seized and occupied the Rumanian Communist Legation in Bern last February. I understand their trial is to take place in Switzerland in the near future:

The Soviets' barbaric tyranny in Eastern Europe and their ruthless subversive methods in the free world, have not yet been able to crush the spirit of anti-Communist resistance on both sides of the Iron Curtain. The slave labor camps, deportations, mass massacres all over the Red prison of nations, the assassinations in the Katyn Forest and all the other crimes against freedom and human dignity, which are going on even today, have not extinguished that burning flame of resistance in Eastern Europe, nor has the new campaign, waged by the Soviets among the exiles, of intimidation through blackmail and murder, shaken the faith and determination of the refugees.

But this overwhelming criminal pressure brought to bear both on the captive peoples themselves and on the escapees, has driven them to the verge of despair. Two years ago the despondent people of East Berlin attacked with their bare hands the oppressor; this year young anti-Communist refugees rising in utter desperation, raided a Communist Legation in Bern, Switzerland, exposing its subversive activities. These explosions of the strangled urge for freedom should be taken into serious consideration as they are warning signals of a general situation and not just isolated cases. In fact incidents such as that of Bern, are the expression of the deep instability, misery, and tension created by the Soviet aggressive intrusion in the free countries of the Eastern part of Europe and by the shortsighted indifference shown by the free world. After long years of Soviet despotism and Western abandonment, these people are reaching the end of their tether.

Moscow is at this precise moment waging a powerful propaganda campaign to recruit among the unsettled, bitter and frustrated refugees, those desperate enough to accept repatriation with assurances of forgiveness and good jobs. The real aim of the Soviets in this maneuver is to get a corps of anti-Western, especially anti-American propagandists, as being direct witnesses of the failure of the West in dealing effectively with the problem of those who had chosen freedom. There is no doubt that the Soviets badly need new instruments of propaganda to keep down the fermenting discontent behind the Iron Curtain and to kill the ever renascent hope in the West. But neither is there much doubt that the program for handling the refugee problem is clearly inadequate.

There is therefore a most urgent need to strengthen the badly strained morale of both the enslaved and the refugees. We are upholding this cause as being of vital importance in the battle for men's minds. We must give comfort and encouragement to those who, fighting for freedom, are serving as well the best interests of the United States. Such are the young patriots in the Bern incident who courageously tore off the mask of Red diplomacy. They are awaiting trial in Switzerland and we are sure that the Swiss courts will grant them a fair trial in accordance with their laws, product of a life of freedom and normalcy. But our purpose is especially to draw the attention of the public to the tragic background of the abnormal existence of terror and enslavement in which lies the motivation of their action.

The Soviet subjugated peoples have no longer the possibility to express their will, as they are the object of the most intolerant totalitarian rule. The technically legal facade, such as constitutions on the Soviet pattern, peace treaties, diplomatic relations, etc., corresponds in no way with the rights and free will of the people. As a matter of fact the people are deprived of all normal legal channels of expressing their feelings or defending their interests. As it has happened in the significant moments of history under such circumstances, the natural inalienable rights of man are asserted by the

resistance to oppression. The people, seeing that all legitimate juridical ways of defending their liberties have been denied them, are making use of the means forced on them by the very slavery to which they have been reduced, namely passive resistance, sabotage and direct action. The incident in Bern is due to this tragic situation in which the victims of tyranny are compelled to make use of their sacred right to resist oppression.

It is tyranny, persecution and the fake legality of totalitarian conformism, which push people to insurrection, rebellion and violence. It is indeed by now established that the "law" in the Soviet orbit is the mere instrument of absolute dictatorship. The American people as inheritors of the Declaration of Independence feel deeply that the honor and dignity of the captive peoples are not in their comformity to this fake Communist legality but in their very acts of revolt and violence against the oppressor. This is the real and dramatic background which caused the action of the young exiles in Bern. Aiding in their defense by giving them our moral support, we recognize the spirit of resistance and self sacrifice which animates them and all their like behind the Iron Curtain.

We appeal to our public to give its traditional understanding to these brave young men who, in their fight for freedom, lost both home and country, and thus bring a message of encouragement and hope to all our secret allies, the captive peoples.

Polish Primate's Fate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. FLOOD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barrer Times-Leader of July 26, 1955:

POLISH PRIMATE'S FATE

While Joseph Cardinal Mindszenty has been "temporarily" released by the Hungarian Communist regime, the fate of Stefan Cardinal Wyszynski Primate of Poland, continues a mystery. A certain number of imprisoned priests and a few Bishops have been released in Poland, but the majority, and with them Cardinal Wyszynski, have not regained their liberty. Moreover, it is said that the Communist Warsaw regime is putting pressure on the Cardinal to have him adopt a conciliatory attitude toward communism.

The matter was discussed by Federico Alessandrini in Osservatore Romano in an article headlined, "Where is Cardinal Wyszynski?" The article mentions rumors about Cardinal Wysznski's severe illness and operation. Alessandrini adds that rumors also have it that the Cardinal is being subjected to pressure and cajolery in order to induce him to make a declaration that Catholicism in Poland enpoys full freedom.

In connection with the Osservatore Romano article, it is worth recalling that rumors concerning Communist efforts to break Cardinal Wyszynski's resistance reached the West at the end of the winter. At first, the Communist provocateurs are said to have made the following proposal: Primate Wyszynski will be released immediately if he goes straight from his prison to the airport and leaves for Rome, where he will take up residence. The primate categorically refused.

Now it is said they propose to set him free and allow him to return to his diocese, conditioned on his issuing a declaration that his former enunciations concerning the persecution of the church in Poland did not take into consideration the picture of Poland's reality as a whole and that now, having taken everything into consideration, he can declare that the church in Poland is not persecuted and that there is complete religious freedom.

The true reason for all these different Communist approaches lies in their fear of setting him free and of the enthusiastic reception he would get from the people of Poland. This prompted them first to suggest that he leave Poland, and now that he issue a declaration which would greatly weaken his prestige among the faithful. Incidentally, such a declaration would serve as a propaganda weapon to convince Catholics abroad religious freedom exists in Poland.

Military Program Half Finished

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. WILSON of California. Mr. Speaker, for nearly 10 years the military services of this Nation has suffered repeated cutbacks and reductions in the traditional benefits that heretofore had been recognized as essential to good morale and esprit de corps.

As a result, career service in the military lost much of its attractiveness for officers and enlisted personnel. Reenlistment rates reached a record low last year. Cadet and officer resignations were at a high peak.

The trend was finally reversed by Congress last year. Household goods shipping limits were increased. The Warrant Officer Act and Reserve Officers Promotion Act corrected inequities in certain ranks. Restrictions on promotions and resignations were eased. A reenlistment bonus was approved. The Housing Act gave career personnel attractive terms for buying houses, similar to GI benefits, and 11,000 new homes were authorized for on-base family housing.

This session of Congress has produced additional legislation of benefit to the services. The Career Incentive Act of 1955 gave much-needed pay increases and substantial pay adjustments at critical points in career military service. Hazardous-duty pay and other special benefits were also added. The national Reserve plan, to greatly strengthen the Reserve forces, was enacted. Seventeen thousand additional houses were authorized for military families.

The House of Representatives, to date, has passed two highly desirable bills to further improve career military service. The Survivors Benefits Act will be a major step in assuring career service. A special retirement income-tax exemption has also passed. Both of these bills await action in the Senate.

Much credit for support of this legislation must go to the various organizations interested in improving our military posture. The Retired Officers Association, Fleet Reserve Association, Navy League, Reserve Officers Association, and many such groups have been instrumental in organizing support for beneficial legislation we have passed.

But we must not stop with the job half done. Much more legislation is needed, particularly in the field of medical care for dependents and military housing. The investments we make now in building a long-range career military structure will pay off in better defense and more efficiency.

An enlightening editorial on this subject appeared in the New York Times on July 27, 1955. Under unanimous consent, I include it as a portion of my remarks:

FOR THE ARMED FORCES

Some measures to improve military morale and to increase the attractiveness of a military career have been enacted at this session of Congress. Service pay has been increased; a $254 million housing plan for 17,000 service homes has been approved, and other needed legislation has been passed.

But the "package program" envisaged by the Pentagon as an important part of the process of revitalizing the regulars and making the services desirable careers has by no means been completed. One of the most important pieces of legislation—the survivors benefits bill, which liberalizes survivors' pensions, eliminates inequities and replaces an obsolete complex of out-of-date legislation with a single law—has been passed by the House but not by the Senate. Various plans to standardize, improve and insure medical care of service dependents have been studied, but no action has been taken. A bill to eliminate a discriminatory provision of the Internal Revenue Act, which operates only against retired military personnel, is still languishing in the Senate. A bill which would credit cadet and midshipman service (at the service academies) as active duty service for longevity pay purposes has had no congressional action, athough this legislation, sponsored by the Department of Defense, simply eliminates an existing discrimination against the regular career officer.

The current session of Congress is approaching its 11th hour. Another year's delay in the enactment of legislation vital to the services can result only in the loss to the Nation of many valuable and irreplaceable officers and noncoms. The military career legislation now pending should be enacted before Congress adjourns.

Aid for FDA

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mrs. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the St. Louis Globe-Democrat of July 24, entitled "Aid for FDA." I am calling this to the attention of the Members in order to emphasize the great need for increasing the appropriations of the Food and Drug Administration. The article follows:

AID FOR FDA

Until the Federal Food and Drug Administration stepped on the scene, Americans had none to blow the whistle on unscrupulous food and drug makers who turned out products unsafe for public consumption. Since then, however, the FDA agents have done a first-rate job of policing the food and drug industries—within the limits of their ability.

Last month, however, a 14-man citizens' survey group announced that the FDA is woefully understaffed to do the big job cut out for it. The committee, whose chairman was G. Cullen Thomas, vice president of General Mills, knew the field in which FDA works and the problems with which it must cope.

Its members urged that FDA's modest budget be stepped up threefold to fourfold in the next 5 to 10 years. Last year, Congress gave it $5,100,000. The commission urged that this sum be increased 10 to 20 percent in the new fiscal year.

Representative LEONOR SULLIVAN, St. Louis Democrat, has introduced a bill that would carry out this recommendation. In the past, Congress hasn't leaned over backward to give the FDA the money it needs to carry out its job of protecting the public. The House should give the Sullivan bill the green light it merits.

Russia Spends $2 Billion on Exporting Culture, an Amount 700 Times Greater Than the Amount Spent by the United States

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the Russian Government has spent $2 billion on international theater exchange since the end of World War II, while the United States has spent less than $3 million.

The Senate this week appropriated the full budget estimate of $6 million for the President's emergency fund for international affairs, a step recommended by the Senate Appropriations Committee. The Senate committee, whose chairman is the great CARL HAYDEN, of Arizona in its report to the Senate urged that hereafter this item be presented in the regular budget estimate.

I join with Senator ALEXANDER WILEY, of Wisconsin, in hoping that the Senate-House conference committee will abide by the Senate's decision and provide the full budget request for the export of American culture.

I include a number of relevant articles on the success of our cultural export program to date:

[From the Saturday Review of July 30, 1955]

AMERICAN CULTURE FOR EXPORT

The conception held abroad in almost every country that the United States is undoubtedly a fabulously wealthy nation but that it lacks any of the cultural aspects of life is rapidly disappearing. That it has lasted so long has been our own fault, for until this year we have done little or nothing to put an end to it. Even a nation so enlightened as France has judged us by the motion pictures we have sent abroad, by translations of our novels, and by the more lurid aspects of American life revealed in our newspapers. Frenchmen may have admired Hollywood's lavish technique, but films have given the impression that our people live in gaudy mansions, behave like gangsters, drive around the country in enormous automobiles. Europeans may have recognized that our foremost writers deserved the acclaim they have received, but they knew the South only through William Faulkner's novels, the Middle West as it was interpreted by Sinclair Lewis and later neonaturalists, and the Far West through John Steinbeck's Grapes of Wrath.

Our first attempt to present a different aspect of American culture was launched in January by ANTA, the American National Theatre Academy, sponsored by our State Department, and hailed by President Eisenhower, who predicted that it would be of vast significance to the cause of friendship and understanding between the people of America and Western Europe. Most of the funds necessary for the project were raised from private sources. Known as Salute to France, ANTA offered a 2-month program—the theater, the ballet, the Philadelphia Orchestra, and an exhibition of 50 years of American art which drew an average daily attendance of 2,500 people.

"Salute to France" closed on July 7 after 2 successful months, headlined by Judith Anderson in her favorite role in Medea, the Rogers and Hammerstein musical, "Oklahoma, Thornton Wilder's The Skin of Our Teeth, the New York City Ballet directed by George Balanchine, and three concerts of the Philadelphia Orchestra conducted by Eugene Ormandy. This large and expensive enterprise has indeed exceeded the hopes of its founders. It was a magnificent answer to anti-Americanism, which as Robert Sherwood said "has drenched the people of Europe with propaganda, first by the Nazis and then by the Communists, an answer which says in effect, 'the Americans have money, they have power, but they are uncultured barbarians'."

"Salute to France" was conceived in June of last year. A letter had come to the attention of ANTA through diplomatic channels stating that the Minister of Fine Arts of France had suggested to Ambassador C. Douglas Dillon that in the spring of 1955 America might stage a great festival of the arts in Paris. ANTA was at the same time informed that our Government had no funds available for so expensive a project, but was asked politely if it would assume the responsibility of raising the necessary funds and directing the entire festival. The French Government offered to provide the necessary theatres, fully staffed, and without charge.

To the average American it might appear that since the United States Government has spent billions of dollars to revive the economy of many foreign nations, it might be induced to hallmark a few hundreds of thousands of dollars to continue a venture which has proved its value. Indeed, President Eisenhower in his State of the Union message to Congress last year proposed the establishment of a Federal Arts Commission to encourage artistic endeavors. "In the advancement of the various activities which will make our civilization endure and flourish," he said, "the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities."

It would seem to be reasonable that, if his idea is accepted by the Government, part of the necessary funds should be used to send examples of American art and culture to every country where it would be acceptable. But whether or not his suggestion is accepted, ANTA's foreign venture in Paris and elsewhere has led to worldwide cultural efforts. The Gershwin-Du Bose Heyward operetta, after a tour in Yugoslavia, Greece, and the Near East, opened in the Municipal Theatre in Rio De Janeiro on July 9, where it was received, according to The New York Times, with "thunderous applause." It was also the greatest social event of the season. Last May the Symphony of the Air ended a triumphant tour of the major cities of Japan. According to a press report a Japanese critic wrote that he did not believe there have been any musicians from abroad "who have so successfully grasped the heart-strings of the Japanese people." Thousands of people lined up at box-offices a day in advance, sleeping on the ground wrapped in quilts. The musicians were flown to Okinawa and Korea. This was only the beginning of the Symphony's Far Eastern tour, which was extended two weeks to play in Bangkok, Singapore, Colombo, Kaula Lampur, Manila, and Hong Kong. The tour was sponsored by ANTA's Exchange Program.

A conception which has in so short a time proved that other nations, aside from Russia, are eager to know more of American culture, that they will welcome our actors, dancers, and musicians, will applaud them if they deserve it and treat them handsomely in the press, should be given every opportunity to expand and to prove once and for all time that we do not deserve the reputation of being a country without culture of any significance. The day may come when Russia and the United States will exchange their art, their drama, music, and ballet. The revelation of their different cultures may prove to be a better key to co-existence than armies and atomic weapons.

SAO PAULO, *July 20, 1955.*

To: Secretary of State.
From: McArdle.
Re Department's Circular 13, July 7.

Porgy and Bess opened Sao Paulo, July 16, overwhelming success.

Quotations critics:

O Estado de Sao Paulo: "Opening of Porgy and Bess undoubtedly marked high point of the artistic season—Porgy and Bess is the true tradition of opera, born within the theater—a miracle that would not be possible without the truly exceptional technical progress of the North American theater—if some day opera should have a rebirth, critics are beginning to realize that it will be in the United States—not only an extraordinary and unforgettable spectacle but equally a work of art—everyone has something to admire and to learn in Porgy and Bess: The musician, the scenarist, the actor, the choreographer, the poet, the technician—it is for the people; it is the richest and most imaginative entertainment one could desire."

Correio Paulistano: "A marvelous spectacle."

Folha da Manha: "The (theater) Santana is living sweet moments with the Gershwin opera."

Ultima Hora: "As we expected Porgy and Bess impressed us greatly—a spectacle not to be missed."

Noticias de Hoje (columnist): "A finished production of high-technical standard, presenting good voices and interpretations, dances, and direction worthy of unrestricted applause. What is to be lamented is the fact that Gershwin did not live long enough to ripen his art and prove the feasibility of a national opera, based on the different aspects of the life of the North American people. The deep divergence and irremediable antagonism existent between these very people, anxious for emancipation, economically and politically, and the Government of the United States, openly and rigidly subordinated to the interests of imperialist capital, does not prevent our accepting in friendly fashion, an

opera that, in spite of innumerable limitations, is undoubtedly an authentic work."

KUALA LUMPUR, *July 13, 1955.*

To: Secretary of State.

Re Symphony of Air appearances Malaya:

Press and public loud in praise of performances and Government support cultural attractions. Letter to editor Straits Times, June 23 "will the United States give us more? I wish to thank the State Department of the United States for making possible the concerts by the Symphony of the Air for the public of Singapore. It is a pity that the American flag was not displayed behing the orchestra to remind the listeners that we were all enjoying the beautiful music through the courtesy of the United States Government. If the policy of the United States is to encourage a better understanding and good will in Asia, this was one of the important steps toward the goal. We hope that this will be only the beginning of the display of American cultural progress."

Headline Singapore Standard, June 21, "School Children Listen Spellbound to Hendl's Symphony of the Air." Malaya Mail editorial June 22, "A Welcome Visit. The visit of the American symphony orchestra to Kuala Lumpur was more than being an outstanding event in the cultural life of the town and immediate area. To begin with it was a first-hand demonstration of good international relations and was evidence, if evidence is needed that in cultural as in many other directions there is more that unites us than divides us. The orchestra itself while comprising American citizens drew on a dozen or more countries of origin evidence again that those who take a fatalistic attitude toward racial problems (which can arise as easily in the West as in the East) can prove wrong. Good as it is for growing Kuala Lumpur—growing in maturity as well as size—to have a visit of the size and importance of the Symphony of the Air yet it has to be remembered that the financial implications are by no means simple. Despite the by no means trifling charges of admission to the Chinwoo on Monday night the takings will fall very short of the expenses involved and Kuala Lumpur folk who had a good evening's entertainment must not forge the substantial subsidy which came from friendly but foreign taxpayers."

Singapore Standard, June 23. Editorial "Musical History: Musical history was made in Malaya with the performances in Singapore and the Federation by the New York Symphony of the Air orchestra during their all too brief tour of this country. The ovation which this company of 92 musicians received at every concert is a tribute to their contribution to the world of music. Music lovers, and even those to whom 'high brow' music is not so palatable, came away from the concerts wishing that they could have sat and listened on and on for many more hours." Straits Times, June 22: "Chenwu Hall rocked by lusty applause * * * Tired Hendl gives an encore." Malaya Mail, June 21: "Eastern audiences inspire musicians." Full reports and press clippings already dispatched.

[From the Dallas Times Herald of July 4, 1955]

BEWILDERED BY FAR EAST TOUR, HENDL SEES A RETURN POSSIBLE

SAN FRANCISCO, July 4.—Dallas Symphony Conductor Walter Hendl returned to America Sunday, weary from the pace of a 9-week Far East tour that took him some 40,000 miles with the famed Symphony of the Air, but jubilant over the reception given the orchestra throughout the Orient.

He described the enthusiasm of the symphony's Asian audiences as "almost unbelievable," adding:

"Music is a food for Asians—something they cannot seem to get enough of. In Japan, for instance, we could have played to full houses every night for a year's time. It was the same wherever we went."

NINE COUNTRIES

Hendl said that the symphony drew audiences numbering from 4,000 to 20,000 in 9 Asian countries—Japan, Korea, Okinawa, Formosa, the Philippines, Thailand, Singapore, Malaya, and Ceylon.

"Five thousand children came to hear us in Colombo, Ceylon," he said, "and some of them had come as far as 250 miles by bus.

"In Seoul, Korea, 14,000 Koreans came to hear us. Another 3,000 crashed police lines and nearly turned over my car, trying to get autographs. I had to change clothes and sneak out in disguise later. And this had to do with music, not just me. The fourth clarinet player got the same treatment."

WEST MEETS EAST

Hendl said the symphony played standard Western symphonic music throughout the Far East tour bringing it to Asian audiences for the first time in a majority of cases.

He said that in Kuala Lumpur, Malaya, for instance, a city he described as a "fabulous place—a city in the middle of a jungle"—the symphony played Beethoven, Brahms, and Tchaikovsky, "and the audience went wild."

Hendl said he was just beginning to put the Far East tour—his second in 2 years—into perspective.

POWERFUL VOICE

"But here is something I have got out of it," he said. "In the East—the Orient—the making of music is just beginning. I believe that in the 20th century the arts will establish themselves as a powerful voice in the understanding of peoples.

"In the making of music, we were friends. There was a closeness there that I believe has not been established over the diplomatic tables."

Hendl said that a return visit to Asia was very possible late in the summer, before he opens his seventh season with the Dallas Symphony, the second week in November, but the idea has not yet thoroughly jelled. He would travel alone in that event and conduct Asian symphonies.

CHAUTAUQUA NEXT

First, however, he is booked for 24 summer concerts at Chautauqua, N. Y., July 16 through August 26.

Hendl arrived at Travis Airbase, north of San Francisco, from Japan early Sunday and then motored to San Francisco where he planned to spend "at least a couple" of days. He said he had not yet made specific arrangements but would probably head eastward to Dallas later in the week.

"First," he said, "I have to get some sleep."

[From Time magazine of July 18, 1955]

SYMPHONY IN THE AIR

Back in the United States last week was a 92-man team of ambassadors to the Far East. Behind the Symphony of the Air lay a 42-concert tour of Japan, Korea, Okinawa, Formosa, the Philippines, Thailand, Malaya and Ceylon that endowed the United States with musical glory and cultural good will, and provided the indefatigable 92 with 8 weeks of experiences that will give them anecdotes for years.

They flew the 30,000 miles mostly aboard Military Air Transport Service and Air Force planes. Unpressurized cabins brought ear trouble. There was a running gag of one violinist asking his neighbor, "How did I play tonight? I couldn't hear myself." One flight, between Tokyo and Seoul, ran into a storm so Wagnerian that everyone but Director Don Gillis became violently ill. Gillis, with an oxygen tank but no mask, dashed up and down the plane spraying groaning musicians in the face with oxygen. "It may or may not have helped," he says.

UNSTUCK

Far Eastern atmospherics were punishing to Western instruments—and instrumentalists. The glued parts of viols and woodwinds regularly came unstuck; humidity snapped the strings of three violas during Beethoven's Eroica in Ceylon. The heat could untune a piano half a tone in 2 hours and rot a dress suit in a matter of days. In Bangkok, with a temperature of 105° onstage and no fans, United States Ambassador John Peurifoy came backstage to insist that the men take off their white jackets. After that they often played in shirtsleeves, delicately abandoning suspenders in favor of belts. In Manila an enthusiast presented them with sport shirts decorated with pictures of Maestro Arturo Toscanini, who trained the orchestra (as the NBC Symphony), and left in the spring of 1954.

As the tour progressed, the musicians, in Panama hats, sport shirts, and shorts, began to look less and less like a symphony orchestra. Most of them bought cameras and camera equipment in the PX's; some went about festooned with 3 cameras. So avid was the search for souvenirs that the airplane pilots would kid them: "Just tell us the next time you guys are going to buy another 2,000 pounds of stuff so we can get lighter by feathering the props."

CONVERTED

Everywhere the reception was enthusiastic—even from people who had never heard live Western music, e. g., the Okinawans, who kept moving their heads to see where each new sound was coming from. In one community, between Kobe and Osaka, Conductor Walter Hendl, 38, stepping outside between numbers for a breath of air, discovered hundreds of Japanese who had been unable to get in standing with their ears pressed to the wall.

"I'm going back," said Pianist Hendl last week. "Probably before the end of this year I'm going back by myself. Whatever I am capable of contributing to Eastern culture in the way of Western music, I want to contribute. The tour we just concluded clearly affirms something I've always believed: that the greatest of music, which transmits the greatest of human messages, is understood everywhere."

Wheat or Controlled Acreage for Feed and Seed Purposes

EXTENSION OF REMARKS

OF

HON. ROBERT D. HARRISON

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include letters of Secretary Ezra Taft Benson and Mr. Peterson relative to growing wheat on controlled acres for the purpose of feed and seed without being subject to the penalty provisions of the present agriculture act:

SECRETARY BENSON ISSUES STATEMENT ON WHEAT QUOTA VOTE

UNITED STATES
DEPARTMENT OF AGRICULTURE,
Washington, June 26, 1955.

Secretary of Agriculture Ezra Taft Benson today issued the following statement concerning the action of wheat growers in approving marketing quotas on 1956 production in the national referendum of June 25:

"Approval of marketing quotas on 1956 wheat production by more than the required majority of wheat growers voting in Saturday's referendum means that the level of support for next year's crop will be at not less than 76 percent of parity, or $1.81 per bushel, national average. To be eligible for this price support, farmers are required by law to plant within their acreage allotments. While approval of marketing quotas will undoubtedly result in substantially smaller 1956 wheat production than otherwise would have been the case, the problem of accumulated wheat stocks remains an extremely serious one. The United States wheat carryover on July 1 of this year is estimated to be a record 1,030,000,000 bushels, with virtually all of it owned by the Government. The indicated wheat harvest for 1955 will bring total supplies to a level high enough to meet domestic demands, plus foreseeable exports, for more than 2 full years.

"In this situation, the Department will continue its several programs aimed at achieving maximum practicable exports of wheat and flour.

"In order to improve the quality of wheat produced and reduce controls over production and utilization, the Department intends to:

"1. Undertake to place in effect upon the 1956 wheat crop appropriate discounts in price suports for certain designated varieties of wheat, especially those suitable primarily for feed purposes, in an effort to improve the quality of the wheat crop.

"2. Continue efforts to secure favorable congressional action authorizing the Secretary to broaden the noncommercial wheat area. In this area growers are not subject to acreage control. Supports are set at 75 percent of the rates within commercial areas.

"3. Continue efforts to secure favorable congressional action on legislation now before the Congress to exempt wheat growers from marketing-quota penalties if all the wheat produced on their farms is used for feed or seed on the farms where produced.

"4. Request legislative extension of special durum acreage provisions for the 1956 crop. Despite the excessive stocks of wheat, available supplies of durum wheat, used mainly for spaghetti and macaroni, are expected to continue short.

"5. Give special consideration in the months ahead to programs which will further encourage farmers to make needed adjustments in their pattern of land use. This would be both on land ill-suited to crop production and on better lands where it would be advantageous to shift a part of the acreage to hay and pasture. The program now being developed for the Great Plains is an example of this."

At a meeting in Algona, Iowa, on October 7, 1954, Secretary of Agriculture Ezra Taft Benson made the following remarks regarding the question of production controls for wheat which is grown by farmers for feeding on their own farms:

"You may have read recently of farmers who protest acreage limitations on the production of wheat which they are growing for feed. Many of these farmers want no price support on their wheat or other crops; they feel that they should be permitted to grow wheat for feed on their own farms without acreage limitations and without penalty.

"I am sympathetic to this point of view, but the law is clear and its constitutionality was upheld in Wickard against Filburn (317 U. S. 111 (1942)). When marketing quotas for wheat had been voted, those who harvest wheat in excess of their allotments are subject to penalty, whether they sell their wheat in the market or whether they feed it on their farms. I have pledged to administer the law, and I shall do so to the best of my ability.

"I urge farmers to comply with the law as it now exists.

"But when Congress next convenes, I hope they will review this provision of the law which was enacted about 13 years ago. It has been the law ever since. In preparation for any review by Congress I am seeking advice on what changes are practical so as to permit the production of wheat for feed, wthout penalty, if no wheat is sold and farmers do not desire price support on other crops.

"It is the objective of this administration that farmers be permitted to operate their farms with a maximum of freedom. It was this objective which led me to recommend the relaxation of the total acreage allotments to help meet drought conditions. We will enlarge the area of freedom and responsibility in the operation of our farms whenever this can be done without impairing the effective functioning of our farm programs."

JULY 1, 1955.

Hon. SAM RAYBURN,
Speaker, House of Representatives.

DEAR MR. SPEAKER: On June 25 the wheat farmers of the United States voted to continue marketing controls as provided for in the Agricultural Adjustment Act of 1938. The Department of Agriculture believes that the law could be amended to improve the wheat program in certain instances and therefore recommend congressional action as follows:

1. We recommend that the present exemption of durum wheat be extended 1 year. There has been a shortage of this type of wheat and the liberalized allotment will help meet the need for increased production. Public Law 8 signed by the President February 19 was for 1 year only.

2. We aagin recommend enactment of the legislation that is now before the House Agriculture Committee that will exempt wheat growers from marketing quota penalties if all of the wheat produced on their farm is used for food, feed, or seed on the farms where produced. This "feed wheat" provision would remove a program inequitay and permit greater freedom of operation on those many farms that do not produce wheat for sale. S. 46 has been passed by the Senate.

When passed by the House we recommend including food use along with feed and seed. There are farms and institutions where wheat is produced and milled locally for consumption on the farm or in the institution where grown.

3. We recommend legislation that will authorize expansion of the non-commercial wheat areas beyond the 12 States now in this classification. This would provide greater flexibility in "marginal" regions where wheat is not a major crop. There are bills now pending that include this provision.

4. We recommend that the Congress give consideration to legislation that would authorize the Secretary of Agriculture to dispose of not to exceed 100 million bushels annually of low grade wheat for feed at prices 10 percent above the support price for corn.

Closely associated with the above recommendations, but not needing legislation, is the Department of Agriculture's study of the effect upon 1956 wheat crops if discounts for price supports for certain designated varieties of wheat, especially those suitable primarily for feed purposes, are put into effect in an effort to improve the quality of the wheat crop. These discounts, as well as quality premiums recognized in the past, can be imposed by administrative regulation and legislation is not necessary. However, we would welcome legislation such as is now pending in S. 2125.

Also, the Department is moving ahead with a program to encourage farmers to make needed adjustments in their pattern of land use. This could be on both land ill suited to crop production and on better lands where it would be advantageous to shift a part of the acreage to hay and pasture. This will be helpful in carrying out the long-range program in the Great Plains as well as other programs.

The Bureau of the Budget advises there is no objection to the submission of this report.

Sincerely yours,

EZRA TAFT BENSON,
Secretary.

UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, July 22, 1955.

Hon. HAROLD D. COOLEY,
Chairman, House Committee on Agriculture.

DEAR MR. CHAIRMAN: This is to invite your attention again to the urgent need for immediate consideration by your committee of H. R. 1834 and other bills to exempt certain wheat producers from marketing quota penalties under the Agricultural Act of 1938 in cases where all of the wheat crop is fed or used for seed on the farm, commencing with the 1955 crop.

As you know, the Senate on March 28 passed S. 46, which is identical with H. R. 1834. It is my understanding that these measures, together with several other bills which seek to accomplish similar ends, have been referred to a subcommittee of the House Committee on Agriculture under the chairmanship of Representative CARL ALBERT of Oklahoma. It is my further understanding that the subcommittee has decided to take no action on any of the bills at this session but to hold hearings on them this fall.

May I respectfully suggest that an intolerable situation is developing with respect to assessment of wheat marketing quota penalties? With certain exceptions, farmers who produce wheat in excess of their quotas are subject to marketing penalties currently set at $1.13 per bushel. Penalties have already been collected from many farmers who exceeded their 1954 production quotas. However, instances where farmers are refusing to pay, necessitating suits to collect penalties on the 1954 wheat crop, are being reported at an increasing rate.

The Department of Agriculture estimates that there may be as many as 1,500 cases this year, involving production of wheat in 1954, which will require legal action. Unless suits are filed to collect these penalties, it appears certain that there will be many more violations in 1955 which would normally come up for legal action sometime after completion of the 1955 harvest.

In many cases farmers who seek to avoid penalties plead that their wheat was not sold in interstate commerce, that they did not want price support, and that all of the wheat was used for feed or seed on the farm. Under the holding in *Wickard* v. *Filburn* (317 U. S. 111 (1942)), the farmer is liable whether the wheat is fed or sold if he exceeds his acreage allotment unless the planted acreage of wheat does not exceed 15 acres or an acreage from which the normal production does not exceed 200 bushels.

Another unusual example which has come to our attention involves a monastery in Georgia. The monastery has followed the policy of producing the wheat necessary for food at the monastery. None of the wheat is sold. The amount required for 1954 was in excess of the marketing quota. The monastery now finds itself liable to the Government for a penalty of $1.13 per bushel on the excess.

I doubt that Congress contemplated situations such as this arising under the penalty provisions of the Agricultural Act of 1938. I would strongly recommend that the legislation now before your committee be amended so as to exempt additionally from marketing penalties producers who grow wheat for food consumption on the farm.

I have said on many occasions that I believed the present law should be amended

along the lines of the bills now before your committee respecting marketing quota penalties on wheat where the poduction is consumed entirely on the farm. I have urged you as chairman of the House Committee on Agriculture to give consideration to this problem. I do so again now, emphasizing that the growing number of court cases arising from this section of the law is creating a most serious situation.

Enclosed is a copy of a letter of March 4, 1955, to you as chairman, setting forth the Department's position in this matter. I am also enclosing a copy of my letter of July 1, 1955, to the Speaker of the House, in which I recommended action on the proposed legislation.

In view of the broad interest in this question, I am taking the liberty of making this correspondence public immediately upon delivery of this letter to you.

Sincerely yours,

EZRA TAFT BENSON,
Secretary.

MARCH 4, 1955.

HON. HAROLD D. COOLEY,
Chairman, Committee on Agriculture,
House of Representatives.

DEAR CONGRESSMAN COOLEY: This is in reply to your request of January 27, 1955, for a report on H. R. 1834, a bill to amend the Agricultural Adjustment Act of 1938 to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed on the farm, and for other purposes.

We favor enactment of this bill.

The purpose of this bill is to correct a situation which has arisen in connection with marketing quota operations for certain wheat producers who desire to use their entire output for feed and seed on the farm where produced, and who do not want to participate in the wheat price support program.

Under the Agricultural Adjustment Act of 1938, as amended, wheat producers subject to marketing quotas who harvest wheat in excess of their acreage allotment are subject to a marketing penalty on their farm marketing excess (unless they avoid or postpone the penalty by storage or delivery to the Secretary), whether they sell their wheat on the market or whether they feed it on their farms. The law is clear on this point and its constitutionality was upheld in *Wickard* v. *Filburn* (317 U. S. 111). Thus, farmers subject to quotas on their crop are forced to curtail their operations or pay the penalty if they fail to do so.

Production of wheat for feed is, in general, confined to small farms in the feed deficit areas.

Existing legislation exempts certain of these farms from marketing quota restrictions. For example, quotas are not applicable to any farm on which the wheat acreage does not exceed 15 acres or on which the normal production of the wheat acreage is less than 200 bushels. Also, marketing quotas are not applicable to any farm in any State which has been designated by the Secretary as outside the commercial wheat-producing area. Any State for which the wheat acreage allotment is 25,000 acres or less may be so designated by the Secretary.

H. R. 1834 broadens these existing exemptions to include those farmers in the commercial wheat-producing area who harvest more than 15 acres, who use all their wheat on the farm where grown for feed and seed, and who do not desire wheat price support. Insofar as this latter group of farmers is concerned, wheat marketing quota restrictions impose special hardships.

Accordingly, although the consumption of wheat on farms where grown does affect interstate commerce, the proposed exemption relating only to farms on which no wheat is removed would appear to be desirable. Such farms constitute only a small portion of all farms which produce wheat and the proposed exemption, although creating some new problems, would not unduly hamper the administration of the wheat-marketing quota and price-support programs with respect to farms from which wheat is removed. This would not be the case, however, if the exemption with respect to feed and seed were to apply to farms on which wheat is produced both for home consumption and sale.

Enactment of this bill would be another step toward achievement of our objective—that farmers be permitted to operate their farms with a maximum of freedom. At the same time, it would remove the dissatisfaction of some small wheat producers with the program as it must be operated under present legislation.

The bill, if enacted, would become effective with the 1955 and subsequent crops of wheat. It would in no way relieve or otherwise affect the liability for marketing penalties incurred by farmers under the 1954 wheat-marketing-quota program who fed or used for seed on the farms where produced their entire 1954 wheat crops.

As indicated above it is recognized that there will be certain administrative difficulties in putting the provisions of the bill into operation, but we believe it will be possible to develop adequate safeguards.

Additional administrative expenses would be incurred in carrying out the provisions of the bill, if enacted. It is believed that such increases might be absorbed from funds appropriated for administering the wheat-quota program. However, a detailed analysis of the costs involved will be required before a definite cost estimate can be submitted.

The Bureau of the Budget advises that, from the standpoint of the program of the President, there is no objection to the submission of this report.

Sincerely yours,

E. L. PETERSON,
Acting Secretary.

House Resolution 137

EXTENSION OF REMARKS
OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. BOSCH. Mr. Speaker, I wish to again call the attention of my colleagues to House Resolution 137 calling for an investigation of the participation of the United States from 1945 to 1947 in the forced repatriation of anti-Communists.

Under leave to extend my remarks, I include a letter received by me today from Mr. S. Sidney Bromberg, 109 Grand Avenue, Englewood, N. J., in which he points out the reasons that he feels that action by the United States is necessary:

JULY 27, 1955.

HON. ALBERT H. BOSCH,
Congressman from New York,
Washington, D. C.

DEAR CONGRESSMAN BOSCH: I thank you for your kind letter of July 21. Permit me to add a few suggestions that would throw more light on the subject of forced repatriation of Russian nationalists after the Second World War.

We all know by this time that the Kremlin dictatorship not only deprives its subjects of all intellectual and spiritual freedom, but also imposes acute economic poverty, exploitation, and physical and moral degradation.

Let me give you here only a few examples of Communist exploitation which should rather be called robbery.

The Russian people pay 9 rubles for a kilogram (2.21 pounds) of sugar, the production of which costs the Soviet Government 83 kopeck (100 kopeck equals 1 ruble), which makes 1130 percent profit for the Communist government. A pair of boots is sold in Russia for 160 rubles, while its production costs the government 7 rubles, 40 kopecks. A kilogram of wheat flour is sold to consumers for 6 rubles, 70 kopecks, while the government pays to the peasant 13 kopecks for it, which gives the Kremlin 5,150 percent profit.

The average monthly earnings of a Soviet citizen is from 600 to 800 rubles. These few figures concerning main articles of consumption illustrate the terrible conditions of life in Communist Russia, and they are getting worse daily.

Former Premier Georgi Malenkov had a plan to produce more consumer goods at cheaper prices, but the rest of his associates decided it was wrong.

It would mean letting the peasants work the land individually as they were doing for ages, and receive a reasonable price for his grain, meat, and wool, which would mean much less income for the government, with its bureaucratic apparatus consisting of millions of Communist officials, political police, spies, and snoopers all over the world, as well as a standing army of four to five million with its costly armament.

In such a case the Kremlin could not maintain its communistic system—at least for some years. It would inevitably collapse, its leaders would lose control over the enslaved, suffering people, and most likely would lose not only their power, luxuries, and dreams of world conquest, but also their lives.

The mass of the Russian people also know that real improvement of their lot is impossible without the downfall of the entire Communist system.

Thus the idea of "strengthening the hands and the hearts of the people behind the Iron Curtain" may mean only to help them abolish the Communist system.

To do that they have millions of men who already have suffered from the cruelties and injustices of communism, who are ready to risk their lives to unshackle their fatherland which they love.

Under the Kremlin's system of minute political controls, some of the Russians who have the ability for leadership would need material help to quit their jobs to give their time to propaganda, organization, and traveling. Most of all they would need the assurance that help would come systematically, uninterruptedly from what the Psalmist called "understanding hearts"; and that there would be no slackening until the revolutionary job is accomplished.

Most likely such revolutionary activities would result in the formation of a military junta similar to that of Egypt, Iran, or Guatemala, until a constituent assembly is called, which is the dream of the Russian people to put the country on a democratic basis.

Let us look at the source from which the enlightened, patriotic, bold and determined leadership of the Russian revolution can come. It is the same source that supplied them in the past—in the revolt of the soldiers in the fortress of the Cronstadt in 1921, in the formation of the Russian Army of liberation under Gen. Andrei Vlasov in 1943, and in the strikes of Vorkuta and other slave-labor camps in 1953. It is the patriotic elite of the Russian people, which is naturally limited in numbers.

And they had their fingers badly burned in the years 1945–47, by the actions of only a few Americans who at the time failed to understand and sympathize with the Russian liberation movement

It can be said that they did not act from evil motives. But to the Russian soldiers and officers who were forced to board the trains for a trip to a firing squad or forced labor camps, the motives of responsible American officers did not matter. Nor did it matter to General Vlasov and his 12 collaborators who were given over to the Kremlin dictators to be hanged in Moscow.

Nor does it matter to the followers and admirers of General Vlasov, who now have numerous organizations in Russia and among the Russian emigrees including the United States.

They have no assurance that similar lack of understanding will not repeat itself. That's what holds them back from starting anew their assault on the criminal Kremlin bunch that hold a third of the world in abject slavery and the rest of it in mortal danger of utter destruction.

Although only a few Americans are responsible for the tragic collapse of the Russian revolutionary movement of 1945–47, as members of the democratic America, we are all responsible for the acts of crime or folly of the few.

Only by publicly repudiating their acts can we regain the confidence of the best self-sacrificing elements of the Russian people who, as Christians, for such they are, could forget and forgive, and start their activities anew, to remove the Kremlin conspiracy.

Only the Congress can speak for the American people. This is why a congressional investigation or resolution on forced repatriation of Russians and their satellites is so necessary and urgent now.

I personally believe that Senator McCLELLAN'S subcommittee that showed itself efficient and prompt, could do it best and quickest.

If you find the arguments in this letter justified, wouldn't you Congressman BOSCH, bring it to the attention of other Congressmen and Senators?

Sincerely yours,

S. SIDNEY EROMBERG.

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a letter I have received from Marlan O. Walter, commander, Department of Pennsylvania, Veterans of Foreign Wars, which is self-explanatory.

I believe the Pennsylvania VFW has an excellent idea, one which I endorse completely. I have asked the Office of the Legislative Counsel to draft the proper bill to carry out this idea and plan to introduce it as soon as it is completed. I shall welcome the cosponsorship of my colleagues from Pennsylvania and from all other States.

The letter follows:

DEPARTMENT OF PENNSYLVANIA,
VETERANS OF FOREIGN WARS,
Millersburg, Pa., July 27, 1955.

HON. JAMES M. QUIGLEY, M. C.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN QUIGLEY: The department of Pennsylvania, Veterans of Foreign Wars of the United States, believes the last survivor of the Confederate Army and the last survivor of the Union Army should be laid at rest, side by side, in Gettysburg National Cemetery and their eternal resting place appropriately marked by a suitable monument representing all the men of both those glorious Armies that would symbolize the peace, friendship, and unity that evolved in our Nation because of their sacrifices.

What we propose as a final resting place in the solitude of the hallowed ground where they never will be alone would be our Nation's grateful, final, and most beautiful tribute to those millions of Civil War men whom we all so revere.

We do not believe the survivors or members of the survivors' families will object to their burial in the consecrated earth of Gettysburg. What greater honor could any man receive than that which we wish and propose to be bestowed upon the last two men whose youthful courage surpassed their years?

We want them to know while still they live the esteem in which they are held by their countrymen; that when they hear the last echoing taps they will know they will be laid at rest where men rededicated themselves "with malice toward none, with charity for all * * *."

"* * * let us strive to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle * * *."

Here is the final opportunity for the Nation to do all these things.

Let us consecrate ourselves to this noble work.

All Americans feel the last survivors of both Armies belong to all the families in our Nation; that they are our living heritage.

We have buried unknown soldiers to symbolize the sacrifices of all servicemen. Let us set aside a plot at the crest of a gentle, rolling hill in Gettysburg for all the men of the Civil War and let the last two survivors symbolize the sacrifices of all the men in Blue and Gray.

Let us feel toward them as did Grant when he learned that Lee's men were starving. Let us show the friendship Grant immortalized when he ordered every man in his Army with 3 rations to give 2 of them to Lee's men.

What we propose would tangibly express at home what the President at Geneva said we stand for abroad—friendship and unity. It would have a powerful psychological impact upon governments and people throughout the world.

The burial plot and monument we suggest would crystallize and symbolize the friendship that emerged from the crucible of that war.

We feel sure the last survivors would want it that way.
